This fine, lofty, spreading, tree, grows in the tropical parts of America, in Jamaica, and in Tenasserim where it was introduced by Major Macfarquhar. The tree is easily propagated, and the trunk acquires an immense height. The timber of the old trees is very hard and tough, and is in great request for wheelwork, particularly for cogs. The wood is so heavy that a cubic foot is said to weigh a hundred pounds: it takes a fine polish and is used by cabinet makers. When in a sickly state, the resin called Western Anime exudes from between the principal roots. It is fine and transparent, of a red or yellowish-red colour, and in large lumps. It resembles amber, is very hard and sometimes contains leaves, insects, or other objects imbedded in it. It burns readily, emitting a very fragrant smell. Dissolved in rectified spirits of wine it makes one of the finest kinds of varnish.—*Eng. Cyc., Drs. O'Shaughnessy*, p. 314, *Mason's Tenasserim*, p. 156, *and Voigt*, p. 252.

HYMENODYCTION. Of this genus of plants, belonging to one section of the Cinchonaceæ, H. obovatum, *W. Ic.*, "Yella mala kai maram" Tam., "Kurwye" Mahr., H. utile, *W. Ic.*, "Peronjoli maram" Tam., and "Kurwye" Mahr., grow in Coimbatore and in Canara, but woods only fit for fuel. H. thyrsiflorum, *Wall.*, grows at Rajmahal, Chittagong, and at Rangoon.—*Drs. Wight, Gibson and Voigt.*

HYMENODYCTION, *Species.*

Dudippa of Godavery Forests. | Chetippa of Circars.

A large tree of the Godavery. Wood not used.—*Captain Beddome.*

HYMENODYCTION EXCELSUM, *Wall.*

Cinchona excelsa, *Roxb.*

Kala bachnak DUK. HIND. | Sagapu maram, TAM.
Cedar wood, ENG. | Burja Burija, TEL.
Kundaru. ? HIND. | Chetippa, "
Bundaru, " | Bandaroo, Pundaroo ? "
Barthoa; Thab, HUSHYARPUR. |

A very large tree, common all round the foot of the Neilgherries, and in the mountainous parts of the Circars, but chiefly in the valleys. The wood is firm, close-grained, of a pale mahogany colour, and very useful for many purposes. The bitter astringent bark is used by tanners, also medicinally for yokes of ploughs, for scabbards and gun stocks? Possesses febrifugal properties, but it contains no alkaloid.—*Drs. Roxburgh, Fl. Ind Cor. pl.* 113 and 106. *O'Shaughnessy*, p. 394, *Mr. Rohde, McIvor, Ain. Mat. Med.*, p. 104.

HYMENODYCTION OBOVATUM. *W. Ic.* 1159.

Kurwye, MAHR. | Yella malakai maram, TAM

Dr. Gibson says, this and H. utile grow on the Bombay side of India but the wood of neither is fit for anything but fuel.—*Drs. Wight, and Gibson.*

HYMENÆA RECURVALIS.—*Fabricius.* A pretty little moth found in Jamaica, Ascension, Sierra Leone, Bagdad, India, Ceylon, China, Australia and New Zealand.

HYMENÆA VERRUCOSA, a tree growing in Colombo; it produces a gum said to be the source of Copal. Wood very soft and brittle.—*Mr. Fergusson.*

HYMENODYCTION UTILE.—*W. Ic.* 1159.

Peeroonjolay maram, TAM. | Kurwye, MAHR.

This tree attains a large size and the heart wood is red. When Dr. Wight first gathered specimens of this tree, he was informed that it furnished the wood called bastard cedar. He afterwards found two other trees similarly reported.

Dr. Gibson says the wood of this tree is never used, except for firewood. The tree is common enough, in rocky slopes mostly, in or near thick forest. It does not stretch inland beyond the limits of the Ghaut ravines.—*Wight. Gibson.*

HYMENOPTERA, an order of insects characterized by the majority of species possessing stings. Large numbers of them are also distinguished for their social habits, of which the bees, the wasps, the hornets and the ants are familiar examples. They frequently build for themselves houses in which they dwell or deposit their ova. They use different materials for this purpose. The wasp and the hornet with several other allied species, make a kind of papier-machie tenement in which they deposit their eggs and hatch their young. The bee uses for this purpose the material known as wax. From the ants, when bruised, are obtained juices which yield an acid secretion, the formic

acid, a chemical base from which Dumas obtained the ter-chloride of formyle. Dr. Simpson of Edinburgh tried this, as an anæsthetic agent and found it succeed, and it is is now known as the chloroform, which has been the means of alleviating a vast amount of human misery. The species of the genus Cynips belong to a group of this order, and make their nests in the oak-tree bud and produce the oak-apple, by inserting their eggs, into the bud as it expands, by means of their ovipositor. The 'robins-pin-cushions' on the dog rose are produced similarly, thistles are similarly attacked, and the Dead Sea Apples, which are excrescences produced on a species of Solanaceous plant, are amongst the most remarkable of these productions. These are remarkably like the fruit of a plant, but, when opened, they are found to contain nothing but the excreta of the young larvæ that were hatched in their interior. It was these apples of Sodom to which Milton alludes, in the lines—

* * * * greedily they plucked
The fruitage fair to sight, like that which grew
Near that bitumous lake when Sodom flamed;
This, more delusive, not the touch but taste,
Deceived; they, fondly thinking to allay
Their appetite with gust, instead of fruit,
Chewed bitter ashes:

The excrescences called galls are also produced by a species of Cynips, and are largely used for tanning purposes, also, medicinally, in the form of gallic acid. The Hymenoptera are very numerous in the South East of Asia. A fossorial wasp of the family Sphegidæ, the Pelopæus spinola of St. Fargeau is distinguished by its metallic lustre. It frequently makes its nest in key-holes and similar apertures, which it stops up by little pellets of clay brought by it to form its cells. Into these it thrusts the pupæ of some other insect, into whose bodies, it has previously introduced its own eggs. The young parasite, after undergoing its transformation, gnaws its way into light, to emerge as a four winged fly. The Ampulex compressa which drags about the larvæ of cockroaches into which it has inserted its eggs, belongs to the same family. The Ichneumon, is a genus of insects, which deposit their ova in the bodies of larvæ. They, also, belong to the order "Hymenoptera," section "Terebrantia" and family "Pupivora" in the classification of Latreille. The Ichneumon with its ovipositor pierces the bodies of other insects and deposits its ova within their bodies, where the larvæ are parisitic. The Ichneumon forms small nests of clay into which they deposit the infected insect. *Eng. Cyc. Sir J. E. Tennent's Sketches of Ceylon. Dr. Lankester on the Uses of Animals.* See Insects.

HYOBUNS, or Haiobans, the raja of Huldee in Ghazeepoor is of this conspicuous clan, which once held large dominions on the banks of the Nerbudda.—*Elliot Supp. Gloss.* "*Journal A. S. Bengal*," *August* 1837. See Benoudha; Hureehobuns.

The Seed.

Bazr-ul-Bunj.	Pers.	Khurasani ajwain,	Hind.
Tukhm-i-bunj-i-Rumi,	,,		

The henbane plant is a native of Europe and of Asia Minor and is frequent in waste ground near houses, from 5,000 to 10,000 feet, in the Punjab Himalaya, where it is stated on high authority to be eaten by cattle. The seeds are, on the Sutlej, said to be poisonous but are officinal in the plains of India for their narcotic effects. It is cultivated in several parts of India. In physiological action this plant and its preparations seem intermediate between belladonna and opium, combining great soothing and anodyne power with the property of dilating the pupil. Over opium, hysocyamus possesses the advantage of relaxing rather than constipating the bowels, and being less apt to occasion headache; in excessive doses however delirium, coma, and convulsions (the latter but rarely) supervene, and not uncommonly terminate in death. The chemical properties of the leaves and seeds have been carefully investigated, and an alkali has been obtained termed Hyosciamia, but it differs little, if at all, from Atropia. A dry inspissated juice of the leaf was prepared by exposing the juice in thin layers on a shallow earthen vessel to the intense heat of the sun in April and May; Dr. O'Shaughnessy deems this extract far superior to any imported from Europe or prepared in India by other processes. In three grain doses its soporific and anodyne effects were most decisive, and its use rarely, if ever, followed by any headache or other unpleasant symptoms.—*Drs. O'Shaughnessy, page* 47. *J. L. Stewart, M. D., Spry's Suggestions, p.* 36. *M. E. J. R. of* 1855.

„ Atherura, 1 sp.
Fam. LEPORIDÆ. Hares. 2 Gen. 10 sp. viz.
Gen. Lepus, 7 sp.
„ Lagomys, 3 sp.

The Sub-family Hystricinæ, embraces the animals familiarly known as Porcupines, of the genus Hystrix of *Linnæus*. They are Rodents whose covering consists, for the most part, of offensive and defensive armour, in the shape of spines or quills, instead of hairs. Colonel Sykes described the Hystrix leucurus (Sayal of the Mahrattas), as Hystrix cauda-alba It is nearly a third larger than the European species. All the spines and open tubes of the tail are entirely white, which is not the case in Hystrix cristata. The spines of the crest also are so long as to reach the insertion of the tail. The ears are much less rounded, and the nails are shorter, infinitely deeper, and more compressed, and with deep channels below. The white gular band is more marked; and the Asiatic species is totally destitute of hair —spines, where wanting, being replaced by strong bristles even down to the nails. Mr. Hodgson notes this species among the Mammalia of Nepaul, as inhabiting the Central and Lower regions. The small porcupine of the Tenasserim Provinces, does not appear to have been discovered in Arracan. According to native description, it best accords with the small species described by Hodgson, as H. alophas.

Hystrix bengalensis.—Blyth.

H. Malabarica, SCLATER. | Bongal porcupine, ENG.

This is smaller than H. leucurus, the head and body being about 28 inches, and tail 8 inches. It is found in South Malabar, lower Bengal, Assam and Arakan, doubts however exist as to the identity of H. bengalensis and H. Malabarica. Dr. Day states that he procured specimens of the orange porcupine from various parts of the ghats of Cochin and Travancore, and that the flesh of this kind is more highly esteemed for food than the common variety. The Native sportsmen declare that the aroma from these burrows is quite sufficient to distinguish the two species.—*Jerdon, Mammals*, p. 220.

Hystrix leucura.—Sykes.

H. hirsuti-rostris, BRANDT. | H. zeylanensis, BLYTH.
H. cristata Indica, GRAY. |

Sajru,	BENG.	Sahi, Sayal, Sarsel,	HIND.
Yed,	CAN.	Salendra,	MAHR.
Indian porcupine.	ENG.	Dumsi,	NEPAL.
Saori,	GUZ.	Yeddu Pandi,	TEL.
Hoigu,	GONDI.		

The white tailed or Indian porcupine is found over a great part of India, it forms extensive burrows, often in societies, in the sides of hills, banks of rivers, nullahs and tanks, or old mud walls. Its length is about 32 inches, tail 7 inches. In some parts of the country, they never issue forth till dark, dogs take up the scent readily. The porcupine charges forwards on its assailants, with erected spine, and dogs frequently get severe wounds, the strong spines being driven deeply into them. The meat of the porcupine is white, tasting something between pork and veal, and is not bad eating.

Hystrix longicauda.—Marsden.

H. alophus,	HODGSON.	Acanthion Javanicum,	F. CUV.
H. Hodgsonii,	GRAY.		
Crestless porcupine,	ENG.	Sathung of the	LEPCHA.
O'e	of the LIMBU.	Achotia dumsi,	NEPAL.

The crestless porcupine is found in Sikkim, in Nepal, at Darjeling, up to 4,000 and 5,000 feet in the Eastern Himalaya, it is about 24 inches long, tail 4 inches and quills 5½ inches. They are very numerous and very mischievous, committing great depredations in the edible root crops.

Atherura, a genus of mammals of the family Hystricidæ, and sub-family hystricinæ. Only one species of Atherura is known in India, viz., A. fasciculata, of the Tipperah hills and thence southwards to the Malay peninsula. The tail is much longer than in the true porcupines and ends in a tuft of long bristles and the spines of the

back are less elevated.—*Jerdon, Mammals. Mason's Tenasserim : Zool. Proc.* 1830-1831, 1834, quoted in *Eng. Cyc.* p. 218-222.

HYTA-BASHI, a leader of the Hyta troops. The Hyta or Bashi-Bazouk are Turkish irregular cavalry, called Hyta along the valley of the Tigris and at Mosul, and Bashi-bazouk in Roumelia and Anatolia. They are collected from all classes and provinces. A man, known for his courage and daring, is named Hyta-Bashi, or chief of the Hyta, and is furnished with tazkara or orders for pay and provisions for so many horsemen, from four or five hundred to a thousand or more. He collects all the vagrants and free-booters he can find to make up his number. They find their own arms and horses, although sometimes they are furnished by the Hyta-Bashi, who deducts a part of their pay until he reimburses himself. The best Hyta are Albanians and Lazes, and they form a very effective body of irregular cavalry. Their pay at Mosul is small, amounting to about eight shillings a month; they are quartered on the villages, and are the terror of the inhabitants, whom they plunder and ill-treat as they think fit. When a Hyta-Bashi has established a reputation for himself, his followers are numerous and devoted. He wanders about the provinces, and like a condottiere of the middle ages, sells his services, and those of his troops.

HYUN-DES. Amongst the hindus of the Cis-Himalayas, Hima-des, Sansc. means Snow country. See Hundes.

I.

This letter of the English alphabet has, in England, four sounds. As an initial and medial letter, it has a long sound as in iron, fine, isinglass: a second is short and acute as in "sit" "infant" indigent; a third sound is that of the letter "u," as in "stir;" and the fourth sound is close and slender, though long, like "ee," as in "fatigue," "intrigue." The three first sounds are peculiar to the English language, but the last long sound, as of "ee," is represented in all the tongues of the South East of Asia.

IANTHINA, the violet snail, a genus of molluscs, of the family Haliotidæ. There are six recent species, widely distributed in the four quarters of the globe. They are seen floating on the ocean but are often driven on the shores by tempests. The beach at Madras is strewn with them after a gale. The Ianthina has occurred on the coasts of Britain, but there is reason for thinking that it is not to be found in very cold latitudes. In warm climates it is very plentiful.—*Eng. Cyc. Vol. III, p.* 299.

IARVINI, TAM. ?

Yarvaney... ... .TAM. | Crawn....DUT. & PORT.

A Ceylon tree which grows tall and straight, from twenty to forty-five feet high, and from twelve to thirty inches in diameter. It may be obtained in great quantities, and answers many purposes in ship and house work.—*Edye, on the Timber of Ceylon.*

IAYAPALA, CAN. Croton seed.

IBERIA, this ancient kingdom is the modern province of Kartelania in Georgia. Ptolemy describes it as bordered on the north by the Sarmatian mountains; to the south by a part of Armenia; to the east, by Albania, and to the west by Colchis the present Immeretia. He mentions many of its towns and villages. Strabo who travelled in these countries, speaks of this being a flourishing and even luxurious state. In the western emigration, the Iberians and Cantabrians preceded the Celts, and their language is preserved in the Basque (Biscayan).—*Porter's Travels, Vol. I. p.* 110. *Latham in Brit. Assoc. Journ.* 1845, *p.* 77 and 78.

IBERIS, Candy tuft. One of the Cruciferæ. Grows wild in England: named Iberis from Iberia, or Spain; easily grown from seed. Its colours are pink and white, and it blossoms towards the close of the rains.—*Riddell.*

IBEX. This name is given, in India, to several animals of the genus Capra or goat. Capra-ibex Himalayana *Blyth*, is the Himalayan Ibex the Skeen, Skyn, Sakeen or Sikeen of the Himalaya, the Kyl of Kashmir. These are the names of the male, that of the female, in Thibet, is L'damuo. It inhabits Ladakh and Kashmir. A wild species called "passeng" by the Persians, and which belongs to the genus Ægagrus, occurs in middle and North Asia.

IBHARAN-KUSHA, BENG. Andropogon iwarancusa.

IBI-GAMIN, a glacier in Eastern Thibet, in height 22,260 feet English=20,886 French feet.

IBIS, a familiar name, applied to species of the Falcinellus genus of birds belonging to the Family Ardeadæ, sub-family Tantalinæ. One species occurs in India, the Falcinellus igneus ('Ibis falcinellus; or Glossy Ibis' of Europe, Asia, Africa, N. and S. America, Australia and very common in India. See Birds.

IBLIS AR, the devil.

IBN BATUTA was born at Tangier, on the 24th February 1304. He started in the year of the Hijira 725, A. D. 1324, from his native city, Tangier, at the age of twenty, twenty-two or twenty-three, but some say 28, and for thirty years continued with unwearied diligence travelling about in different countries. His name and title are at length, Sheikh Abu Abdallah Mahomed Ibn Abdallah al Lawati al Taudii. He travelled in India from 1324-1353. On his way to India, he visited Shiraz. After passing Kunduz and Baghlan he arrived at Andar (Andarab), where he says a city formerly existed which had altogether disappeared. Starting for the Hindu Kush (the name which he uses) they met with hot springs in which he washed, and lost the skin of his face in consequence. These were no doubt the hot springs of Sirab, near where the Passes of Tul and Khawak diverge in the upper valley of Anderab, and which are mentioned by Wood as having temperatures of 108° and 124° *Fahr.* (*Journey, p.* 413.) He then arrived at the mountain of Pashai. The Pashai race are mentioned repeatedly by Leech as one of the most numerous tribes in the Panjshir valley and adjoining passes. These are supposed to be mahomedans, but as the name is mentioned also by Elphinstone as that of one of the Kafir tribes, part of them in the mountains may have retained their heathenism and independence. He then reaches Parwan and Charkh (Charekar) which Leech also calls Chark.) In Delhi he acted for a time as one of the magistrates. He wrote a history of his travels, and gives a historical retrospect extending from the first conquest of Delhi by the mahomedans under

Kutb-ud-deen Aibek in 1188 to the accession of the then reigning sovereign Sultan Mahomed, son of Toghlaq, 1325. He quitted Delhi, in the year of the Higira 743 (A. D. 1342) as one of the ambassadors to China, passing through Dowlutabad, Goa, and Honore to Calicut, where the Chinese Junks awaited the embassy. But after his embarkation, he was shipwrecked and then, determining to resume his wanderings, set sail for Honore (Honavar) visiting the Maldives (Zabiyah ul Mohli) in his route, also Ceylon where he landed in 1347, thence he visited Sumatra.—*Ind. in 15th Cent. Tr. of Hind. VII. p.* 215. *Yule Cathay, II. p.* 595, 597.

IBN HAUKAL. An Arab traveller who visited India, a short time after Masudi. He wrote the Ashkal-ul-Balad to which he also gave the name of Kitab-ul-Masalik-o-ul-Mamalik, or descriptions of countries, in which occur notices of most of the mahomedan kingdoms of his day. His real name was Mahomed Abu-l-Kasim, and he was a native of Baghdad. He left Baghdad A. D. 943 (A. H. 331) and he continued travelling till A. D. 976. He notices his obligations to Ibn Khurdadbha, and he copied likewise from Istakhri.—*Ind. in 15th Cent. Elliot Hist. of India.* See Kelat p. 496.

IBN KHURDAD-BHA, died A. D. 912 (A. H. 300) wrote a work on roads and kingdoms. He attained high office under the Khalifs.—*Elliot.*

IBRAHIM, founder of the Roushenai sect of Mahomedans, died at Cairo 1529.

IBRAHIMI, a town near the river Kashrud, which rises in the mountains of Siah-bund and flows towards Koh-i-duzdan, a village between Washeer and Ibrahimi.

IBRAHIM KHAN of Gour had 7,000 families of Taymuni under his rule; but, about the year 1838, Yar Mahomed of Herat completely devastated the country which they occupied and removed them to Herat, where he established some of them in the city and some in the suburbs. In 1846, however, they took advantage of Yar Mahomed's absence on the Murghab to decamp into the Persian territory.

IBRAHIM LODI, king of Delhi was defeated at Panipat by Baber.

IBRAHIM PASHA, son or adopted son of Mahomed Ali.

IBRAHIM QUTUB SHAH, one of the Qutub shahi dynasty of kings, who ruled at Golcondah near Hyderabad A. D. 1557. He is buried there and a large cupola covers the tomb.

ICE.

Yach, Guz. Hind. often termed Burf (snow) Pers.

In many countries, the command of a proper supply of ice or snow for cooling water or other liquids in summer has long been regarded as one of the necessaries of life. And so ancient is the practice, that we even find allusions to it in the Proverbs of Solomon.—"As the cold of snow in the time of harvest, so is a faithful messenger to them that send him; for he refresheth the soul of his masters." xxv. 13. Of late years, ice has become an article of commerce between countries where it is found in abundance, and those where it is found scantily or not at all. The place where this remarkable traffic commenced, is Wenham Lake, about 18 miles from Boston, in the United States of America; and subsequently, some of the Norwegian lakes have furnished abundant supplies. After the Wenham Lake Company was formed, in September, 1833, a cargo of ice shipped at Boston, was discharged at Calcutta, and sold at 3*d.* per lb. It was packed in large cubes, fitting closely together so as to form one solid mass, within chambers of double planking with a layer of well-dried refuse tan, or bark, between them. The quantity shipped, was 180 tons, of which about 60 wasted on the voyage, and 20 on the passage up the river to Calcutta. Thousands of tons are now annually shipped from Boston to the East and West Indies, and to South America. Wenham lake occupies an elevated position and lies embosomed in rugged hills. The lake has no outlet, but is fed by the springs which issue from the rocks at its bottom, at a depth of 200 feet, the cutting, storing, and transportation of the ice is regularly carried on throughout the winter. The ice-house, which is capable of storing 20,000 tons of ice, is built of wood, with double walls 2 feet apart all round, the intervening space being filled with sawdust. The machinery used for cutting the ice is worked by men and horses. From the time when the ice first forms, it is kept free from snow until it is thick enough to be cut; the cutting being commenced when the ice is a foot thick. A surface of some 2 acres is then selected, which, at that thickness, will furnish about 2,000 tons and a straight line is then drawn through its centre from side to side each way. A small hand-plough is pushed along one of these lines, until the groove is about 3 inches deep and $\frac{1}{4}$ inch wide, when the marker is introduced. This implement is drawn by 2 horses, and makes 2 new grooves parallel with the first, 21 inches apart, the gauge remaining in the original groove. The marker is then shifted to the outside groove, and makes 2 more. Having drawn these lines over the whole surface in one direction the same process is repeated in a transverse direction, marking all the ice out into squares of 21 inches. Meanwhile the plough drawn by a single horse follows in

these grooves, and cuts the ice to a depth of 6 inches. One entire range of blocks is then sawn out, and the remainder are split off toward the opening thus made with an iron wedge, called an ice spade; when it is dropped into the groove the block splits off with a very slight blow, especially in very cold weather; the labour of spliting being slight or otherwise according to the temperature of the air. Low platforms are placed near the opening made in the ice with iron slides extending into the water, and a man stands on each side of a slide armed with an ice hook, with which he catches the ice, and by a sudden jerk throws it up the slide upon the platform. In a cold day everything is quickly covered with ice by the freezing of the water on the platforms, slides, &c. and the huge blocks of ice, some of which weigh more than 2 cwt. each, are hurled along these slippery surfaces with great ease. By the side of the platform is a sledge of the same height, capable of containing about 3 tons, which when filled, is drawn over the ice to the front of the store-house, where a large stationary platform of the same height is ready to receive its load, which as soon as discharged, is hoisted a block a time into the house. Forty men, assisted by 12 horses, will cut and stow away 400 tons a day. Sometimes in favourable weather 100 men are employed at once. When a thaw or fall of rain occurs, the ice is made porous and opaque and unfitted for the market: when snow is followed by rain, and that by frost, the snow ice thus formed is removed by the plane. The operation of planing is somewhat similar to that of cutting. A plane guage to run in the groves made by the marker, and which shaves the ice to the depth of 3 inches, is drawn by a horse, until the whole surface of the ice is planed. The chips thus produced are then scraped off, and if the clear ice is not reached the process is repeated. If this make the ice too thin for cutting, it is left until a few nights of hard frost shall have added below as much as was removed from above. In addition to filling their ice-houses at the lake and in the large towns, the ice-company fill a large number of private ice-houses during the winter; all the ice for these purposes being transported by railway. The production of ice artificially was carried on in India, prior to the receipt of this substance from America. In the upper country, near the town of Hoogly, about 40 miles from Calcutta, by a skilful application of the process of evaporation the natives are able to procure a supply of ice during their short winter, viz. from the end of November to the middle of February. The ground where the ice was made was a large open plane: 3 or 4 troughs are formed, each about 120 feet in length by 20 feet in width and 2 feet in depth: the bottom is made smooth and allowed to dry by exposure to the sun. It is covered with bundles of rice straw to the depth of about a foot, and then loose straw is strewed in, to within 6 inches of the adjoining land. The water to be frozen was contained in pans of unglazed porous earthenware, very much like those put under garden flower-pots, and these were arranged in regular order close to each other upon the loose straw in rows to the number of 5 or 6,000. The natives filled the pans with soft water by means of small earthen pots, attached to the end of bamboo-rods, long enough to reach half way across the trough. The water was taken from large water jars sunk deep in the ground near the pits where the ice was stored, and filled from the neighbouring pools or with drainings from the ice. The quantity of water poured into each pan varied from $\frac{1}{2}$ to $\frac{1}{3}$ of a pint, depending upon the clearness of the sky and the steadiness of the wind. The most favorable wind is from the N.N.W. but any point between N. and W. will do, although less ice is produced. If the wind blew between E. and S. no ice will be formed. The ice which begins to appear a little before midnight, was carefully watched by persons stationed near each trough. As soon as a slight film of ice appears, the contents of several pans were mixed together, and the freezing liquid sprinkled over the others. The freezing continues till sunrise, when perhaps as much as half an inch of ice was found in each pan. In very favourable nights the water is entirely frozen. The ice was generally removed by women, 7 or 8 of whom were appointed to each ice-bed: they used a blunt semi-circular knife to scoop out the ice, which they threw together with any unfrozen water into earthen vessels placed near them. When these were full their contents were poured into conical baskets, placed over the large waterjars from which the pans were filled; by which means a supply of cool water is collected for the next night's operations. When the ice has been sufficiently drained, it was deposited in wells near the ice-beds; and at night removed to large circular pits lined with mats, and covered over with a straw shed. The heat of the day, even in the ice-making season, is frequently greater than that of the hottest summer days of England, so that after all precautions, a partial thawing went on in the pits. The water thus produced was carried off through holes in the bottom of the pits to a deep well, which also served to supply the pans in the ice-bed; thus, throughout the process the cold was economised as much as possible. The ice was conveyed in boats to Calcutta by night. When the weather was coldest it was simply packed in bags; at other times in baskets lined with straw mats, and conveyed to the city

before sunrise. During the hot season, when ice was most needed, it was scarcely possible to preserve it in any quantity, and the first heavy fall of rain usually melted all that was left of the last ice-making season. In Oudh 80 maunds of ice were recently made. Ice is to be had in the mornings of December in the hollows and valleys of Ootacamund. The crust is scarcely half an inch thick, but sufficiently consistent for all freezing purposes. Of the ice used in America and exported only a small part comes from the Wenham Lake but Boston is the great place of export, and the trade is steadily increasing. In 1863 there were exported 71,245 tons, and in 1864 104,356 tons were shipped to the following countries, viz:

Calcutta	7,472	Kingston Jamaica	2,332
Hong Kong	2,381	Barbadoes	1,309
Bombay	3,255	Havannah	8,131
Madras	1,508	St. Thomas	1,282
Cape, Good Hope	300	Other Ports	75,137
Mauritius	1,350		

In 1866, the exports were 1,24,751 tons, most of the block-ice used in Britain is imported from Norway. Mr. Fortune tells us that on the right bank of the Ning-po river, above the town and fort of Chinhae, and in various other parts of the north of China he met with ice-houses. The town of Ning-po stands in the midst of a level plain from twenty to thirty miles across. The ice-houses are built on the sides of the river in the centre of the plain, completely exposed to the sun—clear, fierce and burning, which would try the efficiency of the best English ice-houses. The bottom of the ice-houses is nearly on a level with the surrounding fields, and is generally about twenty yards long, by fourteen broad. The walls which are built of mud and stone, are very thick, twelve feet in height, and are, in fact, a kind of embankment rather than walls, having a door on one side level with the floor, for the removal of ice and a kind of sloping terrace on the other, by which the ice can be thrown into the house: on the top of the walls or embankment a tall span roof is raised, constructed of bamboo, thickly thatched with straw and in appearance exactly like an English haystack. This simple structure keeps ice well during the summer months, and under the burning sun of China. Around the house is a small flat level field connected with the river. This field he takes care to flood in winter before the cold weather comes on. The water then freezes and furnishes the necessary supply of ice at the very door. Again, in spring, these same fields are ploughed up and planted with rice, and the water which drains from the bottom of the ice house helps to nourish the young crop: here, as in England, when the house is filled the ice is carefully covered up with a thick coating of straw. Thus the Chinaman, with little expense in building his ice-house, and an economical mode of filling it, manages to secure an abundant supply for preserving his fish during the hot summer months. Ice is of great importance to the Chinese, who depend much for their food upon the fish which is caught in their waters. They are enabled by its means to keep their fish during the hottest weather for a considerable time and transmit them in this way to different parts of the country. Ice is now largely made in India by machines. The Peninsular and Oriental Ice Company at Bombay can make five tons daily at a cost of five pie the lb. Private manufacturers sell it at two annas a lb. at a profit. The smaller machines turn it out in cylinders, the larger machines in slabs. But only the very well to do Europeans purchase it. On the recommendation of Colonel Balfour, C. B., the Indian Government sanctioned an ice-machine value Rs. 7,000 for each European regiment, but regiments have not used them. The price of a full sized machine capable of turning out one hundred seers in the hour, is 20,000 Rupees and the total cost per seer does not exceed one anna. There are also smaller machines equal to the production of twenty-five seers in the hour, and which cost no more than 7,000 rupees, but the expense of working them—though trifling in either case—is very nearly the same as with those of greater power.—*Tomlinson*; *Neilgherry Star*, *December* 25; *Illustrated London News*; *Fortune's Residence*.

ICELAND MOSS. This is a lichen (*Cetraria Islandica*), common in the north of Europe and North America. It yields a nutritive starchy substance, sometimes employed to make bread and gruel.—*Waterston*; *Faulkner*.

ICELAND SPAR. Surmah Safed of Kabul. This mineral, a variety of calcareous spar, is found in rocks near Kabul, and is extracted and broken into crystalline rhombohedral fragments, more or less opaque. It is employed by the natives as an astringent in ophthalmia, gonorrhœa, and other fluxes, in doses, internally, of 7 grains, and also externally as a local application. It is called Surma Safed, or white antimony, from being thought to be similar to black antimony, the common tersulphide of that metal. Price 3*d*. per lb.—*Cat. Ex.* 1862.

ICHNEUMON, a genus of insects, which deposit their ova in the bodies of larvæ. They belong to the order "Hymenoptera," section "Terebrantia" and family "Pupivora" in the classification of Latreille. The ichneumon with its ovipositor pierces the bodies of other insects and deposits its ova within their bodies,

where the larvæ are parisitic. The Ichneumon forms small nests of clay into which they deposit the infected insect, *Eng. Cyc.*

ICHNEUMON of the Egyptians, is the Herpestes ichneumon, a quadruped celebrated for destroying serpents and crocodiles. It was also called Ichneumon Pharaonis. There are several species of Herpestes in India called Mongoose, H. javanicus of Java and Sumatra, H. griseus, Geoff. of continental India and neighbouring countries; H. Nipalensis, Gray, of Nepal, and H. neyula, Hodgs. of the Terai.

ICHNOCARPUS, a genus of plants, belonging to the order Apocynaceæ, I. fragrans, Wall, is grown in Nepaul and Kamaon. It has large handsome flowers, I. Loureirii is a native of Zanzibar. All the species of *Ichnocarpus* grow well in a mixture of loam, peat and sand, and cuttings strike readily in sand under a hand-glass. *Don, Dichlamydeous Plants; Lindley; Flora Medica.*

ICHNOCARPUS FRUTESCENS, *R. Br. W. Ic.*

Echites frutescens.—*Roxb.*
Apocynum frutescens.—*Linn.*

Grows all over India. According to Royle, sometimes used in India as a substitute for sarsaparilla.—Price 12 annas per lb.—*O'Shaugnessy, page* 442. *Cal. Cat. Ex.* 1862.

I-CHOW or AI-CHOW. Two islands in the Canton River in lat. 22° 2½, N. and long. 113° 54′ E.—*Horsf.*

ICHTHUS, Gr. a fish.

ICHTHYAETUS, a genus of birds, the species of which are now transferred to the genera Haliætus and Polioætus.

ICHTHYOCOLLA, a name derived from ιχθυς a fish, and κογγα glue, is translated Isinglass, a word derived from the German *Hausenblase*, from *hausen*, the great sturgeon, and *blase*, a bladder, being one of the coats of the swimming-bladder of fishes, chiefly of the genus Acipenser, or Sturgeon, and of which the best qualities are exported from the rivers of Russia, flowing into the Black and Caspian Seas, but also from the Sea of Aral, and the Lake Baikal. Isinglass is also exported from Brazil, and likewise from India. Of late the quality of this has been much improved. 92·8 per cent. of Gelatine.—*Royle.* See Air-bladder; Fish-maws; Isinglass. Sounds.

ICHTHYOLOGY. A branch of science so called which comprehends a knowledge of the structure, nature, and forms of Fishes. See Fishes.

ICHTHYOPHIS GLUTINOSUS, an immense earth worm, common in Sikkim. It is a native of the Khasia Mountains, Singapore, Ceylon and Java.—*Hooker Him. Jour. Vol. II. p.* 25.

ICICA INDICA, *W. & A.*

Bursera serrata, *Wall.*	Schinus Saheria, *H. B.*
Schinus Bengalensis, *Herb. H. B.*	,, Niara ,,

Nayor Beng.

A tree of Assam and Chittagong, growing 70 feet high; its timber is close grained and hard, as tough as oak, but heavier, and used for furniture by the natives.—*Voigt.*

ICTIDES. See Mamalia; Paradoxurus.

IDAAN, called also Meroot, a race in Borneo, who inhabit the more hilly districts towards the north, in the vicinity of Kina Balou. They resemble the Kadyan; and some of their tribes who are near the capital are compelled to plant pepper and collect the produce. They appear anxious for an intercourse with Europeans: they are said to sacrifice human victims, like the Kyans. The Idaan, of different places, go under different denominations and have different languages, but in their manners and customs they seem to be nearly alike.

The name "Idaan" is, in some measure, peculiar to those of the north part of Borneo; the inland people of Passir are called Darat; those of Benjar, Biajoos, the Subano of Magindanao appear to be the same people; perhaps, where the aborigines, in the several islands of the Oriental Polynesia are not negroes, they are little different from the Idaan of Borneo. The Idaan are reckoned fairer than the inhabitants of the coast, this has given rise to an opinion, seemingly wholly unfounded, that they are the descendants of the Chinese; the custom obtains of arranging human skulls about the houses of the Idaan, as a mark of affluence.—*Journal of the Indian Archipelago, No. IV. Sepr.* 1849, *p.* 557.

IDA CHETTU, Tel. Citrus aurantium, L. a very small var. of orange, growing in all the hilly country of the Circars both cultivated and wild. Perhaps the original of the Citrus aurantium? C. variatro, *Heyne* 57; musk orange. Ch'hota Kichli Hind. Kiri kittali, Can.—*Fl. Andh.*

IDAIYAN, Tam. Cow-keeper.

IDANKAI, Tam. Left hand caste. See Edakai.

IDIGA, Karn. A caste who sells toddy, the fermented palm wine, &c. also employed as Palankin bearers.—*Wils.*

IDOL, Eng.

Salai..... ,,	Prattima... ..... ,,
Vikramu... ....Tel.	But.....Hind. Pers.

Idols are treated of in scripture in Isaiah xli. 24 ; Isaiah xlv. 1 ; Jeremiah x ; Cor. viii. 4.

The idols of the hindus are made of metal ; gold, silver, and copper and their alloys ; one of frequent use being that called "panchalaka" of gold, silver, copper, tin and lead : but stone, earth, cowdung and wood are often also employed, the red saunders wood and the woods of the Cupressus torulosa, Macrotomia euchroma and Melia azedarach. Many of the idols in India are monsters, many are mere shapeless masses of stone with a smearing of red lead or a log of wood without shape or form, or a stone from the river bed, others, like the bull "Nandi" or Basava, the vahan of Siva are beautifully formed models of that quadruped. The forms of the cobra serpent are usually well pourtrayed, also of the peacock in the Saiva temples. The horse is formed of wood, plated with silver and gilded ; occasionally well made figures of the elephant are to be seen. Every hindoo house has, at least, a picture ; many have idols and every man of the Vira Saiva or Jungum sect, of whom there are many millions in India, always wears the lingum in a silver or gold casket, suspended from his neck or tied round his arm. The lingum inside is a small stone cylinder imbedded in the Yoni. The ordinary lingum, of which there are millions in India, is a stone cylinder rising from the yoni, a stone platform marked with circular markings ; usually in front of it is a figure of the bull Nandi in stone. Ganapati or Ganesa with the head of an elephant and the body of a fat man is an idol frequently to be seen. As the god of wisdom he is worshipped at the beginning of every undertaking, by almost every hindu ; when a hindu boy or girl begins to read, they make a Ganesa in the form of a small cone of cowdung which they place on a purified spot, and ornament with flowers and naragam and red kunganoo, and offer a sacrifice by burning camphor and frankincense, also offering betelnuts and plantains, cocoanuts and jaggery, then bow reverentially and pray for the god's aid. The pyramidal figure is then kept for a time or thrown into the water.

In a temple the hindu idols are kept in the centre of the temple, called "sanadi." Daily the brahman servants anoint it with oil, cleanse it with sekaia, wash it with water, then with curds, milk, lime juice and honey, and cocoanut water. The dancing girls of the temple, the deva dasi, dance and sing to music morning and evening. Occasionally, on certain festivals, the idol is taken from the temple in a palanquin or on a car and made to perambulate the square of the streets.

A case was heard at the Calcutta Small Cause Court. An old lady sued for Rs. 500 as compensation for an idol which a man, whom she had adopted as her godson, had taken from her. The defendant was making Rs. 1,000 a year profit from the idol. The woman declared that she was out of her senses with grief. "I have no children. I want my bones back. I have been crying like this for five years. I am starving, and by crying I have become so thin." She was non-suited and referred to the High Court. On being removed from the Court, she tossed her arms in the air and cried out—"Let the world go on ; Let the world go on, as it is going on. Have reliance in God."

The Jain idols are usually naked figures of men and women, of gigantic proportions, often erect but in every attitude. The buddhist idol is usually Buddha or Gaudama, reclining, or sitting in the attitude of preaching. Some of the figures of Gaudama at the great Shooay dagon temple at Rangoon are of vast dimensions. See Avatar ; Bull ; Ganesa ; Hindu Images ; Lingam ; Siva ; Vishnu ; Yoni.

ID US ZOHA, Arab. Also called Bakrid, a mahomedan festival. See Bakrid : Eed.

IGHIR, Ar. Acorus calamus.—*Linn.*

IGNATIA AMARA.—*Linn.* Papeta, Hind.

IGNIS, Lat. Fire, see Agni.

IGRUSHKI, Rus. Toys.

IGUANA, the popular name for species of reptiles of the genus Varanus, family Varanidæ, order Sauria, of the section of scaled reptiles. Baron Cuvier classed them under his "Iguaniens," others have arranged them under the Agamidæ. Varanus flavescens. (*Gray,*) inhabits Bengal : V. dracæna, (*Linn.*) Bengal and Agra, and also V. nebulosus.—*Dum. et Bib.*

The Basilisk of the Eastern Archipelago is the Basaliscus amboiensis, (*Daudin,*) one of the Iguanidæ. Messrs. Dumeril and Bibron, in their 'Erpetologie' (1837), treat of these reptiles under the name of Lizards Iguaniens, or Sauriens Eunotes. In the catalogue of the specimens of Lizards in the British Museum, the Iguanidæ with the Agamidæ constitute the tribe Strobilosaura.

IGUANA, (Varanus Dumerilii,) attains a length of 7 feet, it frequents the neighbourhood of houses, to rob hen roosts. Species of the family Agamidæ, having pores on the inner surface of the thighs, are the Leiolepis reevesii (A. guttata of M. Cuvier) of Cochin-China, with white rays and spots on a bright blue ground. The Physignathes (A cocincinus) from the Malayan Peninsula is remarkable for its large size, uniform blue colour and is one of the very few species of saurian reptiles, which feed upon vegetable substances. Baron Cuvier assures us that it lives entirely upon fruits and nuts. A. calotes, of a bright blue colour with transverse white marks on the sides is found in the Molucca Islands. The Lophyres (A. giganteu,

Kuhl), with a crest of long elevated spines on the neck; and the Lyriocephalus (A. scutata) which has a similar elevated crest along the back, and the tail keelshaped. This latter species, in many respects a most singular reptile, inhabits Bengal, and lives upon fruits.—*Eng. Cyc. p.* 87.

IHRAM, Ar. The dress worn by mahomedan pilgrims at Mecca.

IJADI-GADDA, or Ijedi-Gadda. Tel. The Stemonia of *Lour*, also Roxburghia gloriosoides.—*Dryander. Roxb. ii.* 234.

IJAU, a feeder of the river Krian, in Malacca. See Semang.

IJJUL, Hind. Barringtonia acutangula. *Gaertn.*

IJU, Av. Also written Eju, the horse hair-like substance, which grows on the Gomuto tree, the Arenga saccharifera.—*Labill.* This substance is also called Gomuto; part of it is a stiff bristle but the bulk more resembles horse hair and it is largely made into cordage. See Gomuto, Arenga sacharifera.

IKAN, Malay. A fish, any fish; also a crab. The word is always prefixed to the specific name of the fish, as ikan bawal, the pomfret, tulor-ikan, fish-roe; sirip-ikan, fish-fins; sisek-ikan, fish scales.—*Cantor. Simmonds.*

IKAN DORI. A small dark-coloured fish, of about a pound weight. Great caution is necessary in handling it, because it is armed with poisonous spikes under the pectoral and dorsal fins, the wounds from which are extremely painful. It is not much esteemed.—*Mr. Earl, p.* 195.

IKAN MIMI, Jav. The King-Crab.

IKAN SALADU, and Ikan Surdudu; Malay. Arius Arius.—*Buch. Ham.*

IKAROON, Ar. Acorus calamus.—*Linn.*

IKH, Sans. Sugarcane.

IKKHOO, Beng. Sugar-cane, Saccharum cucullata.

IKL-BIR. Datisca cannabina.

IKRA, Rus. Caviare.

IKSHUGANDHA, Sans. Asteracantha longifolia. Nees.

IKSHURA, Hind. Asteracantha longifolia, Nees.

IKSHWA'CU. The first king in the Solar line, who, according to hindoo legends, reigned at the commencement of the Treatu yug. He was the son of the 7th Menu, or patriarch, the offspring of the sun. His posterity was called, in consequence, the dynasty of the solar princes, in the same manner as Buddha was reputed the head of the Lunar line. Modern commentators bring the time of his accession down to the year 1320 before Christ. A passage in the *Agni Poorana* indicates that the line of Soorya, of which Ikshwacu was the head, was the first colony which entered India from Central Asia. But the patriarch buddha was his contemporary, he being stated to have come from a distant region, and to have been married to Ella, the sister of Ikshwacu. Amongst the Arian hindus, the chaitrya was a warrior branch taking social rank after the hindu brahmins. Manu writing of their duties says "to defend the people, to give alms, to sacrifice, to read the Vedas, to shun the allurements of sexual gratification are in a few words the duties of a Chatriya. How this soldier branch broke up is extremely obscure, but it is generally supposed that none of the races now in India can trace their lineage to that tribe of Aryans though most of the Rajput families doubtless belong to them. Their quarrels amongst themselves seem to have led to their own destruction. There seem to have been two branches of the Chaitrya tribe, the Solar who traced up to Ikshwaku and the Lunar who traced up to Budha, who married Ila or Ella, daughter of Ikshwaku. These Chaitrya soldiers do not appear to have adopted brahminism readily, and the brahmins to overcome them consecrated by fire, on Mount Aboo, a warrior body who still remain, and are known as the four Agnicula rajput tribes. A common spelling of the word is Kshatriya.—*Warren's Kala Sankalita. Tod's Rajasthan, Vol. I. p.* 37. See Hindoo; Suryavansa.

IL, pronounced also Ilhat, or Iliat, a term applied to the migratory tribes of Persia. See Iliyat.

ILA, sister of Ikshwacu, of the solar race, she was married to Bud'ha of the lunar race, and these were the ancestors of the lunar line of kings. In hindu mythology, budd'ha son of Atri, son of Brahma, was husband of Ila, the earth, daughter of Spatembas. Buddha was Mercury, son of the moon. See Ella; Ikshwa'cu.

ILA or Ilita, mentioned in the Vedas as a goddess, may possibly be the same as the Babylonian goddess Ili or Bilat Ili, queen of gods

ILACHI, Hind. A generic term for several plants producing cardamom, viz.

Elletaria cardamomum, *Maton.* syn. of Amomum cardamomum.

Alpinia nutans.—*Roscoe.*

Ilachi-bari, Hind. or Ilachi-kalan, Amomum dealbatum or A. cardamomum.

Choti or Khurd ilachi, Elettaria cardamomum, the small cardamom.

Bari Ilachi is the large rough shelled variety.

ILAH, the name of an old Arabian deity and is more properly and more usually, applied to a pagan god, than to God supreme over all. Hence the mahomedan profession of faith says *La Ilah illa Allah, &c.* which in the ordinary translation of "there is no god but god," con-

veys no precise meaning and involves an obvious truism, which Mahomed would never have enunciated. From some passages in the early Indian historians it would appear that they supposed the famous *Somnat* to be the Arabian *Ilah* or *Ilat;* Notices of it occur in the Rouzut-oos-Sufa; Hubeeb-oos-Sair and Ferishta, the passage quoted from Fureed-ood-deen Attar. Sale's Koran, I. 23. 11. 390. Hyde de Rel: Vet: Pers: p. 130. Pococke. Spec: Hist: Arab: 4. 92. 110. Bird's Guzerat, p. 39. D'Herbelot, voce Lat. Al-Makkari Mahomedan Dynasties in Spain, I. 346, and Herod. III.—*Elliot.*

ILAHEE GUZ. Properly Ilahi gaz, HIND, is the standard Guz, or yard, of forty-one fingers, instituted by Akber. After much controversy respecting its length, it was authoritatively declared by Government to be 33 inches long; and the declaration has been attended with considerable convenience to revenue officers, as a Bugha measured by this yard constitutes exactly five-eighths of an acre.— *Elliot.*

ILA KURA, TEL. Salsola Indica, *Willd.* This is occasionally used as a vegetable and being naturally salt, has given rise to the Teling saying, "the carping husband (finding fault without cause) says to his wife, there is no salt in the Ila kura."

ILAM. Said to be the Tamil name of Ceylon and to signify gold, but gold in Tamil is Ponnu.

ILAM, (Elam, corrupt) auction sale.

ILAMBADI, TAM. Corruption of Lambady, the Banjara race so called in the south of India.

"ILA-PANANKI JANGU MAVU," TEL. A farina, obtained from this root by treating it the same as in manufacturing manioc. It is very nourishing.

ILETADI MARAVARA, MALEAL. Scindapsus pertusus.—*Schott.*

ILEX. A genus of plants of which Dr. Wight mentions I. Gardneriana and I. Wightiana. Mr Thwaites mentions, as growing in Ceylon, I. denticulata, a large, and I. Walkeri, a small tree. Mr. Hodgson, in his "Nagasaki" mentions eight species in Japan, viz. crenata, *Thbg.* microphylla, *Bl.* integra, *Thbg.* latifolia, *Thbg.* rotunda, *Thbg.* serrata, *Thbg.* aquifolium, L. var. heterophylla. See Evergreens.

ILEX DENTICULATA. WALLICH is a large tree growing in Ceylon, on the Bopatalawa plains at an elevation of 6,000 feet

ILEX DIPYRÆNA is common at Mussooree and everywhere in the Himalayas. It bears a very close resemblance to the holly, especially in November and December, when it is covered with clusters of scarlet berries.

ILEX JAPONICA, *Thunb.* Syn. of Ber-

ILEX SERRATA. A lofty species found in Mussooree, and I. excelsa in Nipal.—*Royle, Illust p.* 167. *O'Shaughnessy, page* 272.

ILEX WALKERI, *Wight. Gardn.* Is a small tree in the Central Province of Ceylon, growing at an elevation of 5,000 to 8,000 feet.

ILEX WIGHTIANA, *Wall.* Is a large umbrageous tree with small white flowers and red berries growing in the Neilgherries and in the southern and central parts of the island of Ceylon up to an elevation of 4,000 feet.—*Thw. Enum. pl. Zeyl. p.* 183.

ILI. MALEAL. Bambusa spinosa.

ILI, a valley and town in Central Asia, from which Lassen supposes the Szu Tartars were expelled by the Yue-tchi or White Huns B. C. 150. The Szu Tartars he supposes to be the Sacæ and the Yue-Tchi to be the Tochari. After occupying Tahia or Sogdiana for a time, they are stated by the Chinese to have been driven thence, also, by the Yengar, some years afterwards, and to have established themselves in Kipen, in which name Lassen recognises the Kophen valley in the Kohistan. The great Kirghis horde is adjacent to Ili and Tarbagatai. It is under the dominion of China and exchanges large quantities of cattle on the frontier for silk goods. See Kabul, p. 434.—*Kirghis.*

ILIPI, TAM. Bassia longifolia.

ILIYAT are the wandering, nomade tribes of Persia, who live in tents and have no settled habitation. They are mostly of Toork, Arab and Koord descent, and comprise a very large portion of the population of the country, though their actual numbers are not well known. They are mahomedans of the Sunni sect and herdsmen. They change their places of encampment with the season and climate, going in the summer to the Yeilauk or quarters where pasturage and water are to be found in abundance; and when the cold of winter sets in, adjourning to the kishlauk or warmer region, in which their flocks and herds, as well as themselves, are better sheltered. In each province of Persia, there are two chiefs acknowledged by all the tribes who roam in that province. In their conduct and morals, the Iliyat women are vastly superior to those of the towns and settlements. They are chaste and correct in their lives, and faithful to their husbands. Many of the best families in Persia are of Iliyat origin. The present royal family is of the Kajar tribe, a Turkish El, which came into Persia with Timur.

The Iliyat are by no means particular in their religious observances: and are not ruled or influenced by the moollah, as townsmen are. They are all, in a greater or less degree, professional robbers some tribes living solely by rapine and plunder; and others resorting, only

occasionally, to such means. They have large flocks and herds which they often augment by taking possession of their neighbours. The civilized population hold them in great dread on this account.

The Iliyat families tributary to Khiva were

Yamut	15,000	Kalpak	30,000
Goklan	20,000	Kazzak	40,000
Choodar said to have been brought from the further borders of the Oxus by Mahomed Rahim Khan.	2,000	Ikdar	15,000
		Sarokh	15,000
		Uzbek	40,000
			195,000

—*Frazer.*

The distances that some of these Iliyat tribes have to perform in their annual migrations are really wonderful.

From the southern shores of Fars, the Kashgoi arrive in spring, on the grazing grounds of Isfahan, where they are met by the wandering Bakhtiyari from their warm pastures of Arabistan, near the head of the Persian Gulf. At the approach of winter both the tribes return to their respective Garm Sair.—(*Baron C. A. D. Bode's Travels in Luristan and Arabistan, p.* 256. *Frazer.*)

In the tenth century, they are said to have comprised five hundred thousand families within the province of Pars alone. Although much inferior in numbers, many of the present Iliyat tribes are very considerable, and since the destruction of Rai and the decay of Ispahan, Shiraz, and all the other great cities throughout the empire, they constitute a principal source of population, and the best nursery of its soldiers. Some of their chiefs are men so powerful that the king attaches them to his court by honourable and lucrative employments, or detains them about his person as hostages for the loyalty and good conduct of their respective clans. We find them, as they were eight hundred years ago, unmixed with the Persians who inhabit cities; retaining their pastoral and erratic habits, and using among themselves a dialect different from the language of the country, which, however, most of them can speak and understand. They are an independent and hardy race, inclined to hospitality; Two or three families in little groups, preparing or enjoying their simple meal by the road-side; or proceeding on their journey, the wife carrying one child, two or three others packed in baskets on an ass, which the husband drives, before him, is a usual picture to be seen.

The name Iliyat, is the plural of Iel (Eel) a tribe, equivalent to the Arabic kabilah. Often on approaching an Iliyat encampment the stranger is met by the women of the tribe, who burn aromatic herbs in honor of the guest, and as a token that he is welcome to their hearth. Mr. Bickmer observed a similar practice among the Chaldeans in Kurdistan. This custom must be very ancient, for we find Ferdausi alluding to it in his description of the early heroic ages of Iran.

The usual drink of the Luristan Iliyat consists of buttermilk weakened with water; a little salt is added to it, and it is then called ab-i-dhung. It is generally sour. There is nothing so efficacious for the purpose of slacking thirst on a hot summer's day, as this ab-i-dhung.—*Baron C. A. De Bode's Travels in Luristan and Arabistan, Vol. II. p.* 220. *Ouseley's Travels, Vol. I. p.* 307. *Rich Narrative of a Residence in Kurdistan, &c. Vol.* 1, *chap. VI, p.* 101. *Frazer's Travels.* See Biluchi. Tajik.

IL-KHANI, of Fars is the chief of the Kashgoi tribe.

ILAHABAD, or Allahabad. Immediately before Akber's time, this place was known as Peag or Prag; by him it was denominated, Allahabas, which subsequently became Allahabad. The name is more correctly Ilhabad, or Ilahabad, but the usual practice of writing it is Allahabad. The article coalesces with the substantive in Allah, and represents the "Almighty."—*Elliot.*

ILLANUN. Pirates on the coast of Borneo. See Lanun. Boat.

ILAVANGA, Malbal. Cassia lignea.

ILLECEBRACEÆ. The knot grass tribe of plants, comprises 39 genera. In these 3 species are found in Arabia, 1 in Persia, 1 in China and in continental India, 17 forms have been discovered, viz.

1. Herniaria.	4. Polycarpea.
1. Hapalosia.	2. Drymaria.
1. Illecebrum.	8. Mollugo.

ILLECEBRUM LANATUM.—*Linn.* syn. of Ærua lanata, *Juss.* Achyranthes lanata. *Ainslie.*

ILLECEBRUM SESSILIS syn. of Alternanthera sessilis, *R. Brown.*

ILLECEBRUM VERTICILLATUM, Burm. syn. of Portulaca quadrifida.—*Roxb.*

ILLEPI YENNAI, Tam. Oil of Bassia longifolia.

ILICEACEÆ, the holly tribe of plants, are trees or shrubs, included in 14 genera. Nine species occur in Japan, 1 in China, 16 in continental India, and, with the exception of Monetia tetracantha which grows in the plains of India, all the forms of this order have been found in the Himalaya and Khassya mountains on the Neilgherries and the mountains about Penang, Moulmein and Singapore. The genera are Asterogyne; Ilex; Macoucoua; Monetia; Prinos. In China, says Mr. Williams, the order Ilicinæ, or holly, furnishes several genera of Rhamnea, whose fruit are often seen on tables. The Zizyphus produces the Chinese date, and the fleshy peduncles of the Hove-

nia are eaten, the latter is quite common in Hongkong. The leaves of the Rhamnus theezans are among the many plants collected by the poorer Chinese, as a substitute for the true tea. The Chinese olive is obtained from the Pimela, but it is a poor substitute for the rich olive of Syria.—*Williams' Middle Kingdom, p.* 283. *Voigt.*

ILLAR BILLAR, HIND. Cocculus leæba.

ILLICIUM, a genus of plants belonging to the order Winteraceæ of Lindley. The order contains four genera and twelve species, shrubs or small trees, one of them, the Illicium anisatum, grows in Japan and China ; one on the Khassya mountains and one in new Zealand. The general properties of the order are stimulant and aromatic.—*Voigt, p.* 13.

ILLICIUM ANISATUM.—*Linn.*

Badian-i-khutai.....AR. HIND. PERS.	Chinese anise.....ENG.
Badian..... ,,	Skimmi ....JAP.
Pa co-hu-huei-hiam CH.	Marati Moggu .....TAM.
Anas phal .. DUK.HIND.	Anasi pu..... .. ,,
Star anise.....ENG.	Marati mogga.....TEL.

The star anise tree is a native of the countries extending from 23½° to 35° of N. latitude, or from Canton to Japan. Thunberg relates (*Vol. III. p.* 227) that in Japan the Skimmi (*Illicium anisatum*) was every where considered a poisonous tree, and the Japanese would not believe that the same tree produced the real (*Anisum stellatum*) Starry Anise, which they annually buy of the Chinese. The designation Star is applied to the fruit from the manner in which they grow, the pods being in small clusters joined together at one end, and diverging in five rays. They are prized for the volatile oil obtained from them, and for their aromatic taste. The barks have a more aromatic flavor than the seeds, but they are not so sweet. In China, their most common use is to season sweet dishes: In Japan they are placed on the tombs of friends and presented as offerings in the temples. They are chiefly exported direct to India, England, and the north of Europe, at the average value of 8½ dollars per picul. In 1850, 695 piculs were exported from Canton valued at 8,200 Spanish dollars. In India they are much used in seasoning curries and flavouring native dishes, and large quantities are used in Europe in the preparation of liqueurs 3,000 piculs of anise are exported annually from Cambodia, and in 1841, 81 piculs of oil of aniseed, valued at 11,900 dollars, were exported from Canton. In preparing a spirit of anise, the Star Anise, may be used instead of common anise. The capsules constitute in India a rather important article of commerce, and are sold in all the bazars. Both capsules and seeds evolve a powerful odour of anise ; the taste is similar, very mild, sweet, and somewhat acidulous. The kernel of the seed is oily. The capsules and seeds abound in an essential oil, easily procured by distillation with water ; this oil is rather brown, lighter than water, more difficultly congealed than the true aniseed oil, but in other respects exactly of the same properties. The powdered capsules are used by the mahomedan practitioners as stimulant carminatives. For the colics of children the essential oil is given with advantage.—*O'Shaughnessy Dispensatory, page* 191. *Thunberg's Travels, Vol. III. p.* 227. *Morrison's Compendious Summary. Simmonds. Faulkner. O'Shaughnessy. Beng. Phar, p.* 412.

ILLICIUM FLORIDANUM. See Illicium.

ILLICIUM PARVIFLORUM. See Illicium

ILLICIUM RELIGIOSUM. Siebold, LINN. Holy Star Anise.

ILLIGEREÆ. See Gyrocarpus.

ILLINDA, TEL. Diospyros chloroxylon, *R.* ii. 533

ILLU KATTE, TEL. Ichnocarpus frutescens, *R Br.*

ILLUPA, TAM. Bassia latifolia, *Willd.*

ILLYRIAN, one of the great Asiatic European stock of languages, still well known. It is the Skippetarian or Albanian or Arnaut and is a distinct Indo European idiom.

ILOCO, one of the languages spoken in the island of Lucon. In the Philippines are many separate nations or tribes, speaking distinct languages unintelligible to each other. The principal tongues of Lucon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000 people, while the Bisaya has a wide currency, among the southern islands of the group, Leyte Zebu, Negros, and Panay, containing 1,200,000 people, Mr. Crawfurd says that it does not appear from a comparison of the phonetic character and grammatical structure of the Tagala, with those of Malay and Javanese that there is any ground for fancying them to be one and the same languages, or languages sprung from a common parent and only diversified by the effects of time and distance and that an examination of the Bisaya Dictionary gives different results. See India, p. 358.

ILUMBILLI MARAM, TAM. Ferreola buxifolia.

ILUPI MARAM, TAM. Bassia longifolia.

IMAGES. Those worshipped by the Hindus are made of various materials, gold, silver, and metals of inferior value, crystal, stone, wood, clay, dough, and compositions of different kinds. Some are of small size, and appropriated as household gods ; others are progressively larger, and used for temple worship, and others again are of colossal size, seventy, eighty or more feet in height. A lingum at Benares requires six men to encircle it. Some of the clay and composition images made in the vicinity of Calcutta for the annual festivals,

have a very splendid appearance and are of large dimensions and after the ceremonies are over are cast into the river. The modern manufacturers of the deities are artisans in gold, silver, and other metals, stone-cutters and potters. Some of the modern castes are handsome, but the modern sculptures are commonly contemptible. Some of the ancient hindu sculptures are magnificent; and in minute ornamental and floral decorations, almost unrivalled. In Burmah the images of Goudamah Buddah are made of wood, marble and the precious metals. In Siam, Japan, &c., images are made of the ornaments, precious metals, &c., collected from the ashes of the funeral pile of a deceased person; and others again from the pulverized fragments of the bones kneaded with water into a paste, baked, and afterwards gilded. Images of snakes are common. The idea of their medicinal virtues is very old in India: a hindu attacked by fever or other disease, makes a serpent of brass or clay, and performs certain cermonies to its honour, in furtherance of his recovery. Such ceremonies are particularly efficacious when the moon is in the nakshatra (mansion, sign, or asterism,) called Sarpa, or the Serpent; called also Ashlesha. Dhanwantara, is the Esculapius of the hindus, but has not an attendant serpent like his brother of Greece; the health bestowing Dhanwantara arose from the sea when churned for the beverage of immortality. He is generally represented as a venerable man with a book in his hand.—*Colem Myth. Hind., page* 383. *Moor, page* 342. See Idols; Hindus.

IMAM, a head of the mahomedans in religious matters. It is a sacred title and is, by the shiahs, given only to the immediate descendants of the prophet, who were twelve in number, their "barah-imam." The last of these, the imam Mehdy, is supposed by them to be concealed (not dead), and the title which belongs to him cannot, they conceive, be given to another. Among the sunni mahomedans, however, it is a dogma, that there must be always a *visible Imam*, or "father of the church." The title is given to the four learned doctors who are the founders of their faith. It was long maintained that the Imam must be descended from the Arabian tribe of Koreish: but the emperors of Constantinople (who are of a Tartar family) have assumed the sacred title, which they claim on the ground of the formal renunciation of it by Mahomed the twelfth, the last caliph of the race of Abbas, in favour of Selim the first. The acknowledgment of this title renders the emperor of Turkey the spiritual head of all orthodox mahomedans.

One sect of mahomedans believe that the imam Mehdi has come and gone; and they are the "Mehdavi" or as others call them the "Ghair Mehdavi" sect, *i. e.*, people without Mehdi. It is not known that the ruler at Muscat has ever laid claim to the title of imam, though Europeans invariably confer it on him. Imam is however said to be now adopted as a royal or dignatory title by several Arab and African sovereigns. The successors of Mahomed, continued to exercise their religious functions in proof that they enjoyed spiritual as well as temporal power, and took the title of "khalif;" but various Arab princes who dared not aspire to the title of Khalif, took that of Imam, to which they frequently added that of Amir ul-Mominin, or prince of the faithful, and, like the Khalifs, observed the precaution of changing their name when they ascended the throne. The custom seemed to typify that their whole nature underwent a change, on being invested with an office, to which a certain amount of sanctity was attached.

Of the Imams of the shiah sect, one was the Imam-Ali, cousin and son-in-law of Mahomed, for he married Fatimah, Mahomed's daughter; the two sons of Ali, the Imam Hoosain and Imam Hussain, neither of whom were successful leaders, though, since their deaths they have by some sects been deified and believed to be incarnate.

In every sunni mosque, at the appointed prayers, there is a leader of the devotions who is called the "Pesh-Imam," because he remains in front "Pesh" of the worshippers leading them in the successive parts of their worship.—*Pottinger's Travels, Beloochistan and Scinde, p.* 234. *Burton's Scinde, Vol. I. p.* 129. *Malcolm's Hist. of Persia, Vol. II. p.* 345. See Jews, Ali-Illahi; Khajah.

IMAM ALI, a town in the vicinity of the Shatt ul Arab, in the Ur of the Chaldees.

IMAM ALI,—Ali, the son-in-law of Mahomed.

IMAM BARI. A building over an imam or mahomedan saint, or other holy mahomedan. The Imam-Bari at Lucknow is a magnificent palace. Its most remarkable part is an immense hall, containing the tomb of Asof-ood Doulah, the great grandfather of the last king of Oudh. Mr. Rich mentions that a pine-apple spire rises over the tomb of Zobeidah, at Bagdad wife of Haroon al Raschid.—*Mundy's Sketches in India. Rich's Residence in Koordistan.*

IMAMI, HIND. A kind of Kabul silk.

IMAM MASHUDI, the religious guide of Akbar. His tomb is to the west of the Musjeed-i-Kootub-ul-Islam.—*Tr. Hind. V. II. p.* 201.

IMAM REZA. See Jews.

IMAM SHAFAI, one of the four commentators of the Koran. He founded the Shafia school.

IMAMZADAH means the descendants of tn Imam, but, it is said, generally applied in Persia, as the mausoleums built over the bodies of such descendants, which are to be found scattered in great abundance all over the country.—*Fraser's Journey into Khorasan, p.* 303.

IMAN, Sp.

IMAR, Hind: Carpinus viminea.

IMARJAL, Hind. Iris pseudocorus.

IMAUS, a name by which part of the Himalaya was known to the Greeks and Romans. Pliny was fully aware of the signification of the name for he says (Hist. Nat. VI. 117) "Imaus in colarum lingua, nivorum significans." The great part of the mountains N. West from India was also called the Paropamisus or Hindoo Cush; and Imaus and Hindoo Cush seem to have been identical. The true Imaus, however, is the ridge which separates Kashmir from Little Tibet. It appears to incline in its northern course towards the continuation of the Hindoo Koh and even to join it. The term Hindoo Koh or Hindoo Kosh is not applied to this ridge in its whole extent, but seems confined to that part of it which forms the N. W. boundary of Kabul, and this is the Indian Caucasus of Alexander. There is however much confusion in the Tibetan, Chinese, and Persian names of that great mountain mass. See India, p. 337, Kabul 436, Kashmir ; Koh ; Kouenlung.

IMBIR, Hind. Ulmus campestris.

IMBO, Javan. Azadirachta indica.

IMBOOLGAS, Singh. Eriodendron anfractuosum, D. C.

IMLA, Hind. The Amni of the Salt Range, Zizyphus vulgaris, or common jujube ; also Pers. the Emblic myrobolan.

IMLI, Hind. Tamarindus indica, the tamarind fruit ; Imli-ka-binj, the seed.

IMLI KHORASANI, Hind. Adansonia digitata.

IMLOO BAGH. See Sanatoria.

IMMOLATION, a man will rip up his own belly with a razor in order to spite two opponents. The Satti was a voluntary immolation of a widow on the death of her husband. See Burning, Burial, Hindoo, Sati.

IMPATIENS. A genus of plants of the order Balsaminaceæ belonging to the East Indies found in the mountains of Silhet, Nepal, Kemaon, Cashmere, Kunawar and the Peninsula. Single species extend into Europe, Siberia, and North America. Linnæus was only acquainted with 7 or 8 species ; but not less than 100 species are now known, and almost entirely from the mountains of the Peninsula of India or the Himalayas ; in those from Silhet as far north as the Sutlej, and in 30° N. lat., as great elevations as 7,000 feet, the species are chiefly found at elevations of 4,000 and 4,500 feet, in a region where there is moisture combined with a moderate but equal temperature. They are absent from the plains of India ; but some are found on the Malabar Coast, little elevated above the sea, but only during the monsoon great success has been attained in the cultivation of Balsams.

They are largely cultivated in Indian gardens as handsome flowering plants. The double flowered are most prized. The colours are rose, pink, white, blue, and variegated. When the true colour of the plant from seed can be depended upon, if sown in large beds, or patches, they have a pretty effect in full blossom. The Balsams are propagated by seed at the commencement of the rains, in small beds, and then transplanted. After the first blossoms are off they may be cut down, and will throw out fresh shoots, but will not blossom so fine as the first. A rich light loamy soil, with old decayed stable manure is the best. No plant should ever be closer than one foot, especially if the soil is rich and all lower superfluous leaves and stalks removed from the stems. They thrive well in pots, and during the time they are in blossom look very ornamental placed amongst evergreens. In the middle of the rains, the whole line of the western ghats is covered with them. The ripe capsules, on being touched, fly open and scatter their seeds, whence they get the name of "Noli me tangere." The following species may be enumerated.

albida	jerdoniæ	scabrida
bracteata	kleinii	scapiflora
campanulata	latifolia	setacea
cuspidata	leschenaultii	sylvestris
dasysperma	modesta	trilobata
fasciculata	munronii	tomentosa
filiformis	mysorensis	tripetala
fomentosia	ornata	triphylla
fruticosa	oppositifolia	umbellata
gardneriana	rheedii	uncinata
goughii	rivalis	verticillata
inconspicua	romarinifolia	viscida
insignis	rufescens	

—*Voigt. Wight. Ic. Royle Ill. Himalayan Bot. p.* 150. *Eng. Cyc. Vol. III. page* 225. *Dr. Wight in M. L. S. Journal.*

IMPERATA CYLINDRICA. Thatch grass. Saccharum cylindricum, and Saccharum spontaneum. The Karens in Amherst Province cover their houses with the tall grasses which are so abundant on the coast, and a few Europeans prefer this thatch to that made from the Nipa. Two different species of grass are used for this purpose both of which were formerly referred to the genus which produces sugar cane. The sugar grass seen in Moulmain, which flowers two or three feet high has been removed since Roxburgh wrote, into the genus Imperata. This is

one of the grasses used for thatch, and is often mistaken for Saccharum spontaneum.—*Mason.*

IMPERATA KONIGII. Alang alang, MALAY, also Lalang, MALAY.

IMPEYAN PHEASANT; Lophophorus Impeyanus : the Monal, Hind. Nil. in Ladak.

IMPHI, the Chinese sugar-cane, Sorghum saccharatum has been grown in India, since time immemorial, but was not known to Europeans in India, until reintroduced in 1860.

IMPPIO, a river of the Punjab ; its sands yield gold. See Punjab.

IMPURE CARBONATE OF SODA. See Barilla Soda.

IMPURE CARBONATE of ZINC. ENG. Calamine, ENG. FR.

IMRTAN. See Afghan. Kaffir.

INACCESSIBLE ISLAND, a name of the island of Fatsizo.

INACHUS SCORPIO. See Egeria.

INAKARTO PATI, king of Janggolo of the 14th century, invented the Kris.

INAM. In mahomedan countries, it is customary to call inam grants to religious orders "grants of land," although they include only the rents thereof ; for there is no seizin of the land itself, which is the proprietary right of the cultivator only. In the tamba-patra, copper-plate patent (by which such grants are designated in Rajputana) of Yasovarma, the Pramara prince of Oojein, seven hundred years ago, he commands the crown tenants of the two villages assigned to the temple "to pay all dues as they arise, money-rent, first share of produce." In India where the cultivating proprietor has always paid a feu-duty to the State, the grant of an Inam is like the grant of a jaghire merely the transfer of the State dues. According to practice, a jaghire is a reward for past or a retaining fee for future services, or a means of support and is resumable at pleasure. The Inam for religious purpose has been a more permanent alienation, but even the Madras Government about the middle of the nineteenth century re-examined all the Inam grants, and up to a late date, decisions had been given on 102,735 cases. The total number of titles confirmed was 80,395, of which 9,630 were in respect of religious and charitable grants of a permanent character ; 43,826 personal grants enfranchised at the option of the Inamdars ; 25,295 personal grants enfranchised compulsorily ; and 1,644 personal grants not enfranchised and confirmed on present tenures. The total number of title deeds issued was 45,320. The total amount of quit-rent then payable to Government in addition to former jodi was Rs. 1,31,462. The amount paid in redemption of the quit-rent Rs. 7,740-8-0. Combined quit-rent annually payable to Government for the future upon personal Inams confirmed to the holders Rs. 2,32,380-4-0, which is about one-fourth of their full assessment—Rupees 9,47,142-8-0. *Tod's Rajasthan, Vol. I. p.* 552.—*Transactions of the Royal Asiatic Society, Vol. I. p.* 223.

INAN, MALAY. Boehmeria nivea. China-grass.

INDARJAO-I-SHERIN, HIND. Wrightia antidysenterica.

INDERJAO-I-TALQ, PERS. HIND. Wrightia antidysenterica also W. pubescens.

INDARUMI. ? DUK. Dragon's blood.

INDERABIA, of some English navigators, is also written in different charts, Andervia, Anderipe, Indervea, Dr. Vincent, (Nearch, p. 375) thinks it the Caicandrus of Arrian, but a corresponding name is not found in oriental manuscripts.—*Ouseley's Travels, Vol. I. p.* 174.

INDIA. The British nation usually give the name of India to their own possessions in the south and east of the Asiatic continent. But the vast acquisitions of Holland and Spain, and the smaller territories of Portugal and France, are equally regarded by the respective nations as in the Indies, and a description of India, therefore, needs to embrace the entire regions in south-eastern Asia through which Europeans and oriental races hold sway and which are usually termed the East Indies. A considerable portion of the countries to which this name is applied by the people of Europe, is under the rule, direct or indirect, of Great Britain, and it is perhaps, on this account that India is so frequently spoken of as British India, and the British Empire in India, as also Her Majesty's Eastern Empire in India. But British India, Netherland India, Spanish India, Portuguese and French India, are but portions of tropical Asia, and where the old term East Indies is employed, it may be taken to embrace all the states lying intermediate between Arabia and Persia on the west and the Indian Archipelago in the East, the northern boundary being the great snowy range separating India from Tibet. The term Hindustan, so familiar to European ears, is not applicable either to British India or to the countries embraced within the term East

Indies, being only the central part of the British Indian territory.

It has been recently remarked by Mr. Logan that the great divisions of Asia are the North, Mid, and South, the first comprising all the river basins that discharge their waters into the North Sea, and also the N. E. Peninsula (the Indijirka basin and the other countries beyond it to the E. being termed N. E. Asia); the second embracing Central Asia with the western basins that have outlets into the Caspian, Black Sea and Mediterranean and the eastern basins from the sea of Okhotsk to the Gulf of Leatung; the third embracing all the remainder of Asia from the Leatung Gulf to the Red Sea,—the countries to the W. of the Indus being designated S. W. Asia and the term S. E. Asia, being applied to the countries between China and India.

The ancients termed the last of these India beyond the Ganges. Leyden included it and the Indian Archipelago under the name of the Hindu-Chinese countries. Malte Brun calls it Chin-India. Ritter, the greatest of geographers, prefers the German name Hinter Indies. And instead of further India, Transgangetic India, the Eastern Peninsula of India, &c., the single words Ultraindia and Transindia, have been proposed by Mr. Logan, as they admit of the ethnic and adjective forms of Ultraindian or Transindian.

Mr. Logan is of opinion that the Indian influence has been considerable to the S. E., and he thinks that the whole Indian region consisting of the continental portions bisected by the Bay of Bengal, and the eastern islands as far as Indian influence reached directly, may be comprised under the three names of India, Ultraindia or Transindia, and Indonesia. The earlier and wider connection of Ultraindia with China being best indicated by embracing both under the term S. E. Asia.

The configuration of British India has been described as resembling closer than any other the form of a trapezium. And if, on this figure, a diameter be drawn from the mouths of the Indus to those of the Brahmaputra, two irregular triangles will be formed, each of which contains a region with marked characters of its own as to geological formation, profile of surface, climate and races of inhabitants. The northern of these triangles, whose apex approaches Ladak, is a country emphatically of plains, and in India it bears the name of Hindustan which it received from its Moghul invaders, its ancient denomination amongst Hindu geographers being Aria-varta, *i. e.* the land of the Arians, also, it is said, Jambudwipa, the country of the rose-apples. The southern triangle is usually termed the Peninsula of India, but is known in northern India as the Dekhan, or Deccan, from the Sanscrit and Persian Dekhan,—itself again derived from the Sanskrit Dakshan. Lassen derives this from Dakshina or "the right," being the country on the right hand of a hindu when saluting the rising sun; hence we have Dakshan, south, and Dakshanapatha the land to the south, which agrees with the Δαχινβαδησ of Arrian. In the Peninsula, itself, however, the term Dekhan is only applied to that portion lying between the rivers Nerbudda and Kistna, and that too, solely by mahomedans and Europeans. The terms eastern and western Peninsulas, also, have been frequently used of late to distinguish those of India and Malacca.

This portion of the globe has great ranges of lofty mountains, several navigable rivers, and a vast ocean on its south and east studded with the innumerable islands of its Archipelagos. All of these have exercised so continuous an influence on the peopling of the country,—from Africa, from Arabia, from Persia, from Tartary and from Central Asia, that a notice of the physical features is needed to explain the positions in which its occupants are now found.

Almost from the first occasion that the British assumed the character of a ruling power in India, each year has brought some change in their political relations, with some acquisition to their empire there. From the close of the Punjab war until 1863, about 12,000 square miles with six millions of people were added: and, since then, Tanjore and the Carnatic have been escheated, but, at present, British India stretches from Singapore near the equator to Peshawar in latitude 34° north, a distance of 2,700 miles, and from west of the Indus in 67° East to longitude 105° east. The political boundary thus briefly indicated is also the natural limits of a region, which has the Himalaya mountains on the north, and which is girdled by the Bay of Bengal and the Indian Ocean on the south: which has the Indus with the mountain and desert tracts of Baluchistan and Afghanistan on the west; and on the east the kingdoms of China, Burmah and Siam, from both of which it is separated by forests, and mountains extending from Assam to the southern extremity of the Malay Peninsula.

Chains of military posts have been drawn by the British over the length and breadth of this great portion of the earth, at various altitudes, from the level of the sea to heights of many thousand feet; their cantonments are linked together on the shores of the ocean, amidst pimeval forests, on arid deserts and along the fertile valleys of the great rivers; the extensive plains and table-lands of the interior are studded over with great fortresses, and links in the chain of posts are thrown 8,000 feet high over the mountain ranges of the Dekhan, and

along the southern slopes of the Himalaya, whose highest summits, clothed with eternal snows, rise to the altitude of 28,000 feet above the level of the sea.

There are posts in these territories where rain is unknown, or where only a few showers fall at long intervals, while in other cantonments the British soldiers have to live for many months of the year in a hot humid atmosphere, which soon relaxes the frame and blanches the cheek of the strongest. There are large camps in places where, in some seasons, both European and Native soldiers are struck dead, even at night, by the excessive heat: while in places more distant, their soldiers have perished amidst winter snows. Where such extremes exist, the physical aspect of the country must necessarily present the most varied features and include every variety of climate.

Nearly the whole of these regions have been elevated into table-lands varying in altitude from 1,200 to 4,500 feet, and all that can be termed lowland country are the valleys of the Indus, Ganges, Brahmaputra and Irawady and a belt of low level land lying between the mountains and the sea, extending from Guzerat along the whole of the Malabar coast southwards to Cape Camorin, thence northwards along the Coromandel Coast to the delta of the Ganges, and to be traced southwards at intervals through Chittagong, the province of Arracan, and, skirting the Malay Peninsula to Singapore.

This belt of lowland is frequently termed the low country, but the portions of it in the Carnatic and in Canara are called, respectively, the Eastern and Western coasts. It varies there in breadth from twenty to fifty miles, between the mountains and the sea-shore; but, following the windings of the coast from Guzerat with interruptions to Singapore, it is more than 4,500 miles long. The portion of this lowland in the Carnatic is drier than the rest, but the great part of it has a mean elevation of only one hundred feet above the sea; it has many inlets from the ocean, marine lagoons, popularly known as back-waters, and it is traversed by many rivers which overflow their banks during the rains and render the surrounding country a swamp for many months in the year, parts of it in Guzerat, Orissa, Arracan and the Delta of the Ganges being little above the high-water mark.

All within and to the north of this level belt is known as the "Interior" or "Up-country" and consists of the elevated table-lands alluded to: thus, the table-land of Rajputanah has an elevation of from 1,300 to 2,200 feet; those of Central India and the provinces of Malwa have an altitude of from 2,000 to 3,000 feet; that of Allahabad about 700 feet; that of Berar 1,000 to 1,500; of Aurungabad 1,700 to 2,400; of Hyderabad in the Deccan 1,500 to 1,800; of the Balaghat Ceded Districts and the Province of Bejapoor, 500 to 2,500; and the table-land of Mysore attains an elevation of from 2,200 to 3,200 feet, to the S. W. of which the western ghauts terminate in the plateau of the Neilgherries, which is about 7,000 feet above the level of the sea, although some points, as Dodabet, attain a higher elevation. From Mysore, however, the land declines gradually towards the south and east in the direction of Ceylon, the intermediate province of Coimbatore not rising higher than 1,200 or 1,400 feet, though the Shevaroy, the Pulney and the Animullay hills rise prominently from the plains, and, like the Neilgherry mountains, are occupied by tribes to whom the people of the low country are strangers. The highest of all the inhabited tracts, however, are among the southern slopes of the Himalaya; there, the mountains are inhabited up to the snow line, the population being abundant in the province of Kumaon at an elevation of from 2,500 to 4,000 feet, as well as at Simlah at an altitude of 8,000 feet, and people reside also at an elevation of 10,000 feet in Sikkim and Bhutan; the Sewalik range has an altitude of 2,500, to 3,000, feet; the highest measured crest of the Himalaya proper being more than 28,000 feet above the sea.

Seasons.—In British India there are only three well marked seasons, the cold, the hot and the rainy. The cold season of the year corresponds with that of all northern latitudes, and lasts from the middle of December to the middle or end of February, and although it is only in the North-west or on the Neilgherry hills in the south, and, occasionally, on the table-lands of Central India that the thermometer sinks below the freezing point, the dry keen winds, which then blow over the plains and elevated tracts, cause a sensation of great cold. It is in this season that the thermometer has the greatest daily range, varying from 19° to 39°.

The hot season commences in March. By the month of May the heat is intense every where but on the mountains. The rivers dry up and the earth is scorched and fissured by the great heat: the country seems a desert; all nature is hushed; it is the stillness of the winter of the poles. This is succeeded by a few sultry days in June, the forerunner of the rains of the S. W. monsoon; in June and July, this monsoon has carried the rains to almost every part of India, reaching the different provinces according to their proximity to the southern oceans, or to the direction given by the mountains to the winds. The face of the country then becomes green with its natural vegetation and

Dhawalgiri 28,077 feet.

thecrops of the cultivators, the rivers are all full and the low-lands all flooded, particularly in Bengal, where, in several places, the ryots go to their fields on rafts, and vessels are often navigated over submerged villages which the inhabitants have temporarily abandoned. This monsoon is ushered in with great electric changes, and prevails till the end of September, when it disappears with thunder and lightning as it came; the occurrence of these electric phenomena marking the breaking up of the monsoon. The fall of rain, while this monsoon lasts, varies from 12 to 250 inches, in the different provinces, but it is distributed to a greater or less extent over almost all India, the only part deprived of it being the Carnatic, where, so far north as the Ongole, only slight showers fall in July, possibly owing to the winds of the S. W. monsoon being deflected by the barrier of mountains on the western coast; the hot weather, consequently, continues in the Carnatic from April until November, when the winds change to the N. E. and bring the rains of the N. E. monsoon across the Bay of Bengal.

The N. E. monsoon rains, however, only last for six weeks or two months; it does not extend so far inland as that from the S. W. and at places in the peninsula of India within a hundred miles of the Eastern ghats it is marked only by the occurrence of heavy showers. At Madras, on the Coromandel Coast, the annual fall of rain is about 50 inches.

Earthquakes.—Shocks of earthquakes are frequently felt in several parts of India, particularly about Ongole. In other places there have been about twenty shocks observed between the years 1840 and 1870; they are sufficiently severe but, from their short duration, injury has rarely resulted. The latest severe shocks occurred in Cutch in 1819, when the walls of Boojh were thrown down, after it had been taken by escalade by Sir W. Keir's army. More lately, while the force under Sir Robert Sale was defending Jellalabad, the newly constructed walls were thrown down by an earthquake and still more recently much injury resulted from the same cause in parts of British Burmah. Hot springs also occur in many places, on the table-lands, and in the low country.

In the Bengal Presidency, the general inclination of the land is towards the South, but the local inclinations are towards the valleys of the rivers. In the provinces of the Peninsula of India, south of the Nerbudda river, the western parts are the most elevated above the sea, the inclination being towards the eastern coast and slightly towards the south.

Mountains.—The mountains of India, without being strictly speaking, parallel, have principally two directions, viz. easterly and westerly and from North to South. Thus, the Himalaya Mountains the Vindhya, the Rajamahal Hills and the Satpoora range, have a direction from east to west,—but the Hala Mountains in Beluchistan, the Suliman Mountains west of the Indus, the Aravalli which separate Rajputanah from Central India, the Eastern ghauts, and the Western ghauts or Syhadri range, as well as the mountains in Arracan, Burmah, Siam, and Malacca all run from north to south. These mountains, many of them covered with impenetrable forests and from 3,000 to 28,000 feet high, form great physical barriers, separating countries of a different aspect, and nations of different race and origin, whose appearance, religion, language and manners are widely dissimilar. Down to the present hour, these barriers continue to direct the route alike of armies and of immigrants; and roads and railroads are only now in progress or in contemplation to overcome them. One of these roads was commenced in 1850 along the Sutlej valley, with the view of connecting Hindustan with Tibet. Other routes have been cleared through parts of the northern Himalaya; a road to the north-east, through the Brahmaputra valley has been often spoken of, and a railroad has been contemplated from British Burmah to the great river of China, to facilitate communication between the people of India and the races of Central and Eastern Asia.

Navigable rivers.—Only a few of the rivers of British India, the Ganges, the Irawady, the Moulmein river, the Brahmaputra and the Indus have ever been used in modern war. The Ganges has formed the basis of nearly all the operations in the North of India, one of its tributaries the Jumna being navigable for 1,000 miles as far as Delhi, *i. e.* within 200 miles of where it issues from the Himalaya Mountains amongst which it rises. The course of the Ganges is to the South-East through the plains of the Bengal Presidency into the Bay of Bengal. The Irawady is navigable for 500 miles as far north as Ava. It rises in latitude 28° North, and after a southerly course of 800 miles it enters the Bay of Bengal in latitude 16° North. The Brahmaputra is navigable into Assam for 500 miles, and has commercial steamers constantly running on it. The river Indus, which rises on the plateau north of the Himalaya, after penetrating the mountains in longitude 72° East and latitude 33° North, runs to the South receiving the waters of the Punjab as its tributaries, and, traversing the countries of Sind in a low valley, empties itself into the Indian Ocean, in latitude 23° North and longitude 67° and 68° East, after a course of 1,500 miles. A little fleet of commercial steam boats are now running on its waters; but it had, at first, a flotilla of war steamers and war boats

guarding the western frontier of British India and in all the military operations since 1834, in Affghanistan and Sind the Indus has been of great value as a means of communication. During the war of 1845-1846 in the Punjab, a bridge of roads was carried up the river as far as Bhawulpur and thence dispatched up the Gharra to Ferozpur, and another branch of the river, the Chenab, was in the last war navigated up to Mooltan.

There is a peculiarity in the river system of British India which merits notice. It is that shortly after issuing from the mountains among which they rise, the rivers run through low-lying valleys to the sea. Their fall is so gentle that, following their windings for even 1,000 miles from the ocean, the rivers of India are still found running in beds, only seven or eight hundred feet above the level of the sea, thereby affording great facilities for damming up their waters, and for making long reaches fit for navigation. This peculiarity is the more worthy of notice, because, throughout these territories, there are no natural inland lakes or seas deserving of note; none, certainly, which could be used for purposes of commerce, and most of them only fit for purposes of irrigation, the largest natural waters in the country are equalled, and, in many cases, surpassed by the magnificent lakes which have been formed in several places by throwing embankments across great valleys. The many shallow salt-water lagoons known as back-waters, found running close around the shores of the Bay of Bengal and of the Indian Ocean, some of them from twenty to fifty miles long,—are however well worthy of notice, as they afford great facilities for a safe traffic along the coast line, the violence of the monsoons and the few sheltered harbours on the eastern coast of the Peninsula, rendering navigation perilous at all times and often impossible.

Except the Nerbudda and Godavery, unless great engineering skill be applied to them, there are no other of the rivers of Southern India likely to prove navigable or available for military operations, but the shores of the two Peninsulas are washed by the Indian Ocean and the Bay of Bengal, and present a line of coast about 4,500 miles in length. The valleys of its great rivers and its enclosing seas have been the chief routes followed by the various emigrants into India, Ultra-India and the Archipelago.

Geology.—The investigations of Dr. Hugh Falconer have shown that, at a period geologically recent, the present peninsula of India, was a triangular island, bounded on each side by the eastern and western ghats, converging to Cape Comorin; the base of the triangle was formed by the Vindhya mountain range, from which an irregular spur, forming the Aravalli mountains, extended northwards: while between the northern shore of this island and a hilly country which is now the Himalaya mountains ran a narrow ocean strait. The bed of this strait became covered with debris from the adjacent Himalaya on its northern shore, and with this debris became entombed and preserved many and various animal remains. The present condition of the country has been produced by an upheaval of the land so that what was the ocean strait, forms now the plains of India,—the long nearly level valleys in which flow the Ganges and the Indus. Besides this, a great upheavement along the line of the Himalaya has elevated a narrow belt of the plains into the Sewalik Hills (determined to be of tertiary age) and added many thousand feet to the height of the Himalaya and facts tend to the conclusion that India had one long term and one protracted fauna which lived through a period corresponding to several terms of the tertiary period of Europe.

The series of sedimentary rocks in Central India, between Hazareebagh and Palemow on the east and Jubbulpore on the west and thence southwards to Nagpore and Chandah, has in the east five well marked subdivisions, the Talchir, Barakur, Ironstone shales, Ranigunj and the Panchet, but at a short distance to the west, there are only a threefold series, the Talchir, Barakur and the Panchet. All these successive beds (possibly with the exception of the Talchir) representing an enormous lapse of time, agree in one respect that they seem to be purely fresh-water (fluviatile or fluvio-lacustrine) or estuarine deposits. The Damoodah, the Barakur, the Adjai and the More rivers seem at an early period to have formed one general estuary. The basins of the Sone, of the Nerbuddah, of the Mahanuddy and of the Godavery, in all of which extensive deposits have been found, seem as yet not to have been connected. Further south, in the basins of the Kistna river and its affluents, the Gutpurbah, Malpurbah and Beemah, the country is occupied by the quartzites, slates, limestones, &c. which cover the larger portion of the districts of Cuddapah and Kurnool, westwards through the Raichore Doab by Gogi, Gulburgah, to Kulladghee and Belgaum and which appear to represent the older portion of the great Vindhyan series. Rocks of the same mineral character appear under the great flows of the Dekhan trap, and resting quite unconformably on the gneiss rocks in parts of the Raichore Doab and in the vicinity of Belgaum, and under parts of the ghats on the western coast, and that they belong to the same general series as the rocks in Cuddapah and Kurnool, there is no doubt.

Further south to the west of Pondicherry, at Ootatoor, are extensive beds of limestone, con-

taining numerous fossil remains, ammonites, &c. and still further south in the Tinnevelly district are extensive beds of marble.

Granite and sienite seem the chief uplifting rocks of India, and they burst through upraised sand-stone, clay slate, mica slate, chlorite slate, and limestones. This feature of granite and sienite disturbing stratified rocks can be traced at intervals from near Ceylon northwards through the table-lands of the interior; in Mysore, in the Ceded Districts, Hyderabad, Berar and across the Nerbudda into Central India, where the granite for a time disappears. Trap is visible however, in the bed of the Jumna near Allahabad, in latitude 25° north; but in the ascent to Mussoorie by Kuerkoolee, the granite reappears and makes a great eruption at the Chur Mountain—above 12,500 feet high—on the southern slopes of the Himalaya. Near Gungotree, at the source of the Ganges, is however described as the grand granitic axis of the Himalaya, and one of the greatest and most magnificent outburst of granite in the world. It traverses these mountains in numerous veins—westwards towards the Barenda pass, and eastwards towards Kamet, Nandadevi and Nandakot,—upraising the metamorphic schists which form the highest peaks of the snowy range.

Lower down on the southern slopes of these mountains at an elevation of from 8,000 to 1,500 feet, uplifted stratified rocks, consisting of hornblende rock and slate, limestone, sandstone, great beds of quartz, clay, mica, chlorite, and talc, slates, rest on the gneiss and granite; and lower still at altitudes of 3,000 to 2,500 feet above the level of the sea, gravel, boulders, marl with coal, recent clays and sand-stone form the Sewalik, or sub-Himalayan mountains. It is in these hills that extensive fossil remains were discovered, and the low alluvial tract known as the Terai, is the valley formed by the junction of the Sewalik with the Himalayan inclined rocks.

To the south of this, the highest parts of Central India occur along the Aravalli mountains and the Vindhya range, and are from 2,000 to 3,000 feet in altitude. There are, here, three inclinations, one declivity from the Aravalli mountains towards the valley of the Indus, a second from the Vindhya range northwards to the Ganges, and the third running southwards to the Nerbudda. Granite is here, also, the upraising rock; it bursts out at Oudeypore, Kaunore, Banswarrah, and Rajpore, through the gneiss, and mica, and chlorite slates, limestone and sandstone. It was to the east of this central tract that the first great deposit of coal was found lining both banks of the Damoodah, though it has, since then, been discovered in several other provinces of British India. It is in Central India, also, that the volcanic rocks to any extent are first observed as they spread east and west from Neemuch in the form of basalt, basaltic greenstone, greenstone and greenstone amygdaloid, and southwards by Oujein and Saugor across the Vindhya, assuming a columnar structure in their steep descent to the Nerbudda. The trap crosses this river meeting with sandstone and fossils in the Satpura ranges, and spreads over all western Berar and the Aurungabad province; assumes a columnar form at Gawilgurh and Chikaldah, occupies Candeish and the Conean to Bombay, and passes southwards to Malwan in latitude 16° north; its southern limits being south of Punderpoor, on the right bank of the Kistna. In the valleys near Hoomnabad, south and west of Beder, it is seen between and beneath, but never penetrating the laterite hills, and is noticed at Maharajahpettah, 30 miles west of Hyderabad. The eastern edge of this vast tract of volcanic rocks, after crossing the Nerbudda to the south, skirts the town of Nagpore in Berar, passes Nandeir, and to the west of Hyderabad to its southern limit, just mentioned. It is the greatest flow of trap-rock observed in any part of the world. South of this, as well as to the eastward, the trap only appears as great dykes, from fifty to a hundred yards broad. These dykes can be traced at places, for a hundred and fifty miles, bursting through the granite and other rocks, tearing the highest of the hills asunder and filling the chasms and crevices with their dark and compact substance. In these provinces, the elements of the trap-rock, assume in the dykes a variety of lithologic appearances, greenstone, and porphyritic greenstone; and, in the great volcanic district, basaltic greenstone, hornblende rock, basalt, and amygdaloid, with cornelian, heliotrope, prase, chrysoprase, agates and onyx. The dykes are particularly numerous near Hyderabad, but they occur in the Balaghaut Ceded Districts in the Carnatic and Mysore almost to the southern Cape of the Peninsula, and with very rare exceptions they run due east and west.

The central outburst of granitic rocks in the peninsula can be traced from north of the Godavery, in latitude 19° north, through Hyderabad the Ceded Districts and Mysore to Ceylon, these rocks and the greenstone form the prominent parts of the Dekhan, clay slate, mica, chlorite and hornblende schists, sandstones and limestones with fossils of a post oolite age being the stratified rocks through which they burst. The greenstone is supposed by some observers to decompose into a deep black earth, light when dry, and cracked and rent by the sun in the hot season, but forming a tough, deep, tenacious soil in the rains, ren-

dering marching almost, if not wholly impracticable. It is called "regur" in the Dekhan, and is the "cotton soil" of Europeans, by many of whom it is regarded as indicating an unhealthy locality. It is very fertile. The granite rocks, on the other hand, decompose into a red sandy soil, which is generally hard, and as it allows a rapid percolation of water and quickly dries, it is less fertile, but is considered more favourable to health. It may be doubted, however, if there be any facts to prove that the one soil is more favourable to health than the other, but a somewhat lengthened outline has been given of the physical features of India, as facility of access to its several districts, their fertility and salubrity, have regulated the advance and settlement of the emigrant population. Also opinions have been held that particular series of rocks afford signs by which the salubrity or insalubrity of a district can be determined, but the occupation of the country seems to have been tested by trial, for, in several places, on which the forest has encroached, or around which the country now lies waste, are architectural and agricultural remains of an advanced civilisation.

Population.—At present, the inhabitants of India are very unequally distributed. The native states of India, have 80 to the square mile, while the countries under British controul have 170, British Burmah has 26 to the square mile, Coorg 49, the Central Provinces 79, and Bombay and Sind 99, while the N. W. Provinces have 361, and Oudh 474. In the Bengal presidency, the number varies from 134 souls to the square mile in Cooch Behar, to 629 in Burdwan. In this respect India is still as described by the Honorable Mountstuart Elphinstone who mentions that "in one very extensive district of Bengal, Burdwan proper, it was ascertained to be 600 souls to the square mile, while, in some desert and forest tracts, ten to the square mile might be an exaggeration."

Along these densely crowded tracts, cultivation is diligently pursued. In some places they gather three crops, in others two, and in others one crop in a year, according to the elevation of the district, the nature of the soil and the abundance of water; nearly half of the population is engaged in agricultural pursuits, but many villagers, in their leisure hours, weave cotton articles, and make coarse fabrics from the hair and wool of their goats and sheep; in one or two places, great uninhabited deserts exist, and in several districts there are extensive forests, the few passes by which they are traversed being very unhealthy for three parts of the year, and these forests and deserts have therefore formed, like the mountains, great physical barriers.

Ancient India.—The origin of this name of India is obscure. Asia seems to have been so called from the great Asi race of Central Asia, whose name of Asi is said by Remusat to have been applied by the Chinese almost promiscuously to the nations between the Jaxartes and Oxus, as far south as Samarkand: and in one of his quotations it is applied to people of Khojand, and in another to people of Bokhara. Masudi mentions that at the time of the mahomedan conquest the country about Basrah was called Arz-ul-Hind, "The Land of India."—(*Prairies d'Or. IV.* 225 quoted in *Yulè Cathay, I. p.* 243.

India is supposed to have obtained its name from the Indus, the Sin, Sinda or Hinda or Hapta Hinda, the Abu-sin of the Arabs, the first great river met in the routes from Europe and from Western and Central Asia. It is true that so far back as the reign of Darius Hystaspes, B. C. 521, the early writers placed Indians on both sides of the Indus and made India extend westward to Kandahar (Gandhara), embracing perhaps the fourteen Iranian provinces or nations, enumerated on the Nakhshi-Rustum as lying between Sogdiana and the Punjab and subject to Darius. But eastward of the Indus, the country was always India. This name seems to have been chiefly used in the south of Asia for it first occurs in the Bible, in the book of Esther (I, 1; VIII, 9) as the limit of the territories of the king Ahaseurus in the East, as Ethiopia was on the west and the names are similarly connected by Herodotus (VII, 9). The term "Hoddu" used by the Hebrews is an abbreviation of Honadu which is identical with the names of the river Indus, for to the present day all along the course of that river the letters s and h are interchanged, and, in the Venudidad, the Panjab is described as the "Hapta-Hindu" and the other native form "Sindus" is noticed by Pliny (VI, 23). The India of the book of Esther is not the peninsula of Hindustan, but the country surrounding the Indus—the Punjab, and perhaps Sind—the India which Herodotus describes (III. 98) as forming part of the Persian empire under Darius, and the India which at a latter period was conquered by Alexander the Great. The name occurs in the inscriptions of Persepolis and Nakhsh-i-Rustam but not in those of Behistun.

In more recent times, the term has been applied by the nations of Europe to the localities which they have occupied or with which they have traded. With the Portuguese the northern part of Hindustan held by the Moghul sovereigns, was styled Mogor, and Goa and the western coast of the Peninsula was to them India just as the British now designate all their possessions and as with the Dutch, now, India

means Java, Sumatra, and the Netherland possessions in the Archipelago. Also most of the traffic with India seems to have been by way of the Persian Gulf and the Red Sea. The Tyrians established depots on the shores of the Persian Gulf, and the course of trade being through the land of the Cushdi the races in India came to be included under the ethnological title of Cush, (Gen. X. 6), and hence the Persian, Chaldean and Arabic versions frequently render that term by India.—(Is. XI. ii; XVIII. 1; Jer. XIII. 23.—*Yule, Cathay II. p.* 549. *Rawlinson Herod. II.* 485. *Smith's Dictionary of the Bible, Vol. I. p.* 867.)

Over the early history of British India, much obscurity rests; for, it is generally recognised that prior to Alexander's time and for long periods subsequent thereto, there are doubts as to the correctness of the Indian accounts of kings and localities. It is, however, certain that several conquerors, in ancient times approached the present western boundaries of British India without absolutely invading it. The conquests of the Herculus Belus of Cicero, who is supposed to be the Osiris that invaded India, extended only up to the Indus. It was undoubtedly approached by Semiramis, B. C. 1230, but the warrior-queen was driven back across the Indus with great loss, retreating into Bactria with only a third of her army. This great Assyrian queen, however, extended her conquests into central Asia, until they even embraced Bactria or Bactriana, which is now represented by the modern Balkh. Another name is also mentioned in connection with Indian history, that of Ogyges, supposed to be Oghuz Khan the Scythian, whose historian, Abul Ghazi, relates that after establishing the religion of Japhet in his own dominions and in those of Tibet, Tanjat, Kitay, and other states immediately adjoining, he conquered Irak, Babylon, Azerbijan, and Armenia, and subsequently took Kashmir after a year's resistance. Darius, the Persian conqueror of Babylon, spread his rule over Bactria, which is enumerated as one of his provinces in the extraordinary inscription which he caused to be carved on the rock of Behistun. Alexander afterwards overran this same country, and penetrated from it into the valley of the Indus, which he merely crossed. But in the days of the decline of Syrian power, Bactria was erected into an independent state by Theodotus I. in 256 B. C. and he extended his dominion over parts of India which the arms of Darius and Alexander had not reached; and it is this monarch's descendants who are designated as a Syro-Bactrian dynasty. Numerous relics of his successors have been found near Peshawar, Jellalabad, and in places near Cabul, in the shape of coins.

Arians.—The great inroad, however, was of a people who have continued up to the present time to exert a great influence on the country. It was an immigration on the borders of historic times, of part of the great Arian race. Much connected with this people remains in obscurity, for they were pre-eminently a non-recording race. But Chevalier Bunsen supposes that they reached the land of the five rivers some time between 4000 B. C. and to 3000 B. C. but, as regards the length of the period from their immigration into the country of the Indus down to their advance to the land of the Sarasvati, he remarks, that we have no standard whatever, from our present point of view, by which to estimate it. All that he considers (p. 564, vol. iii) we can say regarding them is, that peculiar habits of life were contracted in the land of the five rivers, and that, out of the religion there instituted, allusions to which are found in the oldest Vedic hymns, the brahminical system, with a new mythology and the introduction of castes, gradually grew up on the eastern side of the Sutlej.

That author is, however, of opinion that the period of the passage of the Sutlej and immigration towards the Sarasvati occurred from B. C. 3300 to B. C. 3200. And that, at this stage of their progress, a schism occurred amongst them, in which the party who continued in the five rivers retained the worship of Agni only, and rejected Indra, while brahminism predominated in the other section which advanced towards the land of the Sarasvati, the modern India. Whilst they dwelt in the country of the five rivers, from B. C. 4000 to B. C. 3000 little change in their habits and belief seems, in his opinion, to have occurred. But about B. C. 3100 or 3000 their power on the Indus appears to have been broken, in consequence of some war with one of the surrounding kingdoms, and from the latter date, India east of the Sutlej up to the extent of the Arian conquests adopted brahminism. From that time, the religious views, forms and habits of Bactria were for ever abandoned by these Arian immigrants, and between B. C. 3000 to B. C. 1900 they extended their brahminical religion from the Sarasvati to the Doab.

This race called the portion which came under their own rule, by the name of Aria-vartha. But by the western nations, India, east of the Indus, was always India, and was never called Aria by any writer. Before the arrival of the Arians or Sanscrit speaking colony of Brahmins, and Kshattriyas and Vaisyas, the greater part of northern India was peopled by rude tribes,

described by the Sanscrit writers as M'hlecha, Dasya, Nishada, &c., and it is the received opinion that many of those prior occupants were of Scythian, or, at least, of non-Arian origin. But at a much later period, and when the Arians were in full occupation of the country from the Indus to the Ganges and into Bengal, all to the south of the Vindhya mountains continued to be occupied by Turanian races. An immigration into Ceylon of a colony of Arians from Magadha took place about B. C. 550 (B. C. 543), and Wajeya, the leader of the Ceylon expedition, is said in the Mahawanso, to have married the daughter of the king of Pandu. But now, seemingly, there is no Arian colony in any part of the south of the peninsula of India, individual members of that race alone appearing scattered amongst the nations occupying it.

There is nothing in history to show, nor is there in the physical appearance of the races to the east of the Ganges and of the Bay of Bengal, anything to warrant the belief, that these Arian immigrants ever advanced, in masses, beyond their present locality in the northern parts of India north of the Vindhya range. But from the period of their immigration up to Alexander's passage of the Panjab rivers there is much obscurity. Indeed Mr. Elphinstone (i. 19) considers that, until Alexander's conquests, the dates of events are all uncertain, and again, from that time till the mahomedan invasion, he thinks that a connected history of this country cannot be given. It is known that, from the khalifat, an expedition approached the confines of India by the route of Beluchistan, and that the Bactrian dynasty, for nearly a hundred years, held a considerable portion of the Indus country, but the chief inroads were those of the Scythian mahomedans, Affghans, Moghuls and Persians, with Mahmud, Timur, Baber, Nadir and Ahmed Shah as leaders between the tenth and eighteenth centuries; since then the Portuguese, French and English, have at intervals, invaded and ruled portions of India.

It is scarcely three hundred years since the British appeared in these countries. They had been trafficking along the sea-board for some time prior to the grant, by queen Elizabeth, of a charter to a company of merchants, who, under various re-grants, up to 1833, continued to trade with India, while they were also waging wars with and acquiring dominions from its previous rulers. Amongst the earliest of their possessions was the Island of Bombay, which Charles II. received as a dower with his Portuguese bride. The British power did not, however, rise to its present magnitude over the ruins of ancient kingdoms, or by dispossessing dynasties that had long held sway. But the fortunes of war set aside a few families whose power was almost ephemeral, and whom the British succeeded in the rule over the various peoples scattered throughout the country. And, short as has been the period of the British dominion, at no period within historic times, have so many portions of India been so long under one rule.

British India, in 1868, contained an area of 980,908 square miles, with a population of 164,671,621, or 170 to the square mile. But, within the boundaries of British India, are the territories of 153 Asiatic sovereigns, feudatories of the British Indian Empire, ruling over an area of 596,790 square miles, and a population of 480,000,000 or 80 to the square mile. The total of British India, feudatory and non-feudatory, is 1,577,698 square miles with a population of 212,671, 621.

The peoples, nations and races composing this number are various and difficult to describe, and not the less so because ethnologists have not as yet adopted one generally recognized classification of the deviating peculiarities which mark the family of man.

The ethnic relations of the inhabitants of the East Indies have, however, engaged the attention of the most eminent of the learned of Europe. Of those who have dwelt in India, and who have brought a personal knowledge of the people to aid their researches, may be mentioned the names of Marsden, Wilson, Earl, Hodgson, Mason, Crawfurd, Logan, Dalton, Bowring, Campbell and Caldwell, the last the most recent writer and perhaps the best acquainted with the Tamulian, or, as he designates them, the Dravidian stock. The learned of Europe who have discussed the origin of the nations of the East Indies, have done so in connection with their researches into the entire human race. The most recent authorities are, Latham, Prichard, Max Muller, Crawfurd and Bunsen, whose writings in the Reports of the British Association it will be observed are frequently quoted as authority for the views here advanced.

It is perhaps not very creditable to the present dominant races in the East, that so limited a number of their writers have taken up the subject of the ethnic grouping of the nations over which they rule. But a peculiar feature of these Indian races is the class, tribe and race separations to which they adhere, and independently of there being no class amongst the rulers possessing the leisure to devote their attention exclusively to the subject, the very multitude of the seeming nationalities is a bar to the completion of a general view. It is admitted that during all ages, either as immigrants or as conquerors, the races from the north and west have been entering India. How

little these have amalgamated may be judged of by mentioning, that out of 1,030 villages lying here and there between the Jumna and Sutlej and which were under British management in 1844, there were found to be 41 different tribes of agriculturists, of whom may be mentioned

Jat	443	Brahmin	28	Doghur	28
Rajput	194	Khetri	6	Kulall	5
Gujur	109	Raien or		Gossaeen	3
Syed	17	Araien	47	Bairagi	2
Sheikh	25	Kumbo	19	Miscellaneous	46
Pathan	8	Malee	12		
Mughl	5	Ror	33	Total.....1,030	

And as a character of the great revolt and rebellion of 1857 and 1858, it was observed that certain classes of villages attacked and destroyed other classes :—the powerful hand of a regular government being temporarily removed, the ancient antipathies of race at once came into play. Dwelling amongst each other, door to door, but yet never mixing, most of the races remain as distinct as when ten, fifteen, twenty, thirty, forty and fifty centuries before, they came to the south, neither eating together nor intermarrying. It is this separating system which has kept the stocks of Arian and Turanian races of India pure. On the slightest suspicion as to descent all social intercourse ceases, and the descendants, in different lines, from the same recognised ancestor form new castes. In this way, almost every family of a few hundred years' duration is now separate. The cause of the origin of this exclusive propensity is unknown, further than that the system of caste and the forms of brahminic worship commenced amongst the East Arians after their passage of the Sutlej, and now every Arian and most Turanian households in India are guided by its rules. This separation into castes or sections seems, however, primarily to have been a race distinction. It has, now, however, as regards the East Arians and others who follow the brahminical teachings, and even as regards the Turanian races a bearing quite irrespective of race or faith or creed. In explanation of this, it may be mentioned that the countries comprising British India are essentially hindu, by which is merely meant that the bulk of the agricultural and commercial classes—perhaps 86 per cent.—are neither buddhists nor mahomedans, but are followers of some form or other of the brahminical teachings and reverencing their teachers.

On the western boundary are nations, races and tribes following mahomedanism, but its marches on the north and on the east, run with the Kashmir, Jamu, Lahul, Spiti, Tibet the Chinese Nepal, Sikkim, Bhootan, Burmah and Siam frontiers and beyond Singapore lie Cambodia and Cochin-China, all of them essentially buddhist in faith.

In the southern part of India, however, the mass of the people have never been wholly converted to the brahminical faith, and everywhere throughout the peninsula are considerable numbers who continue to worship the earth deities, their favourite being the goddess Ammen, whose ordinary temple is a rude stone or a pyramid of earth or of brick and mortar. Of all the worshippers according to the brahminical teachings, however, one-half may be saiva, the other half vaishnava sectarians ; each sect may be seen worshipping at the same shrine, and, at the great temples, all hindu castes will partake of the prăsădh, food offered to the idols : but such minglings beget no communion in their social life, and every family of a different origin remains apart. The diversity thus created may be further illustrated by the following census of the races, classes, castes and sects in the Cowle Bazaar and Bruce Pettah of Bellary, as taken about the year 1844.

Castes and sects.			Total. Houses.	Total. People.
Brahmin...			203	1140
Cheyatrie...			18	96
Rajpoot, (Natives of Rajputanah, of any caste)			70	261
Bard or Bhatraj, they claim to be Cheyatries, whose occupation is to proclaim the titles of kings and be their eulogists			6	23
Vesya or Comatteewanloo claim to bepure Vesya occupied as traders and other peaceful avocations.			204	983
Parsee or Guzerattee, Parsee Fire Worshippers...			4	16
Jain sect, often greatly persecuted by the brahmins.			3	14
Sudra who are Village authorities	a.	Packinattee, ...	49	225
	b.	Moottattee, ...	2	11
	c.	Vellanattee, ...	30	144
These are styled Reddy in Tamil and Teloogoo, or by the Mahratta term of Potail. They collect the Government rents. They claim to be the true owners of portions of the land in Southern India.				
Husbandmen of the Sudra caste.	a.	Peraccoonty Capooloo...	10	47
	b.	Goongeddy, do. ...	1	4
Laneeka wanloo, a caste of Sudras			6	24
Cudeywaklee wanloo. The women of this caste dress their hair in a bunch on the right side of their heads			27	95
Vira saiva. Lingaet sects.	a.	Linga balgee wanloo. This sect wear the Lingum, the emblem of Siva, in a silver casket on their breasts, suspended from their necks.	20	64
	b.	Jaloroo Balgee wanloo wear the lingum on their right arm.	14	79
Jangam sects.	a.	Jungum wanloo worshippers of one lingum.....	86	348
	b.	Punchabanjeeka do. worshippers of five lingums ...	187	1160
Shopmen	a.	Wanaganakaloo	3	10
	b.	Curraganika wanloo ...	5	22
	c.	Punchunganigaloo	8	36
These three dealers or shopkeepers a. b. c. are called, in common parlance by the Hindi word "Teli" or oilmen. They are petty traders or shopmen.				

Worshippers of Siva.	a. Chippegeree or Nagaleka balgee wanloo worshippers of Siva, in the form of a cobra.	58	280
	b. Siva Chippaga wanloo, worshippers of Siva	3	21
Gumpe Cumloo or Kamawaroo. This caste permit no strangers to enter their houses; they are husbandmen.		20	66
Hindoo Hawkers...Yailm wanloo.....		392	1768
These people follow any occupation not involving manual labor, writers, painters.			
Pure Sudra of unmixed Caste.	a. Teloogoo balgee wanloo	430	1757
	b. Chetty balgee wanloo.....	59	462
These Sudra consider themselves to be the unmixed original race as it sprung from its creator.			
Shepherds, Milkmen, Wool Shearers, Cowherds, Cowkeepers.	a. Oree golla wanloo ...	148	651
	b. Coraba golla wanloo..	223	965
	c. Hundee Coraba do.	92	296
Divisions of the Shepherd or cowkeeper races, who intermarry. There are several other sections of this people. Golla is the Greek Gala milk.			
Goldsmith.	a. Comsalla wanloo.....	53	204
Carpenter.	b. Wodla wanloo.....	18	79
Blacksmith.	c. Comala wanloo.....	12	49
Brazier.	d. Consagara do, ...	6	16
Stonecutter.	e. Sungtrasha do.	1	6
Five artizan trades divisions of the same religious sect, all of whom intermarry and the men wear the zonar or sacred thread, called in Teloogoo "Junjum."			
Mendicant Priests ..Dewanagee wanloo ...		14	50
These mendicants accept of charity only from one or other of the five artizans above named, goldsmith, blacksmith, brazier, carpenter and stonecutter.			
Binjara Migratory Grain and Salt Merchants.	a. Buljara wanloo...	38	195
	b. Corbana wanloo.	1	2
Weavers, divisions of the weaver caste.	a. Pursala wanloo	37	173
	b. Sumsala wanloo... ..	9	38
	c. Puttanasala wanloo..	17	85
	d. Sala... ... do.	32	144
Dancing Girls...Bogum wanloo...		9	55
Devotees of the Vaisya caste. They belong to the Rhumba and Oor Vussee sections.			
Common Women... ...Kubera wanloo... ...		76	352
Potters ... ...Komera wanloo... ...		27	95
Washermen... ... ...Sakela wanloo.		137	541
Barbers... ... ...Mungala wanloo... ...		89	386
Salt-makers	a. Upera wanloo... ...	30	152
Quarrymen : Masons.	b. Wadi wanloo	50	209
These people are employed in digging tanks, making salt, and in road making.			
Arrack Sellers... ... ...Adega wanloo... ...		30	136
Oil makers ... ...Ganola wanloo		40	165
Basket and bamboo mat makers... ... Maydhera wanloo		5	24
Dyers ... ...Rungaraj wanloo.....		88	545
Saddlers... ... ...Zeengar wanloo... ...		22	117
Shoemakers ... ...Moochee wanloo... ...		25	126
Basket Weavers and Coorchee wanloo		67	250
This race also make house mats of palm leaves			
Watchmen, Village Watchmen...Matraj wanloo.		3	8
Oor Boya wanloo Mercenary Soldiery very devoted in their duties. They generally serve Native Rajahs, &c. and very rarely enter the British army.		236	990
Mess Servants... ... ...Mess Maty...		6	27
Paria... ... ...Malla wanloo		515	2188
The Dher people of India, of Turanian origin, worshippers of Ammen, scarcely of brahminical faith.		340	1510
Madega wanloo workers in raw skins, known as the Chamar or Chuckler.			
Butchers... ... ...Lar Kassai wanloo.		82	448
Religious Mendicants, &c.	Satana wanloo.....	82	448
	Jherra wanloo.....	11	44
	Dhasray wanloo...	6	22

These three mendicant sections are religious devotees and mendicants. The Satana keep a god "Permaloo," the image of an incarnation of Vishnu in their houses and worship it daily. They perambulate the streets morning and evening and accept alms from all but the lowest castes. They often demand alms threatening otherwise to burn themselves with a lamp or torch. The Dhasray play on the "Jangata" "Tartee" and Sincoo and hold an iron worshipping lamp in their hands. They walk before the corpse when carried to the funeral pile.

Byragi ascetic mendicants ..Bairagooloo.....	1	4
Gosaen..... ... ...Gossi wanloo.....	1	2
Arava	16	99
Christians (Native Christians.....	155	676
Pindaree ....Baidera wanloo...	6	22

These Pindarees are here mahomedans, who keep numerous little horses which they use for carriage. They are great carriers, and of importance in military cantonments and during military operations.

Jain or Buddhists merchants...Marwaree wanloo.....	2	19
Europeans.....Dora wanloo... ...	19	99
Mahomedans..... ... ...Ain Turka wanloo.	1433	7060
Beef butchers..... .....Gai Kussai wanloo.	14	65
Cotton cleaners.....Pinjari wanloo ...	21	103
Scavengers..... ... ...Hulal Khor..... ...	7	41

All of these, again, have numerous subdivisions, all keeping more or less apart, and in illustration of this feature of Indian society the more recent separatist conditions of a Turanian, and of an Arian or Indo-Scythic race may be briefly noticed.

The Lingaet, or Jangama sect, noticed in the above census, are also called Lingadhara, Lingawant and Linghamat. In common with the Jangama they are "vira saiva hindus, whose sole object of worship is the lingam, a model of which they carry on their arms, enclosed in a gold or silver box, or suspended in caskets of silver around their necks. They are sectarian saivavi, and they do not in their creed recognise castes nor acknowledge brahmans. The customs and belief of this sect were fully described by Mr. C. P. Brown in the Madras Literary Journal. They are very numerous amongst the Canarese speaking people from Salem through Mysore northwards to Panderpoor on the Kistnah, and further north towards Kalliani fort, where the sect was originated in the thirteenth century by a brahmin named Basava. But further north, even in the Oomraoti district of East Berar, there were, in 1869, 7,670 of this sect. Their avocations are almost solely those of civil life, in agriculturists and shop-keepers. They are rigid in external ceremonial, but they have loose ideas in morals, probably resulting from what Wilson states as their belief in the inferiority of women and from their licentious habits they are often before the criminal courts. The great bulk of them are such rigid vegetarians, they will not even bring any living creature to a flesh-eater. Their dislike to brahmins is such that they use every means to prevent their settle-

ment in their villages ; but, though by their creed they should abstain from caste distinctions they are the most exclusive of all the religionists in India, the followers of every different trade or avocation refuse to eat together or intermarry, the Jangam alone adhering to their law. They have made differences in their avocations equivalent to the caste or race distinctions.

The Jains alluded to in that census are the people usually called Marwari. They are a mercantile body and bankers, who conduct, almost exclusively, the entire banking business of India. Their name is erroneously supposed to be derived from the Malwah or Marwar territory, and almost all of them are of the Jain religion. Colonel Tod tells us that they are of Rajpoot origin, one of them, the Oswal is the richest and most numerous of the eighty-four mercantile tribes of India, and is said to amount to one hundred thousand families. They are called 'Oswal" from their first settlement, the town of Ossi. They are all of pure rajpoot birth of no single tribe, but chiefly Pura, Solanki and Bhatti. All profess the Jain tenets, and the pontiffs of that faith must be selected from the youth of Ossi. These great bankers and merchants are scattered throughout India, but are all known under one denomination, Marwari, which is erroneously supposed to apply to the Jodpoor territory, whereas, in fact, it means belonging to Maroo, the desert. It is singular he adds (Rajasthan ii. 234) that the wealth of India should centre in this region of comparative sterility. The Marwari is essentially following similar mercantile pursuits to the vaisya Komati of the Peninsula of India, viz. that of banker, and merchant, to which, however, the Komati add that of retail shopkeeping. If a Marwari engaged in business in the Peninsula, be asked as to his caste, he replies, that he is a Mahajan, a Bania, a Bais, or Vais, meaning that his profession is of that section of the people. But on further question, he explains that originally the Marwari was a rajpoot ; that there are twelve great tribes, of whom are the Oswal, Messar, Agarwala, Saraogi Meddat-war, Parwar, Bijabargi, and five others. These all subdivide into innumerable "kap" or clans ; in the Messar tribe alone, are 72, amongst whom are the Rathi and Dhaga. All the Marwari adhere to the "gotra" principle, taking their descent from a founder, and in their marriage ceremonies they abstain from the blood relationship never marrying in their own gotra. Their widows never re-marry.

It is to this peculiar separatist feature that Mr. Hodgson alludes, when he remarks that no question of Indian ethnology is insulated, for if we begin, even with the humblest tribe, we find that we are dealing with a portion of some great mass of the human race. Thus, he adds, " we cannot take up the investigation of a seemingly narrow topic like that of the Kuki, the Chepang, or the Gond tribes, without finding ourselves engaged in unravelling some intricate, but important, chapter of the history of one of those large masses of human kind the Indo-Chinese, the Tibetans, or the Tamulians."

It is now generally recognised that a great part of the inhabitants of British India, in the Peninsula and Hindustan, are of the Turanian, Mongolian or Scythic race, and are regarded by Europeans as the earlier occupants of the country. They are styled by Mr. Hodgson the Tamulian races and Dr. Caldwell classes the speech they use, under the term Dravidian. All these designations are framed to distinguish them from the Arian race (Iranian, Indo-Atlantic or Caucasian) who, under the British, are to be found in all posts of honour from the snowy mountains in the north to the southern-most point of the Peninsula of India ; in whom, too, the characteristics of a haughty pride and a bold, independent, even arrogant, bearing towards all other races, are displayed no less prominently than amongst their kindred of Indo-Germanic origin,—" fierce, ruthless and beautiful,"—who streamed westerly into Europe from the south and south east of the Caspian sea, during the same ages before the Christian era, that the eastern Arians were moving on India along the valley of the Indus. We here see kindred, long and wide apart, who set out four or five thousand years ago for conquest and dominion, meet, far from their primitive seat ; and meet, too, as dominant races, each in their own way powerful and each striving for greater power. Humboldt (Colonel Sabine's translation of Cosmos, Vol. II. p. 40), calls these the East Arians or the Brahminic Indians, to distinguish them from the West Arians, or Persians, who migrated into the northern country of the Zend, and were originally disposed to combine with the dualistic belief in Ormuzd and Ahrimanes a spiritualized veneration of nature.

These races have received various names, originating perhaps in the retention of old vague designations, as well as those known as Turanian, Tamulian, Dravidian and Scythic, all of them general terms. Dr. Mason, for instance, tells us (p. 36) that Scythia, was the name given by the Greeks to the country occupied by Tartar races, and according to Johannes Tzetze the Byzantian, it included the Asbasgæ, Alan, Sakæ, Dakæ, Rhos, Sauromatæ and every nation dwelling by the blasts of Boreas. At the present day Tartar, Tatar, or Tahtah, is a term applied to the Manchu of China, who are called a Tartar dynasty : the Bhot of the Himalayan frontier of Tibet are

also called Tartars, as also are the Turk of Khoten and Yarkand or Little Bokhara, and the Tartars ruling China are Manchurian Tangus.

Many of the Scythic tribes have entered India, mostly as conquerors, the Gete, the Takshac, the Asi, Katti, Rajpali, Hun, and Kamari. They seem to have brought with them a worship, out of which ultimately was formed the buddhist religion as promulgated by Sakya Muni. These Indo-Scythic tribes also brought with them their northern custom of using tribal designations, taken from the names of animals, Varaha, the hog, Numri or Lumri the fox, Takshac, the snake, Langaha, the wolf, Cutchwha the tortoise, Aswa or Asi the horse, Seesodya from Seesoo the hare, &c. and several of them still hold large possessions in the Western parts of Central India and in Beluchistan. Some of them even carried their names into Europe. Asi was the term by which the Gete, Yeut or Jut were known, when they invaded Scandinavia and founded Yeutland or Jutland. The Asi nomades took Bactria from the Greeks, and Mr. Prinsep considers them to be Scythians of Azes, who overpowered the Greek dynasties in Sogdiana and northern Bactria, between 140 and 130 B. C.—(*Rajasthan, Vol. I. p.* 61; *II.* 233; quoting the *Edda.*)

Mr. Hodgson, writing on the northern races, remarks that the great Scythic stem of the human race is divided into three primary branches, the Tungus, the Mongol, and the Turk. The first investigators of this subject urgently insisted on the radical diversity of these three races: but the most recent inquirers are more inclined to unitise them. Certainly, he adds, there is a strong and obvious character of physical (if not also of lingual) sameness throughout the Scythic race: and it is remarkable that this peculiar character belongs also to all the aborigines of India, who may be at once known, from the Cauvery to the alpine Cosi and Bhagarati by their quasi-scythic physiognomy, so decidedly opposed to the caucasian countenance of the Arians of India. Mr. Hodgson also suggests that there will be found among the aborigines of India a like lingual sameness, and that consequently very extended and very accurate investigation will alone suffice to test the real nature and import of the double sameness, physical and lingual. That all the aborigines of India are Northmen of the Scythic stem, seemed to him decidedly and justly inferrible from their physical characteristics. But, inasmuch as that prodigious stem is everywhere found beyond the whole Northern and Eastern boundary of India, not merely from Attok to the Brahmaputra, where these rivers cut through the Himalaya, but also from that point of the latter river all the way to the sea; and inasmuch as there are familiar ghats or passes over the Himalaya throughout its course along the entire confines of India from Kashmir to the Brahmakund, he thinks it follows of necessity that very careful and ample investigation will alone enable us to decide upon the question of the unity or diversity of the aborigines of India, in other words to decide upon the questions, whether they owe their confessed Scythic physiognomy to the Tungus, the Mongol or the Turk branch of the Tartars or Scythians, and whether they immigrated from beyond the Himalaya "the hive of all nations" at one period and at one point, or at several periods and at as many points. Between Gilgit and Chittagong there are 100 passes over the Himalaya and its south-eastern continuation to the Bengal Bay; while for the time of passage, there are ages upon ages before the dawn of legend and of chronicle.

Mr. Hodgson inclines to the opinion that the aborigines of the sub-Himalaya, as far east as the Dhansri of Assam, belong to the Tibetan stock, and east of that river to the Chinese stock—except the Garo and other tribes occupying that portion of the hills lying between Assam and Sylhet; and that the aborigines of the Tarai and forest skirting the entire sub-Himalaya, inclusive of the greater part of the marginal circuit of the Assam valley, belong, like those last mentioned, to the Tamulian stock of aborigines of the plains of India generally. But what he asks is this Tamulian stock? what the Tibetan stock? and what the Chinese? and to which of the three grand and well known branches of the Scythic tree (Tungus, Mongol, Turk) do the Tamulians, the Tibetans and the Chinese belong? Of the aborigines of Central India, of several of whose languages lists have been obtained; the affinities of these tongues are very striking; so much so that five of them may be safely denominated dialects of the great Kol language: and through the Uraon speech we trace without difficulty the further connection of the language of the Kol with that of the "hill men" of the Rajmahal and Bhagalpur ranges. Nor are there wanting, he believes, obvious links between the several tongues above enumerated—all which may be classed under the head Kol—and that of the Gond of the Vindhya whose speech again has been shown by Mr. Elliot to have much resemblance both in vocables and structure to the cultivated tongues of the Deccan.

Mr. Hodgson's hypothesis, in his essay on the Koch, Bodo and Dhimal, is that all the Tamulians of India have a common fountain and origin, like all the Arians; and that the innumerable diversities of spoken language characterising the former race are but the more or less superficial effects of their long and utter dispersion and segregation, owing to the

savage tyranny of the Arian race in days when the rights of conquest were synonymous with a license to destroy, spoil and enslave. He considers that the Arian population of India descended into it about 3,000 years ago from the north-west, as conquerors, and that they completely subdued all the open and cultivated parts of Hindostan, Bengal and the most adjacent tracts of the Dekhan, as Telingana, Gujerat and Maharashtra, or the Mahratta country, but failed to extend their effective sway and colonization further south, and that this may be regarded as a historical deduction confirmed daily more and more by the results of ethnological research. Brachmanes nomen gentis diffusissimæ cujus maxima pars in montibus (Ariana) digit, reliqui circa Gangem. (*Cell. Geogr.*) And we thus, he adds, find an easy and natural explanation of the facts that in the Dekhan, where the original tenants of the soil have been able to hold together in possession of it, the aboriginal languages exhibit a deal of integrity and refinement, whilst in the north, where the pristine population has been hunted into jungly and malarious recesses, the aboriginal tongues are broken into innumerable rude and shapeless fragments, but which may yet be brought together by large and careful induction. Mr. Robinson, in a paper upon sundry of the border of tribes of Assam, in the B. As. Journal, No. 201, for March, 1849, asserted the affinity of these tribes (the Bodo and Garo amongst others) with the people of Thibet. But Mr. Hodgson thinks that Mr. Robinson had overloked the physical and psychical evidence which are each of them as important as the glottological, towards the just decision of a question of ethnic affinity. Much of the mechanism of the whole of the Turanian group of languages is common to every one language of that group, and the Tamulian and Tibetan languages are held to be integral parts of that group. He thinks that if the Bodo, for example, were of Tibetan origin it is hardly credible that their ordinary vocables should not plainly reveal the fact, seeing that they have never been out of actual contact with races of the same descent as that ascribed to them. The Sub-Himalayan dialects differ from the trans-Himalayan standard: but identity is here shown in the roots as well as in the mode of agglutinating the servile particles; not to mention that the snows form such a barrier in this case as exists not in regard to the Bodo intercourse with tribes of Tibetan origin. The same general result follows from a careful examination of vocabularies. Apparently the Tibetan, like the Hindi, words, are adopted ones.—(*Mr. Hodgson on the Aborigines of North-Eastern India in Beng. As. Soc. Journ.*)

Languages.—Chevalier Bunsen, Professor Muller, Dr. Pritchard, Dr. Latham, Dr. Caldwell, Mr. Hodgson, Mr. Earl, Mr. Logan and the Revd. F. W. Farrar are the most recent writers on the classes of languages spoken by the races in South Eastern Asia. The offshoots from these, are very numerous. Along the low level tract which runs bordering the ocean from the Red Sea to the southernmost point of the Malay Peninsula, we find the Arabic, Turkish, Sindi, Guzerati, Marathi, Hindustani, Konkani, Canarese, Tulu, Malayalum, Singhalese, Tamil, Telugu, Urya, Bengali, Burmese, Chinese, and Malay, a number of languages truly perplexing to traders on the sea-board of Southern Asia. A Master Mariner, Master Richard Kynge writing in 1634, notices this, saying "and in this founde wee oftimes much trouble and vexation, with moreover losses, both of precious time and lucre. *Fyrste*, that wee could never aske in Indian tongues for such herbes, or fruites, wodes, barks or gummes, as wee knew full well, by experience in sundrye other partes, to bee wholesomme (many of our crewe lying sicke at the tyme), or savorye, or usefulle to trafficke withall. *Nexte*, that when anye were shewne us, we coulde in noe-wise tell, from ye names given to them by ye Gentooes whether or noe ye like were already knowne, in European countryes; and yett these parts doe myghty-lie abound with herbes and woodes of sovraigne virtue." (*Piddington, Index.*)

All of these tongues come under one or other of the classes or families into which philogists arrange the languages of the old world.

In Dr. Pritchard's classification, (Report British Association 1847, Pages 241 to 250) we have four groups, or dynasties of language, three of which are confined to Europe and Asia, a fourth being common to Africa and those parts of Asia which are near that continent. The first of his four groups is 1. the Indo-European, sometimes termed Indo-Germanic, and by late writers the Arian or Iranian languages. He considers that the Indo-European languages and nations may be divided into many different groupes in the order of their affinities for instance; but he regards the most obvious division to be a geographical one, and he styles his first, the eastern group, which, by many writers has been termed exclusively the Arian family of tongues. It includes all the idioms of the ancient Medes and Persians, who named themselves Arii, and their country Eeriene or Iran, and likewise the Sanskrit with all the Prakrits, properly so termed, and the Pali of India. Among the former was that ancient Persian language in which one particular set of the cuneiform inscriptions was written. This dialect was so near the Sanskrit that the inscriptions have been interpreted through the medium of that language. The Zend lays claim to a still higher antiquity, since the Zend is

said by Burnouf, Professor Wilson and others who have studied it most successfully, to be more nearly allied to the very ancient dialect of the vedas, which preceded the classical Sanscrit, than it is to this last more cultivated speech. How this claim is to be reconciled with the comparatively recent date of all extant compositions in the Zendish language, remains, he considers, to be explained. But that the high castes or "twice born" classes of the Indian race as they term themselves, the brahman, the chetriya and the vaisya, hindu, were of the same stock as the ancient Persians, may be regarded as a fact established by the affinity of their languages.

They also have the name of *Aria*, which means noble or dignified, and this is doubtless the origin of the epithet Αριοι which, as we learn from Herodotus (vii. 62) the ancient Medes assumed. Dr. Pritchard is of opinion that the Arian hindus must have crossed the Indus and have driven the aboriginal Indians across the Vindhya mountains and the Nerbudda into the Dekhan, where they still exist and speak their native languages, though mixed more or less with the Sanskrit of their Arian conquerors.

He adds that some other Asiatic nations of inferior note speak dialects more remotely connected with the same group of the Indo-European languages. Among these are the Pushtaneh or Affghan, the Armenian and the Ossetes, and some other nations of the chain of mount Caucasus.

He is further of opinion that the Indo-European languages are the natural idioms of all those races who at the time of the Great Cyrus became and have ever since continued to be the dominant nations of the world. And he only excepts from this remark those instances in which certain Syro-Arabian or Ugro-Tartarian nations, under some extraordinary impulse, as the mahomedan outbreak, assumed or recovered a partial sway over some of the weaker divisions of the Indo-European race.

On this point, also, Chevalier Bunsen remarks *(Rep. Brit. Ass.* 1857) that all the nations which, from the dawn of history to our days, have been the leaders of civilization in Asia, Europe and Africa, must have had one beginning, and it may be pointed out that eight distinct families of speech, the Indian, Iranian, Hellenic, Italic, Keltic, Slavonic, Lithuanian and Teutonic have all sprung from a parent speech.

The Revd. F. W. Farrar has recently published a series of lectures delivered by him on the families of speech, but in 1860, he gave the following synopsis of the same subject.

I.—Arian. This family of languages has received several names. It is the Indo-European and Indo-Germanic of some philologists. Pictet and Burnouf called it Arian from the Sanscrit word Arya meaning noble: Rask called it Japhetic. According to Mr. Farrar, it has eight divisions

Hindu.	Greek.	Lithuanian.	Tutonic.
Persian.	Latin.	Sclavonic.	Celtic.

Of these it is uncertain whether Celtic or Sanskrit represents the older phase. But it is known that all of them are the daughters of a primeval form of language which has now ceased to exist, but which was spoken by a yet undivided race at a time when Sanskrit and Greek had as yet only implicit existence.

II. Semitic of Eichom, from Shem is the Syro-Arabian of Farrar and Arabic of Leibnitz.

The race speaking this family of languages ignorant of science and theocratic, has devoted itself to the expression of religious instincts and intuitions, in one word to the establishment of monotheism.

It has, according to Mr. Farrar, three main branches.

Aramaic divided into two dialects, Syriac, Chaldee.

Hebrew, with which is connected the Carthaginian, Phœnician and Arabic.

Besides these, Egyptian, Babylonian, Assyrian and the Berber dialects are now considered to have a Semitic character by Champollion Bunsen (Egyptian) Lassen, Eugene Bornouf, Dr. Hincks, Sir H. Rawlinson (Assyrian) and Prof. F. Newman (Berber.)

III. Turanian, Nomadic or Allophyllan of Pritchard are names applied to all languages not belonging to the Arian or Semitic, and which comprise all tongues spoken in Asia or Europe not included under the Arian and Semitic families, with the exception perhaps of the Chinese and its dialects: These are,—

Tungus.	Turki.	Finn.
Mongol.	Samoiede.	

The writers on this class are Rask, Klaproth, Schott; Castren, and Muller. But even Dr. Muller admits that the characteristic mark of union, ascertained for this great variety of languages are as yet very vague and general, if compared with the definite ties of relationship which severally unite the Semitic and Arian. The Turanian languages occupy by far the largest portion of the earth, (viz., all but India, Arabia, Asia Minor and Europe) but except agglutination there is not a single positive principle, which can be proved to pervade them all. It has points of affinity with the languages of Africa and America and even with the Chinese.—(*Essay on the origin of*

language by F. W. Farrar, A. M., London 1860.)

Dr. Prichard writing on the Indo-European stock of languages observes that the principal branches are

1. The Greek language and its dialects, and he thinks it probable that the Lydian and other languages of lesser Asia, and perhaps also the Thracian and Macedonian were altered to the Hellenic or Pelasgic Greek.

2. The old Eperotic and Illyrian, a language still well known as the Skippetarian or Albanian or Arnaut, is a distinct Indo-European idiom.

3. The old Italic languages, comprehending the Latin, Umbrian, Oscan, Siculian and excluding the Rasenic or Etruscan.

4. The Etruscan was probably an Indo-European dialect, though distinct from the Italic. Very little is, however, known about this language.

5. The old Prussian, including the Lettish and Lithuanian, said to resemble the Sanscrit more nearly than any other language.

6. The Germanic family of languages.

7. Slavonian and Sarmatian dialects comprehend the languages of eastern Europe, Russian, Polish, Bohemian and the dialects in the greater part of Europe subject to the Turkish empire.

8. Celtic.

He mentions that the Teutonic and Scandinavian tribes of the German race, were known to Pytheas, who sailed on the Baltic in the times of Aristotle; and that the brahmans probably spoke Sanskrit at the court of Palibothra when they were visited by Megasthenes in the age of the first Seleucus. All ancient Germany, Scandinavia, Sarmatia, Gaul and Britain, Italy, Greece, Persia, and a great part of India, were then inhabited by nations separate and independent of each other, speaking different languages, but languages, analogous and palpably derived from the same origin.

By the method of examining languages through their grammatic forms rather than by separate words Frederich Schlegel showed the intimate historical connexion between the Sanscrit, the Persian, the Greek, the Roman, and the Germanic languages and the following illustrations may be given:

Grimm, the philologist, discovered as the law of transposition of sounds in the Sanscrit, Greek, Roman and Gothic words, that the letters P. B. F. are interchangeable; also T. D. and H. also K. G. and X. H.

Sanscrit.		Greek.	Latin.	Gothic.	Old, High German.
Padas,	(foot)	πους	pes, pedis	fotus	vuoz
Pancha,	(five)	πεντε	quinque	finif	vinf
Purna,	(full)	πλεος	plenus	fulls	vol
Pitri,	(father)	πατερ	pater	fadrein	vatar
Upari,	(over)	υπερ	super	ufar	ubar
Vrisha,	(cow)	.....	vacca		fersa
Virisha,	(hemp)	κανναβις	cannabis		hanf
Bala,	(young)	....	bullos		folo
Bhanj,	(to break)	... .	frangere	brikan	prechan
Bhuj,	(to enjoy)	... .	frui-fructus	brukon	pruchon
Bhratri,	(brother)	.....	frater	brother	pruodar
Bhri,	(to bear)	φερω	fero	baira	piru
Bhru,	(brow)	"οφρυς	.....	.....	praua
Kapola,	(head)	κεφαλη	caput	haubith	houpit
Tvam,	(thou)	τυ	tu	thu	du
Tam,	(him)	τον	is-tum	thana	den
Trayas,	(three)	τρεις	tres	threis	dri
Antara,	(other)	ἕτερος	alter	anthar	andar
Dantam;	(tooth, acc)	"οδοντα	dentem	thuntu-s	zand
Dvau,	(two)	δυο	duo	tvai	zuene
Daxina,	(right)	δεξια	dextra	taihsvo	zesawa
Uda,	(water)	υδωρ	unda	vato	wazar
Duhitri,	(daughter)	θυγατηρ		daubtar	tohtar
Dvar,	(door)	θυρα	fores	daur	tor
Madhu	(sweet)	μεθυ			meto.
Svanam	(dog)	κυων	canis	hunths	hund.
Hrid	(heart)	καρδια	cor (dis)	hairto	herza.
Akscha	(eye)	" οκος	oculus	augo	ouga.
Ashru	(tear)	δακρυ	lacryma	tagr	zahar.
Pashu	(cattle)		pecus	faihu	vihu.

Sanscrit.		Greek.	Latin.	Gothic.	Old, High German.
Svashura	(German Schwaher, Schwager)	" εκυρος	socer	svaihra	suehur.
Dasan	(ten)	δεκα	decem	taihun	zehan.
Jna	(to know)	γνῶμι	gnosco	kan	chan.
Jati	(kin)	γενος	genus	kuni	chuni.
Janu	(knee)	γονυ	genu	kniu	chniu.
Mahat	(much)	μωγας	magnus	mikls	mihil.
Hansa	(goose)	χεν	anser	gans	kans.
Hyas	(yesterday)	χθες	heri	gistra	kestar.
Lih	(to lick)	λειχω	lingo	laigo	lekom.

The Lithuanian follows generally the three old languages, Sanskrit, Greek and Latin, only substituting, from its deficiency in aspirates, unaspirated for aspirated letters, for instance :—

Sanscrit.		Lithuanian.	
Ratha	(waggon)	rata	(wheel.)
Ka	(who	ka	(who ?)
Dadami	(Igive)	dumi	.....
Pati	(master)	pati	(husband.)
Panchan	(five)	penki	.....
Trayas	(three)	trys	.....

C. C. Bunsen Rep. Brit. Ass. 1847, *p.* 263.

For this family of languages, however, Chevalier Bunsen,(Report British Association 1847, p. 263,) proposes the term Iranian and to subdivide Dr. Pritchard's Indo-European group into two, viz.

A great Asiatic European group of eight families, into one of which, viz. his Asiatic-Iranian, he places the languages of Iran proper or the Arian stock, viz. those of Media and Persia, including the Zend of the cuneiform inscriptions and the Zend Avesta; the younger Pehlevi of the Sassanians and the Pazend, the mother of the modern Persian tongue : the Pushtu of the Affghans belongs to the same branch.

The second of his subdivision embraces the Iranian languages of India, viz. the Sanscrit and her daughters.

2. The Ugro-Tartarian languages, the languages of High-Asia and other regions, which other writers style Turanian, are those of Dr. Pritchard's second group of nations belonging to the same great family and include the various hordes who have been known under the names of Tartar, Turk, Mongol, Mantchu, and Tungus. All these nations appear, from the result of late researches, to be allied in descent, though long supposed to be quite separate. In the vast wilderness extending from the chain of the Altai to that of the Himalaya are the pasture-lands, where, during immemorial ages, the nomadic tribes of High Asia have fed their flocks and multiplied those hordes which from time to time descended in immense swarms on the fertile regions of Asia and of Europe. Perhaps the earliest of these invasions of the civilized world was that of the Hiong-nu, expelled from the borders of China by the powerful dynasty of the Han. These were the people who, after their inroad on the Gothic empire of Hermanrich, made their way, under Etzel or Attila, into the heart of France. Hordes from the same regions under Togrul-Beg, and Seljuk, and Mahmud of Ghizni, and Jengiz, and Timur and Othman, overwhelmed the kaliphat and the empires of China, of Byzantium, and of Hindustan, and lineal descendants of the shepherds of high Asia still sit on the throne of Cyrus, and on that of the Great Constantine. As a branch of the Ugro Tartarian, he speaks of some of the insular nations to the eastward of Asia and near the coast of the Pacific Ocean. The idiom of the islands comprised in the empire of Nippon, as well as that of the independent Liukiu Archipelago, bears some signs of affinity to those of the Ugro Tartarian nations, and he adds that Mr. Norris, who has studied the Japanese, and whose very extensive knowledge of languages renders him a great authority in such questions, had assured him that the principle of vocalic harmony and other phenomena of the Tartar languages prevail in the idiom of the Japanese and Liukiu islands.

In his group of the Ugro-Tartarian, Dr. Pritchard classes the aboriginal inhabitants of India who, he supposes, were expelled from Hindustan, by the brahmins and the Arian people who accompanied them across the Indus, and retired, as it is supposed (on apparently insufficient proof,) into the Dekhan. They still occupy the greater part of that peninsula, and a portion, at least, of the island of Ceylon. Their idioms—the Tamil,

the Telugu and the Karnataka of the Mysore, —are sister dialects of one speech, and he considers it likely that the languages of the mountain tribes of India, the Bhil, the Gond, the Toda and others, belong to the same stock. Dr. Pritchard adds that professor Rask had conjectured that these nations are also of the Tartar stock. Their language has some of the peculiarities of structure which have been pointed out. He also observes that there are some curious analogies between the Tamulian and other dialects of the Dekhan and the languages of Australia, with which we have obtained some acquaintance through the labours of Mr. Threlkeld and several other missionaries, and from the able researches of Captain Gray.

Dr. Latham's views.—In the Report of the British Association for 1845, Dr. Latham remarks that the distinction between the languages of Thibet and China, as exhibited by Klaproth, must be only provisional: over and above the grammatical analogy there is an absolute glossarial affinity. Of the languages of the transgangetic peninsula the same may be asserted. Where languages are monosyllabic slight changes make palpable differences. The vocabularies of Brown, for more than a score of the Burmese and Siamese tongues, have provided us with data for ethnographical comparisons. By dealing with these collectively, we find in one dialect words which had been lost in others. The Chinese, Thibetan, Bhootan, Burmese, Siamese, and all the so-called monosyllabic languages hitherto known, are allied to each other. The general affinities of the Indo-Chinese tongues are remarkable. With Marsden's and Sir Stamford Raffles' tables on the one side, and those of Brown and Klaproth on the other, it can be shown that a vast number of Malay roots are monosyllabic. The Malay languages are monosyllabic ones, with the superaddition of inflections evolved out of composition, and euphonic process highly developed.

Baron Bunsen's views.—And Chevalier Bunsen also observes (Report Brit. Ass. 1847) that the researches of our days have made it more than probable that the Tartar, Mantchu and Tungus belong to one great stock; that the Turkoman, Chud, Fin, Lap and Magyar (Hungarian) present another stock closely united and that both these families are originally connected with each other. He proposed to call this whole group of languages the Turanian, and in lieu of Indo-Germanic or Indo-European he proposed the term Iranian, following the antithesis of Iran and Turan, established by Heeren and Carl Ritter. He further remarks that "these nations, who probably may be reduced to two families, one centreing in the Altai and the pasture lands towards the Himalaya, and the other having its centre in the Ural mountains, have acted in the history of civilisation a most powerful episode by conquest and destruction. They appeared in the fifth century as the Huns, a scourge to Romans and Germans; they produced Jengiz Khan, Timurlang and Mahomed II.; they destroyed the Persian empire, subdued Hindustan, and they still sit upon the throne of Byzantium and upon that of China. They seem destined to partake only by conquest in the higher civilisation of the surrounding nations, older or younger ones, the Chinese presenting the one extreme, the Iranians the other. Little disposed to learn from them as neighbours or subjects, they become more or less civilized by being their masters. They cannot resist the inward force of the civilisation of their subjects, although they repel it, as an outward power.

It will, thus, be seen that Chevalier Bunsen's names differ from those of Dr. Pritchard. He classes one group as the great Asiatic European stock of languages, which he sub-dividies into eight families, viz. 1. Celts, 2. Thracian or Illyrian, 3. Armenian, 4. Asiatic—Iranian; 5. Hellenico—Italic, 6. Slavonic, 7. Lithuanian tribes and 8. Teutonic.

His fourth or Asiatic Asian, or the Iranian stock as represented in Irania, he again subdivides into :—

1. The nations of Iran proper or the Arian stock, the languages of Media and Persia. It includes the Zend of the cuneiform inscriptions and the Zend Avesta. The younger Pehlevi of the Sassanians and the Pa Zend the mother of the present or modern Persian tongue. The Pushtu or language of the Afghans belongs to the same branch.

2. The second sub-division embraces the Iranian languages of India, represented by the Sanscrit and its daughters.

His Semitic stock of languages he constructs from the following nations who form another compact mass, and represent one physiologically and historically connected family; the Hebrews, with the other tribes of Canaan or Palestine, inclusive of the Phœnicians, who spread their language, through their colonization, as that of the Carthaginians; the Aramaic tribes, or the historical nations of Aram, Syria, Mesopotamia and Babylonia, speaking Syrian in the west, and the so-called Chaldaic in the east; finally, the Arabians, whose language is connected (through the Himyaritic) with the Æthiopic, the ancient (now the sacred) language of Abyssinia. He calls this second family by the name now generally adopted among German Hebrew scholars, the Semitic.—Chevalier Bunsen further remarks as the first lesson which the knowledge of the Egyptian language teaches that all the nations which from the dawn of history to our days have been the leaders of civilization in

Asia, Europe and Africa, must have had one beginning. He adds that the researches of our days have very considerably enlarged the sphere of such languages of historical nations, as are united by the ties of primitive affinity. Those researches have made it more than probable that the Tartars, Mantchu and Tungusians belong to one great stock; that the Turkomans, as well as the Chudes, Fins, Laplanders and Magyars (Hungarians) present another stock closely united, and that both these families are originally connected with each other.

These tribes appear also as the once subdued substratum of Iranian civilisation. So in the north of Europe, where the Finnic race preceded the Scandinavians.

But the same great family appears also in Asia as the subdued or primary element. It seems probable, that the aboriginal languages of India, which attained their full development in the Dekhan dialects, belong to this stock, not only by a general analogy of structure, but also by an original and traceable connexion.—He remarks that colonies may either preserve the ancient form, or become the occasion of a great change. Thus the ancient language of Tibet, which is in the Chinese traditions the land of their earliest recollections, may have been preserved by the colonists who formed the Chinese empire, while Tibet went further in its development.

In a similar position we find another member of that family in western Europe It there preceded the Celts, in the Iberians and Cantabrians, whose language is preserved in the Basque (Biscayans). Those tribes were once prevalent in France and Spain, probably also in Italy. Their language has the same structure, and certainly some signs or vestiges of a material conversion in roots, with the Altai-Ural idioms. He concludes by remarking that his historical formula respecting this formation will therefore be as follows:—all the nations, who in the history of Asia and Europe, occupy the second rank as to the civilising power they have hitherto displayed, are probably as much of one Asiatic origin as the Iranian nations are. They centre on the northern borders of the Himalaya, and everywhere in Central Asia are the hostile, savage neighbours of the agricultural Iranian people whom they have disturbed and dispossessed in different ages of history, having probably themselves been primitively driven by them, as nomades by agriculturists, from a more genial common home. He indicates, summarily, the relation of this great family with the three great families into which the leading nations of civilization, as children of one stock, appear to be divided. The names of Cham, Shem and Japhet (the last equivalent with Indo-Germanic) represent to us scientifically three steps of development of the same stock. He asks with which of these leading nations is that great Altai-Ural family originally connected, and to which of these three great divisions, Chamism, Semitism and Japhetism do these secondary families more particularly approach. He considers there is no doubt of such a connexion, but adds that at the same time we find these languages, although very inferior to those Indo-Germanic tongues, more nearly allied to them than to Chamism and Semitism. They represent like Cham and Shem, a lower degree of development, if compared with the Iranian languages, but a degree of their own, starting as it were from the opposite pole. The tongues of High Asia form with these most perfect languages, a decided opposition to the Chamitic and Semitic branches. They are more advanced than these, and therefore later, but so to say, advanced in awrong or less imperfect way. It is for this reason that he proposes to call this whole family the Turanian, and the Indo-Germanic or Indo-European the Iranian, following, as was said, the antithesis of Iran and Turan established by Heeren and Carl Ritter. And, indeed, he adds the more we go back to the most ancient historical traditions of the Japhetic family, particularly in India and Persia, the more we see how the two branches, the Iranian and the Turanian, though always in opposition to each other are to be considered but as diverging lines from the common centre. (See Lassen, Indische Alterthumskunde, p. 728) In a note, he adds that Doctor Max Muller, gave him the following data for this assertion. "In the hymns of the Rig Veda, we find still the clearest traces, that the five principal tribes, the Yadu, Turvasa, Druhyu, Anu, and Puru, were closely connected by the ties of nationality, and had their gods in common. In the succeeding age, that of the epic poetry of the Mahabharata, these five nations are represented as the sons of Yayati one of the old fathers of mankind. Yayati curses four of his sons, and the curse of the Tur-vasa is, to live without laws and attached to beastly vices in the land of barbarians in the North. In this name of Tur-vasa, as well as afterwards in the name given to the Indo-Scythian kings in the history of Kashmir, Turushka, we find the same root as in the Zend Tura, the name of the nations in the north. But "tura" itself means quick, from tvar, to run, to fly, and thus the very name of these tribes gives the same characteristic of these nomadic equestrian tribes, which afterwards is ascribed to them by Firdusi, and which makes them always appear in India as well as on the Sassanian inscriptions of Persia, as the An-iran, or non-Arian people; that is, as the enemies of the agricultural and civilising nations."

And, further on, he adds, likewise, his belief that Wilhelm von Humboldt has established the connexion between the Polynesian languages and the Malay or the language of Malacca, Java and Sumatra, and that this Malay language itself bears the character of the non-Iranian branch of the Japhetic family. Whether the Papua languages, spoken in Australia and New Guinea and by the aborigines of Borneo, of the Peninsula of Malacca and of some small Polynesian islands, be a primitive type of the same stock as the Malay which afterwards in many parts superseded it,—is a point that in his opinion must remain uncertain until we receive from the hands of the missionaries a Papua grammar. But we thus, he adds, see that Asia (with the exception of China and Tibet), the whole of Europe and probably of America and the Polynesian islands (at least in their secondary stock) belong to one great original family, divided into the Iranian and Turanian branches and he calls this definitively the Japhetic race. In many parts we know that the Turanian race has preceded the Iranian : its language certainly represents an anterior step or preceding degree of development. In some parts we find that the Turanian race succeeded to a still older native element.

Dr. Pritchard's THIRD family of languages belonging to the great Asiatic continent, are the Chinese and Indo-Chinese idioms or the monosyllabic and Indo-Chinese languages. They are, however, in his opinion, associated by the resemblance of their structure, consisting of monosyllabic words and not by any considerable number of common vocables. Other languages have monosyllabic roots, as the Sanskrit, but the words of the Sanskrit become polysyllabic in construction ; not so the Chinese, which are incapable of inflection, and do not admit the use of particles as a supplement to this defect—the position of words and sentences being the principal means of determining their relation to each other and the meaning intended to be conveyed. Baron William von Humboldt has observed that conversation in these languages therefore requires a greater intellectual effort than is necessary to comprehend the meaning of sentences spoken in the inflected languages. And he remarks that all the nations who speak these languages bear a considerable resemblance to each other in their mental character and disposition, and still more obviously in their physical characters, in which, however, some varieties are observable. Strongly marked as the peculiarity of the monosyllabic languages undoubtedly is, they are not as a class so completely insulated as many persons imagine. The Bhotia or Tibetan language belongs to this family, but it is in some respects intermediate between the monosyllabic languages in general and the Mongolian, which is one of the Tartarian group.

Dr. Latham however is of opinion (*Report Brit. Association* 1845, *p.* 77) that in addition to their grammatical analogy there is an absolute glossarial affinity between the languages of Tibet and China, and he thinks that the same may be asserted of the languages of the transgangetic peninsula. In examining the vocabularies of upwards of twenty of the Burmese and Siamese tongues, words are found in one dialect which have been lost in others, he mentions that the general affinities of these Indo-Chinese tongues are remarkable, and that the Chinese, Tibetan, Bhootan, Burmese, Siamese and all the so-called monosyllabic languages, hitherto known, are allied to each other. A vast number of Malay roots are monosyllabic, the Malay languages being monosyllabic ones, with the superaddition of inflictions evolved out of composition and euphonic processes highly developed. And, he continues, " the next class of tongues akin to the monosyllabic is that of Caucausus. The numerous languages of this class have long been reduced to four groups ; the Georgian, the Lesgian, the Circassian, the Mizdzhegi. That these four are fundamentally one, may be seen from Klaproth's tables, whose classification seems only provisional. These tongues, dealt with *en masse*, have their affinities with the monosyllabic tongues. As with the Malay language, the monosyllabic character is modified by the evolution of agglutinational and inflectional processes, but not much by euphonic processes. An original continuity of language, displaced at present by the Turkish and Mongol, is thus assumed for parts between Caucasus and Thibet. (*Dr. Latham in Rep. Brit. Ass.* 1845. *pp.* 77, 78.) The same author observes that a monosyllabic basis of separate words is provisionally assumed as the fundamental element out of which inflections are evolved by agglutination and amalgamation. This makes it possible that poly-synthetic tongues, like the American, may be represented in their earlier stage by monosyllabic tongues like the Chinese. Glossarial investigations confirm both these views. There is a radical unity for the different Siberian groups of the Asia Polyglotta, *e. g.* Yukageer, Yenesean, Samoeide, &c., and *a fortiori* for the Turk, Mongol, and Manchu groups. Each and all of these have affinities with the monosyllabic tongues, and through these with the Malay and Caucasian.

Polynesia, he adds, presents the first appearance of isolation, in the languages of New Guinea, Australia, &c., *i. e.* the Negrito tongues. The philological evidence of their being akin, either to the Malay or Tamul languages, is, he thinks, at present indefinite and inconclusive. And, Southern India, and the

Indian hill-ranges, he says, present the first appearance of isolation in the languages of continental Asia. But, although unplaced they can scarcely be called isolate.

African influence.—Subsequent researches have established the affinity of the languages of Southern India, and Mr. Logan (Journ. Ind. Arch. Vol. IV, Nos. 5 and 6, May and June 1850, p. 310) points to the prolonged intercourse between the western and eastern parts of the Indian Ocean extending from the Arabian Sea, Persian Gulf and Red Sea to the Mozambique channel on the west and to the Indo-Australian Seas, on the east. He believes that the shores of the Indian Ocean were occupied by races in an advanced stage, before the seeds of a higher civilization germinated in the basins of the Nile and Euphrates; amongst whom were navigating tribes who spread themselves over every habitable island of the Eastern Ocean from Madagascar to the Fiji group. Amongst all the foreign influences, he adds, of which the presence can be clearly traced, two are of the widest extent and greatest importance. The first entirely African and Indo-African in its character, embraced the whole Indian Archipelago, Australia and Papuanesia, and certainly included a portion of Micronesia, though whether it extended to Polynesia he is doubtful. The races to which this influence must be referred, prevailed along the shores and islands of the Indian Ocean, from Africa to Polynesia, their sole limits being those of the monsoons, and he infers that when they thus spread themselves over Africa, India and the Indian Archipelago, there could have been no civilized Semitic, Iranian, Burmese or Siamese races, on that sea to hinder them.

The language of their population belonged to a state intermediate between the monotonic and the inflectional, and had strong and direct affinities to the other families of language of this stage,—the Ugro Tartarian, Japanese, old Indian and African, and to a certain extent, too, the American, which last may be considered as constituting a peculiar family. Amongst the best preserved examples of these languages are the Formosa, Philippine and the Australian, and he thinks it probable that some of the eastern Milanesian languages will be found to be equally characteristic.

In briefly remarking on the progress of Ethnology in Oceanica and America, Dr. Pritchard also mentions that besides much other valuable information, the great work of Baron Humboldt, on the Kavi speech, has afforded the important result that the resemblances known to exist between the nations of the islands in the Pacific Ocean termed Polynesian and the tribes of the Indian Archipelago, Malacca and Madagascar, are not, as some persons have thought, the effect of casual intercourse, but are essential affinities, deeply rooted in the construction of these languages. For the proofs of this assertion, and of the ultimate fact in ethnology which results from it, viz. that the races of people are themselves of one origin, he refers to Humboldt's work. The Papua languages, or those spoken by the black and wooly-haired nations, are for the most part as yet unexplored, but the dialects of the Papuan races often partake more or less of the Polynesian. Whether this arises from the adoption by the Papua of the Polynesian vocabulary has not been determined, though most persons incline to this last opinion. It is, however, now well known that some black nations have Polynesian dialects. The idiom of the Fijian islanders, for example, is properly a dialect of the Polynesian language.—(*Dr. Pritchard in Rep. Brit. Ass.* 1847, *pp.* 241 to 250.)

Dr. Pritchard makes his FOURTH family, the Syro-Arabian languages, which he says, appear to have been spoken from the very earliest times by the various nations who inhabited that part of Asia lying to the westward of the Tigris.

Chevalier Bunsen names these the Semitic stock of languages amongst which he includes those of the *Hebrews* and other tribes of Canaan or Palestine inclusive of the Phenicians:—the *Aramaic* tribes of Aram, Syria, Mesopotamia and Babylonia, speaking Syrian in the west and the so-called Chaldaic in the east; and thirdly, the *Arabians*, whose language is connected (through the Himyaritic) with the Ethiopic, the ancient (now the sacred) language of Abyssinia.

Modern languages.—The Sanskrit language is not spoken in any part of India, but up till the introduction by the British, of the western forms of education, every brahmin learned Sanskrit and many of them were learned men. These have greatly disappeared. Sanskrit and its congeners are inflectional languages, after the manner of the languages of Europe; while the Turk, Mongol, Tangus, and Ugrian, in the North and West, and the Tamil in the South, are agglutinate tongues. The Tibetan, Burmese, and all the Nepalese dialects are monosyllabic tongues. The Sanskrit differs from the Tamil of the South, and much more so from the Tibetan, Nepalese and Burmese, on its North and West. It has no relations with the Arabic, Armenian, Iron or modern Persian. The nearest congeners to the Sanskrit are the Sarmatian languages of the Russian Empire, then the classical tongues of Rome and Greece, then those of Germany and the Keltic, this class of languages being called the Indo Germanic. Of the Sclavonic and Lithuanian, the two branches of the Sarmatian, the affinities of the Sanskrit

are closest, and closer with the Lithuanian than with any other known tongue. Sanscrit, next to Lithuanian is most like the Sclavonic.—(*Latham.*)

Sanskrit was a dead language in the time of Buddha. The alphabet of the oldest Sanskrit manuscript and oldest composition in Sanskrit is of Pali origin. The Sanskrit and Pali are, both, dead languages. It will thus be observed that the Arian or Sanskrit speaking races of India, seem to have been closely connected with the Zend-speaking, Greek-speaking Latin-speaking, German-speaking, and Sclavonic-speaking races, and not at all with the Arabic, Phenician and Hebrew families. Sanskrit in all its perfection was at one time, probably between the eighth and fourth centuries B. C., the spoken language of that race which immigrated into India from Central Asia, and to which modern orientalists give the name of Arian. The Hindi, Tamil, Telugu, Bengali and others of the languages of India, have their own ancient literatures; but even where these languages are in no way connected with the Arian stock, the subjects of their compositions are all referable to those of the Sanskrit. The Sanskrita Vach, the "Perfect Language," is the vehicle of the older literature of almost every part of India. According to a reviewer of the works of Ernest Curtius, that author is of opinion that the ancestors of the peoples of India, of the Persians, Greeks, Italians, Germans, Slaves and Kelts, were originally one people dwelling in the uplands of Asia: and that the first to separate themselves from this united Arian or Indo-European family, and to push their way into Europe, was the Kelts, they were followed by the Germans, and these by the Slaves and Letts. The next great swarm that deserted the hive and left behind them the progenitors of the Medo-Persians and the Indians, was composed of the common ancestors of the Greeks and Romans. But Sanskrit, though the latest researches have exploded the theory that it was the actual parent of that large stock of languages, which goes by the name of Indo-European and extends from India to the Americas, comprising Zend, Persian, Afghan, Armenian, Greek, Latin and all their progeny—the Celtic, the Sclavonic, the Teutonic and Scandinavian families, the languages of the whole Japhetic branch of mankind, it is not denied, that while it is the actual parent of some, as the Teutonic and Sclavonic families, it is certainly the eldest brother of and presents older and more original forms than all the rest. Professor Max Muller, however, who does not accept the ordinary chronology of the world's age, in his history of Ancient Sanskrit Literature, divides the interval in which it appeared, into four periods The first of these, the Chandas period, he computes to have lasted from 1,200 to 1,000 B. C., and during that time the most ancient of the Vedic hymns were composed. The second or Mantra period lasted from 1,000 to 800 B. C., and its hymns bear traces of the growth of a sacerdotal spirit and system. The third or Brahmana period lasted from 800 to 600 B. C. In these ancient liturgical books, the ritual application of the hymns, is prescribed with painful minuteness, and often with a mixture of childish allegorical interpretation. His fourth period is that of the Sutras or aphorisms, in which the ceremonial prescriptions were reduced to a more compact form and to a more precise and scientific system.

Amongst the most recent writers on the spoken tongues of India have been Sir Erskine Perry and the Reverend Dr. Caldwell. They remark that the brahmins make a simple classification of the languages of India depending mainly on geographical considerations, by which five northern languages are grouped in one class and five southern ones in another, under the denominations of panch Gaur and panch Dravid, applying the term Gaur or Bengal to all northern India while that of Dravida, the name of that part of the Coromandel Coast lying between the twelfth and thirteenth parallels of north latitude, is applied to the whole Peninsula. Their classification is as under:

The five Gaur.	The five Dravid.
1. Saraswati (extinct)	1. Tamil.
2. Kanoji	2. Marathi.
3. Gaur or Bengali.	3. Carnatika.
4. Mathala or Tirhuti	4. Telinga or Telugu.
5. Orissa or Urya.	5. Gujerati.

Dr. Caldwell, in his Comparative Grammar, remarks that by the term Gaura or Gauda, are meant the Bhashas or Pracrits or vernacular tongues spoken in northern India, some old ones of which have since ceased to be spoken, or have merged into others. At present the languages which may be considered Gaura, are Bengali, Hindi with its neighbour the Hindustani, Punjabi, Gujarathi, Marathi, the languages of Kashmir and Nepal, altogether nine. The Pandits named the five Dravira, the Telinga, Karnatika, Mahratha, Gurjara, and Dravida or Tamul proper, but at present Dr. Caldwell displaces the Gurjara or Gujarathi and the Marathi, and considers the Dravida proper or Tamul, the Telinga, Talunga, or Telugu, and the Karnataka, Kannada or Canarese, to be the three principal languages of the Dravidian family, and he adds thereto the Malayalam, the Tulu, and the uncultivated Toda, Kota, Gond and Ku, making altogether nine Dravidian or Tamulian tongues. Of the Hindi tongues the Kashmiri, Uria and Gujarat

are the languages spoken in the smallest limit. But the Jataki, Sindi, Panjabi, Haruti, Marwari, and Konkani, are other Hindi dialects. Mr. Elphinstone, however, makes another classification. He assigns Gujerati to the northern and Urya to the southern languages, and the Haiga brahmins in Canara, give a third list of Dravids, in which they exclude the country on the Malabar coast where they themselves are domiciled. These brahminical divisions, however, are not founded on any scientific principles, for the languages of India from the Himalayas to Ceylon, it is now known, belong to two essentially different stocks, viz: the Dravidian or Tamulian, such as Karnatica, Telugu, Malayalam, Tulu, and Tamul, and languages of undoubted Sanskrit origin or the Arian or Sanskrit stock. He remarks that the affinity between the Telugu and Karnatica is so great that in order to make the correspondence complete it frequently suffices to change an initial or an inflection, and Ellis shows both these languages to be cognate with Tamul. Again the Tamul speaking inhabitants of the Coromandel Coast can make themselves intelligible when they get into the districts on the western coast of the peninsula, where Malayalam is vernacular. So the language of Tuluva (on the coast of Canara), has a strong resemblance to that of Malayala, though the Tuluva speaking race are unable to understand their Malayalam neighbours. The languages or dialects of the aboriginal mountain races occupying the Neilgherries, are Tamulian, and the Kodagu of the mountains of Coorg is a dialect of Tulu. On the crest of the high and romantic range, extending from Cochin to Cape Comorin, and reaching to 8,000 or 9,000 feet above the sea, Francis Buchanan found that the rude tribes spoke a dialect differing only in accent from Tamul. The language of the mountaineers of Rajmahal dividing Bengal from Bahar, abounds in terms common to the Tamul and Telugu, and Mr. Hodgson, after comparing the vocabularies of seven languages now spoken by rude tribes in Central India, pronounced all of them to belong to the Tamulian stock, while the Brahui on the mountains west of Sind, are said to have a language very like that of the Toda. Thus a closely allied family of languages extends over all southern India, cropping out on the hill tops in Central India, on the mountains in the west, and perhaps also traceable on the southern slopes of the Himalayas. According to Rask, Singhalese belongs to the same family, and Lassen states that the languages of the Laccadives and Maldives come within the same category.

In the North, however, we meet with languages of a different family, springing from those Arian conquerors who, during the thirty centuries preceding the Christian era, migrated from central Asia, entered India from the north and north west, and diffused themselves, their language, their religion and their brahminical distinctions, over the plains of India, at a period before the authentic history of this country begins. According to this view therefore, the principal languages of India should be arranged as under:

(A)—Arian, Sanskritoid, or Northern Family.

1 Hindi.
- *a*. Hindustani or Urdu.
- *b*. Brij Bhasha.
- *c*. Rangri Bhasha or Bhaka.
- *d*. Punjabi.
- *e*. Multani.
- *f*. Jataki.
- *g*. Sindhi.
- *h*. Marwadi.
- *i*. Haruti.

2 Kashmiri.

3 Bengali.
- *a* Tirhuti.

4 Gujarati.
- *a* Kachi.

5 Marathi.

6 Konkani.

7 Urya.

(B)—Turanian, Tamuloid, Dravidian or Southern Family.

1 Telugu or Tiling.
2 Karnatica.
3 Tamul.
4 Malayalam.
5 Tulu.
6 Gondwani.

Our present knowledge of the languages belonging to the Arian class does not enable us to determine whether they are developments of some tongue, of which the Sanskrit is the cultivated representative, and of which Magadha and Pali at the era of Asoka and the introduction of Buddhism into Ceylon, was a spoken form, or whether Sanskrit has been superinduced upon some aboriginal tongue, as it has been demonstrably though in much smaller quantity upon the Tamuloid languages of the South, and as French has been introduced into Anglo-Saxon. Certain it is that in every Arian tongue, a considerable and apparently primitive element is found which is not traceable to Sanscrit and which in Gujerati is reckoned at one-third of the whole language.

With this knowledge of so much in common, in the several Indian tongues, it would at first view seem an easy matter to become acquainted with them. But at the first step there is this difficulty that every dialect has its separate alphabet and every province has two or three alphabets in use. The various nationalities cannot use each others books nor write to each other. Even were it possible out of the fourteen current alphabets of India to select one for universal use, there is not one of them which it is not extremely difficult to read, difficult to write, and difficult to print. The natives themselves cannot read them fluently. Even pundits and moonshees are continually obliged to pause for the purpose of spelling the words. A fluent reader of any of the native characters is almost

unheard of, while a mere boy who is taught the Roman characters will, in the course of a few months, read anything that is given to him without stopping. Writing, it may well be imagined, is still more difficult. As a general rule it is impossible to write fast in the native alphabets without making so many blunders and omissions that the manuscript becomes an unintelligible scrawl. The greatest difficulty of all, however, occurs in printing. For one dialect a fount of type is required consisting of not less than 700 letters, simple and compound; another requires 900 letters ; a third 1,000 and so on, the cost of preparing such a fount, and the difficulty which a compositor has to contend with in having a " case" before him with this prodigious collection of characters, are great. With one character in common use, it would have been comparatively easy to frame two dictionaries—one with words common to the Arian family, the other with Dravidian words ; but the many written characters has rendered that impossible and before the end of the 19th Century if no unexpected change occur, the English language will have become the chief medium of intercourse between the various races in India.

IN ILLUSTRATION OF THE TONGUES SPOKEN, THE LORD'S PRAYER IS GIVEN IN NINE OF THE LANGUAGES OF SOUTHERN ASIA.

ARABIC.	HINDUSTANI	PERSIAN.	ENGLISH.	ASSAMESE.	BENGALI.	GUZERATHI.	CANARESE.	TAMIL.	TELUGU.
9. Abunálází fissamawati lo-atta qaddasa ismoka.	9. Ai hamare Bap, jo bihisht men hai, Tera nam muqaddas ho.	9. Ai Pidr-i-mayan ki dar bihisht hásti, nàm-i-Tu muqaddas bad.	9. Our Father which art in heaven: Hallowed be Thy name.	9. He ámár swargat thoká pitri; Tomár ná m pújyá hauk.	9. He ámáider swargashtha pitah; Tomár nám púja hauk.	9. Mammuna sodhana loki tisukápoká, kidununchi mammuna tappinchumu; yendukanté, rajiamuunnu parakramuunnu mahatwamunnu yellappatikinni nivi yunnavi. Aman.

Races now in the E. Indies.—No one of the nations or races of those who were occupying India and South Eastern Asia, prior to the mahomedan invasions, retain any strictly historical record of the routes by which they reached their present localities or of the dates of their advents. Researches into the families of language to which the spoken dialects belong, and the existing physical peculiarities of the several races permit, however, the belief that India and the islands and parts of South Eastern Asia were peopled long prior to historic times, that a succession of races or of branches of the same human family, have entered India and in some instances become amalgamated with or been dispersed amongst the prior occupants, or have pushed them further on into less peopled or less fertile districts, or amid forest and mountain tracts. In India proper from the Himalaya to Cape Comorin, even yet, every village and every hamlet have small bodies of predial slaves, who though possessing certain minor agricultural rights are not allowed to purchase lands ; are compelled to reside outside the village walls, and are prevented quitting the locality, for they furnish the only free labour, available for the labors of the field. The total number of the non-Aryan aborigines and outcastes is estimated at 12,250,000 people. Also, within the walls almost of every town and village of British India are to be seen the Arian brahman, the rajput of varied origin, the Arian vaisya and sudra hindoo, the Mongol Dhangar, the Gaoli, the Ahir and the Kurumbur, mahomedans of Turk, Mongol Persian, Affghan, Beluch, Arab and African descent, and several slave races dwelling outside the walls, all testifying to the varied routes which immigrants and conquering nations have folowed. Also, the towns, villages and hamlets in India are multitudinous, each with its own distinctive name, nevertheless of very few of these names can the origin, be traced, or are the names intelligible to the present inhabitants, a fact of itself showing how far back we must recede into unknown ages, when endeavouring to realise the period of their first settlement. The view taken by General Briggs is that the earlier occupants of India entered it by successive incursions and that though their religious tenets were the same, one horde obtained their food by the chase dwelling in or near the forests abounding with game ; the other occupied the open plains, subsisting on the milk of their cows and buffaloes and feeding on the flesh of their flocks and sheep. These two classes were constantly at war, and the same aversion and innate hostility against each other exist at the present day. At the time the Aryan hindus entered India, both classes of this race appear to have been spread over the whole surface the country, under the several denominations of

Mina	Morawa	Banderwa
Mer	Kollari	Cheru
Bhil	Pulli	Bengy
Dhirokoli	Pariar	Koki
Mhar	Yenedy	Garro
Mang or Man	Chenchy	Kassia
Beder	Barka	Hajin
Dher	Tallari	Bhar
Gaoli	Gond	Dhamuk
Kurumbar	Kond	Dom.
Cherumar	Sawara	

He points to the fact that the names of many of the territorial divisions of the country have been derived from these earlier races, thus Kolwan and Kolwar from the Kol:

Bhilwan and Bhilwara from the Bhil.

Mharashtra, contracted in Mharatta, from the Mhar.

Man-desa, from the Mang or Man.

Beder from the Beder.

Gondwana or Gondwara from the Gond.

Or-desa or Orissa from the Oria.

Bengala from the Bengi.

Behar from the Bhar.

Merwar or Marwar from the Mer, with Ajmir, Jessulmir and Kombalmir, called after chieftains of the Mer race.

Ahirwara from the Ahir.

Mr. Hodgson briefly sums up his views as to the groups to which the races in South Eastern Asia belong, in the remark that the latest investigators of the general subject of human affinities include in the great Mongolian family, not merely the high Asian nomades, or the Turk, the Mongols and the Tangus, but also the Tibetan, the Chinese, the Indo-Chinese, and the Tamulian. And under the term, Tamulian, he includes the whole of the aborigines of India, whether civilized or uncivilized, from Cape Comorin to the snows, except the inhabitants of the great mountainous belt confining the plains of India towards Tibet, China and Ava. These last he thinks are, in the North West, derived from the Tibetan stock ; and in the South-East from the Indo-Chinese stock ; the 92° of East longitude, or the Dhansri river of Assam, apparently forming the dividing line of the two races, which are each vastly numerous and strikingly diversified, yet essentially one, just as are the no less numerous and varied races of the single Tamulian stock.

Mr. Hislop took almost a similar view, as the result of his philological inquiries.

Turanian races.—The great Turanian or Tatar family of languages is spoken by all the tribes from the Himalaya to Ohotsk and to Lapland and includes the Hungarian, Krimean, and Turkish tongues. In India, are four distinct

branches of this family of languages, spoken by members of the Turanian race. In the north, are the Himalayan tribes, with their dialects, occupying from the Kunawars on the Sutlej to the Boti of Butan in the extreme east. Then there are the Lohitic class, comprising with the Burmese and others of the Malay peninsula, the dialects of the Naga tribes and of the Miker in Assam, and of the Bodo, Kachari, Kuki and Garo in eastern Bengal. Nearly related to this class, is theKol or Munda family of languages including the Kol, Southal, and Bhumi of Sinbhum and western Bengal and the Mundala of Chota Nagpur. The Kur or Muasi and the Korku in Hushangabad and westwards in the forests of the Tapti and Nerbudda, until they come in contact with the Bhil of the Vindhya hills, and the Nahal of Khandesh, belong to this Kol family, indeed, the late Mr. Hislop held that the word Kur is identical with Kol. The *fourth* branch is the Tamulic or Dravidian, to which belong the Brahui of Baluchistan, the Gondi, the Tuluva of Kanada, the Karnata of the S. Maratha country, the Todava of the Neilgherries; the Malayalum of Travancore, the Tamul and the Telugu.

The close relationship of the Kur and Sonthal and their separation from the Dravidian, are illustrated by a few examples.

English.	Kuri.	Sonthalior Kol.	Gond dialects.	Tamil.	Telugu.
Dog	Sita Chita	Seta	Nei	Nay	Kukka
Ear	Lutur	Lutur	Kavi	Kadu	Chaoo
Hair	Op; Up:	Up	Meir	Mayir	Yentekalu
Nose	Mu	Mu	Muku	Mukku	Mukku
Belly	Lai	Lai	Pir	Walru	Karpu
Fire	Singal	Singel	Narpu	Nerappu	Neppu
Water	Da	Da	Tanni	Tannir	Niru
House	Ura	Ora	Ron	Vidu	Illu
Star	Epal	Ipil	Sukum	Tarakei	
Man	Koro		Manwai	Manidan	Manshi
Two	Barku	Bara	Rand	Irandu	Randu
Three	Apkor	Apia	Mund	Mundru	Muru

The Kur or Muasi and the Korku or Kurku to the N. West and west of the Mahadeva hills are, in language, at least, quite distinct from the Gond tribes.

Line of immigration.—From that geographical distribution of the Kol and Dravidian languages, Mr. Hislop asks "may we not conclude then that while the stream of Dravidian population, as evidenced by the Brahui in Baluchistan, entered India by the North-west, that of the Kol family seems to have found admission by the North east; and as the one flowed South towards Cape Kumari (Comorin) and the other in the same direction towards Cape Roumania, a part of each appears to have met and crossed in central India." This hypothesis, a Reviewer remarks, rests on the presence of the Brahui in Baluchistan a fact however which is not inconsistent with the supposition that the Dravidian tribes, may also have entered India from the North East, or even across the Himalaya, as the Kanawari, Newar, Chepang and other tribes have done, while the Kol tribes were an offshoot from a latter horde, the main body of which entered the Eastern Peninsula. The Brahui may have been driven westward from the upper Indus by the invading Arians.

Chevalier Bunsen, (Report Brit. Association 1847) mentions that throughout Asia, the two great nations who once centred—the one in the Altai and the pasture land towards the Himalaya, the other having its centre in the Ural mountains,—appear in Asia as the subdued or primary element, as the subdued substratum of Iranian civilization, and that the aboriginal languages of India which attained their full development in the Dekhan dialects, belong to that stock.

Mr. Hodgson, writing on this point, gives as his opinion, that every medium of proof which has been employed to demonstrate the unity of the Iranian family is available to demonstrate the unity of the Turanian and that the Tamulian, Tibetan, Indo-Chinese, Tangus, Chinese, Mongol and Turk are so many branches of another single family, viz. the Turanian.

Professor Muller is of opinion that when the Arian tribes immigrated into the north of India, they came as a warrior people—vanquishing, destroying and subjecting the savage and despised inhabitants of those countries. But that, in the countries south of the Vindhya, their entry was in the way of colonization, and instead of introducing their own Sanskrit language, they adopted those of the southern nations—refined and improved them till they even rivalled the Sanscrit in perfection, though there remain up to the present day, in some parts of the interior of the Peninsula, savage tribes never reached by the superior civilization of the Arian. But, although the Arian conquerors seem to have crushed and extinguish-

ed the great mass of the aboriginal inhabitants in the north of India, yet some of these Autochthones, or earlier inhabitants of India, who were considered by the brahmins as impure and unworthy to partake of their religious sacrifices, found a refuge in the thick forests of the mountainous districts, and in the countries south of the Vindhya range, while it is not unlikely that some of them were tolerated by the brahmins, so as to remain in a state of slavery, constituting the class of Sudras, to whom though they were not considered as twice-born, like the three other classes, some few civil rights were conceded and to whom in latter days even a brahminical origin was attributed.—(*Prof Max Muller, Rep. Brit. Ass.* 1847, *p.* 330.)

Mr. Hodgson is also of opinion that all the aborigines of India, are Northmen of the Scythic stem, and he considers this view to be justly inferable from their physical characteristics. He thinks, however, that very careful investigation will alone enable us to decide whether they owe their confessedly scythic physiognomy to the Tangus, the Mongol or the Turk branch of the Tartars or Scythians and whether they immigrated from beyond the Himalayas at one period and at one point or at several periods and at as many points. Members of that stock, he continues, are found from their original seats on the north of the Himalaya southwards to the seas, and between Gilgit and Chittagong there are a hundred passes over the Himalayas and its south eastern continuation to the Bay of Bengal, through which they may have migrated ages upon ages before the dawn of legend and of chronicle. In every extensive jungly or hilly tract throughout the vast continent of India there exist hundreds of thousands of human beings in a state not materially different from that of the Germans as described by Tacitus and he adds that these primitive races are the ancient heritors of the whole soil, from all the rich and open parts of which they were expelled by the hindus.

Dr. Pritchard has also arrived at the conclusion that when the Arian hindus crossed the Indus, they drove the aboriginal inhabitants across the Vindhya mountains and the Nerbudda into the Dekhan, where they still dwell, speaking their native languages, though mixed more or less with the sanskrit of their Arian conquerers. (Report for 1847 of British Ass. pp. 2, 412, 250.) At another place, however, he expresses the opinion that the expulsion of these races from Hindustan into the Dekhan has been assumed on insufficient proof, but they still, he adds, occupy the greater part of the Peninsula of India and a portion at least of the island of Ceylon, Their idioms, the Tamul, Telugu and Karnatica, are sister dialects of one speech and he concurs with Professor Rask who regards the languages of the mountain tribes of India, the Bhil, the Gond, the Toda and others as also of the Tartar stock and mentions that some curious analogies have been observed between the Tamulian and other dialects of the Peninsula, and the languages of Australia.

Race distinctions Non-Arians.—It may be here remarked that to all these prior races, the Arian immigrants applied the most contemptuous expressions, Dasya or country people, Locust-eaters, Hole-dwellers, Rejectors of Indra, Monkey-tribes, snakes, &c. but the term most frequently used is M'hlecha. This name, now only employed to designate any person other than a hindu, long continued to be applied to all the unsubdued Non-Arian tribes in India. But the aboriginal scythian inhabitants of India seem to have been subdued and transformed from M'hlechcha into Sudra, by slow degrees and the process is everywhere yet in progress. In the age of Manu they retained, their independence, and the appellation of Mhlechcha in Bengal, Orissa, and the Dekhan; but in the earlier period which is referred to in the historic legends of the Mahabarata, the M'hlechcha and Dasya are mentioned as disputing the possession of Upper India itself, with the Arya, and in conjunction with certain tribes connected with the Lunar line, they succeeded in overrunning the territories of Sagara the thirty-fifth king of the Solar dynasty.

Though Sudra is now the common appellation of the mass of the inhabitants of India, whether Gaurian or Dravidian it, according, to Lassen, was originally the name of a tribe dwelling near the Indus. Lassen recognises the name in that of the town Συδρος on the lower Indus, and especially in that of the nations of the Sudroi in northern Arachosia. He supposes them to have been with the Abhira and Nishada a black long haired race of aborigines, subdued by the Arians. It cannot, however, be doubted that, by the Aryans, the term was extended in course of time to all who occupied or were reduced to a dependent condition, whilst the name Mhlechcha, continued to be the appellation of the unsubdued Un-Arianised tribes.

Both Lassen and Max Muller suppose that the whole of the Sudra or primitive servile classes of northern India, belonged to a race different from their Arian conquerors, but Dr. Caldwell thinks it probable that a considerable portion of them consisted of the slaves, servants, dependents or followers of the high caste Arians, and like the latter belonged to the Arian race. And the legend that the Brahman, Kshatriya, Vaisya and Sudra, all sprang from Brahma's body, though from different parts of it, is in favour of the idea that the Sudra differed from the twice-born Aria, in rank only, not in blood.

Southern migration and races.--These writers, it will be observed look solely to the North, as the region from which India was peopled. But Mr. Logan *(Jour. Ind. Archip. Nos. 4 and 6, Vol. IV, May and June* 1850) has recorded his belief that in bygone ages the races who prevailed along the shores and islands of the Indian Ocean from Africa to Polynesia, spread themselves over Africa, India and the Indian Archipelago, at a time when there were no civilized Semitic, Iranian, Burmese, or Siamese races on that sea, to hinder them. He points to the prolonged intercourse between the western and eastern parts of the Indian Ocean, from the Arabian Sea, Persian Gulf and Red Sea to the Mozambique channel on the west, to the Indo-Australian seas on the east, and he is of opinion that by means of the Euphrates and the Nile, the ancient civilization of the Mediterranean and the Nile spread their influence into India, the Euphrates itself being the seat of a great archaic development of intellect and art. He considers however that the shores of the Indian ocean were surrounded by races in a stage before the seeds of a higher civilization germinated in the basins of the Nile and the Euphrates, and that they were influenced by the more powerful and populous nations of the Nile and southern India long before the later and slowly descending Iranian civilization touched them. These races included navigating tribes, otherwise they could not have spread themselves over every habitable island of the Eastern Ocean from Madagascar to the Fiji group, if not throughout Polynesia also. To account for this extension, it is not necessary to suppose that they had larger boats than those in which, in modern times, the Papua have been accustomed to make descents on Ceram, and the Sakalava on Camore and the Coast of Africa. But the far higher maritime art of southern India appears to be one of the most ancient in the world. It was certainly not derived from the brahminical tribes of the northwest and it was too much in advance of the Himyaritic to have been borrowed from them. There are, he says, abundant reasons for believing that India, before the prevalence of brahmanism, was at least as civilized as Africa, and he adds that nations who had reached this stage, were as capable of perfecting a navigation of their own as the Chinese, and far more so than the Arabs, who wanted the nurseries which the large eastern rivers gave to India. The earliest glimpse we have of the vessels of the east coast of India is at a comparatively recent period, 1,800 years ago, but it is strongly in favour of an indigenous art. Amongst all these foreign influences of which the presence can be clearly traced, two are of the widest extent and greatest importance. The first is entirely African and Indo-African in its character, it embraced the whole Indian Archipelago, Australia and Papuanesia. Whether it extended to Polynesia and Micronesia Mr. Logan regards as still doubtful, but it certainly included a portion of Micronesia. Along the shores and islands of the Indian Ocean the races to which it must be referred appear to have prevailed. Their limits were those of monsoons, or from Africa to Polynesia. When they thus spread themselves over Africa, India, and the Indian Archipelago, the great outlying regions of the old world, there could have been no civilized Semitic, Iranian, Burmese or Siamese races on that sea to hinder them.

The language of their population belonged to a state intermediate between the monotonic and the inflectional, and had strong and direct affinities to the other families of language of this stage,—the Ugro-Tartarian, Japanese, old Indian and African, and to a certain extent too the American, which last may be considered as constituting a peculiar family. Amongst the best preserved examples of these languages are the Formosa, Philippine and the Australian. It is probable that some of the eastern Melanesian languages will be found to be equally characteristic.

Tibeto-Indian.—The second of the great insular families, he continues, is the Tibeto-Indian and Mayama-Anam. It connects itself with all the races and languages from Tibet to Anam, but it chiefly flowed in through the ethnic basin of the Malacca sea. By a long continued influx this family spread itself over the Malayan Peninsula, Sumatra, Java, Borneo, and Celebes, but its further progress, over the many islands to the north and east appears to have been long checked by the older races.—(*Jour. of the Indian Arch. Vol.* IV. *No. 5 and* 7. *May and June* 1850, *page* 310.)

Dravidian race.—Mr. Logan who has had great opportunities of contrasting and comparing the Dravidians from various parts of India inclines to call them South Indian. He remarks that physically the population of southern India is one of the most variable and mixed which any ethnic province displays. A glance at a considerable assemblage of Kling (Telugu) and Tamular of different castes and occupations, shows that the varieties, when compared with those of similar assemblages of men of other races, such as Europeans, Ultra-Indians or Indonesians (including Negros in the last two cases), are too great to allow of their being referred to a single race of pure blood. Some are exceedingly Iranian, some are Semitic, others Australian, some remind us of Egyptians, while others again have Malayu-Polynesian and even Simang and Papuan fea-

tures. Yet when the eye takes in the whole group at once, they are seen to have all something in common. They are not Iranians, Polynesians, Papuas, &c., but South Indians. The Dravidian language, however, or one of its principal elements, was probably an extension of a Mid or W. Asiatic formation, and it may be inferred that the common element of the Dravidian, the Fin and Japanese languages, must be much more ancient than the occupation of Japan by the Japanese, India by the Dravidians and Finland by the Fins.

The peculiarities in the Dravidian physical type, when compared with the Scythic, are African and Africo-Semitic.

The main affinities of the Dravidian formation thus point two ways,—the linguistic chiefly to a Scythic, and the physical chiefly to an African origin or fraternity. The geographical position of the Brahui would lead us to explain the double alliance by placing the native land of the Dravidian stock in Beluchistan and including it with Arabia, or the southern portion of the latter,—in the archaic African or Africo-Semitic era. That the African physical element prevailed over the Scythic, while a Scythic language has entirely superseded one of an African character, finds explanation in the fact that the Scythic races and languages have in themselves an intimate archaic connection with the African, and the Dravidian language, although Scythic more than African, has special Africo-Semitic affinities. He is further of opinion that races may blend without the different types being effaced and that, while certain exclusive or excluded castes, or sequestred geographical sections of the population, may preserve one type better than another all may continue for some thousands of years, to be reproduced in softened and modified forms even in the least secluded portions, and to this he refers his explanation of the variety of physical types visible in south peninsular India. That the Dravidian race did not bring with it into India, the civilization which the present great southern nations possess, as the Arian did theirs, appears, he thinks, to be little questionable when we consider the antique character and affinities of the dialects of the Male, Orond, Khond and Toda, the very archaic and barbarous character of many of the customs of the widely separated tribes which speak them a prior race, and, above all, the nature of the relationship of the dialects to those of the civilized nations. The known ethnic facts lead directly to the conclusion that the uncivilized Dravidian speaking tribes are genuine Dravidians who have in a great measure escaped the culture which the more exposed tribes have received and thus preserve a condition of the race, certainly not more barbarous than that which characterised it when it first entered.

The Dravidian race everywhere in India, has been long in contact with other races and shows the influence which the intermixture has produced. If the formation of their language be taken as a test, it leaves no doubt that one tribe carried a large batch of its native glossary over all India from the Himalaya to Ceylon. In the Himalaya and Northern India, the old race has long been in contact with ultra-Indians, Tibetans and Arians. But, if their physical appearance be examined, even in the extreme south the diversity which prevails shows that there has been great intermixture, but there are nevertheless widely prevalent characters most of which are not Arian nor Tibetan and are even distinct from Ultra-Indian.

The more important of these characters are appointed, and frequently hooked, pyramidal nose, with conspicuous nares, more long and round; a marked sinking in of the orbital line, producing a strongly defined orbital ridge: eyes brilliant and varying from small to middle sized: mouth large, lips thick and frequently turgid; lower jaw not heavy, its lateral expansion greater than in the Arian and less than in the Turanian type; cheek bones broad and large rather than projecting, as in the Turanian type, giving to the middle part of the face a marked development and breadth and to the general contour an obtuse oval shape, somewhat bulging at the sides; forehead well formed but receding, inclining to flattish and seldom high; occiput somewhat projecting; hair fine, beard considerable and often strong, colour of skin very dark, frequently approaching to black.

We may, he adds, conclude from the ethnic character and position of the ancient Indian population, that it belonged to the small Turano-African type. But successive modifications of race, seem to have been going on in India from times long anterior to the Arian or even Tartar eras and imply linguistic changes also.

The above is the higher and much improved type. But, as in Africa, Ultra-India and Asionesia, a smaller, more Turanian, and less Semiticised type is still preserved although variously crossed. The successive Turanian predominant races and formations and the Irano-Semitic have in turn influenced all the great outlying southern provinces, Africa, India, Ultra-India, and America, the last in general indirectly, through Ultra-India, India and Africa. From the formation of the language, there was seemingly a still older intrusive people, the Scythico-Semitic and pastoral, who found India less Scythic and more African than it became under their influence, but the same evi-

dence shows that the Dravidian race and linguistic formation preceded the Ultra Indian, Tibetan and Arian in India, and prevailed everywhere to the southward of the Himalayas. Their route seems to have been from the N. W. where, from time immemorial, the region between the Indus and Euphrates has been occupied by the Turanian, Iranian and Semitic races. Physically the Dravidians are somewhat Turanian, and the linguistic formation of their language has a strong and unequivocal affinity to the great Asiatic Turanian, or Ugro-Japanese alliance. The Turanian formation, physical and linguistic, evidently long preceded the Iranian and Semitic, as an expansive and dominant one and it is certain that the Turanian was migratory and diffusive on a great scale, long before the Semitic and Iranian, which must have remained sequestered in some portions of the mountain band of Asia Minor, Armenia, and Irania and the adjacent S. W. region which includes the basin of the Euphrates, during the great era that must have been occupied while the Turanian linguistic formation spread to Lapland and Japan, to North Cape and Ceylon.

The peculiarities in the variable physical character of the Dravidian physical types, when compared with the Scythic, are African and Africo-Semitic. The very exaggerated occipital and maxillary protuberances are not characteristic of the typical African head, but of a debasement of it confined to certain localities. Several east and mid African nations have the so-called African traits much softened, and differ little from the Dravidian. Even woolly or spiral hair is not a universal feature in Africa, some tribes having fine silky hair. The Dravidian pyramidal nose, the sharp depression at its root, the slight maxillary and occipital projection, the turgid lips, the oval contour and the beard, are all African. He thinks there is reason to believe that the strong Africanism of some of the lower South Indian castes is really the remnant of an archaic formation of a more decided African character. The position of India between two great negro provinces, that on the west being still mainly negro, even in most of its improved races, and that on the east preserving the ancient negro basis in points so near India as the Andamans and Kidah. It is therefore highly probable that the African element in the population of the peninsula of India, has been transmitted from an archaic period before the Semitic, Turanian and Iranian races entered India, and when the Indian ocean had negro tribes along its northern as well as its eastern and western shores.

As bearing on this point it may be remarked that Dr. Pritchard mentions as the result of Baron W. Humboldt's researches into the Kavi language, that the resemblances between the nations of the Polynesian islands and the tribes of the Indian Archipelago, Malacca and Madagascar, are not, as some have supposed, the effect of casual intercourse, but essential affinities, deeply rooted in the construction of these languages, and that the races of people are themselves of one origin.—(*Rep. Brit. Assoc.*, 1847, *pp.* 241-250.)

Chinese.—Chevalier Bunsen (*Report Brit. Assoc.* 1847) says that according to Chinese traditions, Tibet is the land of their earliest recollections, and Dr. Latham (*Rep. Brit. Assoc.* 1845) says that in addition to their grammatical analogy, there is an absolute glossarial affinity between the languages of Tibet and China: and that the Chinese, Tibetan, Bhutan, Burmese, Siamese and all the so-called Monosyllabic languages are allied to each other.

Routes followed.—Mr. Logan long resided at Penang and his opportunities of examining the various races of the South of Asia were great. He is of opinion that the various races in south Eastern Asia, reached their present positions along the great rivers and by traversing the seas, and he styles the original seats and routes, sea basins and districts, defining the former term as the seas with the marginal basins of their affluent rivers.

Mr. Logan's Tibetan district is the great plateau of mid Asia and is centrical ethnically as well as geographically to all S. E Asia and to Asianesia, abuts on the west on the eastern extremity of the primitive Iranian region, and is connected with China and all the sea basins on the east of Asia by means of the Yang-tse-Kiang and Hoang-ho.

The Indian Oceanic basin of that writer consists of the whole of India and of the Bay of Bengal, the bay affording means of communication between the western margin of the China Malayan basin and the eastern sea board of India.

The Yang-tse-kiang forms with the Hoang-ho, a twin basin, to which the most advanced and powerful Eastern civilization owes its development. The Yang-tse-kiang is connected on the west with the twin basins of the Salwin and Irawadi, which are themselves connected inland with the Tibetan district and on the S. and E. with the Indian Oceanic basin.

Tibeto-Indianesian.—India, has both land and sea communication with the Tibeto-Indianesian region, viz. by the passes of the Himalaya, the valleys of Assam and the Brahmaputra, and by the ocean, coasts and winds of the Bay of Bengal.

It contains, therefore, the district of the Malacca straits, the marginal districts of the northern part of the Malay Peninsula, and the

basins of the Salwin, Irawadi and Kolandan, all of which also pertain to the eastern region, but its peculiar districts are the basins of the Brahmaputra, Ganges, Godavery, Kishna, Ceylon and the marginal districts on the west.

He says that from all historic times uninterruptedly to the present day, the sea basins whose ethnic influence has been in operation, are the China, Malacca, Java, Mangkasar, Solo, Mindoro, Molucca, Banda, Papua, Jilolo, Papuan, Papua Australian and Papua Micronesian seas, and the Archipelagian seas of Johore, the Trans-Javan or Timorean chain, the Bisayan group, the Moluccas, Eastern Melanesia and the different Polynesian and Micronesian groups. All of these are broad highways throughout the Archipelago, permit foreign navigators and the natives of the islands to traverse them freely and permit of constant intercourse with the rivers on the continent, thereby bringing the whole under the operation of foreign civilizations, and, opening as they do into each other, they are as broad highways traversing the whole Archipelago in different directions, and uniting it, both for foreign navigators and for the more advanced and enterprising of its native communities.

Instead of the name "Indian Archipelago" which is too long to admit of being used in an adjective or in an ethnographical form Mr. Earl at first suggested the term Indu-nesian but rejected it also in favour of Malayanesian. The purely geographical term Indonesia, is suggested by Mr. Logan as a short synonym for the Indian Islands or the Indian Archipelago, as we thus get Indonesian for Indian Archipelagian or Archipelagic, and Indonesians for Indian Archipelagians or Indian Islanders.

By Mr. Logan's term Malayu land he understood all districts, whether geographically united or not that are possessed by communities of Malayu, and by Malay or Malayu is understood men of the Malayu race and language. So by his Jawa-land is understood all the lands of the Jawa race ; so Sunda land, Wugi-land, Batta-land, &c.

He observes that for compound insular districts it is very desirable that single geographical names should be used. Until unexceptionable ones are suggested we must continue to speak of the Sumatra—Philippine islands ; the Moluko-Timorean, &c. The Indian Archipelago must remain, but the shorter form Indonesia might be usefully employed on many occasions.

The principal divisions may be designated : —1st western or W. Indonesia i. e. Sumatra, the Malaya Peninsula, Borneo, Java, and the intermediate islands.

2nd, North Eastern or N. E. Indonesia i. e. Formosa to the Solo Archipelago and Mindanao, all included, and embracing the Philippine and Bisayan groups, &c.

3rd, South Eastern or S. E. Indonesia, from the East coast of Borneo to New Guinea, including the Western Papua islands and the Keh and Aru Archipelagos.

4th, Southern or S. Indonesia, the great southern or Trans-Javan chain between Java and New Guinea or from Bali to the Timor Laut group.

The different portions of the first division are sufficiently distinguished by the names of the great lands of which it is composed. The only portion of the 2nd division which has not a distinctive name is the Southern chain which has a close ethnic connection. As it is throughout the great seat of piracy in the Indian Archipelago it has been proposed to term it Piratania, including under that name Mindanao, Solo, and the crowd of other islands extending from Mindanao, to the N. E. coast of Borneo and separating the Mindoro from the Solo sea. In the 3rd division, S. E. Indonesia, may be distinguished as subordinate groups, the Molukas, Halamahera, Ternate, Tidore, &c. (N. Molukas, Banda, Ceram, &c. S. Molukas and the Keh Arus.)

The sea basins, that is the seas with the marginal basins of their affluent rivers, which are districts of the greatest importance physically as well as ethnographically, he proposes to name after the seas. The basin of the Java sea will then be the Java basin, so the Mangkasar basin, Celebes basin, China basin-better China Malayan, &c. Mr. Logan is of opinion that the post-fix "nesia" should be confined to the great divisions of the Indo-Pacific insular region,—Indonesia ; Melanesia, (New Guinea, Australia, and all the eastern Papua islands) ; Micronesia (all the islands between Melanesia and the Luchu and Japanese chain) ; and Polynesia, all the islands of the Pacific to the east of Micronesia and Melanesia as far as Easter island. Papuanesia might be occasionally used to distinguish the northern Melanesian islands inhabited chiefly by spiral haired tribes from Australia.

As Oceanica includes all the Indo-Pacific islands, he proposes to use the word Asianesia to indicate the great S. E. insular region, which has intimate connexions, geographical and ethnic, with Asia. It would include Indonesia, Melanesia, Micronesia and Polynesia, but not the N. E. chain that lies along the continent, because, it forms a distinct and well defined geographic and ethnic group. He would therefore call it Ainojapanesia, and to include all the Japanese and Aino islands from Formosa to Kamtschatka.

He remarks that these great basins have several subordinate ethnic regions to which it is necessary to advert, if we desire to trace to

their sources the successive foreign elements that have been introduced into the Archipelago, The principal one in the North Pacific is that which is surrounded by the Japanese, Luchuan, Meiskoshima, Formosa, Philippine. Palos, Oluthy, Marianne, and Bonin groups. On the S. E. it merges in the Muro-Polynesian band ; on the S. W. it constitutes a portion of the Indian Archipelago ; on the N. W. it forms the outer boundary of the China-Corean basin on the N. it connects itself with the basins of the Japanese and Okhotsh seas, and is thus brought into direct ethnic union or close connection with the E. districts of M. and N. Asia. The China sea unites the Indian Archipelago primitively with the great ethnic region of S. E. Asia by the districts of the Hongkiang, Tongkin, Mekong and Menam basins, and the marginal Chinese and Anam districts,—the Malay Peninsula, which forms the western bounding district, being ethnically a common portion of the Archipelago and the continent.

This *Peninsular district* again enters on the west into the twin basins of the Salwin and Irawadi, which are themselves closely connected more inland with all the previous basins, as well as with the great eastern one of the Yangtse-Kiang. The latter is intimately connected with that of the Hoang ho, and forms with it the twin basin to which the most advanced and powerful eastern civilization owes its development.

The *Tibetan district*, the relations of which important district is central ethnically as well as geographically to all S. E. Asia and to Asianesia, unites all the preceding ones, connects them with the great plateau of mid-Asia, and abuts on the eastern extremity of the primitive Iranian region.

The next ethnic region of the Indian Oceanic basin is that of the Bay of Bengal or *Indo-Malayan sea* which unites the western margin of the China Malayan basin with the eastern sea-board of India. As the rivers of the Indian Peninsula connect it closely with the western marginal districts, the watershed being near the Indo-African sea, while the basin of the Ganges has its head nearly in the same longitude, we may consider the whole of India as of portion of this region. It contains therefore the district of the Malacca Straits, the marginal districts of the northern part of the Malay Peninsula, and the basins of the Salwin, Irawadi and Kolandan all which appertain also to the eastern region. The districts that are peculiar to the Indo-Malayan basin, some however being common to it with the Indo-African basin, as are those of the Brahmaputra, Ganges, Godavery, Kishna and Nerbudda, with the secondary districts between the Ganges on the one side and the Nerbudda and Godavery on the other, the great Dekhan and Singalese projection and the western marginal districts. India is connected with the Tibeto-Indonesian region—landward by the passes of the Himalaya, the Asamese valley, and the eastern margin of the lower Brahmaputra basin, and oceanically by the coasts and winds of the Bay of Bengal. By the latter it has also a direct and independent connection with the insular portion of the first region.

The *Indo-African sea* is that portion of the Indian Ocean extending from its N. W. boundary to the Mozambique Channel and including the Persian Gulf, Arabian Sea and Red Sea. It has had much influence on the ethnology of Eastern Africa. The corresponding eastern portion of the Indian Ocean may be termed the Indo-Australian Sea. Important ethnic considerations—relating to the Oceanic winds make it necessary to distinguish these two regions from the middle one ; this, with the districts of the Indus basin, the marginal district of Beluchistan, the great longitudinal one formed by the Persian Gulf and the basin of the Euphrates, the southern Arabian district, that of the Red Sea, and the marginal or Trans-Nilotic one of E. Africa, form the next region. Of these basins, the Euphrates and the Red Sea are of especial importance, for by them the ancient civilization of the Mediterranean and the Nile spread their influence into the Indian region, while the Euphrates basin was itself the seat of a great archaic development of intellect and art.

Races now inhabiting Southern and Eastern Asia.—The many countries from which the various occupants of India have come create a difficulty in framing a notice of each of them in a continous narrative.

Semitic race.—The Semitic populations in Asia, are the Arabians, Syrians and Samaritans; in Africa, the Abyssinians of Tigre and Amhara, Agow, Falasha, and Gafat. Several branches of the race have played a distinguished part in the history of the world. Conquest and commerce, but chiefly the former has greatly diffused this race. In various inroads, they have gone northward and eastwards into Persia, India and China and smaller parties are to be found located in Burmah, Malaya and Polynesia. Many of them have likewise conquered and migrated to the west, along the north of Africa and into Europe, where, as in Spain, they ruled for 700 years, and were again driven back into Africa. The original highland south-west of Armenia (Arminu) the country between the sources of the Euphrates and Tigris, and Mesopotamia proper, is Aram Nahrain. The Aramæans, were a Semitic race of highlanders who first settled on the upper part of the Euphrates

and Tigris districts, and then passed through Mesopotamia proper (Aram of the two rivers), the low land (where is Mash, Mons Masius) which falls gradually towards Syria, afterwards called Aram. The name of Uz, in Nejd, proves that its off-sets extended as far as North Arabia. The Aramaic tribes, according to Ch. Bunsen, are the historical nations of Syria, Aram, Mesopotamia and Babylonia, speaking Syrian in the west and the so-called Chaldaic in the East. In the gradual diffusion of mankind, the western provinces of Iran seem to have fallen to the share of the Aramæans and Elamites—and the Semitic people and language displaced the Cushite. From their primitive language two distinct branches sprung,—the original Arabic, with the Musnud, Koreish and other dialects of that tongue, being one, and the Aramaic, the other. The latter had two grand sub-divisions, from one of which, known as the Western Aramaic, were derived the Amharic, Syriac, Hebrew, &c. &c. and from the other or Eastern Aramaic came the Syrian, Babylonian and Chaldean tongues. From its monosyllabic construction the eastern seems to be more ancient than the Western Aramaic, and it appears likewise to be the root of the Zend, Pehlevi Sanscrit and other dialects in use throughout a portion of the territory along which it had spread eastwards.—(*Bunsen, Vol. iii. and iv.* See India, p. 314. Iran; Babel, Mareb; Semitic Race.)

Arabs.—The Arabic language, as written in the Koran, is the most developed and richest of the Semitic tongues. It is not now spoken in any part of Arabia, as there written. Probably it never was so, any more than the Latin, the English, the German or Italian have ever been spoken as written in their respective bounds, and Burton quotes from the Arabic Grammar of Clodius, that the dialectus Arabum vulgaris tantum differt ab erudita, quantum Isocrates dictio ab hodierna lingua Græca. Indeed the Arabs themselves divide their spoken and even written language into two orders, the "Kalam Wati," or vulgar tongue, sometimes employed in epistolary correspondence. and the "Nahwi," or grammatical and classical language. Every man of education uses the former and can use the latter. And the Koran is no more a model of Arabic (as it is often assumed to be) than "Paradise Lost" is of English. Inimitable, no man imitates them.—(*Burton's Pilgrimage to Mecca, Vol. III. p.* 330.)

The Arabian Sea, that part of the Indo-Afric ocean on the south of Arabia, including the Red-Sea and Persian Gulf, has 6,000 miles of Sea Coast.. Along this and the African coast and to the west are several nations of similar origin.

Arabs.—The Peninsula of Arabia with the Indian ocean on its south, the Persian Gulf on its east and the Red Sea on its west, has numerous fertile valleys amidst mountains, and great sandy desert tracts. The ancient Greek and Roman geographers divide Arabia into A. Felix, A. Petrœa and A. deserta. The first nearly corresponds to the modern Yemen, but including Mahra and Hadramaut: the second the modern Hejaz:—the third, extends N. E. from A. Felix as far as the Euphrates. Some oriental authors have included the whole Peninsula, under Yemen and Hejaz: others into Yemen, Hejaz, Nejd, the Tehama and Yemana. Hadramaut, Mahra, Shehr and Oman have also been reckoned independent provinces by some, while others include them in the two great divisions, Yemen and Hejaz.

The people known as Arabs, are spread from Syria to the Indian Ocean. They are chiefly in tribes and those who occupy the country around Jerusalem, are the Anezi, Shammar, Mowali and Salhan.

The Assir tribe occupy between Meccah and Medinah. They have six kabileh, Bin ul-Asmar, Bin ul-Akmar, Charaan, Assir, Roufe ida and Ahida, and muster about 44,500 fighting men.—(*Fontanier.*)

The Cha'ab-Arabs, occupy the lower part of Mesopotamia. They are a tall, warlike race, strong limbed and muscular, active and healthy. It is necessary, when considering the Arabs, to distinguish between a series of grades towards civilization, in which they are at present to be found. The Bedouin, is wandering, pastoral, tent-loving, disdaining to trade, yet avaricious and willing to sell his ghee, his mutton, or his horse, and always found in wide and open wastes, unpressed upon by adequate exterior power. Yet, even the Bedouin bends to circumstances. He accepts the region allotted for his pasture grounds. Plunder has its laws and vengeance its chivalry. If he will not trade, he has still wants; and suffers the presence of a Jew or Saleebah as the Affghan suffers that of the hindoo. A little higher in the scale, as with the Cha'ab, is the original wandering pastoral Arab, in a district where he is pressed upon from without, and where boundless plunder and roaming are restrained by exterior force. The Arab then partly turns to agriculture, and for this he must in some degree settle. Society harmonizes to this level. Trade is possible. Corn is sold. The abba cloaks are woven and exported. Dates are planted. The appetite for trade grows by what it feeds on. Huts of reeds replace tents; and one sees in their feeble efforts at reed ornamentation, and in their rough twisting of their reed rope for their bunds, the possible germ of some architectural efforts. Yet higher in the

scale is the Arab flourishing as an experienced and wealthy merchant in a town, or administering a well-ordered and comfortable rural district. Passing among these people, society is seen in its transitional state towards civilization.—(*Pelly, Rawlinson, I.* 36.)

The present Arabians, according to their own historians, are sprung from two stocks : Kahtan, the same with Joktan or Yoktan, of the Bible the son of Eber, whose descendants occupy the south ; and Adnan descended in a direct line from Ishmael, the son of Abraham and Hagar who occupy the north."—(*Sales' Koran, Preliminary Discourse, p. ii)*

Yoktan according to Ch. Bunsen, was one of the two sons of Nimrod and was the chief of the first Arabian emigration that proceeded southwards. Tradition points to the mountains of Armenia as the birth place of the Arab and Canaanitish races. It is supposed that they travelled along the banks of the Tigris into Mesopotamia, from which a portion of them commenced a great migration southwards, the result of which was the foundation of the primeval kingdoms of Southern Arabia, the kingdoms of the Adites in Yemen, who believe that they came from the sacred North, and once lived in a glorious garden of the earth which they are to restore. In the matter of their present locations, Dr. Latham, in his Ethnology, mentions that Hejaz, is peopled by the descendants of Ishmael, but the inhabitants of Meccah and Jedda, consist of pilgrims and their descendants of African, Persian, and Turk-blood. In Southern Arabia, Yemen, Hadramaut and Oman, the people are more or less Himyarite in blood, history and civilization. Those of the towns of Mokab, Sanai, Rodda and Loheia, are the more civilized and the desert and hill Arabs are rude and ignorant, one of them so rude in speech as to be named the Bin-i-Kalb, children of dogs—and the Berekede a branch of the Asir are said to prostitute their wives like the Jakuri Hazara. At Hasek is the tomb of the prophet Hud, the fourth in descent from Shem. At the entrance of the Persian Gulf, the pirate coast begins and extends 300 miles northwards. The southern tribes of the Peninsula of Senai, are more or less fishermen. The early Arab religion was Sabæanism, a worship of the heavenly bodies, mixed with idolatry, but with Mahomed commenced the Arab conquests, the creed, science and literature. At present, the Arabic alphabet is in use amongst the Turks, Persians, Malays, some of the people of India and Africa. It was however of Syrian origin. The Arab family is mahomedan, except the christian Arabs of Malta,. Nejd or Central Arabia, is Syrian and arranged into divisions called " *Suk.*"—(*Latham's Ethnology.*) The people occupying this Peninsula, are however regarded by Captain Burton as of three distinct races : viz. the aborigines of the country, who have been driven, like the Bheels and other autochthonic Indians, into the eastern and south-eastern wilds bordering upon the ocean : second, a Syrian or Mesopotamian stock, typified by Shem and Joktan, that drove the indigenæ from the choicest tracts of country ; these invaders still enjoy their conquests, representing the great Arabian people. And thirdly, an impure Egypto-Arab clan well personified by Ishmæl, his son Nebajoth and Edom (Esau, the son of Isaac)—that populated and still populates the Sinaitic Peninsula. The indigens or autochthones, he says, are those sub-Caucasian tribes which may still be met with in the province of Mahrah, and generally along the coast between Muscat and Hadramaut. The Mahrah, the Jenabah, and the Gara especially show a low development, for which hardship and privation only will not satisfactorily account. These are " Arab el Aribah," for whose inferiority oriental fable accounts as usual by thaumaturgy. Dr. Carter has remarked the similarity between the lowest type of Bedouin and the indigens of India, as represented by the Bheels and other jungle races. The principal immigrant race, he also says, are the Noachian, a great Chaldægoan or Mesopotamian clan which entered Arabia about B. C. 2,200, and by slow and gradual encroachments drove before them the ancient race and seized the happier lands of the Peninsula. This race would correspond with the Arab el Muta-Arribah or Arabicised Arabs of the eastern historians. The third family, an ancient and a noble stock, dating from B. C. 1,900, and typified in history by Ishmæl, still occupies the Sinaitic Peninsula. These Arabs, however, do not, and never did, extend beyond the limits of the mountains, where they are still dwelling in the presence of their brethren. Captain Burton considers it highly probable that the Copts, or ancient Egyptians, were " half-caste Arabs ;" a mixed people like the Abyssinian, the Galla, the Somali, and the Kafir, an Arab graft upon an African stock. Hence the old Nilitic race has been represented as woolly-headed and of negro feature.—(*Burton's Pilgrimage to Mecca, Vol. III. pp.* 29, 31, 41, 45.)

Women.—The Arab are not so scrupulous as the Turks and Persians about their women ; and though they have the harem, or women's part of the tent, yet such as they are acquainted with come into it.—(*Mignan's Travels, p.* 16.)

Pirates.—The pirate race whose power and influence was long felt by the neighbouring tribes, and is still intimately connected with their political condition, occupy a part of the coast within the Persian Gulf comprehended between the mountain range and the sea-shore,

and extending in that direction from Kasab to the Island of Bahrein,—a distance of 350 miles. On the map, this portion bears the designation of the Pirate Coast. Ibn Haukal, in his version of the Koran, informs us that before the deliverance of the children of Israel from Egyptian bondage, the subjects of a private monarch in these parts seized on every valuable ship which passed. The possession of a few ports within and near the entrance of the Persian Gulf, where it is not more than thirty miles across, enabled them to perceive and sally out on all passing vessels. To the Portuguese during their brief career in India, they proved quite as troublesome as they did in the latter part of the eighteenth century to the British. With these robbers the imams of Maskat have been repeatedly at war. In 1809, an expedition was sent against them under Captain Wainwright, in his Majesty's ship Chiffonne. Their principal stronghold, Ras-ul-Khaimah was stormed and taken, and fifty of their largest vessels burnt or destroyed. Leit, on the island of Kishm, and several other ports, were reduced; but though this had the effect of checking them for a time, they soon rebuilt these ports, and gradually returned to their old practices. The inhabitants of the Pirate Coast consider themselves to be far superior to either the Bedouin or town Arab. The latter, especially those from Oman, they hold in such contempt, that a Maskatti and an arrant coward are by them held to be nearly synonymous. They are taller, fairer, and, in general, more muscular than either of the above classes, until they attain the age of thirty or forty years, when they acquire a similar patriarchal appearance.—(*Wellsted's Travels, Vol. I. pp.* 249, 262.)

Africa.—In Africa, the Semitic race are found as fetish-worshippers, christian mahomedans and Jews.

Abyssinia—is christian, with the chief truths of the Bible blended with merely human notions.

The Adal tribes also said to be a Semitic race, dwell on the west of the Red Sea. They call themselves Afer, but by the Arabs they are called Kanakil, from their chief tribe Ad-Alli, and Dr. Krapf is of opinion that this Afer is the Ophir of scripture.

Galla, a Semitic race, occupy Shoa in Abyssinia. They are one of the finest races in Africa of a dark brown colour with strong hair, and well limbed. They live in a beautiful country, extending from L. 8° N. to L. 3°. S. with a climate not surpassed by that of Italy or Greece, and speaking a language as soft and musical as pure Tuscan. They are from six to eight millions in numbers. Amongst them are scattered christian tribes, but the religion of the race in general is Fetish, and the seven tribes of the Wollo Galla are mahomedans. The fetishists worship the serpent as the mother of the human race, and hold their religious services under a tree. They keep every fourth day as a day of rest. They acknowledge a supreme being whom they call heaven (Mulungu) and have a notion of a future state. There seem to be three natures or attributes in their supreme being, viz., Wak or Waka, Supreme, Ogli, a masculine, and Ateti, a feminine power or embodiment. They have two holidays in the week, viz. Saturday, which they call Saubatta kenna or little Sabbath and Sunday, which is their Saubata gadda or greater Sabbath.

Zanzibar.—The Zanzibar dominions comprise that portion of the coast included between Magdashoa in 2° north latitude and Cape Delgado in 10° 42′ south latitude. Beyond them, to the north, are the independent Somalee tribes, which extend almost to the Red Sea, where they meet the Dankalie race; and on the south they are bounded by Mozambique. The extent of coast under the dominion of the sultan of Zanzibar is about eleven hundred miles, but the most valuable parts of his sultanate are the islands of Zanzibar (containing the capital of the same name), Pemba and Monfia. The first is situated at a distance of from twenty to thirty miles from the mainland; and is in size about equal to the Isle of Wight. It contains none but small streams.

The Tonareng is á nomade race dwelling in the great desert, very fair, with long hair, aquiline noses, high foreheads and thin lips. They say their prayers in Arabic, and speak a Semitic tongue. Their arms consist of a long lancewith a broad head, javelins 6 or 7 feet long, with jagged hooks at the pointed end, a round buckler (darega) of buffalo or elephant hide from Soudan, and a poniard, a broad bladed scymeter.

The Kabyle, south of Algiers are the Berber race, the old Numidians and differ in language, form and habit from the Arabs of the plains. Their number is about 700,000 they have a federal republic, the old Quinque-gentes who gave so much trouble to the Romans, who treed the soldiership of Maximilian and sixty years afterwards again revolted.

Further West, in Morocco is a population of about eight millions

Berber...	2,300,000	Negro and Abid...	120,000
Shellok...	1,450,000	Christians...	300
Moor...	3,550,000	Renegades...	200
Arab...	740,000		
Jew... ...	340,000		

The Arabs of Morocco, are the Moors of Spain, the Saracens of France, tall, graceful sons of the Arabian desert, courteous, brave, hospi-

table and confiding,—descendents of the conquerors, who in the first ages of the Hijrah propagated the religion of Mahomed, crossed the Straits of Gibraltar, destroyed the Gothic chivalry, reigned in Spain for 700 years, invaded France, devastated Italy and pillaged the suburbs of Imperial Rome. When the last Arab king submitted to Ferdinand and Isabella and the Moorish palaces of Grenada were surrendered to the christians, the old conquerors went back to Africa and resumed their nomade life. In Tripoli, the Arab has monopolized the country. In Tunis, the native reappears in a smaller proportion and in Morocco he is very scarce.

The Berber and Shellok are untamed, warlike tribes dwelling on the mountains; when possible, rovers of the sea, claiming fanciful origins, but impatient of any subjection. They are the same race as those whom the French call Kabyle and Zouave. The Moors are little idle men, who grow fat from indolence, they are lowanders, traders, dwellers in cities, avaricious, perfidious, cowardly, cringing and insolent. The Riff-dwellers of Kalhiya, Cape Tres Forcas, correspond to the Arab Saheli on the Red Sea coast, the name being evidently from "ripa" a bank.

Euphrates to the Indus.—The regions through which these two rivers run, and the countries intervening have, since remote ages, been occupied by races who have taken a prominent place in history. Aram-Nahrain, is the Syria between the rivers, of Gen. xxiv, 10 and Deut. xxiii, 4. The greater part of what was called Mesopotamia, in latter times, constituted the territory of ancient Babel, and was the Aram Nahrain of Scripture. The same territory in Gen. xxviii, 2, is called Padan-Aram, or Champagne Syria, both of which designations agree with the description of the country given by Strabo.

Strabo says that the Tigris washes the eastern side of Mesopotamia, and the river Euphrates its southern and western; whilst the Taurus separates it from Armenia on the north. Pliny is still more distinct. He says that Mesopotamia has the Tigris to the east, the Euphrates west, the Persian Gulf south, and the Taurus north, with a length of 800 miles and a breadth of 360 miles, the city of Charax being at the extremity of the Gulf. (*Lib. vi. c. xxvii.*) Mesopotamia extends above 10° in longitude from Balis, in 38° 7′ 10″ east longitude, to the estuary of the old Kárun, in 48° 45′ 16″ and 7° 31′ 5″; in latitude from the shores of the Persian Gulf, in 30° to Sumeisat, in 37° 31′ 5″ north latitude; its greatest width being about 170 miles from Jaber Castle to Hisn Keifa, on the Tigris, and its extreme length nearly 735 miles. The irregular triangle thus formed has a superficies of nearly 76,117 square miles, including the shores of the Gulf from the Pallacopas to the old Karun. The principal towns of Mesopotamia are Diyár Bekr, Hisn Keifa, Jezireh, Mosul, Tekrit, Sámmará and Kut-el-amárah along the Tigris; Erzingán, Kemákh, Egin, Kebbán Maden, Malatiyah, Rum, Kal'ah, Bir, Rakkah, Deir, Rawd, Anah, Hadisah El' Uzz, Jibbah, Diwániyah, Lamlun, Sheikh ul Shuyukh, and Kurnah along the Euphrates: in addition to Suverek, O'fáh, Háran, Seroug, Ras-el-ain, Márdin, Nisibis, Sinjar, El Hadhr, Kerbelah, Mesjid Ali, Samawáh, Zobeid, and many other villages, both in the mountains and along the streams, between the two great rivers. Grane, or Quade, Mohammarah, and Básrah are the ports; and the last, being the principal, is next in importance to Baghdád, the capital.

The races that have ruled here from the most remote times have been many and remnants are still to be traced of former dominant peoples in the varied languages still spoken.

The inhabitants of that region at present consist of Arabs, Osmanli Turks, Kurds, Turkomans, Syrians, Jews and Christians. Arabic is the general language; Turkish, Kurdish, Chaldee, Syriac, and Syro-Chaldean dialects being the exceptions. The sunni mahomedan religion is prevalent; but, in Upper Mesopotamia, there are many christians of the creed of Nestorius, some of whom have become Roman Catholics and Jacobite as well as Roman Catholic Syrians.—(*Euphrates and Tigris. Col. Chesney, p.* 111, 118.

Professor Rawlinson believes that Chaldea was a part of the great Mesopotamia plain, bordering the Persian Gulf on the south with Arabia on its west, and the limit between lower and upper Mesopotamia on the north. Chaldea seems to have been divided into a northern portion from Hit to Babylon, and a southern portion from Niffer to the shores of the Persian Gulf. In each of these there seems to have been a tetrarchy, viz., Babel, Erech, Accad and Calneh, in the land of Shinar (Gen. x. 10) and Hur, or Huruk, Nipur and Larsa or Larancha, which seem to be the scriptural Ur of the Chaldees, Erech, Calneh and Ellasar. The northern tetrarchy was Babel or Babylon, Borsippa, Cutha and Sippara, the last the Sepharvaim of Scripture. A Semitic or Aramaic race is usually supposed to have early occupied the great alluvial plain at the mouth of the Euphrates and Tigris. They called themselves Aram, and the Greeks called them Assyrians, or Syrians, and Niebuhr regards the early inhabitants of lower Mesopotamia as pure Aramæans closely akin to the Assyrians from whom indeed he regards them as separated only politically, and this view is taken by Bunsen and Muller: but Professor Rawlinson (i. 54) regards as correct, the scriptural statement that they were Hamites, Cushite or Ethiopian. The first Babylonish dy-

nasty began B.C. 3784, by a powerful Chaldee kingdom in Southern Babylonia and the historical city of Babylon is supposed to have been built B.C. 3250. The Chaldean dynasty lasted for 1550 years, B. C. 2234, when Babylon was taken by Zoroaster, a Mede, who then founded there the second Babylonian dynasty. The Median dominion ended B.C. 2011, after a rule of 224 years. The Chaldee were on several occasions the dominant race. The term Chaldæa, is derived by Pococke from Kula a tribe, and deva, a god or brahmin. Chaldæans were undoubtedly the first people who dwelt in cities and formed a nation in the south of Persia. They settled in Mesopotamia, but it is supposed that they originally came from near Ararat and that they had spread northward towards the Caucasian range, where they engaged in astronomical pursuits. The ancient Babylonia, is the modern Irak-i-Ajam. The temple of Belus the sun-god of the Babylonians, in the City of Babylon, was built about B. C. 3,500 or B. C. 3,250, in the era of the largest pyramid, but five centuries before the pyramids generally. This temple was built many thousand years after, and was quite distinct from the watch tower mentioned in, Genesis. The temple of Belus, was in the centre of the city of Babylon, and was the vastest monument in Babylon, and the world, and seems to have been erected 323 years before the birth of Abraham. It was a temple but also meant as the watch tower of Babylon.—(*Bunsen, Vol. IV. pp*, 479, 491 *and* 654.)

The Chaldee was an Aramaic dialect, differing but slightly from the proper Syriac: Ezra iv., 8 to vi, 8 and vii, 12-26; Daniel ii, 4 to vii, 28 and Jeremiah x, 10 are written in the so-called Chaldee. There is also a Chaldee gloss in Genesis xxvi, 47. The Babylonian language in the time of Nebuchadnezzar is very close to Hebrew. The Chaldee language may have been that of Terah, but the possibility of the language of Abraham remaining in its original state during the 216 years that he and his family resided in Canaan; and the 430 years that the Hebrews abode in Egypt; and the 400 years from the Exodus to David, is untenable. (*Rawlinson.*)

Euphrates to Indus.—The region intervening between the Euphrates and the Indus is thinly peopled. It is occupied by races who are subjects of the king of Persia, the bulk of whom are nomade and of varied origin; by the races on the north known to Europe as Afghans; by the Brahui mountaineers and the Balooch races of Baluchistan, and races on the sea coast whose origin is unknown. Macdonald Kinneir (*Geog. Mem. p.* 44) questions whether the inhabitants would amount to more than eighteen or twenty millions even including the Iliyat races, who probably exceed the number of those who reside in towns.

South Persia.—According to the Jehan Numa, one of the earlier divisions of the province of Fars was into the five circles or departments called "Kurre:" and named Istakhr, Darabjird, Shapur, Ardashir and Kobad. At present, it consists of three principal parts, viz. 1. Fars proper (Persis Proper.) 2. Laristan near the Persian Gulf; and 3. Behbehan, or the country of the Khogilu, which represents the circle of Kobad. Behbehan is bounded on the north by the great belt of mountains which separate Irak-i-Ajam from the southern provinces of Persia; the northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the Ka'b country lie to the west, while Shulistan separates Behbehan on the east from the direct dependencies of Fars. On the east and south-east, Behbehan is surrounded by the Mamaseni tribe: on the north and north-west by the Bakhtiyari, and on the west and south by the Ka'b Arabs. Also, the mountainous region to the north and north-east of the plain of Behbehan is occupied by the Khogilu tribes,—and the districts of Lirani and Zeitun, near the Persian Gulf, together with the fortresses of Gul-i-gulab, all come under the control of the governor of Behbehan.

Among themselves, with their equals, the Persians of the higher classes who are settled in towns are affable and polite; to their superiors, servile and obsequious; and towards their inferiors, haughty and domineering. All ranks are equally avaricious, sordid, and dishonest, when they have an opportunity of being so; nor do they care for detection when they have once reaped the benefit of their superior genius, as they term it.—(*Pottinger's Travels, Beloochistan and Sinde, p.* 212.)

Iliyat.—The word Iliyat is derived from Eel, a Turkish or Tartarian word, signifying tribe; to which "aut," an Arabic termination of the plural, was added; a combination not uncommon.

The Iliyat tribes in Persia, are mostly of Arab, Tartar and Turcoman descent; but with tribes from the Bakhtiara mountains, who are of a race totally distinct from the northern hordes, and, probably, something more indigenous to the soil, than any of the other wanderers; but all lead the same manner of life, and bear the common name of Iliyat their pastoral habits little distinguishing them from the Bedouin Arab, or the nomade Tartar on the banks of the Tedzen.

The subjects of the Persian empire therefore appear to consist of two large distinct classes: the stationary inhabitants of towns and cities; and the wandering dwellers in tents and temporary villages.

They comprise a very large portion of the population of the country, though their actual numbers are not well known. They are mahomedans of the sunni sect and herdsmen.

Many of the best families in Persia are of Iliyat origin. The present royal family is of the Kajar tribe, a Turkish El, which came into Persia with Timur.

In winter, the Iliyat either inhabit temporary huts, or follow the sun into warmer districts; the empire of Persia being sufficiently extended to yield a temperate climate somewhere, in almost all seasons. They change their places of encampment with the season and climate, going in the summer to the yeilauk or quarters were pasturage and water are to be found in abundance; and when the cold of winter sets in, adjourning to the kishlauk or warmer region, in which their flocks and herds, as well as themselves are better sheltered. Their summer abodes consist of large black tents, made of woven horse-hair, the sides being matting, or dried rushes. They are usually pitched in a quadrangular form on the banks of their hereditary rivers, and under the brow of the mountains which had shadowed their forefathers for unknown generations. Hence, though they wander, it is yet within bounds. They have a country, and only change their place in it. The nomade tribes of Arabia and of Tartary bear the same character; possessing an extended inheritance, though it be only a desert. (*Porter's Travels, Vol. I. p.* 475.) The Iliyat constitute the military force: and their chiefs, to whom the tribes are entirely devoted, are the hereditary nobility of the kingdom of Persia. Those in the southern provinces, the Bakhtiari, Fielhi, and Mahmaseni, trace their origin to the most remote antiquity, and are probably the descendants of the warlike bands who inhabited the same country in the days of Alexander. The Kashgoi are a nomade Turkish tribe of about 12,000 families, whose chief is the Il-khani of Fars. They and the Bakhtiari from the warm pastures of Arabistan and the head of the Persian gulf arrive in spring on the grazing of Isfahan. At the approach of winter, both the tribes return to their respective Garm-sair or wintering lands. The entire southern region of Fars, bordering on the Persian Gulf, is called the Garmsaer or "hot region." It extends from the sea to the latitude of Kazeroon, and runs parallel with the Persian Gulf, from the banks of the Tab to the confines of Laristan. From Bushire, eastward, as far as Cangoon, the tract is named the Dushtistan or "land of plains." The Tungistan, commonly pronounced Tungistoon, or "narrow land," is a small tract of land east of Bushire. The greater portion of the people of the whole Garm-sair, consists of an independent lawless set, many of the tribes being robbers by profession.

The Garm-sair of Sijistan is a narrow tract of country along the lower course of the Helmund. The Baluch races seem to pronounce it "Gurmsehl" or Garmsail, and one of their wintering places is north-west of Nooshky and distant about 75 miles. (*Pottinger's Travels, Beloochistan and Sind, p.* 103. *Rich.*) Each Iliyat tribe has a separate grazing ground for its flocks; and this land, from long and undisputed possession, is considered, as the property of the different chiefs. In the fine season they are continually on the move, in search of pasturage; but, in the winter, several of the tribes, amongst which may be numbered the Karagoosli and Afshar, settle in villages. In Dahistan, Asterabad, and the Northern parts of Khorasan, instead of tents they live in small portable wooden houses. They principally subsist on the produce of their flocks, and consequently grow but a very small proportion of corn; they manufacture cloth, as well as several other little articles for their own use, and the most beautiful Persian and Turkish carpets, so much admired in Europe, are the work of the Iliyat. Inured, from their infancy, to arms, to danger, and fatigue, and tenacious, at the same time, of the honor of their tribe, they are at once the prop and the glory of their country. Each tribe is divided into "teera" or branches, and each teera has a particular leader, all of whom are however subservient to the chief. These chiefs are, both from birth and influence, the first men in the empire; they are always mutually jealous and hostile; and the king, by nicely balancing the power of the one against that of the other, insures his own safety and the peace of his dominions. It is also the custom to detain at court, either the chief himself or some part of his family, as hostages for the fidelity of the tribe.—(*Kinneir's Geographical Memoir, p.* 44-45.)

The Iliyat tribes says sir John Malcolm are all soldiers, and generally horsemen. The cities furnish no soldiers to the army except infantry, they are defended by a militia, who sometimes take the field.—(*Malcolm's History of Persia, Vol. II. p.* 187.)

In their conduct and morals, the Iliyat women are vastly superior to those of the towns and settlements. They are chaste and correct in their lives, and faithful to their husbands.

Bulbassi.—The Bulbassi is a Kurd race composed of the following tribes:

The Kabaiz, the reigning family, consist of about two hundred persons; 2. Manzoor; 3. Mamash; 4. Piran; 5. Rummook; 6. Sinn and Taafah, who together make one tribe. The chiefs of tribes are called Muzzin. Each chief has a certain number of thieves, who rob for him; and his tribe makes him voluntary gifts

of provisions. These are his only revenues. The price of blood among the Bulbassi is twenty-two oxen, but it may be made up in other effects, to which often a nominal value is attached, more than twice the real amount, when the affair is to be compounded amicably. Their only laws are the usages of the tribe, and these are administered by the chief, assisted by the council of elders. No crimes are punished with death but adultery, seduction, and such like. The Bulbassi will not bestow a girl in marriage on a person of another tribe or people. They have courtship among them, and carrying off a girl by the lover is common. When a chief dies, he is succeeded by the best or bravest of his family, with the common consent of his tribe. If his eldest son is incapable, the best of the brothers succeeds. When a chief is once nominated he cannot be deposed, and his authority is so well defined, that there are no instances of a chief ever having attempted to exceed his powers. In their own country the Bulbassi do not willingly acknowledge any superior, either Turkish or Persian; but when they descend into the regions of Karatchook they pay a tribute of sheep to the Bey. They are very fond of armour; and most of the principal people among them possess a complete suit of mail. The Bulbassi Koords have a most curious way of curing wounds. They sew the wounded man in the skin of a bullock fresh stripped off the animal, leaving only his head out; and they leave him in it till the skin begins to putrify. They say this never fails to cure the most desperate spear or sabre wound. —(*Rich. Residence in Koordistan, Vol. I. p.* 153.)

Races on the Sea Coast, Ichthyophagi.—The people on the coast seem to be identical with the races who are known to have dwelt there two thousand years ago; and described by the ancients as the Ichthyophagi. From Basrah to Hormuz, the sea coast people still principally live on fish. The Mahi-abah and Mahi-ashnah, literally fish bread and fish soup, used among the people of Lar is prepared from fish, (more particularly a small kind found near Hormuz) by exposing it to the sun. Strabo and Arrian relate, that the ancient Ichthyophagi, made into bread in a similar manner, the fishes which they had dried and roasted. The region of the Ichthyophagi commenced at Malana near Cape Arabah and ended between the ancient Dagasira and the place now called Cape Jask, or more properly Jashk. Churchill's Collection of voyages mentions that "the coastes of Persia as they sailed in this sea, seemed as a parched wildernesse, without tree or grass; those few people that dwell there, and in the islands of Lar and Cailon live on fish, being in manner themselves transformed into the nature of fishes. So excellent swimmers are they, that seeing a vessel in the seas, though stormie and tempestuous, they will swimme to it five or six miles to begge almes. They eate their fish with rice, having no bread: their cats, hennes, dogges and other creatures which they keepe have no other dyet." Nieuhoff who travelled in 1662, says that about Gambroon, the common people make use of dates instead of bread or rice; for it is observable that the ordinary food of the Indians all along the coast from Basora to Sinde, is dates and fish dried in the air; the heads and guts of the fishes they mix with date stones and boil it altogether with a little salt water, which they give at night to the cows after they come out of the field where they meet with very little herbage.—(*Taylor's Travels from England to India, Vol. I. p.* 266. *Churchill's Collection of Voyages, Vol. II. p.* 230 *(first edition). Ouseley's Travels, Vol. I. p* 228. *Townsend's Outram and Havelock, p.* 297*).*

Beluchistan.—Around the borders of British India are numerous warlike tribes with whom the rulers on the marches, both prior and subsequent to the British domination, have ever been at war. The first of these met with as we approach India from the west are the tribes occupying Beluchistan. This territory, extensive, varied in character to no ordinary degree, consists of lofty rugged table land and level ground and their climates exhibit the severest heat and the most intense cold. The mountainous table land, a great central mountain range running north and south, which comprises the provinces of Sahrawan, Jhalawan and Lus, extends from the Afghan mountains north of Quetta southwards to Cape Monze, or from Lat. 40° to L. 25° North, a length of 340 miles. In breadth it extends from the level plains of Cutchee eastward, to Nooshky on the borders of the Seistan desert westward, extending thus about 150 miles, widest about the centre, but it gradually narrows southwards until at Cape Monze, the range is only a few miles in width. The height also varies. The greatest altitude is attained at Kelat, about 7,000 feet, where the climate is European; southward it rapidly declines, until in the province of Lus, the elevation is little above that of Sind. This region is occupied by many races some of whom have come from Syria on the shores of the Mediterranean, and others have reached its plains and mountains from the north. This mountain range is the great natural boundary of western India through which, here and there, are long and meandering valleys. Approaching races have been stopped by this great barrier while others have been thrust into it by subsequent intruders. There are two principal divisions, the Baluch and the Brahui, who are sub-divided into numerous clans, between whom are constant blood feuds

though all of them recognise the khan of Kelat as their paramount chief.

Mr. Campbell says the Baluch, in all the east of Beluchistan are but the upper stratum of the population, and there, as also in Sewestan and Cutch Gandava, the Jet race form the greatest portion of the agricultural population (p. 78.) The Baluch acquired recently dominion in Sind and some have settled in the N. W of India, to as far as Delhi, where they are scattered about in various capacities, and are often camel drivers. They are large powerful men, but swarthy.

They serve as mercenary soldiers, in Arabia, and latterly in Bombay they have been labourers at the harbour and on the quays.—(*Campbell, pp.* 78, 142.)

The countries west of the Indus, to which Europeans apply the terms Beluchistan and Afghanistan, are, however, not known by these names to their inhabitants. These are, partly, dwellers in towns and, as indicated by their physical appearance are of widely different races, who have pushed or been pushed forwards from the south, the west, and the northwest, into their present sites. In the territory of confederate tribes, termed Beluchistan, are (1) Baluch tribes proper, viz: the Brahui, the Rind, and the Lumri; (2) Those not Baluch, viz.: the Dehwar of the capital, the Jet of Cutch Gandava; the Babi; the races occupying the maritime provinces, the Afghans of Shall and the hindu residents of villages. Baluch is a term used by Ibn Haukal who says "the Baloujes are in the desert of Mount Kefes, and Kefes, in the Parsi language, is Kouje, and they call these two people Koujes and Baloujes." The Baluch race extend from the eastern limit of Cutch Gandava to the confines of Persia, but include many tribes, speaking different dialects and of very different descent, as some have dark countenances and others very fair. The greater part of the country west of the Indus, from the parallel of Shikarpore to that of Sehwan, is held by Baluch tribes. In the Afghan district of Siwi, N. W. of Dadar, are the Baluch tribes of Khajah and Shilanchi, the latter, in Siwi, being neighbours of the Afghan tribes of Safi, Kurak, Margazari and Duppal. Also, in the hills east of Kahan, are the independent remote Husseni, Chacha, and Ketra tribes of Baluches. They border with the Piari Afghans on the east. There are numerous Baluch east of the Indus, and those in Bhawalpore and the Panjab, are said to be Rind.

The question of the original countries of these tribes is still undecided: the Baluch and Brahui are sub-divided into an infinite number of tribes, who take their names from the chief under whom they serve, the district or country to which they belong, or the traditions as to whence they derive their descent. Lt. Pottinger mentions that the Beluchee tongue partakes considerably of the idiom of the Persian and at least one-half of its words are borrowed from that language, but greatly disguised under a corrupt and unaccountable pronunciation. The Brahuiki, on the contrary, is so dissimilar in its sound and formation, that he did not recollect to have marked in it a single expression in any way approaching to the idiom of the Persian. It contains, he adds, a portion of ancient hindoo words.

The contour of the people of these two classes is as unlike, in most instances, as their languages, provided they be descendants of a regular succession of ancestors of either; but the frequent inter-marriages which take place amongst them have tended in some degree to blend together the peculiar characteristic of both, so that in many families, and even in whole tribes, they have ceased to exist.

The Beluchee branch, in the first instance, form the original class of that name, into three principal tribes, called Nharui, Rind, and Mughazzi. The Nharui, principally inhabit that portion of Beluchistan which lies to the westward of the desert, and there are likewise khel of them at Nooshky and in Seistan.

There are, undoubtedly, two languages spoken in Beluchistan, the Beluchiki a hindi tongue of the Arian or Sanskrit stock in which Persian, Sindi, Punjabi, and Sanskrit words recur; and the Brahui which belongs to the Scythic or Turanian or Tamulian or Dravidian stock.

The Brahui language, spoken by the mountaineers in the khanship of Kelat, in Beluchistan, contains some Dravidian words and a considerable infusion of unquestionable Dravidian forms and idioms. Considered as a whole, Dr. Caldwell regards this language is derived from the same source as the Punjabi and Sindi, but it unquestionably contains a Dravidian element, derived from a remnant of the ancient Dravidian race having been incorporated with the Brahui. The discovery of this element beyond the Indus river, proves that the Dravidians like the Aryans, the Græco-Scythians and the Turco-Mongolians, entered India by the North West route. The Brahui state that their forefathers came from Halb, Aleppo.—(*Dr. Caldwell's Comparative Grammar.*) The Brahui language, according to Dr Caldwell is mainly Punjabi with a Dravidian element; According to Mr. Campbell, is mainly Arian (Indo-Persic) with a Turanian element. (*Campbell, p.* 56.)

The typical Brahui are certain tribes in Saharawan and Jhalawan. The Brahui are sunni mahomedans, are stout, squat, have short thick bones, with round faces and flat lineaments, with brown or even red hair and beards. They have, both in feature and speech, indications of a Turanian element. (*Campbell, p.* 54.) They are

hardy, often migratory. Their political chief is the khan of Kelat.

The Rind and Maghazzi are settled in Cutch Gandava, to which fertile plain they have emigrated at different periods from the province of Mekran, and have become incorporated with the Jut, or cultivators of the soil, as the subjects of the khan of Kelat; a few of these likewise reside in the hills to the N. E. of Cutch Gandava and on the skirts of the deserts north of Kelat. The sub-division of the Brahui tribes amount to about ten, and those of the Rind and Maghazzi each amount to double that number.

The Brahui are a more unsettled and wandering race, always residing in one part of the country, during summer and emigrating to another for the winter season; they likewise change their immediate place of resort many times in search of pasturage for their flocks—a practice rare among the Beluch tribes. They differ so much from the Beluch in external appearance, that it is almost impossible to mistake one for the other. The Brahui, instead of the tall figure long visage, and raised features of their fellow-countrymen, have short, thick bones, with round faces and flat lineaments; and Lieutenant Pottinger had not seen any Asiatics to whom they bear any resemblance, for numbers of them have brown hair and beards. The Kamburani, being the chief tribe, are subdivided into three distinct gradations of rank called Ahmedzye, Khani and Kamburani. The first supplies the khan; the Khani are of the secondary rank of chiefs. The word Kamburani includes all the remainder of the tribe, but in common is applicable to the whole body. They receive wives from, but do not marry their daughters into other tribes.

He says, of the original settlement of the Belooch and Brahui tribes in the country, that when Mahomed, the successor of Subaktagin, the first sultan of the Ghaznavi dynasty, turned his arms towards India, he subjugated the whole of the level district, west of the Indus, to the very foot of the Brahui mountains. His son, Musaood, extended these conquests still more westerly into Mekran; he adhered, however, to his father's plan of not ascending the lofty ranges, and all subsequent invaders of Sind, seem to have been guided by their example. The Balooch, however, ascribe their origin to the earliest mahomedan invader of Persia, and are very desirous of being supposed to be of Arabian extraction. They spurn the idea that they are derived from one stock with the Afghans. The affinity of the Beluchiki to the Persian language affords of itself strong evidence in favour of this position (viz. that they came from the westward) to back which, we still see that the majority of the Beluch nation still dwell on the western frontier; but as neither hair, features, manners, nor language, bear the slightest similitude to those of the Arabs, he rejects the claim totally. In the beginning of the fifth century of the Hejira, the Suljuk Tartar appeared in Khorasan, and in the short space of ten years, wrested that kingdom from the house of Ghaznavi. It was ceded to Alp Arslan, and constituted a part of the Seljukide dominions, until the extinction of that race, about 150 years posterior to Togrul Beg having assumed the title of emperor. In the lapse of time, the Beluch are alluded to both by that general term and particular tribes and as dwelling in the very districts which they people at this hour.

We learn from the Greek and Asiatic historians that, as these armies became dismembered, either by the death of their generals or a defeat, the barbarians who composed them wandered over the country until they found an advantageous place to fix themselves, or entered the services of some more fortunate chieftain than their own as mercenaries. Such, in his opinion, were the Beluch, and that they are of Turkoman lineage, various circumstances go to prove. Their institutions, habits, religion and, in short, everything but their language, are the same; this last anomaly is easily explained. The Seljuk had long settled in Persia, where they naturally adopted the colloquial dialect, and brought it with them on their expulsion by the Kharazmian kings. The unremitting enmity of these kings forced vast hordes of them to fly from Persia after they had been colonised there for many years. The fugitives are said to have gone to Seistan and the neighbouring countries, which are those of Sind, Seistan, and the Brahui mountains.

The Rind, one of the principal divisions of the Belooch tribes—have a tradition that they came originally from Aleppo.

The Brahui appear to have been a nation of Tartar mountaineers, who settled, at a very early period in the southern parts of Asia, where they lived an ambulatory life in khels, or societies, headed and governed by their own chief and laws, for many centuries; and at length they became incorporated, and obtained their present footing at Kelat and throughout Beloochistan. It is impossible to form more than a supposition, what was the nature of the region from which they emigrated, but their pursuits and way of domestic life afford the strongest reason for believing that they were originally mountaineers; and some amongst them affirm that the very name demonstrates this by its signification being a compound of an affix boan and roh, a word said to mean a hill in the dialect still spoken in some parts of Thibet; such reasoning, however, is not entitled to any great dependence, though supported by the collateral evidence of the Beloochees, being called in one quarter of the country Nharui,

which, if we admit the former derivation, means "lowlanders," *i. e.* literally not hillmen, a name they received from the Brahui when they came amongst them, and evinced a preference for the champagne districts, low villages, and plains. The Brahui imagine themselves the aborigines of the country.

In another place he states, that he considers the hindoos to have been the first colonisers of the upper part of the Brahui mountains, and that the Brahui gradually settled amongst them. That the first hindu rajah was named Sehwa, who called in the aid of these mountain shepherds against a horde of depredators from the western parts of Mooltan, Shikarpoor, and Upper Sind; and that the Brahui, having defeated and driven off these invaders, deposed the rajah Sehwa, and seized the government for themselves—a chief of the name of Kumbar becoming khan of Kelat, of whom the present khan, is a lineal descendant.

The foregoing, says Dr. Cooke, would lead us to suppose:—1st. That the original inhabitants of the country were hindoos, who fled from the conquering mahomedans who invaded Sind, Lus and Mekran, A. H. 93:—2nd. That the Brahui were Tartar mountaineers, who gained a footing in the country and ultimately supplanted the former becoming the ruling race:—3rd. That the Belooch came from the westward, but whether they were Seljuk Tartars or Arabs from Aleppo, is a matter of doubt.

The other classes mentioned as residing at Kelat are the Babi and Dehwar. The first are merchants, who appear to have come originally from Affghanistan: they are considered a wealthy people. The Dehwar are, in all probability, the descendants of the Tajik of Balk Their language is nearly pure Persian, they inhabit the Deh or villages, and do not migrate; are an agricultural people, hard-working and poor.—*Dr. Cooke in Bombay, Medical Transaction, No. VI. New Series,* 1860, *p.* 31.

Dr. Latham classes the Belooch language with the Persian, but considers it as a modified form. He says, "E. and S. E. of the proper Persians of Kirman, come the Belooch of Beloochistan. If Rask's great theory be the correct one, which makes all the fragments of nations speaking a Tamulian dialect parts of one great continous whole, which spread in the earlier ages over India and Europe, underlying the more recent system of Celtic, Gothic, Slavonic, and classical nations, as the primary strata in geology underlie the secondary and tertiary, but cropping out, or being exposed here and there—as the fragments of nations—of Lap, Finn, and Basque in Europe, and of the Cuchwaree, Cohatee, Tudo, Gond, Lor and other mountaineers of India; if I say, this theory be the correct one, then the Brahui, being of the great Tamulian family, would be the aboriginal inhabitants of the country. Thus the Koord who inhabit the Dasht-i-be-daulat, doubtless came from Kurdistan, probably amongst the armies of some mahomedan invader of India and, perhaps, laden with spoil, preferred on their return, to settle where they now are, rather than continue their march to their own country, and made choice of the Dasht-i-be-daulat. Again many of the Jhalawan tribes are undoubtedly of Rajpoot origin; and until lately, the practice of infanticide was prevalent amongst them. Near Bagwana is a cave in the rock filled with the dried mummy like bodies of infants, some of which have a comparatively recent appearance. The Sacæ, who formed part of Alexander's army, and whose country is stated by Wilson to have been that lying between the Paropamisan mountains and sea of Aral, still exist as a tribe of the Brahui of Jhalawan. It is not improbable that they accompanied Alexander as far as the south of Sind, and returning with Crateius up the Moolla Pass, settled in their present position. The Belooch also have by no means a pure and unbroken descent from any one source Adopting Pottinger's theory, that the main body were Seljuk Tartars driven out of Persia, as he describes, and that the Belooch have no resemblance in any way to the Arabs, yet undoubtedly, many are of Arabic descent. In many cases the outline of their physiognomy is very similar to that of the Arab of Egypt and Syria; and if such a Belooch were dressed in the Arab dress, it would be exceedingly difficult to detect his nationality. Others are Sindians who fled to the hills on the invasion of their country by the mahomedans. The original hindoo inhabitants of the Murree and Boogtee hills were driven out by their present occupants, but the natives of Barkhan (the Khetran) inhabiting the more mountainous district to the north-ward were able to hold their own. The whole are nominally subject to the khan as chief of all, but his power appears to vary with his popularity. The tribes, especially the Brahui mountaineers, reside in tomans, or collections of tents. These tents are made of goat's hair black or striped; the furniture is very simple—a few metal cooking-pots, a stone, hand-mill, and some rough carpets and rugs, with a distaff for spinning wool, and a hookah, are all that are usually found in a Brahui tent. That of the chief may, perhaps, be better furnished, and he is richer than his neighbours in flocks and herds. The dress of the lower orders is made up of a long tunic, trousers loose at the feet, and a black or brown great-coat or cloak, usually of felt, kummerbund and sandals. They wear a small cap, either fitting tight to the outline of the head, or dome shaped, with a tassel on the top. Those of the higher classes are

elaborately ornamented with gold thread. A few wear turbans, and the Belooch have them preposterously large, of white muslin. The higher classes are somewhat better dressed and carry loongees, or scarfs, which they throw around their shoulders in exactly the same manner as a Scotchman wears his plaid, and as the ancient Irish or Hyperboreans wore them ages ago.

Instead of the Cholo, Beloochi women generally wear the Gaghgho, a long shift resembling an English night shirt, but opening behind between the shoulders, and with half arms. It is generally made of red or white stuff, and reaches almost down to the ancles. Red is the fashionable colour and elaborately worked at the breast.

The men wear their hair long and flowing over the shoulders, whilst a luxuriant beard falls over the breast. The women tie their hair in a knot behind, brushing it smooth in front, and keeping it in place by a kind of fixature. The colour of the hair is frequently brown or red, and many of the natives have a European cast of countenance, in some cases strongly resembling the Irish. A man shoulders his matchlock and stalks his enemy as he would an ibex, shooting him down whether he be armed or not, or working in his field. There was, about A. D. 1854, a feud existing between two tribes, in which one had already lost 300 men, and the other 120. In some cases, by making compensation either in money, land, or cattle, the difference may be settled.

At the commencement of the winter months, all emigrate to the plains, and many leave the hill country as early as the middle of September.

A considerable portion of Beluchistan is subject to the khan of Kelat, the four sub-divisions of whose territories are given by Mr. Masson as,

Western.	Maritime.	Central.	Eastern.
Nushki	Las	Saharawan	Kach Gandava
Kharan	Hormara	Kelat	Harand on the Indus
Mushki	Persani	Jhalawan	Dajil „
Panjghar			
Kej			
Kolwah			
Jhow			

Western Sub-division; Nushki.—The Zigger Minghal and Raskshani, who inhabit Nushki, have no proper towns or villages, but reside in tents, and are not migratory. Their river, the Kaisar, is useless for irrigation and is lost amongst the sands. They cultivate wheat at the skirts of the hill ranges supporting the plateau of Saharawan. Snow seldom falls. The Zigger Minghal at one time occupied the Dasht-i-Guran near Kelat, but their increasing numbers compelled them to migrate into Nushki, dispossessing the Rakshani, of whom two tomans or clans still reside at Nushki. They have a much valued breed of horses, called Tarji. Their flocks are very numerous.

The Kharan province, in which lies two small towns, is occupied by a tribe of Persian origin called the Nousherwani, of whom the Alif Zye are one branch. They cultivate a little wheat and barley but insufficient for their own wants. They claim a descent from Noushirwan, similar to the Udipur rajputs.

Mushki has several towns and castles, and is occupied by the Mehmasani, the Nousherwani and Mirwari tribes.

The Mirwari Brahui are located in Mushki, Jhow and Kolwah. The Brahui entered from the west and point to Khozdar as the capital prior to occupying Kelat.

The Mehmasani have branches in Seistan, and the hills of Luristan.

Panchghar, has ten small towns, it is celebrated for its groves of date trees, and is occupied by the Gitchki tribe of Brahui, of peaceful and agricultural habits.

Kej, the most western of the Kelat territories, is called *Mekran*,—sometimes also Kej Mekran and is the Gedrosia of the Greeks. It is inhabited by many tribes of whom the Gitchki is the most numerous but about half the population is of a sect of mahomedans called Ziggar. The maritime and fishing population of the little ports on the coast of Mekran from Sanmiani to Charbai, are denominated Med, and comprise four divisions, the Guzbur, Hormari, Jellarzai, and Chelmarzye.

The *Chuha* people, occupy a district of same name, on the river Hub, which falls into the sea at Cape Monze. They are said to be of Sumrah or of Brahui origin, and seem to occupy the Pubb hills of Kurachee.

There are, in Mekran, cyclopean structures, raised by some unknown prior race. They are called Ghorbasta or Ghorband and bear a resemblance to the cyclopean remains of Europe. They are built across ravines to form tanks and on the declivities of mountains to distribute the water. They have been constructed by an agricultural race who had, on entering it, foreseen that the country would not otherwise support them and the race is supposed by Dr. Cook to have been Pelasgi or a people with kindred habits.

Kolwah, four or five days journey from the coast, has several villages and castles, and is occupied by the Mirwari, Rodahi, Homerari and Nousherwani tribes, who interchange their commodities with the coast, sending wool, ghi, hides and bdellium.

Jhow has but one village, Nandaru, its tribes are the Mirwari and Halada, the latter Brahui and pastoral. Numerous mounds here called "daim" exist, where coins and trinkets are found, remnants of some former race.

Maritime Division.—Las is separated from Lower Sind and the Indus delta by the Hala Mountains, and is occupied by the Lassi division of the tribe of Lumri or Numri. They have about twelve divisions or clans, one of which, the Jamhut, furnishes their chief or Jam. They trace their origin to Samar, who founded Samarkand, and acknowledge a consanguinity to the Bhatta of Jesulmir. The Lumri are an active hardy pastoral people, their wealth consists in flocks of goats, with fewer buffaloes, and camels. They despise agriculture : wild Lumri are found grazing on the rocky banks of the Hab river. Their language varies little from that current in Sind. They manufacture coarse fabrics from the wool of their goats and camels. The Lumri eats meat almost raw and is greatly addicted to the use of opium. Las has only two or three places for receipt of custom. Near one of these, Bela, are found coins, trinkets and funereal jars. Sunmiani contains numerous of the Mehman sect or race, and part of the fixed population of Bela is called Jaghdal.

Hormara a sterile district with a port of same name is subject to Las. Near Jabl Malan, is a tribe called Gujur, at Garuki, the Sangur tribe, and at Hormara in Mekran, with four hundred houses, is a tribe of this name. The Hormara tribe say they came originally from Sind.

Persani west of Hormara is a small port of two hundred houses.

Central Provinces.—The Saharawan territories are about 10,000 square miles. The population does not exceed 50,000. The borders of this elevated plateau, the more northern of the Baluch confederate provinces, runs with the Afghan districts of Peshing and Toba, dependent on Kandahar, and is separated on the east by a range of hills, from Dadar and Kach Gandava. It has only the Bolan river and a few rivulets, but the climate is cool, and the rains ensure good grain harvests.

Shall his one of its districts where snow lies for two months of the year. The population consists of the Kassi tribe of Afghans who claim affinity with the Safi clans, but in spring and summer numerous Brahui tomans range over its plains. Its capital called Shall by the Baluch, by the Afghans is called Quettah, an equivalent for kot or fort.

Mustung has a healthy climate and fertile soil. It contains no Afghans, the fixed inhabitants are Dehwar, mixed with the Raisani, Sherwani, Mahomed Shahi, Bangol-zye, Lari, and Sirpherra tribes of Brahui.

The Raisani the most respectable of the Saharawani tribes (from "rais" Arab a ruler), are able to raise 500 fighting men.

The Shirwani occupy exclusively Khad and Kishna, and reside with other tribes in Shall and Mastung. They take their name from their belief that they came from Sherwan on the Caspian.

The Mahomed Shahi dwell chiefly at Mastung and Kuhak, but hold also Zir-dad a village west of Bagh in Kach Gandava.

The Bangul-zye exclusively occupy Isprinji, but reside also at Shall and Mustung and in winter repair to Talli near Lehri.

The Lari, exclusively hold Nermuk, but reside also at Mustang and Shaee, with other tribes.

The Sh Luss reside at the skirts of the hills west of Khanak.

The Sirpherra reside in summer in Ghurghina, and during winter in Kach Gandava.

Mangchar has a few dispersed hamlets. It is well irrigated with canals and the whole plain is intersected with bunds or dams to preserve the rain. The tomans are scattered over the plain. Many brood mares are kept. It is separated from Mustung by a lengthened valley termed Khad, in which the Shirwani tribe of Brahui dwell. The Brahui tribes on the east, border with the Mandawari, Kuchik and Puzh Rind tribes and the Ghazgi Brahui, adjacent to Kach Gandava.

Besides these, Merv is held by the Kurds ; Isprinji by the Bangul zye ; Kuhak by the Mahomed Shahi ; Nurmuk by the Lari Brahui ; Lup by the Kalui Rind ; Kishan by the Sherwani. The fixed population of the several villages dispersed over this tract does not exceed 2,500. On the west of Saharawan the country is held by pastoral tribes, the Sirpherra and their branch, the Rodani, Kurds of the Dasht-i-be Dowlat : Sherwani of Khad, and the Ralsani of Dolai and Khanak.

Dasht-i-be Dowlat belongs to the Kurd Brahui tribes. It is in the northern part of Saharawan and west of the Bolan hills, is about 15 miles in length and breadth. In spring it is covered with lovely flowers and grasses and is then covered with the tomans of the Kurd, who retire to Merv after the harvest of autumn and then predatory bands of Khaka roam over the ground and attack travellers.

The Kurd tribe possess the Dasht-i-be Dowlut and Merv also Tikari in Kach Gandava.

Central Provinces.—Kelat is the name of a town and province. The town with its 800 houses is in a narrow valley having on the east the hills of Kach Gandava. The population of Kelat consists of many Dehwar, Brahui, Hindus and slaves and the entire suburbs are occupied by Afghans.

The plain of Dasht Guran south of Chappar is inhabited by the Sunari, a branch of the Jehri tribe of Jhalawan.

Jhalawan with less elevation than Saharawan is held by Brahui tribes, amongst whom are the Minghal, Bizunju and Samalari, in the

ted population in their little towns ed 10,000 and are greatly exceed- toral tribes, The great tribes of Bizunji, giving them the pre-

The Minghal are of rude and predatory habits. They occupy the southern hills of Jhalawan from Khozdar to Bela in Las. They have two great divisions, the Shahi-zye and Phailwan-zye.

The Bizunji, of which are two great divisions the Amalari and Tanbarari, are west of but on the same hills as the Minghal. They are a violent people and much addicted to rapine.

Eastern provinces.—Kach Gandava of which the capital is Gandava, is a great level tract, and is inhabited by three very distinctly marked races, the Jet, the Rind (including the Maghazzi,) and the Brahui. The Jet seem the original race, and occupy the centre of the province. The Rind with their lawless sub-tribes the Jakrani, Dumbaki, Bugti and Marri, are a more recent intrusive race dwelling on the skirts. The Doda, a division of the widely dispersed great Marri tribe, for the last three centuries, have occupied the hill ranges east of the plain of Kachi. The Marri are a brave race and have long been distinguished as daring depredators.

Harand and Dajil, in Kach Gandava, but bordering on the Indus, are inhabited by the Gurchani tribe of Rind, and have the Muzari on their south.

The great Rind tribes are sub-divided into 44 branches, though not Brahui are denominated Baluch. Their tradations affirm them to have immigrated ages ago, from Damascus and Aleppo. Their language is the Jetki in common with that of the other inhabitants of Kach Gandava and Mard-i-Rind means a brave man. The Rind of Kach Gandava are of the Utan-Zye divisions.

The Utan Zye dwell at Suran.
" Dumbki and Jakrani dwell at Lehri.
" Doda Marri " Kahan.
" Bugti in the hills east of Lehrat, Sing Saloh and Teriki.
" Homarari dwell at Tambu.
" Jamali " Rojan.

Of these Rind tribes, the Dumbki, Jakrani, Bugti and Doda Marri, have always been distinguished by their rebellious and predatory habits. They indulged these in attacks on the British armies west of the Indus. The Marri tribe is considerable and inhabit the eastern hills of Kach Gandava, and a peaceful and obedient portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam Marri, on the S.E. frontier of Sind. The Marri of Kach Gandava are notorious for their lawless habits and make frequent inroads on the plains. They and the Maghazzi seem to have emigrated from Mekran to Kutch Gandava, at different periods, and to have become incorporated with the Jut cultivators.

The following minor Rind tribes reside in the north eastern hills of Sahrawan.

Kallui at Lup.	Mandarari at Rodbar.
Kuchik at Kirta.	and
Pushh at Johan.	Pugh at Kajuri.

The Rind on the western banks of the Indus are of two great tribes, the Gurchani, who inhabit Harand and south of these the predatory, but nearly independent, Mazari tribe.

The Maghazzi have only four families, the Butani at Jell being the chief. They are the deadly enemies of the Rind, but are probably of the same race.

The Maghazzi are sub-divided into four principal families or clans, of which the Butani of Jell are the most illustrious and give the chief or sirdar, to the whole. They boast of being able to muster 2,000 fighting men, and between them and the Rind a blood feud long existed. The Maghazzi and Rind are alike addicted to the use of ardent spirits, opium and bhang.

An extraordinary sect, the Daee, are met with at Gajer. They resemble the Brahui in appearance, and wear the same dress. Also, portions of certain Brahui tribes are Daee, such as the Saget (a) Takee, Shadu, Laee, Marbrow, &c. They have a moolla or priest, and a book. They say that they originally came from the westward near Kej, where there is a city called Turbot. The sect abounds in Mekran, and has extended as far east as this. At the city called Turbot is a little hill of circular form called by them Ku-Murad, on the summit of which is their principal musjid, where they meet at stated times to perform their rites.

Professor Wilson, in his " Ariana Antiqua," page 141, mentions the Daee amongst other Scythian tribes, as associated with the Massagetæ, and in a map attached to Digby's translation of Quintus Curtius, their position is fixed a little south of the Jaxartes. This coincidence of association with the Sageta, and Sakæ, both then and now, is worth remarking.

SIND.—This country is on the lower Indus and its delta with the ocean on its south, the valley of a great and fertile river to the north, and warlike races pressing forwards from the west. Often conquered, by the Scythic nations, the Bactrian Greeks, Arians, Persians, Arabs and Baluch, the races in it are numerous. About the commencement of the christian era, the Rai dynasty ruled from Kashmir and Kanouj to Makra and the port of Dabal on the shores of the sea of Oman, and from Surat to Kandahar and the Solaiman range. The

commencement of this dynasty has not been ascertained, but in the time of Rai Diwaij, the capital was Alor. He was a powerful chief, who contracted alliances with the rulers of India. He was succeeded by his son Rai Siharas I. Rai Sihasi was the celebrated son of Rai Siharas, and the next were Siharas II, who reigned 42 years, and was killed in battle. He was a contemporary of Nousherwan. After Saharas II, a brahman dynasty succeeded. The reign of the Rai seems to have extended to 137 years and to A. D. 479.

Several places on the Indus are named after the Chach dynasty, viz. Chachpur, Chachar, Chachgaon, Chachi. Chach was a brahmin who usurped the kingdom of the Rai dynasty of Sind. He was a contemporary of Shahram or Shahrear, and he is supposed to have invented the game of chess. He seems to have reigned about A.H. 2, and to have been suceeeded by his brother.

Mr. Camphell says the Sindi people and language are almost confined to Lower Sind, and there the Sindi has much arabic mixed with it. The Sindi people are well grown and robust, but dark skins, immoral and idle, and given to hunting, fishing and pastoral pursuits quite as much as to cultivation and the delta and country of the lower Indus, seem to be ill and insufficiently cultivated (*p.* 141) Mr. Campbell supposes a mixture of Arabic, Persian and Kol blood.

Most of the races dwelling in Sind, designate themselves by tribal names, either assumed by themselves or applied to them. These names indicate the country or town from which they came, or the ancestor or distant race from whom they have sprung. The bulk of the people of Sind profess mahomedanism.

Syud Mahomedans claim to be descendants of Mahomed, through his daughter Fatimah and her husband Ali. There are of them, 13 tribal designations in Kurachi, and 11 in the Hyderabad district. In the Hyderabad collectorate, the Syuds are land owners and extensive cultivators and say they came from Arabia and Persia, about 700 years ago.

Koreshi was the Arab tribe to which Mahomed belonged. They have in Sind many tribal names: they are cultivators, kazi and scribes and originally came from Syria, Iran and Irak, and claim descent from Ali, Abas, Abubakar, Umar and Usman styling themselves Alvi from Ali, Abasi, from Abas, Sidiki from Abubakar, Farooki from Umar, Usmani from Usman.

Belooch.--The tribes who have come fromBeluchistan are known in Sind by the general term Beloochi. The Rhind tribe is in Sind the head of all those from that region, and from them have descended other tribes. The Talpur, however, became rulers in Sind and the Rhind remained their dependants. The Belooch are generally said to have come originally from Aleppo in Syria, they have, however, all the characteristics of Arabs, sharp, well defined features and well built limbs. Many of their Sind divisional appellations merely denote families or descendents of men of renown whose names the families bear. There are 28 tribal names in the Kurachi district and 60 in that of Hyderabad. On the upper Sind frontier, likewise, the Belooch retain the characteristics of Arabs, alike in features and customs. They have sharp well defined features, are very spare but have well built bodies and limbs. They are averse to regular labour and restless, but they will undergo the most wonderful fatigue for the purpose of stealing a camel or bullock. All their traditions point to Syria as their original site and the date of their advent as about 1,200 years ago. Amongst themselves, the Rhind rank first in importance, then the Loshari, Jutooi ; Dhumki, Jukrani, Murri, Boogti. The Brahui have mostly remained in the mountains of Beloochistan. General Merewether says that their traditions are less clear than those of the Belooch, but that they also came from the west entering Beloochistan from Kirman by Mekran.

Kurrumatee.—These have descended from the Belooch race but have subdivided into 39 tribes :

Asundee, a tribe from Multan.

Mogul, a tribe from Persia.

Tooruk or Toork, do do Khorasan.
Afghan do do do

Arghoni.—This tribe came to Sind in the time of theSumma dynasty which they overthrew and succeeded about A. H. 927 and ruled for 35 years, being in their turn overthrown by the Turkhani in A. H. 962. The Turkhani came to Sind about that year and were in power from A H. 962 to A. H. 1021.

Foreign tribes.—Of the foreign tribes are descendants of Haroon, Mukrani, Loodee (now known as Loodia) Habshi, Sidi, and Jungiani.

Summa claim to be descendents of Sam, son of Noah. They have been long in Sind, of which they are supposed to be the original occupants. They were in power as rulers from A. H. 752 to A. H. 927, when they were overthrown by the Arghoni. Their sub-divisions are very numerous, nearly two hundred. The chief seem to be the Summa, with the sections Sumaja, Dera-Sumani, LoondSumma, Joona-Summa, Oto-Summa, Saheb-Summa, Sahad-Summa, Shekhab-Summa and Sind-Summa. As they are regarded as the original occupants of the country, their tribal names may suggest to ethnologists the regions whence they came.

The *Soomra* race entered Sind about A. H. 445, and became the rulers of Sind in A. H. 609, from which year they continued in power till A. H. 751, when they were overthrown by the Summa. The name was originally pronounced Samra. The tribes in the Kurachee district are the Kumeerpota ; Meetopota, Budeepota and the Norungpota. In the Hyderabad District the Soomra are cultivators and oil manufacturers.

Miscellaneous Tribes, of Sind, professing mahomedanism are as under.

Awan	Memon khowaja	Nakhooda
Chuwan	Memon Sayata	Solangee
Guda	Machee	
Khowaja	Mochee	

The Memon or Mehman mahomedans are cultivators, shop-keepers, artizans, &c. They are believed to be converts from hinduism and are distributed through the Kurachee district, taking their tribal names as given below, principally from their original place of abode. The Khwaja are of the shiah sect and call themselves followers of Khwaja Soliman, Farisi. Their tribal names are

Akhoond	Khwaja	Puggir
Bandroo	Kussabi	Quazi
Hudokut	Loosi	Surha
Katiyar	Mirzapori	
Khebrana	Patoli	

Gola, formerly slaves, principally from Africa, are the Sidi, Habshi, Khaskeli, Sindi and Zemghur.

Tradesmen, are the Raza, Lohar, Wadha or Dakhan, Dhobi, Pinjara ; Katri, Khori, Mochi, Sunara, Thattiara, Muhana, Baleshali, and Machi.

There are, besides, in the Hyderabad district 78 races of miscellaneous origin.

Jhutt, in the upper Sind frontier, converts to mahomedanism, they are a wandering race, but attach themselves to Beloochee and other tribes. They are squarer and stouter in their build, and have broader features than the Belooch, they are camel-breeders and dealers.

Hindoos.—In Lower Sind, in the Kurachi collectorate, are brahmins from the Kokun, and Mahratta country, Guzerat and Nagar. There are also, however, Gour brahmans, the Sarsat or Sindi and the Pokarna from Jeysulmir. In the Hyderabad district, they are even from more distant countries, from the Dekhan Telingana, Dravida, the Carnatic, and Kanouj.

Khatri or kshatri occur both in Hyderabad and Kurachee.

Vaish,—Of these are several tribes, seemingly embracing all who engage in traffic and banking. In Kurachee are the Amil, Godi, Kanooga, Mahajan, Merani and Wanhia ; and in Hyderabad also the Lohana, Bhattia, Bhabera, Panjabi, Mehisirri, Oosuwar, Suhwani, Khalsa, and Shahdadpuri.

Sudra Hindoos, are the Bagoi ; Jakhiri, Jeysulmiri ; Khutti ; Kulal, Kurmi, Lohar, Mochi, Ode, Sochi, Sonara, Sootar, Thumboolee.

THUR and PARKAR districts are occupied almost equally by mahomedans and hindoos, sub-divided into classes. They generally use a mixed language called Dati, composed of Sindi, Marwari, and Guzerati though Guzerati is in use in some parts of the district. They are naturally inactive and in manners and customs resemble the Cutchi. They are chiefly occupied in cattle breeding and as graziers, for which they evince a greater preference than for agricultural pursuits. The mahomedans are Syuds Beloochi, Brahooi, Jhut and Summa. The hindoos are brahmins, Soda. There also twenty-five commercial tribes, five outcast races, the Mengwar, Bheel, Colee, Bala-Sahi and Shikari, and thirteen miscellaneous tribes Shaikh, Memon, Merum, Kumbrani, Gudda, Bujeer, Mohana, Jokiah, Doakur, Koliah, Amunda Bhopa, Mahur Hakra.

KUTCH or CUTCH is a province on the northwest of the peninsula of India bordered by the Runn. Its chief is styled Rao. Its capital is Bhooj ; on the north are Pawar and Patcham. Kanta extends along the coast containing the sea port towns of Mandavie, Munnia and Tunia, the port to Anjar. Waghair, to the east, contains Shahpur Ardasir. To the west, are Garrah and Ubrassa in which are the towns of Mhar, Narna, Lakpat Bandar, &c. The inhabitants of Kutch are given to predatory habits. The Kumbi or cultivators are not numerous, Charon and Bard (Bhat) are numerous. The Jhalla are Rajputs of Sindian orgin, and there are tribes of Lowanna,

Ahir, and Rebhari. The Bhatta are of Sindian origin, a fair handsome race, skilful and industrious mechanics, and are found in all the ports of Arabia and Western India.

Kaba, a piratical tribe in the gulf of Cutch.

The *Khosa* are a marauding tribe on the Thul desert between Hindustan and Sind.—*Mrs. Elwood's Letters. Wilson's Glossary.*

GUZERAT is bounded on the south and west by the gulf of Cambay, the Arabian sea, the gulf of Kutch, and the Runn of Kutch. On the N. E, long ranges of rugged bald mountains, throwing out spurs and covered with forests and broken only by the debouchures of mighty rivers, separate it from Marwar, Meywar, Malwa, Khandeish and the rest of India. The peninsula of Kattywar on the south-west, formerly called Saurashtra or Soreth, has a fringe of hills along the coast, but is for the most part gracefully undulating and abounds in good water and pasturage. Guzerat, with an extensive sea board, a fertile soil, and in a central and naturally well defended position, has had from the earliest times a distinct and self asserting nationality which has survived to the present day through a multitude of dynastic races. It has been repeatedly invaded, from the sea, from the north, along the lime of the Indus, through the desert of the Runn, across the desert from Mooltan, through Malwa, and from Maharashtra in the south, by the aboriginal Bhil and Koli, the various Rajpoot races, and by the Bactrian kings, Demetrius and Menandar; and mahomedans of Arab, Moghul and Afghan descent, the Mahratta, the Portuguese, the Dutch and the British have all left their descendants in the province. At the time that the Chowra dynasty were established under Vun Raj, large tracts of Guzerat were occupied by aboriginal tribes. The aboriginal Bhil and Koli still occupy the forests and mountains, but in the open country they have blended with or been displaced by successve waves of immigration, amongst which the fair haired Kathi still shows his Scythic origin and the Rajput races retain their lands under British political supremacy. About the beginning of the Christian era, the Sinha, or Sah dynasty, rose to power and lasted until about A. D. 250 They are believed to have been of Parthian descent and to have worshipped the sun which is a conspicuous element on their coins. Sehore was their capital. Their sway extended southwards to Sattara and Kolapoor, and comprehended most of what is now the presidency of Bombay, they are also supposed to have subdued Lanka, and given it the same of Sinhaladwipa which has been modified into Ceylon, and to have carried their arms into the Archipelago. About A. D. 250, the Sah were subdued by the Gupta, who invaded Guzerat, after subduing the Indo-Scythian dynasty of central and northern India. In their turn, about A. D. 319, they were displaced by a native race who ruled from Balabhi or Vulubhee at the foot of the hills of Chamardee. This dynasty lasted till about the middle of the seventh century when it was overwhelmed by invaders of Sassanian origin. Before their fall, the authority of the Balabhi rulers had been extended through Guzerat and Kutch, and their rule had been magnificent. The monarchs were of the braminical faith, and worshippers of Siva, but one of them in the 5th century named Siladitya was converted to the jain sect. Between the jain and the brahminical hindu, there has been in Guzerat a spirit of emulation from the most ancient times. Jains do not revere Sakya Muni, but reverence twenty-four Buddhas styled Teerthunkar, who have attained annihilation. The last Teerthunkar was Mahavira who died B. C. 600. The jains have maintained ther ground in Guzerat and in parts of Mysore and followers of their creed hold in their hands a large part of the wealth and trade of India. Their temples are magnificent, the most ancient of them are at Girnar, the most exquisite on mount Aboo, the most extensive and still flourishing at Shutroonjye near Palitana. The last mentioned were beautified and restored by Siladitya and it is the most ancient, and most sacred of the jain shrines of Guzerat. Almost every Indian city has contributed to its advancement. The worship of the sun continues at Somnath and Krishna is worshipped at Dwarka in Kattywar; Siva, the Chiun of the prophet Amos (Ch. 5.), is extensively worshipped in the form of the lingum—the phallus and priapus of the Greeks and Romans.

After the fall of the Balabhi dynasty in the seventh century a period of anarchy seems to have followed. The Chowra clan had long ruled at Deobunder on the coast, not far from Somnath, but they seem to have been driven thence by Arab fleets, on to the borders of the Runn. The Solunkee or Chalookia clan, the greatest of the rajputs, subsequenty endeavoured to obtain possession but finally were expelled by the Chowra race in A. D. 746 and Vun Raj of the Chowra was established. He built Anhilwara. In A. D. 942 the Chowra were superseded by Moolraj of the Solunki who in A. D. 997 abdicated in favour of his son. Between A. D. 1001 and A. D. 1024 Mahomed of Ghazni had made many invasions of India, In 1024, he silently crossed the desert from Mooltan, captured Ajmir, skirted Mount Aboo and surprised Anhilwara, and after severe fighting he took Somnath, the idols of which in the temple of Someshwur he destroyed and plundered, and he retreated by way of Mooltan, followed and severely harassed by Bheem Deo. Bheem Deo,

abdicated in A. D. 1072, in favour of his son, but from the invasion by Mahmood in the early part of the 11th century, up to the middle of the 18th century, mahomedans of Afghan, Hindoo and Moghul descent made incessant efforts to occupy Guzerat.

Between 1174 and 1179, Shahab-ud-din advanced on Guzerat but he was met on the frontier and driven back with loss into the deserts of Sindh. In 1194, Ajmir, Kanouj and Benares fell in rapid succession to Kutub-ud-din who invaded and plundered Guzerat. The Waghela dynasty however ruled in the 12th and 13th Century, but in A. D. 1297, Alif Khan, brother of king Ala-ud-din, suddenly appeared with a large force, defeated Kurun of the Waghela race, took Anhilwara, sacked Cambay, destroyed Sidhpoor and Somnath. Kurun's queen, Cowla Devi, was taken to the emperors harem, and his daughter was subsequently captured and given to the emperor's son. From this time till the close of the 14th century, the mahomedan efforts to subdue Guzerat were continuous, but the first who obtained a hold was Mazafar, a converted hindu. In 1411, Ahmed shah, grandson of Moozaffar shah, changed the seat of Government from Anhalwara to Kuranawati on the left bank of the Saburmuttee and named the new capital Ahmedabad. It was built from the materials of Anhalwara, Chandrawati, also from the sandstones of Ahmednuggur and Dhrangadra and the marbles of the Ajmir district. Thus Anhalwara fell. It had been to the west of India what Venice was to Europe, an entrepot of the products of both the Eastern and Western hemispheres.

Ahmedabad has been the capital of Guzerat since A. D. 1411. It ranks next to Bombay in size and importance among the towns of western India. It is built on the left bank of the Saburmuttee river. It was visited by Mandelsloe in A. D. 1638, and he relates that "there is scarce any nation of the world or any commodity in Asia, but may be seen in this city." About the beginning of the 18th century, the Mahrattas occupied Guzerat, and in A. D. 1755, the mahomedan power was finally extinguished. The Portuguese still hold Diu and Damaun, but the race that is now supreme is the British. In A. D. 1612, they established a factory in Guzerat; Surat and Broach fell into their hands; in A. D. 1780 their army took Ahmedabad, in 1802 they took Kuree, and in 1818, they became the paramount power. Ahmedabad and most of the sea board of the Gulf of Cambay is British territory; a tract of about equal extent is held by the mahratta state of the Gaekwar of Baroda, but the great bulk of the province continues in the hands of its original possessors, styled talookdars, subject to paying a trifling tribute. The images of Siva and Parisnath have been restored; the jains continue powerful, Krishna and the sun are objects of worship, the mahomedans are labourers, artizans and musicians. The aboriginal race are police, and the jain and hindu merchants rule the market of Bombay; under liberal patronage, education is fast spreading through the land and the educated Guzeratee promises to be a great means of inspiring spiritual life among the races in India following brahminism.—(*Architectures of Ahmedabad, London* 1866.)

Broach, Bulsar, Perim, Surat, Cambay, Gopnath and Gundevee till recently were the great shipping places for the products of upper India for cotton, indigo, tobacco, opium, grain, cloth and horses.

The Gaekwar family, sprung in 1720, from Dammaji Gaekwar, Shamsher Bahadur, an officer under Khandi Rao Holkar, and his descendants ruled till the treaty with the British Government in 1802.

The territories of the Gaekwar have an area of 4,399 square miles, with a population of 1,710 404 and an annual revenue of £600,000. —*Thomas Prinsep's Antiquities, p.* 286 *and* 287.)

Kattyawar may be arranged into ten districts viz: five northern, Jhalawar, Muchu-Kanta, Hallar, Burda and Okhamandil; and five southern, viz. Soreth, Babriawar, Sarweya, Gohelwar, and Kattyawar proper.

The district of Geer, in Kattyawar, is full of almost inaccessible fastnessses, which for ages have given shelter to outlaws and robbers. In A. D. 770, Wullubhipur, the present Wulleh, fell before an in-road from the north of a race whom Mount Stuart Elphinstone supposes to have been Persians under Nowsherwan the great, supposed by Colonel Tod, to have been Scythians, and by another authority, to have been Indo-Bactrians. In A. D. 1024, it was overrun by Mahmood of Ghazni whose army consisted of the flower of Turkistan, and Somanath in Deo Pattan then fell before him. The mahomedans from the north long held a feeble sway. The district of Diu is Portuguese, and though the town has been repeatedly besieged by rulers of Guzerat and the Dekhan, it continues in their power. The mahomedans who had only gained a partial authority over the rajputs of Kattiawar, were succeeded by the Peshwa and Gaekwar in 1755, who could only collect the revenue by means of troops, in Mulk giri or circuits. But, in 1808, Colonel Alexander Walker the Resident at the Galkwar's court, was able to arrange for payment to the Gaikwar from the rajput chiefs, of a certain fixed sum as suzarainty. When the Peshwa was overthrown in 1817, the British succeeded that power in the chief control: The tributaries are called talukdars, of whom there are 224

and each of whom possesses exclusive jurisdiction in his own districts, only the Grassia and Mul Grussia being allowed to litigate with their ruling chiefs. These are sprung either from cadets of the ruling tribe or from proprietors of lands which they had originally seized and now defend with all the proverbial tenacity of the rajput, who freely gives and takes life for acres. The principal talukdars are their Highnesses the nawab of Junagarh,—the Jam of Navanaggar, and the Rawal of Bhownaggar, the Rana of Porebunder, the Raj of Drangdra and the Thakur of Murvi. Junagarh, the most important, is held by a descendent of Sheer Khan, Babi, a soldier of fortune who seized it in the general anarchy which preceded the subversion of the Moghuls.

The Jam of Navanaggar is the head of the Kattyawar branch of the great class of Jharija rajputs which surged into the country from Sindh about the middle of the 15th century, and another stem of which is represented by the Rao of Cutch.

The Rawal of Bhownuggur is at the head of the Gohil rajputs, a race driven in from Marwar by the Rathor in A. D. 1,200. He is descended from Mokheraju, a sea rover, who in the 14th century occupied Perim island at the mouth of the Gulf of Cambay and whose shade is to the present day propitiated by the passing mariner. The people are deeply engaged in commerce.

The Rana of Porebunder, styled Puncheria, represents the Jetwa, one of the four ancient races still extant in the peninsula. In the days of Mahmud all the west and north of Kattyawar, belonged to the Jetwa rajputs, but the foray's of the Jhala and Jhareja have confined them to their present district, the shaggy range of hills called Burda.

The Jhala, who own the raj of Hulwud Drangdra, as their chief, are supposed to have sprung from an offshoot of Anhilwara, on the extinction of which dynasty they obtained large territorial aggrandisement.

In the Jhalawar district, the property stolen, or the thief, must be produced, and the paggi who trace the pag or foot-prints, are there the most famous.

The Thakur of Murvi is a Jharija and was the first in Colonel Walker's time to abandon infanticide. He has possessions in Cutch.

Sidi Negroes.—The fortified port of Jafferabad or Muzufferabad is held by the descendant of an African rover, the Sidi of Janjira.

The *Miana* of Mallia in Mucha-Kanta on the banks of the Muchu river, are the real masters of Mullia. They have a Thakur, but own allegiance only to their own Chowhattia or heads of tribes. They are turbulent, take service as soldiers in the neighbourhood, and in every boundary fight, a Miana or two is killed.

The climate is equable and temperate and the coast is balmy with the wet breath of ocean breezes blowing fresh from the southpole.—(*Cal. Rev. No.* 220, *Dec.* 1860.)

Somanath, Puttun Somanath or Somnuth Puttun, or Deo Puttun, is a town with a temple of great sanctity in the south or Guzerat; its gates were carried away by Mahmud of Ghuzni, in 1024, and brought back from Afghanistan in 1843 by the British troops. Somanath or Someswara, is a name of the type of Siva. This idol is related to have been brought to India from the kaaba, on the advent of Mahomed. Brahminical records, however, refer it to the time of Krishna. The Somanath idol, in fact, was one of the twelve great lingums then set up in various parts of India, several of which were destroyed by the early mahomedan conquerors. It seems established that the worship of Siva, under this type prevailed throughout India at least as early as the 5th or 6th century. The temple stood in the country of Soreth; a province of the peninsula of Guzerat, which is now more generally known under the name of Kattywar; and which is celebrated in the Puranas for containing five inestimable blessings. First, the river Goomptee; second, beautiful women; third, good horses; fourth, Somnauth, and fifth, Dwaraka. Among the many places in Soreth that are held sacred by the Hindoos, Somnath or Somnath Pattan, as it more generally termed, has always been one of the most remarkable. It stands one or two miles from the sea, at the junction of three rivers, the Hurna, Kupula, and Sersutty, at a distance of three miles to the east of the port of Belawul. The idol itself, Somnath, is one of the twelve symbols of Mahadeo or Siva, which are said to have descended from heaven to the earth. The holy image was, according to mahomedan authors destroyed by Mahmud, and in late years Ahela Bhaee, the widow of a prince of the Mahratta family of Holkar, erected a new temple on the exact site of that which was demolished. A symbol of Mahadeo has been placed in this temple, which is deemed peculiarly propitious to those who desire offspring. Not far from this, the hindoo pilgrim is shown a solitary peepul-tree on the bank of the Sersutty river, which he is assured stands on the exact spot where shree Krishen received the mortal wound from an arrow that terminated his incarnation.

Mahmud left Ghazni, on his expedition against it, in September A. D. 1024; his numerous army was accompanied by crowds of volunteers, the flower of the south of Turkistan. Ajmir and Anhilwara fell before him. Advancing against Somnath, for two days, his most

devoted followers were beaten headlong back by the valour of the rajpoots, fighting for hearth and altar. On the third day, Mahmud led a furious charge in person, five thousand hindoos lay dead and the day was won. When he entered the shrine of Som-Iswara, he beheld a superb edifice of hewn stone, its lofty roof supported by pillars curiously carved and set with precious stones. In the adytum, to which no external light penetrated and which was illuminated only by a lamp suspended from the centre by a golden chain, appeared the symbol of Som-Iswara, a stone cylinder which rose nine feetin height above the floor of the temple and penetrated six feet below it. Two fragments of this object of idolatrous worship were at the kings order, taken off, that one might be thrown at the threshold of the public mosque and the other at the court gate of his own palace of Ghazni. Other fragments were reserved to grace the holy cities of Mecca and Medina. While Mahmud was thus employed a crowd of brahmans offered an enormous ransom if the king would desist from further mutilation:—Mahmud hesitated: but after a moments pause, he exclaimed that he would be known by posterity not as the idol seller but as the destroyer. The work of destruction then continued and was rewarded by the discovery in the vaults below the adytum of untold treasures. Thus fell Somanah. Its gates were taken to the mosque of Ghazni from which they were removed when the British troops returned from the occupation of the country in 1842. On this occasion, Lord Ellenbrough issued the following notice in the form of a proclamation from the Governor General to all the princes and chiefs, and peoples of India.

"My brothers and my friends.—Our victorious army bears the gates of the temple of Somnauth in triumph from Afghanistan, and the despoiled tomb of sultan Mahmood looks upon the ruins of Ghuznee.

"The insult of 800 years is at last avenged. The gates of the temple of Somnauth, so long the memorial of your humiliation, are become the proudest record of your national glory—the proof of your superiority in arms over the nations beyond the Indus.

To you, princes and chiefs of Sirhind, of Rajwarra, of Malwa, and Guzerat, I shall commit this glorious trophy of successful war.

"You will, yourselves, with all honour, transmit the gates of sandal wood through your respective territories, to the restored temple of Somnauth.

"The chiefs of Sirhind shall be informed at what time our victorious army will first deliver the gates of the temple into their guardianship, at the foot of the bridge of the Sutlej.

"My Brothers and my Friends,—I have ever relied with confidence upon your attachment to the British Government. You see how worthy it proves itself of your love, when, regarding your honour as its own, it exerts the power of its arms to restore to you the gates of the temple of Somnauth, so long the memorial of your subjection to the Afghans.

"For myself, identified with you in interest and in feeling, I regard with all your own enthusiasm the high achievements of that heroic army, reflectiug alike immortal honor upon my native and upon my adopted country.

"To preserve and to improve the happy union of our two countries, necessary as it is to the welfare of both, is the constant object of my thoughts. Upon that union depends the security of every ally, as well as of every subject, of the British Government, from the miseries whereby, in former times, India was afflicted; through that alone has our army now waved its triumphant standards over the ruins of Ghuznee, and planted them upon the Bala Hissar of Cabul.

"May that good Providence, which has hitherto so manifestly protected me, still extend to me its favour, that I may so use the power now intrusted to my hands, as to advance your prosperity and secure your happiness, by placing the union of our two countries upon foundations which may render it eternal." "ELLENBOROUGH."

But the gates never reached their destination. Public opinion stopped them en-route.

Of the fragments of the lingum which were conveyed to Ghuzni and placed at the door of the great mosque, one portion brought back by the British Army soldiers, after the Affghan war, in 1842 was offered to the temple by Lord Ellenborough but was not accepted.

When Somnath temple, was plundered by Mahmood in A. D. 1024, Bheem deo, was ruling.—*As. Jl.* 1843. *Vol.* XI. *p.* 167. *Wilson. Townsend's Outram and Havelock's, p.* 49. *Prinsep, p.* 284, *note to Malcolm's History of Persia, Vol. I. ch. ix.*

Miana.—Amongst the tribes of Kattyawar are the Miana of Mallia in Muchakanta on the banks of the Muchu river, the real masters of Mallia. They have a thakur but own allegiance only to their own chawhattia or heads of tribes. They are turbulent, take service as soldiers in the neighbourhood and in every boundary fight, a Miana or two is killed.

Wagher.—Okhamandal, a sterile jungly tract in the extreme west of the peninsula, contains about 13,000 inhabitants. These are the Wagher. Their only important places are the holy hindu site of Dwaraka on the west coast and Beyt, a small island a few miles to the

north with shrines boasting of scarcely inferior holiness. Okhamandel, as also Umreyli in Kattyawar proper and Korinar in south Kattyawar, are under the direct rule of the Gaekwar, and are the Alsatia of Kattyawar. Thrice,—in 1803, 1858, and October 1859, they repulsed British troops, and at length in 1860, were seemingly dispersed or surrendered. On a former occasion, the rapidity and severity of the vengeance, in the escalade of the strong-hold of the Wagher pirates of Dwaraka by the British force under the Hon. Colonel Lincoln Stanhope, induced Singram the chief of the Badhail of Beyt to sue for terms, and he agreed to surrender Beyt, and to live at Aramra on a stipend furnished by his suzerain, the Gaekwar. These Wagher of Dwaraka, who with the Badhail of Aramra, were long the terror of these seas, are a spurious branch of the Jhareja family of Bhooj, one of whom called Abra, with the cognomen of moochwal or the wiskered, from a tremendous pair of these adjuncts to the face, came from Cutch in the time of Rinna Sowah, in whose family he intermarried, and from whom he held in charge the tha'na, or garrison of the castle of Goomtee, or Dwaraka. His son had offspring by a woman of impure caste, and they assumed the name of Wagair, with the distinctive office of Manik, or gem. The last four chieftains of this race were Mahap-Manik, Sadool Manik, Sameah-Manik and Muloo-Manik, who with all his kin and motley company of Wagair, Badhail, Arab, &c, after a desperate defence, was slain in the storm, or attempted retreat.

Throughout the sea-coast of Saurashtra, at Gogo and Mandavie, are seamen who call themselves hindus, but who keep entirely distinct from all other classes. Some of them claim a descent from the mariners of the Arabian hores, but still as hindus.

Portuguese.—The district of Diu is Portuguese. The town has been repeatedly besieged by rulers of Guzerat and the Dekhan, but it continues in the power of the Portuguese.

Jetwa.—The Rana of Purebunder, styled Puncheria, represents the Jetwa, one of the four ancient races still extant in the peninsula. In the days of Mahmud, all the west and north of Kattyawar belonged to the Jetwa rajputs but the foreys of the Jhala and Jhareja have confined them to their present district, the shaggy range of hills called Burda.

Jhareja.—The Jhareja are a rajput race in Guzerat and Cutch with a branch in Kattyawar. The tribes of Rajputana have a political system similar to the feudal practice of Europe. On the demise of a chief, the members of his family would be entitled to a certain appanage of his demesnes, and every district so acquired would constitute a distinct principality subject to a similar subdivision at the decease of each subsequent holder. Each minor tributary thus possesses a body of kinsmen who are collectively termed the Bhaiad or brotherhood. The Jharejha of Guzerat, were till lately addicted to female infanticide. In 1818, Captain McMurdo estimated the members of Jharejha in Cutch at about 12,000 persons of whom only about 30 were women. The Jharejha killed their daughters to avoid paying for them heavy marriage portions. The Jharejha of Cutch are stated by Mrs. Elwood to be a branch of the Sindh Summa stock, of Arabian extraction, descended from a child of a mahomedan zamindar by a daughter of a petty chief in Cutch, whose descendents settled in Powar and Patcham. They marry daughters of the Jhalla, Wagel, Sodha and Gohil rajputs.

Kathi.—The Kathi of Kattyawar proper immigrated into their present site in the eighth century and are supposed to be of Scythian origin. Their religion is a hinduism, mixed with a sun worship. While the rajputs have a modified primogeniture, the Katti inherits by equal division. They are innately turbulent and, of all the tribes, have ever given the greatest trouble. Several people or branches of the same people are known by this name. At present, the peninsula of Guzerat is divided into numerous chieftainships, and although the Kathi hold but a small portion, yet by some conventional process, this Indo-Getic tribe has given its name to the entire peninsula, and Kattyawar has completely superseded Saurashtra. There was, however, an intermediate term used to designate it (before the irruption of the Katti) a term familiar to the author of Almagestum, as well as to the hindu geographers, and this was Lar-des, from the tribe of Lar, whence the Larica or Larice of the Greeks. Col. Tod tells us that the Katti, the ancient foe of Alexander, are not only fairer than those round them but blue eyes are met with amongst them, indicative of their northern origin. (*Travels, p.* 205.) Another writer tells us that the Jun and Kathi, are tall, comely and long haired races, who have vast herds of camels and black cattle, from which the towns are furnished with ghee or clarified butter, and the people themselves provided with libations of milk. Amongst the various branches of this nomadic race, the most celebrated is the Coman-Cathi. Abulgazi describes a famous tribe in Kharezm, the ancient Chorasmia, called Comani, the remains of which were expelled by Chengis Khan: and the royal author adds, "Urgens was not always the capital: and Abulfeda tells us Cath, also spelt Kaht, in 41° 45' N. lat. was formerly the metropolis." What affinity there was between these, the

people of Cat'hay, it were vain to ask: it is sufficient for our purpose to trace them from the Five Rivers, and to observe that the name of their first settlement in Kattyawar, was Cat'h-kot, from which, as stated, they were dislodged by the first Jhareja colony from Sind. It is said of them, that they repeat couplets describing their migration from Mooltan and temporary settlement in the tracts called Pawin, north of the Runn and of Megum Rao their leader conducting the first Cat'hi colony across the gulf into Saurashtra eight hundred years ago; and so predominant was their power that it changed the ancient name of the peninsula to Kat'hi-war.—*Tod's Travels, p. 456-7.*

Jain.—Mount Aboo, in Jain estimation, is the holiest spot on earth, Dilwarra according to tradition has been famous from a remote antiquity. Hindoo temples are said to have existed thereto which, since A. D. 1034, pilgrims assorted, but all traces of them have disappeared; on their traditional site, however, at Dilwarra, Bimul Sah, a rich jain merchant, and others, erected the celebrated jain temples which are now there.

Loke, a mixed race near Mount Aboo. The name is probably a corruption of the hindi word Log, people. It is supposed that the Bhil race were the aborigines of Mount Aboo and the neighbouring hills, but at some remote time became mixed with marauding rajpoots from the plains and with the workmen who were so long engaged in building the Dilwarra temples. This mixed race called themselves Loke and are now in possession of almost all the land under cultivation.

Aghora are ascetics in the neighbourhood of Aboo said to have resided there from the most ancient times and formerly to have been cannibals, hence their other name, Mard-khor.

Vannio, a race of Guzerat seems identical with the banya or banyan; they are of the jain religion. It is the Vani or Wani of the Mahratta and is doubtless from the Sanscrit Vani.

Bhat: Charan.—Peculiar races are the Bard and Charan of Rajputana and Guzerat. The Bhat or bards of India are of three sorts, the Magadha or historians; the Sata or genealogists, and the Bandi or court minstrels, whose duty, in older times, it was to salute the king or chief, in the early morning, wishing him long life and prosperity. These are the bards and minstrels of central India. The bards from their sacred character were often employed as convoys of travellers and their property, in tandahs or caravans. Throughout rajputanah they are regarded as a sacred order, and as the hereditary guardians of history and pedigree. They chant their own verses, or legends from the mythology of India. The Charan like the Bhat, are a sacred race. Formerly it was usual for travellers in Malwah and Guzerat, to hire a Charan to protect them and the sanctity of his name was generally sufficient. If robbers appeared, he stepped forward waving his long white garments and denounced in verse, infamy and disgrace on all who should injure travellers under the protection of the holy members of Siva. If this failed, he stabbed himself with a dagger in the arm declaring that his blood was on their heads; and if all failed, he was bound in honor to stab himself to the heart.—*Hindoos, p. 75.*

Babria.—The Babria tribe of cultivators of Kattiwar have seventy-two sub-divisions. The Babreawar district is named after them.—*Wilson.*

Rebari.—The Rebari of Guzerat are a class of nomade shepherds who real camels, sheeps, goats and subsist by the sale of the wool and milk, not of the animals.—*Wilson.*

Sabalia in Guzerat are a low caste, employed in tending cattle.

Mewas, a koli tribe of free-booters in Guzerat.

Koli.—On the western side of India a numerous race are the Koli: they are the labourers and lower cultivators in Guzerat.

The Olgana and Dher are outcastes of Guzerat.

Ujain lies to the north of the Nerbuddah, and south of the river Mahi.

Lions are still found in the Geer jungles, there are no tigers, and Captain Postans observes that while Kattiwar abounds with the tiger and lion species, Cutch, the neighbouring province, is free from this terrible infliction. The rao of Cutch, at one period, had several dens filled with wild beasts.—*Postan's Western India. Vol. II. p. 158. Tod's Travels. Malcolm's Persia; Calcutta Review. Hindoos, p. 75. Mrs. Elwood's Letters, Vol. II p. 113. Tod's Rajasthan, Vol. I. p. 59. Tod's Travels, p. 456, 7, 220, 440-441. Townsend's Outram and Outram.*

Peninsula of India.—The greater part of the Peninsula of India is occupied by settled races, many of them well educated, with a large literature and earnestly pursuing agriculture, with many gardening races, possessing tribal names. The farmers are styled kunbi in Mahratta; kapalu in Telugu; waklgiru in Canarese, ryot or khet-karni in Hindi, and they are all bold, self-reliant and vigorous; they have horned cattle and carts, some of them have horses, and the institutions of all are essentially democratic.

Mr. Campbell tells us that in Hindustan and Bengal the republic or village system has been

greatly disturbed by the repeated inroads and conquests of foreign races and by the long period of mahomedan rule and the village officers and servants are there less complete. But, even there, the headman and the accountant are almost invariably retained and some of the other officers and servants are also to be found and in most instances the offices are hereditary, are capable of being mortgaged or sold: are paid by recognised fees and perquisites, by allotments of grain at the time of harvest or sometimes by portions of land held rent free or at a low quit rent.

In the Canarese and Maratha countries the village authorities are all still to be found. They vary very much in number and in duties, but office holders are to be met who claim to be descendents of the persons who first settled and at dates long before the oldest of the European dynasties were established. Amongst them Potails will be found in the Mahratta country, who trace their descent from persons who settled, a thousand years ago and more, in the villages they now hold and the same is to be found amongst the Reddi and Gauda of the South and East, and it is this that has preserved the Indian villages from the changes which would otherwise have occurred from the irruptions of the Aryan, Brahui, Jat, Rajput, Arab, Persian, Tartar, Moghul, Afghan, Portuguese, French and British. In the south the office bearers are known amongst the Mahratta as Balute or Alute; among the Canarese as Ayakarru, Ayagarru or Ayaugaudlu. Of the officers to be found the following may be enumerated:

1. Head officer, styled Potail, Reddi, Gauda.
2. Assistant do. or Changala.
3. Accountant, or Kalkarni.
4. District do. or Despandi.
5. Chaudari, or convener of trades.
6. Money-changer, assayer, gold and silversmith, or Potadar.
7. Barber or Nhawi, or Nai.
8. Washerman, Parit, Dhobi.
9. Temple servant, or Gurao.
10. Carpenter or Sutar.
11. Potter or kumbhar.
12. Gate-keeper or watchman, usually a pariah or Mhar, Mhang, Ramusi or Bhil, called eskaar, veskar, tallari.
13. Waterman do. do. do.
14. Astrologer or Josi.
15. Shoemaker or Mhang.
16. Bhat or Bard
17. Maulana or Mulla, a mahomedan priest.
18. Corn meter.
19. Blacksmith.
20 Notary.
21. Sweeper.
22. Tailor.
23. Physician.
24. Musician —*Wilson's Glossary.*

People of the Peninsula.—Dravidian is a term which Dr. Caldwell has recently applied to the vernacular tongues of the great majority of the inhabitants of Southern India. With the exception of Orissa, and of those districts of Western India and the Dekhan where Gajarathi and the Marathi are spoken, the whole of the peninsular portion of India, from the Vindhya mountains and the river Nerbudda to Cape Comorin, appears to have been peopled, from the earliest period, by different branches of one and the same race, speaking different dialects of one and the same language, and scattered off-shoots from the same stem may be traced still further north and west, as far as the Rajmahal hills, and the mountain fastnesses of Beluchistan. The name for this class of languages is not yet definitely settled. Dr. Caldwell excluding the Rajmahal, the Uraon and the Brahui, designates as Dravidian, nine idioms current in Southern India, viz., Tamul, Telugu, Canarese, Malayalam, Tulu, Toda, Kota, Gond or Goand, Khond or Kund or Ku, and says it has been remarked that in the ten cultivated languages of the Dravidian tongue, Sanscrit words are not at all, or but very rarely employed. He tells us that, of all the Dravidian tongues, no two are so nearly related to each other as to be mutually intelligible to the people who speak them except in the simplest and most direct manner.—(*Dr. Caldwell's Comparative Grammar.*)

Mr. Hodgson alludes to this, and remarks that the insulation of the several members of the Tamulian body has led to an extremity of lingual diverseness which, as contrasted with the similarity of their creed and customs, is the enigma of their race. In Hindi and Urdu, though the structure is the same, vocables make a difference which is broad and clear, owing to the evidently foreign elements of the diversity. Not so, however, in the Tamulian tongues, in which there is very little of foreign element: all is homogeneousness in the vocables, and from its sameness of kind is less open to distinct separability.

The nations and races whom Mr. Hodgson designates Tamulian, are styled by Mr. Logan and Dr. Caldwell, Dravidian. They are found in different parts of India, from Himalaya to Cape Comorin, in varying numbers but are about a fifth part of the population of British India and Dr. Caldwell estimates the proportionate numbers of several of the races by whom the Tamulian languages and dialects

INDIA.

are spoken, to be as follows:

Tamul	10,000,000	Buda	}	
Telugu	14,000,000	Kota	}	500,000
Canarese	5,900,000	Gond	}	
Malaylam	2,500,000	Ku	}	
Tulu	150,000	Total...		32,150,000

About 20,000,000 of these are British subjects, and the remainder are under the native states of Hyderabad, Travancore and Cochin. In this enumeration, however there have not been included the idioms of the fragments of nations the Ramusi, the Korawa, the Lombadi, the Vedar, the Male-Arasar &c., &c., and the various wandering predatory or forest tribes of whom notices will be hereafter given. Their dialects afford another proof that the several peoples speaking them arrived at various periods, at their present sites.

Non-Arian Races. Fragmentary.—According to Mr. W. W. Hunter, India is partly peopled by races distinct from the Arian population. Some of these, he says, have preserved their ethnical identity in sequestered wilds, others have merged as helots or low castes into the lowland hindus and these now fragmentary peoples form the debris of a widely spread primitive race.

In his dictionary of the Non-Aryan languages of India and High Asia, he classes all languages as under :—

1. *Inflecting types.*—Arabic ; Sanscrit.

2. *Compounding types.*—Bask; Finnic ; Magyar ; Turkish ; Circassian ; Georgian ; Mongolian ; Mantshu ; Javanese ; Ngoko Javanese, Krama ; Malay.

3. *Isolating types.*—Chinese of Nankin ; Amoy, Pekin, Shanghai and Canton ; Japanese. Brahui.

4. *Chinese frontier and Thibet.*—Gyami ; Gyarung ; Takpa ; Manyak ; Thochu ; Sokpa ; Horpa ; Tibetan.

5. *Nepal, (West to East).*—Serpa ; Sunwar ; Gurung ; Murmi ; Magar ; Thaksya ; Pakhya ; Newar ; Limbu.

6. *Kiranti Group, East Nepal.*—Kiranti ; Rodong ; Rungchenbung ; Chhingtangya ; Nachhereng ; Waling ; Yakha ; Chourasya ; Kulungya ; Thulungya ; Balungya ; Lohorong ; Limbichhong ; Balali ; Sang-pang ; Dumi ; Khaling ; Dungmali.

Broken Tribes of Nepal.—Darhi ; Denwar ; Pahri ; Chepang ; Bhramu Vayu ; Kuswar ; Kusunda ; Tharu.

Lepcha (Sikkim).

Bhutani *v.* Lhopa.

8. *N. E. Bengal.*—Bodo; Dhimal ; Kocch; Garo, Kachari.

9. *Eastern Frontier of Bengal.*—Munipuri ; Mithan Naga ; Tablung Naga ; Khari Naga ; Angami Naga ; Namsang Naga ; Nowgong Naga ; Tengsa Naga ; Abor Miri ; Sibsagor Miri ; Deoria Chutia ; Singhpo.

10. *Arakan and Burmah.*—Burman written and spoken ; Khyeng *v.* Shou; Kami; Kumi ; Mru *v.* Toung ; Sak.

11. *Siam and Tenasserim.*—Talain *v.* Mon ; Sgau Karen ; Pwo-Karen ; Toungh-thu ; Shan ; Annamitic ; Siamese ; Ahom ; Khamti ; Laos.

12. *Central India.*—Ho (Kol) ; Kol (Singhbum) ; Santali ; Bhumij ; Uraon ; Mundala ; Rajmahali ; Gondi ; Gayeti ; Rutluk ; Naikude ; Kolami ; Madi ; Madia ; Kuri ; Keikadi ; Khond ; Savara ; Gadaba ; Yerukala ; Chentsu.

13. *Southern India.*—Tamil ancient and modern; Malayalma do. do.; Telugu ; Karnataka, ancient and modern, Tuluva ; Kurgi ; Toduva Toda ; Kota ; Badaga ; Kurumba ; Irula ; Malabar, Sinhalese.

Writing further on the Non-Arian languages of India and High Asia, Mr. W. W. Hunter says (p. 22.) that his book contains primeval roots common to both Arian and non-Arian speech, in a far more definite manner than the similar indications by which scholars have sought to reduce the Semitic and Indo-Germanic families to a cognate source.

Many of the non-Arian peoples of India, he tells us, take their tribal designations from the word for "Man" in their respective dialects, and the very general term mi (man), with some prefixed or suffixed syllable, supplies the bases of the race name to not less than forty ascertained tribes, thus Du-mi, Kami, Kumi ; Angami Naga, Mithan Naga. And if we recognise the non-Arian phonetic displacements of *m* and *l* and of l and r, the list can be greatly increased ; thus, in the Sak, *lu* ; Toung, *mru* ; *Murmi*, mi ; Thaksya, mli ; and the root *li* affords the generic term *homo* man, to a whole series of tribal names. Thus Balali ; Mali, the people of Rajmahal ; Dhima-li ; Santali ; Bangali, meaning the people of Bala, Banga, and so forth ; *Li* is thus often added to specific names for man, to form names for aboriginal tribes. In Santali, *li* furnishes the nomenclature connected with the propagation of our species such as lai, laih, &c., and appears in *li* dih, a child ; *le-duka* or *lad-ko*, children : *khili*, a generation of men (*ho-li*) and the hitherto unexplained terms, *Che-la Che-li*, (=khi-l =ho-li) for son and daughter, used by all the semi aboriginal castes of Lower Bengal.

The root *ko*, with the generic affix *li*, is met with in all periods of history and in all India. The Mahabarata and Vishnu Purana, speak of Ko-li tribes in connection with Mikala, Dravida, Kirata and others, and the Aitareya Brahmana, speaks of the Koli as Dasya.

Among a section of the non-Aryan races of India, or aborigines as Mr. Hunter styles them, is the root *ho*, shortening in some to hu and ha, or interchanging into Ko, Ku and Ka. This root Ho furnishes the specific word for Man amongst the Kol tribes of Central India and is one of the oldest and most widely spread roots for Man. In the Sanscrit play, the Mrichha kati, *go-ho* isMan, among the Kur, near Ellichpore, it is *ho ko*. Amongst the Siamese it is *Khon* or *Kun*, which is the same form as it takes amongst the Khond.—*Mr. W. W. Hunter.*

Rama, now a deified warrior, was the leader of one invasion of the southern part of the Peninsula of India and of Ceylon, and his inroad seems to have been a great occasion of breaking up and scattering the races in the east of the peninsula. He advanced into the forests of Dandacaranya, scattering the prior inhabitants, as he advanced, whom he described as rakshasha or demons, driving some of them into the forests and mountain retreats where they still reside in a barbarous freedom, and reducing others to the state of predial slavery, in which, the Pariah, the Pallar, Cherumar and other humbled races are now dwelling in the plains. To such invasions is owing the circumstance that each province in India has its own peculiar helot races; and each range of mountains and each forest tract its own tribes of wild savages either wholly independent or partially subject to their more civilized neighbours in the open country. There may be instanced the Pahari of the Rajmahal hills on the banks of the Ganges, and from their locality westwards through all the races in the Vindhya hills, the Meena, the Mair, the Bheel, and the Koli, southwards through the races in Bustar, and Gondwana, amongst the Sonthal, the Gond, the Kond; Chenchwar; Souriah, the Yanadi, the Irular; the Kurumbar the Beder, the Kallar, to theMalayali or mountaineers in the south,an infinite succession of races and tribes, with customs, and speaking languages, differing greatly from the inhabitants in the plains,—besides whom are numerous migratory races, without country, town, or house, as the Korava, Wadawar, Yerkalwar and Pardi.

The ancient Sanscrit writers give names of ancient races with whom the Arians came in contact in their advance to the Ganges, some of which cannot now be traced. But, amongst others, according to Mr. Hunter, the *Chandala*, were of the same stock and formed their name from the same root as the aboriginal races of northern India at the present day. The Chandala, as their personal appearance, habits and occupations are described by ancient writers, were evidently a prior race, who before the advance of the Aryans had been reduced by other non-Aryans into a helot race and have long since merged as serfs into the hindu population. The whole nomenclature of the helot castes among the mixed hindus, both in ancient and modern times is derived, he says, from the aborigines: thus, he indicates the Mali, gardeners and landless husbandmen, who take their name from the tribal term *Male*, man. The Dom, Dam and Dumi; the Kharwar, the Kheroar or ancient Santal, and the present Kheria of Central India. The Chaura serfs of the Panjab, descendents of the Chaura military outcastes of the Mahabarata. The Coolee or Kuli all over India, and the Hadi a helot race of Bengal.—

Kirata or Keranti, are a warlike, aboriginal tribe spoken of by ancient Sanscrit writers, and classed by Manu and by the Mahabharata as outcaste military peoples, along with the Khasa, China, Dravida and other recognised non-Aryan races, and occupy at this day the exact position assigned to them by the Vishnu Purana, to wit the eastern border of Bharata-varsha.

Savara Saka according to Manu was one of the outcaste military tribes.

China is a race alluded to by ancient Sanscrit writers, as dwelling on the extreme East but further into India than at present, and Mr. Hunter, (p. 28) considers that the aboriginal races of the Eastern peninsula, Burmah and India north of the Vindhya range derived their speech from a source common to themselves and the Chinese.

Dasya.—The Aitareya Brahmana says most of the Dasya, are sprung from Visvamitra, and Sanscrit writers applied the term Dasya, to all the aborigines from the Naga of North Eastern Bengal, throughout all India, to the indigenous castes of Ceylon, to wit, the Koli-Sarpa, Serpent Kol or snake races.

Tamul.—In the peninsula of India, where the Tamul is spoken, in the extreme south-east, by about ten millions of men, the people are, generally speaking, a dark colored and short statured race, energetic, fiery, and quarrelsome, but not vindictive. Most of them have embraced brahminism, but the outcastes and fragmentary tribes have a spirit and a devil worship and the worship of the local deities called Ammun.

Telugu.—On the eastern borders of the peninsula, where the Telugu is spoken by about 14 millions of people, the people are a taller and fairer race than the Tamul, many of the more northern of them being equal in stature to the Arian hindus of the north. They are more brahminical than the Tamulian, races, and are as energetic as the latter though less restless.

Canarese.—The people who speak Canarese are about five millions in number, chiefly in the centre of the peninsula; they are a tall and

singularly graceful race with whom, as amongst the Kandians in Ceylon, a community something akin to polyandry is very prevalent. In this they somewhat resemble the Koorg race and the Nair of Travancore.

The *Malayalim* language, is spoken in the south-west of the peninsula by about 2½ millions, and the *Tulu*, on the sea-board somewhat to the north, by about 100,000 or 150,000.

Kodaga.—The people of Coorg and Mysore speak a Canarese dialect; and on the Neilgherry hill are the Kota about a thousand in number, the Toda about 300 in number, the Budaga another small tribe and the Kurumbar and Irular.

In the interior of the peninsula are Gond or Goand tribes, and the Khond, Kund or Ku, also Dravidian, who are estimated at half a million of souls, and the Bhil of Khandesh and of the Nerbudda of whose numbers we have not seen an estimate. In addition to these larger nations, there are smaller tribes intermixed, some of them living in forests or migratory.

Mr. Elliot remarks that "all the southern dialects become considerably intermixed as they approach each other's limits. Thus the three words for egg used indifferently by the people speaking Canarese, (matte, tetti, gadda) are evidently obtained, the first Tamulian matta; the last, from the Telugu, gadda. This intermixture, which is of ordinary occurrence in all cognate tongues, is here promoted specially by extensive colonization of different races, as of the Telugu race into Southern India under the Bijanagar dynasty, where they still exist as distinct communities—and of the followers of Ramanuja Achary into Mysore, where they still are to be seen as a separate class speaking Tamul in their families, and Carnataca in public. The Reddi also, an enterprizing race of agriculturists, have migrated from their original seats near Rajamundry, over the whole of Southern India, and even into the Maharata country, where they are considered the most thriving ryots, and are met with as far north as Poona." The Lombadi, speak a dialect of the Hindustani. The Ramusi and the majority of the Korawa speak a patois of the Telugu. The tribes inhabiting the hills and forests speak corrupted dialects of the languages of the contiguous plains. The 'Hill Kings' called in Malayalum Male-Arasar, the hill tribes inhabiting the Southern Ghauts, speak corrupt Malayalum in the northern part of the range, where the Malayalum is the prevailing language, and corrupt Tamul in the southern, in the vicinity of Tamul speaking districts. (See Ellis' Dissertation and Wilsons' Mackenzie Manuscripts.)

Tamul country and its peoples.—Tamul was the language of three ancient dynasties of whom we have record: The Chola of Tanjore and Combaconum, who were settled on or near the Caveri and Coleroon rivers, and who, as some suppose, gave their names to the Coromandel or Cholamandel Coast: the Pandya, whose capital is now occupied by the inhabitants of Madura; and the Chera, who ruled at Kerala on the Malabar coast.

Pandiya, probably a word of Sanscrit origin, is the Pandion, the Oi Pandiones, of the Greeks, and was the titular name of the dynasty of Madura: the race were styled Pandyi, Pandiyas, the king, the Pandyan or Pandiya Deva. Two embassies were sent by the Pandyan king to Augustus, the first of which he received at Tarragona, the second is mentioned by Strabo. The friendship of the Romans was sought by only one other hindu prince, O Kerobothros, the king of Chera or Kerala, who was also a Dravidian. Mr. Taylor is of opinion that Tamul was cultivated in its purity in the ancient Pandiya kingdom.

The Tamul language is spoken throughout the vast plain of the Carnatic or country below the ghauts, termed the Carnatic Paen Ghat by the mahomedan sovereigns and by the British who have succeeded them, The Tamul speaking country extends from Cape Comorin to Pulicat 30 miles north of Madras, and inland from the Bay of Bengal, to the Eastern Ghauts, The Tamul skirts Mysore on all its eastern frontier, is also spoken over the Bara Mahal, Salem, and Combaconum, meeting with the Malayalam at the great gap of Palghat, It is spoken also in the southern part of the Travancore country, on the western side of the Ghauts, from Cape Comorin to the neighbourhood of Trevandrum; also in the northern and north-western parts of Ceylon, where Tamulians formed settlements prior to the Christian era, and from whence they have gradually thrust out the Singhalese.

The Tamul was, until recently, called by Europeans the Malabar language, and this term is even still used amongst the illiterate, but even the educated classes write it erroneously, as Tamil. It was the earliest developed of all the Dravidian idioms, is the most copious and contains the largest portion of indubitably ancient forms. It includes two dialects, the classical and colloquial, the ancient and the modern, called respectively the Shen Tamil and the Kodun-Tamil, which so widely differ that they may almost be regarded as different languages. The people at present speaking Tamul, are the least scrupulous or superstitious, and the most enterprising and persevering race of hindus, and swarm wherever money is to be made, or wherever a more apathetic or a more aristocratic people is waiting

to be pushed aside. The majority of the hindu religionists found in Pegu, Penang, Singapore and other places in the east, where they are known as Klings, are Tamulians. All throughout Ceylon, the coolies in the coffee plantations are Tamulians; the majority of the money-making classes, even in Colombo, are Tamulians, and ere long the Tamulians will have excluded the Singhalese from almost every office of profit and trust in their own island. The majority of the domestic servants, and of the camp followers; in the Madras Presidency and the half of its army, are Tamulians, and the coolies who emigrate so largely to the Mauritius and the West India Islands, are mostly of the Tamul people. Including the Tamul people who are residing in the military cantonments and distant colonies, and those in South Travancore, Northern Ceylon, and excluding all mahomedan, Tiling, and brahmin residents of the Tamul country, who amount to at least ten per cent. of the whole population, the people who speak the Tamul language are estimated by Dr. Caldwell at about ten millions.

Vellala.—Amongst the Tamul races who have adopted brahminism, the Vellala, alike in numbers and in social rank, take the chief place. They are very largely agricultural, and take the honorific appellation of Mudali or first man, which seems to be from the same root as the word Mandal, the village headman of Bengal:—the designation Vellala means charitable, but they claim to be Vaisya, of the Bu-vansa or agricultural section. They believe that they came from the north. They are shorter and darker than brahmins, darker even than the Tiling people, but they have in general well formed countenances and graceful forms, though amongst them also occur the decidedly African lip and nose and forehead of which Mr. Logan makes mention.

Pillay.—The Tamul race styled Pillai, call themselves Yadava or Idaan, also Go-vansa, or shepherd race. They are darker and more slender and are less engaged in cultivation. These also are of the brahminist religion, they are intelligent men.

The *Naek* is another Tamul race who have adopted brahminism, they have few lands and are largely employed as farm servants.

Nata-Kothiar.—The Nata-Kothiar race from the south of the peninsula all speak Tamul and follow brahminism, are large spice merchants, and all of them have the marked African protruding lips and nose sharply cut at the forehead.

Fragmentary races.—Amongst these are scattered other tribes and fragments of nations, of whom a mere mention must here suffice. Professor Huxley, writing on Indian ethnology, says the inhabitants of Hindostan are broadly distinguishable into two groups: first, the people of the Dekhan; secondly, the people who inhabit the river plains and northern heights, and have thence overflowed the strips of plain which lie between the ghats and the sea, and penetrated more or less deeply into the Dekhan itself. He is of opinion that proper population of the Dekhan has no analogue in north-eastern or north-western Asia. They are long-headed, dark-skinned and dark-eyed men, with black wavy hair, devoid of any inclination to woolliness; not unfrequently they exhibit prominent brow ridges. Any one who has ever seen an Australian native will be struck with the resemblance between the two. They speak languages known as Dravidian, and where they have been left in their primitive condition are thorough savages. The rest of the population of Hindostan is, he says, allied in physical character and language either to the adjacent peoples in the north-west and the north-east, or exhibits evidence of being the result of the intermixing of such peoples with the Dravidians. Thus, on the north and east, the semi-civilized people assume more or less completely the physiognomy and the linguistic peculiarities of the Mongoloid tribes of Tibet and Ultra-Gangetic Asia. The population of all the rest of Hindostan, on the other hand, exhibits, in physique and in language, obvious signs of the influence of the pale-faced Aryan, who lie to the north-west, and stretch from the waters of the Indus to those of the North Sea, everywhere speaking a language allied to the Sanscrit, which forms the basis of all the dialects of civilized India. In Europe two distinct types of these pale-faced people are to be observed; the one having black eyes and hair, and sallow skins; the other with yellow hair, blue eyes and white ruddy skins. Both these types are traceable to the frontiers of Hindostan, the dark among the Siah'posh, who live in the inaccessible valleys of the Hindoo Kush. Professor Huxley says there can be no reasonable doubt that the population which the Aryans found in India were Dravidian, though whether it was already mixed with a Mongoloid element from the north-east or not does not appear.

Mr. Campbell arranges the Turanian aborigines into two sections, as under:

Dravidian or Southern.	*Northern or Kolarian.*	
Tamil....Kurumbar.	Lurka-kol.	Languages, according to Max Muller, unconnected with any others.
Canara...Burghar.	Ho.	
Do.....Kota.	Bhumi.	
Gond.	Mundah.	
Khond.	Sontal.	
Oraon.		
Rajmahali.		
Malealam...Male Arisar.		
Telugu...Ramusi.		

Dravidian aborigines deal in demonology, fetishism, frantic dances, bloody and even human sacrifices; they are, however, superior to the Arian hindus in freedom from disqualifying prejudices, but inferior to them in knowledge and all its train of appliances.

These prior tribes are most numerous, are, indeed the mass of the inhabitants, in the hilly country from the western and southern borders of Bengal, Behar and Benares to the frontiers of the Hyderabad and Madras territories, and from the Eastern ghats inland to the civilized portions of the Nagpore territory, but even, in this tract, are evident monuments of old hindu civilization and of the saiva persuasion.

The aborigines of India, both in physique and in the structure of their language, present a type analagous to the Negrito of the South seas, Papuans, Tasmanians and others, as well as to the nearer Negrito of Malacca and the Andamans.—(*Journal of the Asiatic Society of Bengal, Vol.* 35, *Part ii.* 1866. *Mr. Campbell, p.* 21. *Lt. Col. E. T. Dalton.*)

Kollar or Colleri are a tribe in the Tondaman country, in the Vasanga district, in the eighteen palliams or districts, and throughout the Madura district. Until late years they were so predatory that in the south of the Peninsula of India, Colleri became the designation of a thief and their name is derived from "Kallara," thieves, plunderers. In ancient times they seem to have inhabited the woods from Trichinopoly to Cape Comorin. Orme writing of them, describes them in the middle of the 18th century as expert thieves and plunderers, and the Jesuit, Father Martin, says they were very cruel. Pennant writing of them in the 18th century says the adjacent countries are covered with thick forests and little cultivated by reason of the savage inhabitants, the Polygars and Colleri, who may be truly styled "sylvestres homines." The Colleri, he adds, were predatory and their government, as also that of the polygars, feudal. They are thirty or forty thousand in number. Their country is hilly; they generally sided with the mahomedans and the British in the wars against the French in the times of Clive and Dupleix. They have a first and second marriage, like the Maravar of Ramnad. The titular sirname of all Kollar is Ambalakaren. Calicoil was the stronghold of the lord paramount, the rajah of Tondaimandalam, the country of the Tondiman, which was an ancient division of the Peninsula of India, of the part now occupied by the Arcot and Chingleput collectorates. The country of the Tondiman, H. E. the rajah of Poodoocotta, a petty chief is now only a small tract near Trichinopoly.—(*Pennant's Hindustan, Vol. ii. p.* 11. *Orme's Hindustan.*)

Vellaler. A fragmentary tribe bearing this name are said to wander about in the jungles of the Poodoocottah estate. They are scantily clothed and subsist on the produce of the jungles.

The *Maravar* are a race in the extreme south of India, in the Ramnad and Siva Ganga districts, differ from other races. Their language and customs differ. They worship local deities to whom they offer liquor, flesh and fruits, and practice divination. The men do not wear turbands. They possess lands. They are a robust, hardy, dark-skinned stalwart race, athletic, with well developed muscles, active, of moderate height, the cranium rounded, narrow in front, forehead low; eyes large and full. They occupy parts of the Madura and Tinnevelly districts, are employed as village watchmen and are honest to their employers, but have been largely given to thieving and gang robberry. They use as food the flesh of all animals except that of the cow. They wear their hair long and arranged like the women of the Dekhan. In their marriages, disparity of ages is not considered, nor is the presence or assent of the bridegroom necessary,—a blade of wood in his absence serving as proxy. They worship evil spirits, to whom they sacrifice, and, on the occurrence of a small pox or cholera epidemic, the whole village is excited and devil dances are common. The Maravar women of Ramnad and Sivaganga, wear cloths of 25 or 30 cubits in length, folded in plats which they fasten behind. This is unlike other hindu women, whose cloths do not exceed twenty cubits and are fastened on the right side in front. They intermarry, some of the sub-divisions not marrying into the father's family,—but hindus in general intermarry with the mothers relations. In Ramnad and Tinnevelly, the titular surname of all Maravar is Dever.—(*Pro. Mad. Govt.* 1867, *p.* 4.)

The Ramayana describes the forest (or wilderness) of Dandaca as covering the whole extremity of the southern peninsula, and the rude inhabitants are designated rakshasha (monsters) or vanara (monkeys) the former meaning races or tribes hostile to the Arians. But vanara is from vana a wilderness and nara a man, that is a wild or uncivilized man, and to this sense as to the wild races in the extreme south, Mr. Taylor thinks may be reduced, the fable of Hanuman, the chief monkey and that of his army. He says that those who have seen the Collyri and Marava wil readily consider them to differ from all family likeness of the Arian Hindus, and as their visages often resemble baboons more than men, it would require even less than the ardent poetical imagination of a Valmiki to induce the employment of an equivalent word which would so aptly seem to convey the idea imparted by their appearance.—*Rev. Mr. Taylor in Madras.—As. Soc. Journ.*

Shanar or *Sanan*, are a tribe in the south of India, about Tinnevelly and Travancore, who are toddy drawers. They are a dark skinned race, with low foreheads, sunken eyes and prominent cheek bones, timid and superstitious. They occupy, in considerable numbers, the districts of Madura and Tinnevelly, but are not so good looking as the Maravar, either as to phy-

sique or features. They are only second to the Maravar in numbers, and more than one-half of them profess christianity of the protestant or Romish churches. The other half follow demonology, the usual bloody sacrifices and devil dances. They are of the Tamulian branch of the human race and came from the north of Ceylon. In the sandy sea coast wastes of the south of the peninsula they have widely extended the cultivation of the palmyra tree, and claim a siegnorage over these tracts; but they are largely occupied in extracting the palm wine. A man will attend to about 50 palm trees. Shanar women lately wished to cover their bosoms, and their attempt to do so was interfered with by the nair race.

Paravar are a dark skinned, almost black race in the extreme south of the Indian peninsula, living in villages along the sea coast and earning their bread as fishermen, with nets, lines and hooks. They own canoes, which they take to sea before daylight and return about noon. Their ancestors are said to have been converted by Xavier, and they still profess the Romish religion but they are drunkensome and dissolute.—*Madras Government Proceedings.*

Mukwa, are fishermen in Malabar; those of north Malabar follow the rule of descent a matrice but those in the south, permit of descent of property to sons.

Shembadawar are fishermen of Southern India.

HILL RACES.—The Kardar race occupy the Animallai hills in the collectorate of Coimbatore. They are open, independent, straightforward, men, simple and obeying their Mopens or chiefs. They are strong-built and active, with woolly hair and something of the African features and file their front teeth to a point. The women wear enormous circles of pith in the lobes of their ears, which they distend down to their shoulders. A black monkey is the Kardars' greatest dainty.—*Lt. Col. Hamilton, in literis.*

A *Negro* race occupy the hills at Dandilli in North Canara.

Chensu Karrir are a migratory race mentioned by Buchanan as residing in the hilly tracts near Coimbatore. They are described as without houses or cultivation, but by snares or with the bow, catch birds and game which they dispose of for rice; the white-ant is said to be used by them for food. They approach their game under the shelter of a cow or buffalo which they have instructed to stalk. Their language is a dialect of the Tamul with a few Canarese words intermixed; those near towns learn the use of Telugu words. A Tamulian is unable to understand their language. A few reside in little huts on the outskirts of villages and have a little blanket. But their ordinary clothing is a loin cloth, and in the denser forests, they use only a few leaves and dwell in caves or hollows of trees or under the shelter of a hut made of branches of trees. They describe the Anamallai as their original country.

Malayali, a race in the Shevaroy hills in southern India.

The Male Arasar, or Hill Kings, are small tribes of mountaineers on the hills in the extreme south of the Peninsula. They inhabit the range of ghats between Tinnevelly and Travancore, in small communities of five or six families, and probably do not exceed 500 in all. Their huts consist of a few sticks covered with bark and thatch. They live on wild forest products, but, since A. D. 1850, they have been cultivating potatoes for their own family use. They have a few fowls and dogs. As a race they are diminutive and pot-bellied, their crania small, and pear-shaped, rising to a point about the junction of the occipital bone and the sagittal suture; a low retreating forehead; long, tangled black hair, flat nose, and small eyes. They are averse to intercourse with strangers. They catch wild animals with pits and traps and use bows and arrows. They are a miserable body, low in the scale of civilization.

The *Neilgherry mountains* are in the southern part of peninsular India. The mountain tract called the eastern ghauts, commences 11° 20′ N. south of the Cauvery, extending to the base of the peninsula. The western ghauts commence at Cape Comorin and extend to the Tapti or Surat river, whence they diverge to the N. E. and are lost among the hills near Boorhampore. The Neilgherry hills are situated between 10° and 12′ N. L. and 76° and 77° E. long. bounded on the north by the table land of Davarajputnam, S. and E. by the open country of Coimbatur, S. W. by the Manaar river, a branch of the Bhowani; W. by the chain of ghauts and N. W. by the district of Wynaad. The base of these mountains, including that of the Koondah hills, covers a circumference of 200 miles. Their greatest length is from E. to W. 46 miles, and medium breadth 15 miles: the surface is composed of ridges of different elevations. The country is divided into three Naad, viz: Peringa Naad, Malka Naad and Thodawar Naad. The first two are mountainous, but the third is of sloping hills and gently undulating surface of table land. Dodabetta is 8,700 feet above the level of the sea. The races occupying these Naad, are the Thodawar,—Buddaga,—Kothur Koorumbur and Erular.

The Toda, properly Tuda or Tudavara, are a primitive and peculiarly interesting tribe; practising quasi druidical rites, and commonly believed to be the aboriginal inhabitants of these hills. They do not, at present, number more than from 300 to 500 souls. It is supposed that they never could have exceeded a few thousand, but

have diminished through opium eating and polyandria, and, at a former period, the prevalence among them of female infanticide.

The Toda are polyandrists; one wife or if there be more than one, all the wives, in a family of brothers are common to all the brothers.

One of the most remarkable varieties of the South Indian type, is that of the Toda, of the Neilgherry hills, whose physical appearance Mr. Logan styles Indo-Semitic. The Semitic character is seen in the breadth and massiveness of the head, the great orbits and eyes, the receding forehead, and Jewish expression which is observable in some families. They are tall, handsome and athletic, with bold noses and expressive eyes. They are strongly distinguished from the more normal type, but he considers them as evidently referable to the archaic Semitico-Turanian era of S. India.

Mr. Campbell, however, says (p. 24, 25) the Toda are Caucasians of a very high type, resemble Greeks.

The *Todawar* say that they are the aborigines and the other classes regard them as the lords of the hills. They occupy the Todawar-naad and Mulka-naad. Their villages are in the depths and on the skirts of the forests. Their houses are built in the form of a paralellogram, 10 feet by 6, roof semicircular and door $1\frac{3}{4}$ to 2 feet high, and 14 inches to $1\frac{1}{2}$ feet wide, and it is the only aperture. Their appearance is noble, some of them being upwards of 6 ft. high. They marry, but practice polyandria and the women can choose a gallant. Infanticide was prevalent, but it is said that no girl has been destroyed since 1819. In their habits of polyandria, they assimilate to the Coorg, Nair, and people of the Himalaya, and, in infanticide, with the Rajpoots.

Their numbers in 1825, were men 145; women 100, boys, 45 and girls, 36= 326. Their colour is a deep copper hue, tall, well proportioned with features of the Caucasian type and graceful carriage.

Their men average in height 5 ft. $3\frac{2}{3}$ and average weight lb. $121\frac{1}{4}$. Nose long, large, and well formed, generally aquiline.

The women average in height 60·25 inches, in weight lbs. 110·80. They are tall and stalwart, with a robustness of form, and are handsome and comely in feature.

The Toda have five sections (*a*) Peiki, (*b*) Pekkan, (*c*) Kuttan, (*d*) Kenna, and (*e*) Todi which eat together but do not intermarry, *Todawar or Torawar*, in Tamil, means herdsman. They claim and are recognized to be the first residents on the hills and the other tribes pay to them in kind, as tribute, one-sixth of the produce.

The *Todawar* are said to have once been clad in leaves, and to have followed the nomade life they still pursue. Motta, and Mund, are words meaning a Toda hamlet. The Toda men carry a small axe and their cowherd staff. Toda women tattoo their arms, legs and chest with dots. The men wear a piece of stout cotton cloth about lbs. 5 in weight thrown around them as a toga or mantle descending to the knee, and their feet and head are always bare. The women have a similar mantle, but falling to the ankles, with the loin cloth (Mūndu, Tam) of hindu women below it. The Toda, do not bathe, but anoint their bodies with ghee, which soon becomes rancid. They are dirty. The Toda women have metal and shell ornaments, with brass amlets weighing lbs. 6. The Toda lead a quiet, peaceful life. They are fond of feasting and dancing, on festive occasions; all use tobacco, many use opium and in latter years the use of arrack has largely increased. The following are a few Thodawar words.

Polsh-ti...Temple.	Tilum.....Pleasure.
Eshu.....Morning.	Ter .....Deity.
Kukh.....Daughter.	Uhk.....Fire.
Mukh.....Son.	Urkom.....A servant.
Pur.... . ..River.	Konnum....Face.
Pest.....Cold.	Phultan.....Flea.
Mittuv.....Nose.	Kust.....Ass.
Hushk.. ..Paddy.	Ez Pom....Raspberry.
Pizhakaza-To-morrow.	Murss.....Straw.
Ponzh.....The sky.	Oom unoor. } Future world.
Modj.....A cloud.	
Porhz.....The sun.	Ath.....That.

Turuvi.....Monkey.	Put .....Fowl.
Ishk.....People.	Err.....Buffaloe.
Mort . .....Home.	Aras.....House.
Cubbon...Iron.	Uschus....Mid-day.

Their cemetery and place of funeral sacrifice is a pretty green spot, partially enclosed by a stone wall, and rendered very gloomy by a thick wood on one side and lofty hills on the other. It is their practice to sacrifice buffaloes on the demise of a Toda, and a strongly walled area is set apart for the reception of these animals whose bones and horns are strewed on the ground. At the demise of a Toda chief, the funeral procession entered the green and moved towards the centre. The deceased was dressed in a new garment and mantle, and arrayed in all the ornaments which he had worn during life. He was carried on a bier formed of branches and herbs, and followed by a number of mourners, male and female, who chanted the lament whilst others carried wood for the funeral pile and provisions for the evening meal. The herd of buffaloes was driven into the wall

ed area, and the men armed with clubs entered with exulting shouts and performed a wild dance amongst the buffaloes. These soon became excited to the highest pitch, and at a signal, a bell was attached to the neck of each infuriated animal. Two young men would throw themselves on the animal's neck, seize it by its horns, and others would run to their assistance, and eight or ten men would be seen hanging on the neck of one animal, whilst others increased its rage by blows of their clubs, and goaded it on with hideous yells and gestures. Three or four animals were thus attacked at one time and the bell attached to the neck of each. But meanwhile, the general assemblage which lined the walls were weeping, exulting or sending forth shrieks of horror whenever a man was wounded, a buffalo overpowered, or a lover or a husband in imminent danger. On the next day, the victims were finally sacrificed. The men struck the animals behind the horns, with a wood-cutter's axe. But sometimes the blow was undecisive, and an infuriated animal escaped and drove madly amongst the multitude. After the sacrifice, several wild dances followed, during which the men feigned to cut and lacerate themselves. On the third day, the deceased was burned on the funeral pile.

Kotar.—The Kotar tribe ranks next to the Toda in priority of occupation of the hills. They have no caste, and as a body, are the most industrious of the hill tribes, giving much of their time and attention to agriculture and handicraft, &c. When not required at agricultural operations they employ themselves as carpenters, smiths, basket-makers, &c., making and repairing their ploughs, bill-hooks, hoes, &c. They also employ themselves as curriers, and are highly esteemed in the plains for the excellent leather they make. They perform all the menial offices required by the Toda and Badaga, supplying them with barbers, washermen, &c. They acknowledge the Toda as lords of the soil, and accordingly pay the tribute demanded by them as "Goodoo." At the same time they exact from each hamlet of the Badaga within a certain distance of their own village, certain annual fees, which they receive in kind for services rendered as handicraftsmen, &c., in addition to that of ceremonial or festive occasions for menial services performed. As cultivators of the soil, they only produce as much as will satisfy their own requirements, and any surplus they may obtain is bartered for iron and other produce of the plains. In confirmation of their having followed the Toda as settlers on these hills, they hold the best lands, and have the privilege of selecting the best whenever they wish to extend their holdings. They are well made and of tolerable height, rather good featured and light skinned, having a copper color, and some of them are the fairest skinned among the hill tribes. They have well formed heads, covered with long black hair, grown long and let loose, or tied up carelessly at the back of the head. An average of 25 men gives the following measurements &c. :—

Age 27·68 years.	Length of arms 80.
Height 62·61 inches.	Hands 7.
Circumference of head, 20·95.	Breadth of hands 3·25.
Neck 11 95.	Length of feet 10.
Chest 30·68.	Breadth of feet 3·50 inches.
Arms 8·76.	Weight (avoirdupois) 105·20 lbs.
Thighs 15·52.	

They have a slightly elongated face with sharply defined features; the forehead narrow but prominent, and occasionally protuberant; ears flat, and lying close to the skull. The growth of hair from the verge of scalp to eyebrows, 2½ inches distant; eyes, dark brown, of moderate size and deep set, varying in color from Nos. 1 to 5, in Paul Brocas' tables, eyebrows, dark and bushy, with a tendency to approach, frequently united to each other; nose, as a rule, smaller and more sharply defined than in the Toda; ridged and slightly rounded, and pointed at the extremity, two inches in length; alæ of nostrils expanded, measuring 1¼ inches in breadth; mouth of moderate size and well formed; teeth, well grown and regular lips, of fair size and well compressed; chin, well set and small. Altogether they may be pronounced tolerably good looking, and the general aspect of the countenance indicating energy and decision. The women are of moderate height, of fair build of body, and not nearly so good looking as the men. An average of 25 women gives the following results :—

Age 32·44 years.	Length of arms 26·52.
Circumference of head 20 36.	Length of hands 6·50.
Height 57·98.	Breadth of hands 3.
Circumference of neck 10·70.	Length of legs 35.
Chest 29·30.	Length of feet 9.25.
Arms 8·20.	Breadth of feet 2.25 inches.
Thighs 14·63.	Weight (avoirdupois) 96.24 lbs.

Most of them have prominent foreheads, with more of a snub nose, and a somewhat vacant expression about their features. They are rather timid when approached, frequently running into their huts and shutting themselves up. They seem to enjoy robust health, and have large families. Their arms are tattooed, having nine streaks, with four dots on each arm and four circular marks on each forearm. The women assist the men at their work in the fields, and make baskets and earthen pots, &c. There are some seven villages altogether: six of these are located on the Hills, and the seventh is at Goodaloor. They form large communities, each village containing from 30 to 60 or more huts, of tolerable size, built of mud walls, and covered with the usual

thatch grass, somewhat after the style of native huts in the plains; but in some villages the arrangement of the dwellings is far from the floors, are well raised from 2 to 3 feet above the soil, with eaves or a short verandah in front, and a pial or seat on either side of the door, under the eaves, on which, the people squat themselves when idle. The doors of their huts, measures 46 × 26 inches. The station of Kotagherry takes its name from the Kotar villages in its vicinity. The Kotar, as a body, are dirty. All the dead cattle and carrion in the vicinity, of every kind, find acceptance among them as food. The whole Kotar population of the seven villages is supposed to count a little above a thousand souls. Some rude image of wood or stone, a rock or tree in a secluded locality, form their objects of worship, and to these sacrificial offerings are made; but the recognized place of worship at each village consists of a large square piece of ground, walled round with loose stones, three feet high, and containing in its centre two pent-shaped sheds of thatch open before and behind, and on the posts that support them some rude circles and other figures are drawn. No image of any sort is visible here, and these buildings, which are a little apart, are supposed to be dedicated to Siva and his wife. They have crude and indistinct ideas of these deities. They hold an annual feast in honor of their gods, which comprises a continuous course of debauchery and licentiousness, extending over two or three days. On these occasions, they clothe and ornament themselves in their best, and make as grand a show as they can, and to witness which the other tribes are invited. Perhaps this is the only occasion, if at all, that they have recourse to water for the purposes of ablution. Much indecent dancing takes place on these occasions between the men and women, and frequently the spirit of their deity is supposed to descend on some of them, when their frantic deeds seem to form but a branch of demonology. Their marriage rite, is simple and has much in conformity with that of the Pariah of the plains. As a rule, they marry and live with one wife, and have a number of children. The Kotar possess a small breed of cows, but have no buffaloes. It is believed that the Toda will object to their having buffaloes on account of their uncleanly habits; consequently they make no effort to procure them. They never, as a rule, milk their cattle, but leave it all to the calves. The Kotar keep up an annual feast in memory of their dead, when a few cattle are slain on a rude kind of altar constructed for the purpose, and on it a portion of the flesh of the animal is laid, with a little of each of the different kinds of grain they cultivate, and is consumed as a burnt offering to their gods; in memory of their dead relatives and friends. During this ceremony, the young men and maidens dance around the altar together. Whilst the younger members are thus engaged, the elders busy themselves in preparing a grand repast for their friends, whom they invite from the adjacent villages on the occasion of this annual festival. More cattle are now slain, and the flesh mixed with small portions of every kind of grain grown in their fields; a great fire is raised, and the scene becomes one of confused riot and mirth, with blowing of the kollera horn, mingled with yells and shrieks and beating of tom-toms, the confusion continuing from morning till night.

The Kotar language is a very old and rude dialect of Canarese, having the same Tamil roots, but differently pronounced, without the guttural or pectoral expression of the Toda. They are believed to be descended from some of the low caste tribes of the plains, who, in former times sought refuge on these Hills from persecution practised on them by the invaders of India: they were the first among the other tribes who followed the Toda. They are not held in much estimation by the other hill tribes and European colonists, in consequence of their partiality to carrion, in which respect they resemble the Pariah of the plains, who eat not only animals killed for food, but also such as die naturally. Oxen and buffaloes which perish from old age or disease belong to them of right, and they carry home and greedily devour the tainted carrion which they find on the highways and on the fields.—90, *Abbe Dubois*.

In cases of sickness they make use of such roots and herbs as their old women commend. The sick are carefully attended to; but in some of the villages, as Kotagherry and Goodaloor, they resort largely to Europeans for medical treatment.

The Kotar are industrious, and possess an extensive knowledge of handicraft. Rude as their work may be, there is scarcely a useful implement connected with the mechanical arts, trade, agriculture, or husbandry, that they are not conversant with; and had they only received the encouragement and patronage bestowed by Europeans on the nomade Toda they might have advanced in the several arts they practise, and might have got rid of some of their filthy habits.

Like the Pariah of the plains, the Kotar are addicted to drinking, and, in the absence of liquor, resort to opium-eating. There can be no doubt, that, like the Toda, these people also belong to the great Dravidian family who were driven to these mountain tops by conquest and persecution.

Every Kotar village has belonging to it a circle of Budaga hamlets or villages, from which they claim at periodical seasons the payment in kind of certain fees or dues; and for which they in return furnish the Budaga

with, or rather make for them (the latter supplying the material) their implements of woodcraft and husbandry. These fees are generally paid in a certain quantity of whatever grain the Budaga has cultivated, for each plough of land, besides incidental dues on marriages, &c. The Kotar always attend the funerals and obsequies of the Toda, &c., receive from them the carcases of the buffaloes that are offered in sacrifice, allowing from a half to a quarter of a rupee for some; and others they receive in return for the assistance they afford on these occasions or for services which may have been performed for the family of the deceased. If they cannot supply themselves with flesh by any of these means, they kill some of their own herd, or purchase for that purpose from the other tribes. The Kohtar burn their dead, collect the bones on the following day, and bury them in a hole, marking the spot where they have done so. This they do in order to the performance of the obsequies. On the night of the first Monday after the first new moon in the month of March, all the friends of the deceased assemble, and preceded by music, go to the place of burning.—*Harkness' Neilgherry Hills, p.* 81. *Dr. Short*, in Proceedings of Madras Government.

Budaga, are the most numerous tribe on the Neilgherry hills, are also called Burgher and Badakar and Vadakar, but their Toda name is Marves, the term for a labourer. They state that about 400 years ago, their ancestors came from the Malusal hills, sixty miles South East of the town of Mysore Their name is supposed to be a modification, of the Canarese word, Vuddaca, or North and they undoubtedly speak an ancient but organized dialect of the Canarese, but whether famine or persecution drove them from their own country is not known. They are of fair complexion and handsome.

In 1825, the men were 1,665, women 1,696, boys 1,151, girls 632= 5,147, inhabited villages 35, houses 1,651.

In 1847, the population of the Badaga was 6,569, distributed over 227 villages.

In 1867, it was said to comprise 17,778 souls, distributed over 4,071 houses.

They have the usual elongated head of the peninsular hindu races. The average of 25 men, of 33·8 years of age, was 66·7 inches, and their weight lbs. 110·76.

The averages of 25 women, of 27·68 years, were of height 58·51 inches, and weight lbs. 92. They have the usual Asiatic features with a feminine caste. They are agricultural, and when they arrived they acknowledged the proprietorship of the Toda as prior occupant races to whom they promised a land-tax of one-sixth of the produce and this they still continue to pay though with occasional demurring. The Toda race call them also "Mav" or father-in-law. Both men and women work in the fields, but of late years, a large number of men find employment as labourers and artizans. The other hill tribes on the hills live in isolated communities but the Budaga dwell in villages on a rising ground, in streets running in parallel lines, in thatched houses built of stone and mud, and divided into separate compartments with a double tier of lofts and with a wide terrace in front as a drying, threshing and winnowing floor. The door way, 43 inches high and 26½ broad is their only opening.

The cattle are penned in an adjoining cow house or shed. One writer says they arrange themselves as Aravar, Lingaet, Odykary and Torayen. Dr. Shortt says they have eighteen sects or castes, of whom he names the Woodearu and Haruvaru as priestly castes, the Hattara, Anearu, Mari, Kasturi, Dumah, Gonaja and Manika as ryots and labourers; the Vellaler, a race from the plains, the Kumbararu or pot-maker; Kongaru and Lingadhari who are of the Lingaet sect; the Adikari; the Kanakaru or accountant; the Chittre, outcastes from the Woodearu; Belli, descendants of silversmiths; Koondc dwelling amongst the Koonda hills, and the Torea, the lowest of all the 18 castes. The arrangements on betrothal are made by the parents, but the marriage only takes place when grown up, Polyandry does not prevail but divorce is easily obtained. The men dress like the people of the plains. The women look like mummies. They wrap a cloth round their bodies from below their arms to their hips, and fasten it with a cord below their arms and around their hips, the arms and shoulders and their legs below the knees are bare. A scarf goes round the head and is let fall behind. The women are of domestic habits, and kind and affectionate mothers. They are simple, modest and retiring. They seem now to be following three forms of the hindu religions, the saiva, the vira saiva and the vaishnava. But the increased intercourse with the plains may have taught them this, as formerly they claimed as their deity, Hettee-du, an old man, and Herear-du, who, they said, conducted them to the mountains. But they have numerous deities. A chief deity is in Rungasawmy peak, where men of the Irular tribe officiate as priests and offerings of ghi and fruits are made; another deity is on a droog uear the village of Hollikul where a Badaga priest officiates, and there are other male and female gods. Many are comparatively wealthy. They can neither read nor write—they are timid and superstitious, haunted with a dread of evil spirits, and are deceitful, ungrateful and false. They are in perpetual fear of the Korumbar, to whose sorcery and witchcraft they attribute all accidents and ailments which befal themselves, their cattle and crops, and in their delusions

they have killed Korumbars and suffered from it: Nevertheless they get the Korumbar to officiate as priests at all social ceremonial occasions. They both burn and bury their dead.

They are divided into two branches, or what may be considered two grand families. One called Peiki, or Teralli, who are competent to hold all sacred offices, the other Kuta, or Tarda who are competent only to hold minor ones within their own particular families, and who may be considered as the lay class.

The Budaga is less in stature than the Toda, of a more slender form, and though straight and well made, under-sized in limb. In complexion, both male and female are some shades lighter than the Toda; but their features are quite of another caste. Both Toda and Budaga puncture the skin about the neck and arms, and males and females wear much the same kind of ornaments, such as rings for the ears and fingers, necklaces, armlets, and girdle. The difference is still so great, however, as immediately to strike the eye, even of a stranger. The Budaga possesses much of the manner and appearance of the hindu cultivator of Mysore, and his wife, who seldom or never stirs from home, seems rather a domestic slave than the mistress of a family. The fidelity of their women appears of but little estimation among them. Although the Budaga, generally may be considered much more cleanly, both in their houses and persons, than any of the other hill tribes, they are still, in this respect, far behind the natives of the plains.—*Harkness' Neilgherry Hills, p.* 117. *Drs. Baikie, Latham, Shortt.*

Kurumbar.—Above the Erular, at heights varying from one to two thousand feet, in the clefts of the mountains and in little openings in the woods, with which at this elevation they are girt, live a race, calling themselves Kurumbars. They occupy the highest range bordering on the Neilgherries and are probably the aborigines. They are arranged into Erular and Mulcer, (qu. Mali arisar.) Kurumbar is said to mean the wilful or self-willed. Their neighbours, when speaking of them, usually prefix to their name the term Mullu, a thorn. They are computed to be about a thousand in number, of all ages. The Toda do not consider the Erular as forming a part of the inhabitants of the hills, but they allow this designation to the Kurumbar, whom they call Curb, their term for a cleft or glen, and from them they receive certain services.

The Arkatou Basileon of the Greeks, was supposed, by one of the editors of Ptolemy, to be Bijnagur, but as the Greeks represent it as the capital of the nomadic Sora (Σωραι), and the local traditions indicate that for several centuries after the Christian era, the [illegible] of the tract lying between Madras and the Ghats, were Kurumbar or wandering shepherds, nomades, it is doubtless the present Arcot, which was then, as now, included in the ancient Sora or Chola kingdom, Arcot, properly Ara Kadu means the jungle on the river. It is probable that the Kurumbar of the hills are the descendants of these nomades. Captain Harkness did not find any temple, but their religion seems to be the same as that of the Erular, except that they are not particular as to the mode of disposing of their dead, either burning or burying, whichever may be most convenient. Swarthy and unhealthy looking in countenance, small of stature, the head but thinly covered with sickly-looking hair, the only covering it has,—little or no eyelash, small eyes, always blood-shot and apparently much inflamed, pot-bellied, and with water running from their mouths, they have in most respects more the semblance of savage than of civilized man. Their women and children have much the same squalid appearance, though on their necks and wrists they wear ornaments made of the different kinds of wild seeds and of berries. Many of the men also wear ornaments in their ears, of yellow straw, plaited with some degree of ingenuity; but, in their general appearance, they are much like the Erular, pictures of wretchedness and misery. They gave his party an abundant supply of honey, plantains, and such fruits as, on the higher parts of the mountains, or in the vicinity of Ootacamund, are considered delicacies. They have no marriage ceremony; but occasionally, when two have been living together for some time, they will enter into an agreement, in the presence of friends to remain united for life; and in a family where a succession of such unions has taken place, they will, once in two or three generations, perform a ceremony, and hold a festival in celebration of them. This is done by pouring pots of water over one another, the pairs seating themselves together for this purpose; the ablution, probably the first voluntary one they have had in their lives, commencing with the seniors. They then put on new clothes, and end the day in feasting and merriment. The Kurumbar, and all the classes occupying the lower regions of the Neilgherry mountains, are many stages behind the Budaga, in civilization, but possessing all the cunning natural to this unenlightened state.

The Koorumbar of the Wynaad forests have two sections, the Jani and the Mulli, and the Gurchea, Panniar and Pulliar races live along with them. The Jani Coorumbar live entirely in the forest, they are the only axemen, and, without them, it would be difficult to work a forest, and the wood contractor and planter alike employ them. The are very docile, quick of imitation, and slavishly submissive to their Moodeli or Head. This individual, like a

patriarch of old, exercises undisputed power over his own family, numerically containing about twenty or thirty beings. Those employed by the coffee planters are a little civilized, appreciating the comforts of life in a slight degree higher than their more savage brethren. They erect rude huts for the habitation of themselves and family, which are built on elevated ground, surrounded by jungles, and about six in number; they touch one another, and the whole present the form of a crescent. One larger than the rest, styled the cutcherry, is erected in the middle in the shape of a hall, for the sojourn of casual strangers: it is dedicated to their household deity, and the place cannot be contaminated by a shoed foot. They may be said to be ephemeral residents in these habitations; the presence of a suspected stranger in their vicinity, sickness, or other trifling but natural cause, will make them emigrate from one place to another, generally within the same district. According to Mr. Campbell (p. 31) the Koorumbar, Irular, Puliar and Veder, are in the lowest stage of life, mere men of the woods, of very diminutive stature, with thickly matted locks, and supple limbs, living under trees, in caverns, or in the rudest wigwams, keeping sheep, or collecting forest produce, very stupid, but also very mild and inoffensive, are reputed sorcerers, and believe in demons.

Kuruba a wandering race in the south of India are divided into Betla and Genu. Both of them have a Mongolian caste of head, high cheek bones, short and somewhat flat nose, and prominent lips. Eyes, small, dark and deep set. Hair, curly, but woolly and matted from neglect. Of middle size in stature, well proportioned body, nimble with powers of endurance, and daring. Colour, dark. Hair on upper lip and chin but no whiskers. They are labourers, basket makers and gather honey and other forest products. They are supposed to have come from Mysore. They profess to worship Kali.

Erular.—Are a low type of the Dravidian race occupying the lower skirts of the forests at the base of the Neilgherry hills. They arrange themselves into two clans, the Urali and the Kurutalei, meaning "rulers" and serfs. They dwell in the clefts of the mountains and in the little openings of the woods. The word Eruli means unenlightened or barbarous, from the Tamul word "Erul" darkness and is the term applied to them by their neighbours, and they speak a rude Tamul dialect. They sacrifice he-goats and cocks to their deity Mahri, which is a winnowing fan, and they have minor deities, mere stones, that they call Moshani and Konadi Mahri. They inter their dead in great pits, 30 or 40 feet square, thatched over, and planked across, with an opening about a cubit square in the centre. of the planking, across this opening are laid pieces of wood, on which the dead are placed, and covered with earth, and are left so till another person die when the former remains and the earth are turned into the pit and replaced by the newly dead. They are scattered into small communities, practising a rude system of agriculture which scarcely furnishes them with sufficient food, so that, when pressed for sustenance, they resort to the jungles and live on such products as they can collect. They make use of animal food of every description, not even excepting vermin, and reptiles. They collect for their immediate wants the wild fruits, herbs, and roots, to appease hunger; also honey, beeswax, gums, and dyes of various sorts, and medicinal herbs and drugs, which they barter with the people of the plains in exchange for food and clothes. They are intrepid as regards the wild beasts they meet in the jungles, and in their search of honey they sometimes suffer severely from contact with wild bears. They hunt and take game of every description with great cunning and expertness.

There are two classes of *Irular*, recognized by the terms Urali and Kurutali. The general term Irula is derived from the Tamil word "Irul," or dark, implying that there was no light in them, and that they were wild and uncivilized. The term Urali means rulers of the country, and Kurutali serfs or common people. The other Neilgherry hill tribes do not recognize the Irular as inhabitants of the Blue Mountains, and do not hold much converse with them.

The following is the result of the weight and measurements of an average of 25 men:

Age, 26·68 yrs.	Length of arms, 30.
Height 61·78 inches.	Hands, 6·50.
Head, Circumference 19·88.	Breadth of hands, 3·25.
Neck, 11·59.	Length of legs, 34·50.
Chest, 29·91.	Feet, 9.
Arms, 8·42.	Breadth of feet, 3·25.
Thighs, 15.17.	Weight (avoir) 96·29 pounds.

They are tolerably good looking, very much superior in physique to the Kurumbar, and in some respects even to that of the Kotar; but they are an idle, dissolute set—the majority being vagrants, living on what they can obtain from the jungles and natural resources of the forest through which they wander, rather than labor and cultivate. They pay a trifling kist to Government according to the nature and extent of their holdings; but their tenure is very loose, simply holding lands at pleasure by paying assessment, but they cultivate little. They do not recognize the Toda as lords, nor do they pay them "Goodoo."

The women are strong and stoutly built, anything but prepossessing in appearance, and very dark skinned. Their feet, of those all

the S. Indian races, are the most beautifully formed. They are fond of ornaments, and wear heaps of red and white beads about their necks, thin wire bracelets and armlets, with ear and nose rings.

The men wear no clothing but the lungooty in their habitats; but, when working on plantations, they wear cloths like other natives. The women wear a double fold of a wrapper cloth, which extends from the waist to the knees; the upper part of their bodies with their bosoms are nude. The men wear their hair anyhow—sometimes it is long and tied over the head, at others short and scraggy, playing to the breeze. The women are much the same; but those seen at the Fair at Mettapolliem had the hair well oiled, combed, and parted in the centre, thrown back, gathered and shelved on the left at the back of the head, like most of the women on the plains.

At one time the Irular rarely held communication with the other natives, living isolated lives in secluded places and unhealthy localities, and eking out a precarious existence. Their villages are small, seldom exceeding five or six huts and cattle pens, scattered far apart, mostly located in groves of plantain and other fruit trees, and built somewhat after the Kurumbar huts, surrounded by the usual filth and dirt. They are more numerous in the southern than in the eastern parts. But of late years they have improved wonderfully by mixing with others and taking employ as coolies on plantations and working side by side with other natives. They give satisfaction to their employers. They have also gained another advantage by attending the large fair or shandy held at Mettapolliem every Saturday. There were gradually attracted thither, and by freely mixing with the people on these occasions, they have lost their timidity and become somewhat self-reliant, to a small extent only as yet, but the civilizing influence of intercourse is not lost, and is slowly gaining ground among them.

MALEALAM DISTRICT.—The Malealam language is spoken in the low country and along the western ghats from Cape Comorin to the Chandagiri river. The people occupying that tract are mostly settled, but it has had several dynastic races, the Zamorin of Calicut, the Bibi of Cananore, the rajah of Cochin, the rajah of Travancore, the Dutch have held sway there, and the present paramount power is the British. Adjoining the Malealam district on the north, is the S. Canara district, in part of which, around Mangalore, the Tulu language is spoken, Canarese being the tongue in general use.

In this tract, the Nair race occupy large holdings; the rajah of Travancore is a Nair, and there are many mahomedans styled Mopla.

Tulu writes Mr. Burnell, is the *original* language of the Canara Collectorate, but has been largely displaced by Canarese the language of the conquering power about four centuries ago. It now prevails (though not *exclusively*) from the north border of Malabar (Kavai) where it is much mixed with Malayalam, to Udapi in the north. Mangalore, Mulki and Udapi are the chief places where it is spoken. The Tulu people belong to the same race as the Tamil and Telugu Family, now conventionally called the *Dravidian race*. The Tulu language has not been examined carefully, but there is no doubt that it is a dialect of the Canarese and closely allied to the Toda, Badaga and Coorg dialects. There do not seem to be any dialects of Telugu. Malayalam is a dialect of Tamil. By dialect is meant that these languages were, many centuries ago, the same as the Canarese and (in case of Malayalam) as Tamil, but that long separation and different influences have caused the variations we now see. Tulu, Toda, &c., are far more closely allied to Canarese and Malayalam to Tamil, than Canarese, Tamil and Telugu are to one another. The Tulu have no literature except a few translations by German Missionaries; but the people are remarkable for the law of succession called Aliya Santana. This is the law of the so-called sudra tribes, and a tribe that practices it is probably Tulu. But the race does not include brahmans or low castes who are mostly settlers from other parts of S. India, though in some cases they have adopted the custom. In south Malabar, descent is to sons-in-law, but in N. Malabar amongst the Nair, the artizan, carpenter, brass-smith, black-smith and gold-smith, also the Tear, who are toddy drawers, and the Mookwa fishermen, all polyandrists, the descent of property goes in the female line. In north Malabar this law of descent is called Marumakatayam, and the mahomedan Mopla has conformed to this usage. In Canara, a similar law called Alya Santana, or nephew of inheritance prevails, and is in practice more strictly carried out than in N. Malabar. In N. Malabar, the adherents to Marumakatayam form united family communities, termed Tarwaad. The senior member of whatsoever branch is the head of the family and is termed Karnaven; the other members are styled Anaudraver; the remotest member is acknowledged as one of the family and entitled to maintenance if living under subordination to the head of the family and taking part in their religious observances. For the women there is nothing analogous to the state of widow-hood as existing elsewhere. Whether in alliance with men or not, they reside in their own families. The Nair marries before he is ten years of age, but though he supports, he never associates with his wife, who receives at her pleasure any men

provided they be not of lower birth. Consequent on this form of descent, a Nair does not know who his father is. In law, property is held to vest in the females only: practically the males are co-sharers with the females. In default of males, females succeed to the management of the family property. In some families, the management devolves on them preferably to the males and the senior female takes it. There is, however, a growing tendency to convey property from father to son, arising from the gradual abandonment of polyandryism. The connubial connection in question is called in Malabar "goona-dosham," "goona" good, "dosham," evil (for better for worse.) In Travancore, it is styled "mundu-vanga," viz.: "mundu" cloth "vanga" receiving, and the girl taken is of ripe age and her consent must be obtained. Personal acquaintance thus precedes the union. The hour selected for the ceremony is 8 P. M. There is an assemblage of friends; the man presents the woman with a "moondoo" or white muslin cloth, in a corner of which, in North Malabar, a small sum of money is tied. The girl either goes to the man's house, or remains in her own, and is visited by him there. Each party is unrestricted as to the number of such connections that may be formed, but these ordinarily do not exceed two or three. The descent being in the female line, the parentage of the father is immaterial. The marumakatayam law is not followed in North Malabar by the Aka Podwal, a class of pagoda servants, nor by the brahmins of North Malabar or of Canara. But in Travancore law, only the oldest brother of a brahmin family is allowed to marry with his equal, and the other brothers form other connexions and their children, therefore, do not inherit. In the Tuluva country, the brahmin widow can devote herself to the temple, and reside outside or inside its walls. If within the walls, she is a servant of the idol and receives the visits of men of her own caste only: the offspring of such, if boys, are called Moylar, and the girls are married to them. But, if she elect to reside outside the walls she must pay a monthly sum to the pagoda and may cohabit with any man of pure descent.

The *Mopla*, written also Mapillai, from "ma" mother, "pilla," a son, are all mahomedans, and are descendants of Arabs who visited or settled in Malabar, Wilson supposes that the Malabar women who bore children to them, ignorant of the race of foreigners who were the fathers, styled the children "sons of mothers:" but the probability is that the law of descensus ab utero, marumakatayam, was prevailing from prior ages and was followed by the mothers of the children born of such casual or permanent intercourse. The Mopla are all large men, active and enterprising, and possess much landed property. They have been restless under British rule, and have repeatedly risen in insurrection but these have been very local, and seem to have sprung from agrarian grievances the result of the British being unacquainted with their proprietary rights in the lands. They are a devout, God-fearing, race, inclined to puritanism, are occasionally fanatical—but they have never been rulers in India, and have no dynastic recollections or longings; and are well worthy of being encouraged by their British rulers.

Coorg (Codagu) is a British district—administered by a Superintendent under the Chief Commissioner of Mysore. It is situated in L. 12° 26′ 21″, and L. 74° 30′ 46″. It is bounded on the north by the Hemavati river; on the south by the Tambacheri pass; on the west by South Canara and North Malabar, and on the east by the Mysore country. It is 60 miles long and 40 broad. Coorg was surveyed by Lieutenant Connor of the Royal Engineers in 1817, who has written a very interesting memoir of the survey. Of 2,400 square miles, 547 are cultivated, 1,705 culturable and 148 unculturable. In 1833, cruelties carried on for a long series of years, by the rajah, brought on him a war by the Indian Government, and after a series of operations, Coorg was captured after a battle on the 8th April 1834. He was of the lingaet hindu sect. The rain-fall varied in 1868-69 from 68·09 inches at Kembu Kolli in the south east to 95·25 at Mercara, the capital, most beautifully situated in almost the very centre of the country, and 4,500 feet above the sea-level. In its area of 2,400 square miles, Coorg has a population of 115,357.

The prevailing languages are Coorg, Canarese, Malayalum, Tamil, Tuju, or Tulu Hindustani and English. There are about 40,000 native Coorgs scattered throughout the country, and the number is believed to be decreasing. The Coorg race are called Koodaga. They are a tall, muscular, broad-chested well favoured race of mountaineers. They are a handsome and well-made race, and are far superior in physique to the inhabitants of the plains, whom they greatly despise. They are also far advanced in civilization and are very intelligent. The morals of the Coorgs are scarcely any better than those of most other races, and the vice of drinking has a deep and widely-spread hold upon them. They are divided into thirteen castes. They marry at a ripe age, but the wives of brothers are considered as common property. They generally retain the old devil-worship of the Scythian Dravidian race, from which they are descended.

The Coorg race arrange themselves into Coorg and Amma Coorg. They have a fair complexion, wear whiskers and mustaches, but no beard, they have intelligent countenances, and a bold independent bearing.

Demon and ancestor worship is common.

The non-Hindu races of British India are estimated at 12,000,000 souls, but, of the Non-Arian races, except the great Tamul, Teling, Canarese, Kol, Bhil, and Gond nations, many of them are in fragments and in small tribes scattered amongst the communities, occupying forests and mountain fastnesses, or dwelling as unclean races on the outskirts of towns. They, in general, bury their dead.

The deities to whom their worship is more specially directed are those of beings whose anger is to be feared. Pieces of wood or stone are made to represent these deities, a shapeless stone from a river bed or a piece of the Erythrina tree or margosa wood; but the institution of an idol seems invariably to be accompanied by some sacrificial rite, sometimes a goat in kid, but more frequently the buffalo or bullock, is the victim. A cart is made, on which, after sacrifice, the stone is placed, daubed with vermilion, and taken to the site appointed for it. Poch Amma or Kokti Amma is the goddess who sends small pox, and Marri, or Marrai, Amma, the goddess from whom cholera comes, the epithet, Marri or Marrai, being brought seemingly from the root relating to death, words from which have branched into so many of the old world languages. Of all these people there are not many who admit having ever seen a devil or spirit, but they offer worship at places which are pointed out by others who lay claim to have seen devils or spirits there. Bal Amma whose image is a shapeless mass of wood, is a goddess much dreaded, as are all who keep such an idol in their houses and they are obliged to intermarry amongst themselves. Marri Amma seems the same as the Ai of the non-Arian races in the Mahratta country and the Ammun of the Tamul races.

Mang-kali, Ujla Mang-kali, Jul-Amma, Yeli-Amma, Poch-Amma and Madri Heri of the central Dekhan, are all supposed to be related, to be, some elder, some younger, sisters of the same brood. To all of them are offered the sacrifice of blood, of sheep or goats or horned cattle, and when the people are moved by an outbreak of a pestilence, the numbers of sheep and buffaloes sacrificed before an Ammun idol are numerous, so many as forty sheep in a night. The worshippers move in procession under loud cries, accompanied by the Murli women, who frequently become hysterical, who are then believed to be possessed by the god, deo ka ch'haya aya ; ang'h b'har lia, the shade of the god has come, and filled the body.

Slave races,—Das, dasa, HIND, Pullukai, TAM., mean a slave. Wilson tells us that the hindu law recognises 15 kinds:—1. Grihajata, the child of a female slave ; 2. Krita or purchased ; 3. Labdha or gifted ; 4. Dayadupagata or inherited ; 5. Anakalabhrita, taken in time of famine; 6. Ahita, pledged ; 7. Rinadasa, voluntarily a slave in payment of a debt. 8. Yuddprapta, taken in a war; 9. Panejita, won in a wager ; 10. Tavavaham, voluntarily ; 11. Pravarajyavasita, an apostate ; 12. Krito voluntarily for a time ; 13. Bhakta-dasa, a slave for his food ; 14. Varavahrita, one who by marrying a female slave, becomes a slave ; 15. Atmani krayi, one who sells himself as a slave.—*Wilson*.

The Puller are a race in the south of India, supposed to have formerly been in a state of slavery but their position is now solely dependent on their wealth. Both men and women work well, take part in all agricultural labour, the women, in this particular, vying with the men. The Puller women go about with their chests exposed, and, as a rule, cannot be induced to cover their breasts. Previous to British rule, the Puller who inhabited the forests and mountainous districts of the Malabar coast were regarded by the settled inhabitants as inferior to the beasts of prey and were not even permitted to erect houses for themselves. A shed supported on four bamboos and open on all sides, sheltered them from the rain, but not from the inclemency of the weather. They dared not venture on the public road lest their steps should defile it ; and when they perceived any person approaching them from a distance, they were required to utter a loud cry and make a wide circuit to let him pass.

The *Vedan*, *Vedar*, *Veddar* or *Bedan* are forest tribes in the South of India. Those of the Malabar forests are predial slaves, who cut timber and do not cultivate.

The *Vetuvar* are a forest and hunter tribe in Malabar, and the *Konakan*, predial slaves, are a subdivision of the Vetuvar employed in agriculture, as boatmen and as salt-makers.

The *Malayan* of Malabar are a slave race.

Cherumar are predial slaves in Malabar, whose name Wilson derives from Chera, Malealam, the soil. They follow the rule of Marumakatayam. They are very diminutive with a very black complexion and not unfrequently have woolly hair.

Teer, *Teyar*, *Tiar*, *Eeyoover*, or *Juver*, the toddy drawers of Malabar, are a servile class who follow the rule of descent a matrice. The women are polyandrous and admit all comers. On the Malabar Coast, they form a great part

of the people; they are a fair, good looking race, till recently treated as outcastes, and compelled to move from the road when a Nair approached. The Teer are being educated in the Government schools, obtain service, are acquiring land and are very well to do. They are fairer and more refined looking than the Nair. Teer is said to mean island, and the Maldives and Ceylon are named as their original country. Dr. Caldwell thinks they came from Ceylon.

Nayade,—slaves of Malabar.

The *Adiyan* slave, serf, or vassal, of Malabar, lives under the protection of a rajah or religious establishment.

Adima,—Amongst the Tamul people, the Adima or Adimai are predial slaves attached hereditarily to the land and only transferable with it.

Alandadey.—In the Tamil countries, about Chingleput the Alandadey are a class of slaves. —(*Wilson's Glossary.*)

Chego are a race in Malabar, who seem to be noticed by Wilson as the Chegavan or Chekavan, whom he describes as a man of low caste, commonly a Teir, one whose occupation is drawing toddy. The tradition is that the Chego came originally from Ceylon, where they belonged to the military caste. In civil war or rebellion, the Chego were bound to take up arms for the sovereign; and some princes employed them as soldiers, if they had not a sufficient force of Nairs. Their principal occupation is that of drawing *Toddy*, which is compulsory on their caste. The Chego are sub-divided into two sections: the Chego and the Twen Chego.

Pariah.—The Pariah race, rare in the Northwest provinces, are found in every village and town in the Peninsula.

Their history is altogether unknown; they are wholly landless, they are generally, in the villages, predial slaves, and escape from this position only in the largest towns where labour is available. Amongst the S. Dravidian races they are called Paraiyan, Pariah and Pariar; and Professor Wilson derives that name from Parai the village drum. This race receive the following designations,

Holliaru .....CAN.	Mhar.....MAHR.
Hollere..... ,,	Paraiyan.....TAM.
Holleru Holgeri.... ,,	Paraiyar..... ,,
Eskar..... ,,	Paraiyadi Kiravan. TAM.
Pariah or Pariar.....ENG.	Mullavadu..... TEL.
Wullaru.....CAN.	Malla Wanloo ...TEL.
Dher.....HIND	Mala-war .....TEL.
Paravan.....MALEAL.	

They are laborers, grooms, never are scavengers, eat dead cattle, dedicate their girls to the gods, are shamanists, fetichists and polytheists. As the Mhair, they, are supposed to have given their name to Mhairwara. This is the opinion of General Briggs, but it is not repeated by Professor Wilson who writes this term Mahar also Mhar, Mher, Mhao and Mar. The Mhar are regarded by hindus as lower than the Dher: the Mhar are not numerous, but are to be met with throughout the Mahratta country, dwelling apart, outside the village, and are often part of the Baloth, being the village messenger and watchman. The mark for their signature is a staff. They are wholly different in race and appearance from the leather working chuckler, dhor, chamar, or Mhang race whose mark signature is a knife. The Pariah are a willing, ready people, obliging, grateful for any little kindness, and, for the traveller, whether at midnight or midday, in sun or rain, or cold or heat, they take up their staff and move cheerfully along to show the road to the next village. Indeed, in the great tract of country of the peninsula, the Pariah and the Mhang are the only free labourers, the hindu farmers rigidly prevent their holding land and with equal tenacity prevent those of the hamlet leaving it, lest the village lose its labouring hands. They are really village slaves throughout the Hyderabad country. The Pariah or Pariar amongst the Tamul people arrange themselves into many tribes, amongst others,—

Valluva.	Kuli.	Ambu.	Vali.
Tada.	Tipparai.	Vaduga.	Vettyar.
Tangalai.	Murasa.	Aliya.	Koliya.
Durchali.			

Theyare permitted to marry into each others families. They are regarded by caste hindus, as unclean but they are not outcastes or men who have been expelled from other castes. They are usually the serfs of the sudr agriculturists. Those in the large towns, in the employ of the Europeans in Southern India, are quick, intelligent, and active. They are emigrating with great rapidity, to the West Indies, Mauritius, Cape Colony and the Burmese provinces, &c., where all sectarian or social distinctions are unknown, there are ten castes who are lower in the social scale than the Pariah, and from these are excluded the Pallar, who dispute precedence with the Pariar. The Pariar constitute a well defined, distinct ancient race, independent of all others, and has its own sub-divisions, its own peculiar usages, its own traditions, and its own jealousy of the encroachments of the races which are above it and below it. And the Pariar, whom St. Pierre's romance has fabled as a mild, benevolent, subdued being, whenever he has an opportunity, is as severe on other sects as from the custom of the world we would surely expect. Many of them devote their young women to the gods but the practice is generally regarded as vile, and as followed for money. The dher of Hy-

INDIA.

derabad worship all the deities; they are eminently polytheists, but they also worship the elemental rain water, as the *Meghoba*, (probably Mrigh) as a deity; and at stated times make a lamp-stand of dough, on the top of which they place the ghi pipkin as a lamp with ghi or clarified butter and a cotton wick which they light and worship, putting cakes before it. Many of them worship departed spirits, some of them evil, some of them good spirits, and others which they designate devils, and which appear only at night, as shades, all believe in transmigration, and one man mentioned his hope to be re-born as a mahomedan.

The Holiyar of the centre of the peninsula where Canarese is spoken and in Canara seem to be identical with the Pariah or dher race of the other districts, and like the latter are predial slaves. In Coorg the Holiyar has three branches, the Holeyaroo, Yewaroo and Paleroo. Both in Canara and Coorg, however, they have other designations prefixed such as Mauri Holeyaroo; Byr Holeyaroo; Murtha, Bulgi Holeyaroo, Rookha Holeyaroo, Badaya Holeyaroo, and in Coorg, Kembatta Holeyaroo. Amongst the Mauri Holeyaroo, property descends through the female line. The Pariah aid in cultivation and reaping, yet if they touch food it becomes unclean.

Bale shahi is given as a name to outcaste people of Sindh, who are large men.

The Pariah of the Punjab are fine powerful men and tolerably good looking: native governments recognised in them a material for soldiers useful in desperate enterprises. The early Sikh reformers tried to proselyte these men, but with very partial success, though a few, as Sikhs, obtained a respectable position. Christians also have almost failed in converting them. Mr. Campbell regards those of the Punjab as Arians.

In the Panjab, every Jat village has a Pariah quarter where the low caste people reside along with the Choorah. They are the ordinary labourers, who do the inferior cooly work and, according to Mr. Campbell, (p. 121) at the same time are the outcaste scavengers of the community,—but this seems to need some re-examination. In East Berar, the Dher divide themselves into the Somassi and the Laryan Dher, who eat together but do not intermarry. The Somassi dher rides on horseback in their marriage, the Laryan on a bullock. The Dher are few north of the Satpura range, south of the Nagpore road. The Dher class themselves as Andhwan, Somassi, Wad, Larwan or Larron and Tirwan. The Somassi and Wad intermarry.

In the Mahrattah country, as dher or Mhar, and in the Canarese country, as Holleru, the pariah in the small villages are watchmen, labourers, help in the fields, have balotta, some have fields with 8 or 10 bullocks and do the "begar" or forced labour work as also do the Mang. A potail Dher is occasional. The Dher is superior to the Mang. The Dher of Central India are said to spin and clean cotton.

The Hulaswar, or Holeyar of Mysore are often employed there as peons and horsemen.

Hollayer formerly came to the western coast nearly quite naked but are said to correspond to the Dher, and to the Palli or Paller in the south.

Halaya Paika or old Paik are a Mysore race.

Billiaru or Bow-men, a low race in Canara.

The *Kalladi* or Kallari of Malabar are predial slaves.

Milkmen.—The milk sellers in India are settled in towns, the chief tribes are the Ahir, Gaola, and Dhangar. The Gaola take their name from the Sanscrit "Go" a cow, or from Gala milk, from which many tribal names and other terms have sprung. Amongst others is the Gop a cowherd race of northern India who breed and attend on horned cattle, and sell their milk, butter, &c. a Gopi is a women of that caste. The Gwalla, Golla or Gopala, is a cowherd by caste and occupation. Gorakh is a cow-keeper, Gobar, is cowdung and Gaola, is a milk man. The Gaola race are tall, robust and fair. Those of the Peninsula of India have no resemblance to any other race in the Dekhan. They are pastoral and migratory.

The Gauliga of Mysore, rear buffaloes, sell milk and ghee and accompany camps. In the south of India, about Bellary, the shepherds, milkmen, woolshearers, cowherds, cowkeepers are regarded as Oree golla wanloo, Coraba golla wanloo, Hundee Coraba wanloo, all of them divisions of the Shepherd race or Cowkeeper who are all of the same people or race and intermarry. There are several other sections of this tribe.

There are 3,050 Gaoli in the Oomraoti district and a sa race in the Dekhan they are a large made fair people, who are solely dairymen. Wilson mentions that they distinguish themselves as Ahir Gauli, a branch of the Ahir; Konkani Gaoli, natives of the Konkan, and Lingayet Gauli followers of the Jangam sectarianism but I have never heard of these distinctions. In peninsular, India their wealth is chiefly in buffaloes and a few cows.

There are Gaoli cowkeepers, but not in regular communities, scattered through Bengal Proper and Orissa, where they succeed to the Ahir, and with their congeners the Satgope are by far the most numerous hindu caste in Bengal and Orissa. They are graziers, but form a large part of the cultivators, carry palanquins, are domestic servants and follow other avoca-

tions, taking the place, there, of the Bui of the centre and South of India. An Ahir or up-country Goala would never dream of such work.

The *Ahir* are hindu shepherds, following a pastoral life. According to Wilson, they were originally in the west of India but are now spread over the country. He mentions that they arrange themselves as of three races, the Naud bansa (race) in the Doab ; Jad or Yadu bansa in the upper Doab and west of the Jumna and Gual (Go-wala) bansa in the lower Doab and province of Benares, but tribes of Ahirs are also numerous in Rajputanah and the Panjab. Some of the Jad Bansa have been converted to mahomedanism, and are known as Rangar. In the Dehli district they have become intermixed with the Gujar and Jat, and conform to their usage of the marriage of the widow of an elder brother by the next in seniority. The Ahir are not known further south in the peninsula than Berar, nor in Burmah. The Ahir Gaoli and Dhangar, seem all to be shepherds, the Ahir, in Berar, are herdsmen and with the Gaoli are deemed of the same avocation as Krishna. They are esteemed, however, of low caste as manifest by the Gopin girls song, Gali mat de re, Ahir ka ch' hora, akhir jat, Ahir. Do not spatter abuse, thou child of Ahir. After all you are but an Ahir in caste.

The Dhangar of the Mahratta and Telugu countries are the Kuru-buru or Curumbar of the Canarese districts. The Dhangar, in Telingana, are in twelve tribes who do not eat together nor intermarry. In the centre of the Peninsula, they are shepherds and wool-weavers, kitchen gardeners, and labourers. In the hill country of Ramgurh and Chota Nagpore, there is a tribe of this name, some of whom descend periodically into the plains for labour. The Dhangar, in Calcutta are labourers (Campbell p. 33.) Mr. Hodgson describes the Dhangar as of Mongol origin. He bids us look steadfastly at any man of an aboriginal race, an ubiquitarian Dhangar for instance, and say if a Mongol origin is not palpably inscribed on his face? There are 8059 of these in Oomraoti. But it is not known whether, as in Ramgurh and Chota Nagpor, they are a hill people ; or as in Telingana, they are cultivators ; or as in the south of India, they are shepherds and weavers in wool. Many of the Dhangar are settled in the towns of the south of India, occupied as labourers, kitchen gardeners and dairymen and the Dhangar in the south of India arrange themselves accordingly. The Tiling Dhangar are milkmen and weavers of coarse woollens ; the Mahratta Dhangar graze cattle and sheep and clarify their butter into ghi; the Bangar Dhangar are purely shepherds.

In the Peninsula, they are dark, almost black, men, of slender and spare forms, they are quite dissimilar from the Gaoli, in personal appearance, and all the sheep (kuru, Karnatica, a sheep) are under the Kurubaru or Kurumbar care. They are also wholly distinct from the Yadayan or Yadava Tamulian cowherd race, who are known in all the Tamul country as ' Pillai' or son, and in all probability, the dispersed Kurumbar or Dhangar of the Peninsula of India, some of them in towns and others almost nomade, are the fragments of the great shepherd race who held sway in the Arcot district in the early centuries of the christian era. See page 73.

The *Golla* is sometimes employed as a cashier.

The *Mirda* are a caste of migratory shepherds in the south of India.

The cowherd and barber are of the better of the servile tribes, but the Kurumbar or Dhangar, and the Gaola dairy men, keep aloof from each other.

Leather workers.—In Berar, the workers in leather assert that they consist of 12½ castes, amongst whom are

The Dhor, who are tanners, make water-buckets and water sacks or the pakhal and mashak.

Kullar Bandela chamar, both a tanner and a shoemaker.

The Mahratta chamar, a shoe-maker.

The Parderi chamar, a cobbler.

The Mang chamar, who make sandals.

The Mahomedan chamar, who is a book-binder.

The Katai, who make shoes and sandals and labour in the fields, at seed and harvest times. The Katai are identical in personal appearance with the chuckler (chakili) of the very south of India.

The Chamar in Aurungabad, worship Mariamma and Sitla. They marry when under age, amongst themselves, proceeding on foot to the goddess Sitla whose shrine they circumambulate five times. The expense is about a hundred rupees. They speak hindi. They burn their dead, but some very intelligent men at Aurungabad, did not know that anything followed death. The designations of tanners and leather workers

Sanigar.....	...CAN.	Chakili.....	TAM.
Madiga Madharu	...CAN.	Madiga.....	TEL.
Chuckler	ENG	Madira wanlu	,,
Chamar.....	...HIND.	Madgolu.....	,,
Mhang .....Mahr.		Madhera.....	,,

Those called Mang or Mhang are scattered through all the northern parts of the peninsula, in the Bombay Presidency, in Maharashtra, Guzerat, Candeish, the Concan and Kolapore.

The leather-workers are perhaps the most humble of all the settled races in the south of India. In the villages they dwell outside the walls, for they are deemed wholly unclean. They are tanners, workers in raw hides and leather, shoe and harness makers, messengers, scavengers, and executioners. They are never horsekeepers. Their avocations are the most abject, and only a very few have ever been known to have the ability to read or write. The race, as a rule, are of a dark black hue, short in stature, and of very slender frame; lower limbs particularly slight and calf and foot delicate. They still eat creatures that most races regard as unclean. In villages they perform the lowest menial offices, such as messengers and scavengers, and are paid by portions of the crops and some small privileges but are not permitted to reside within the village. The Madaru and Madigaru of Coorg are predial slaves, and seem identical with this race. The Madaru make baskets. In Northern India and in Bengal, the chamar, are a low caste race, workers in hides and leather, tanners and shoe and harness makers, and there form the great bulk of the labourers, taking the place of the pariah of the peninsula. There are many sections throughout the Hyderabad country and in Berar they serve as scavenger, guide, watchman and executioner. Their signature mark is a knife. They are part of the Baluth and like the Pariah are the predial slaves of the village The Pendi Mang, are athletæ. The Mhang worship the leather ropes which they make. They also make cakes, which they place on the ground and over it five stones, and a lamp, and worship these. They also worship the spirits of departed men who have led evil lives. They claim the right to have, for food, cattle and camels and horses that die of disease but this is disputed by the Dher and in the village of Dangopura, in 1866 and 1867, this point was for 20 months, under litigation, the ultimate decision being in favour of the Dher. In the northern Dekhan are the sections Mang Garoro; Hollar Mang; Dakhin Mang.

The Mang-Garoro, are also styled "Pharasti" or Migrants, as they have no settled abode but move from place to place, begging; their men and women assume other clothes, and smear their foreheads with the red kuku, a mixture of turmeric and safflower. They also are conjurors and sleight of hand adepts from which they have their name Garori. The men also beat the dholak, when practising their conjuring tricks,

The Hollar mang are village musicians; at marriages, play on the sannai, a musical wood instrument, and beat the dafra; they are also labourers, and go messages.

The Dekhan Mhang make brooms and mats from the date palm, are also labourers, bring wood, marry girls under age, fall at the foot of Hanuman but worship at a distance, being not allowed to approach. They, like the pariah and the humble native christian, are also prohibited approaching the house of any hindu, but stand some yards off and intimate their presence by calling out baba, or maharaj, or ayer, and like the Dher every thing they have brought and every thing they touch and the place they touch is unclean. If it be a metal dish it is passed through fire, and if cloth or other material it is washed, or sprinkled with water, or placed on the ground for earth purification.

They mount on horseback in procession to their marriage which they prohibit the Dher, and Teli or oilman.

They do not usually claim dead creatures as a right but beg portions from the Dher.

They worship generally all the local deities or village gods, the Ammun, the Ai, the Mata, Musoba, Mariai, Devi, Kandoba, and the Mangir or ghosts of deceased relatives. Mangir is the form of a human being engraved on silver or copper, intended to represent a deceased father or mother, sometimes it is a casket of copper containing a silver figure of a man. The Mangir is worshipped at the dewali and dussara and at amas and full moon and anniversaries. The figure is worshiped by washing, and burning frankincense. They bury or burn their dead. They place the corpse in the ground, then bring a potful of water from the river, pour it on the body and cover the dead with earth: after three days they take food and place it over the dead. They seem doubtful as to transmigration.

Dhor. Hind. Tel. Dhoria Can. Dhorata Mahratta are found in most of the larger villages of southern India. They are tanners, but are regarded as hindus, and, unlike the Dher and Mhang, reside within the villages. They worship the earthen jar in which the hides are steeped, placing vermilion on it. They do not partake of animals that die of disease. They never devote their young women to the gods. They are looked on by the Pariah or Dher as vile, and are not associated with in eating or intermarrying. The Dhor are robust, fair, short, men, with well developed chests, wide faces, light colored eyes, many of them with a light mustache and in all their features they present evidence of a Mongol origin. They never eat the large horned cattle, the cow, buffalo, or bullock, nor do they eat dead animals, but fowls, fish, deer, goats and sheep are lawful. They marry in their own tribe, making the marriage procession on a bullock, and say that they are not entitled to proceed on a horse. The objects of their worship are very doubtful.

Like almost all the races of India, they worship, at anniversaries, the chief implements of their trade, which in their case is the tan-pit, but they weekly cowdung a small spot in their house, on which they burn incense, place flowers, and wheaten cakes covered with rice, bow down, worship and eat. The deity, thus invoked, one family whom I saw at Oodghir said. was Bawa Adam, whom they consider to be Maha Deva, and inquiry elicited the information that about 60 or 80 miles west of Punderpore, is a stone, named Bawa, or Father, Adam. They also worshipped Ai, mother, whom they designate as the Bhawani at Taljapore, but Khandoba at Malligaum, also receives their worship. The temple guardians however do not permit the Dhor to approach near to the idols, as their trade of workers in skins and hides makes them unclean. They bury the dead who have fallen victims to small pox and cholera, but those from some other diseases are burned ; a pregnant woman dying is burned. They make leather from hides, and manufacture such articles as are used for water purposes, the mot bucket the d'hol and pak'hal.

The *Totti* of the Tamul people is a village servant who waits upon the villagers. The domestic Totti, does the humblest part of the house work.

Tottyar of Coimbatore are settled there from the north.

Beder.—In the tract lying between the Mysore and Hyderabad and Mahratta territories, are several petty sovereignties, such as that of the nabob of Banaganapally, a syud family, in the east of the Ceded Districts, until 1839, the Pathan nabobs of Kurnool ruled on the right bank of the Tumbudra river, further west, the Reddi chief of Gadwal ; the Mahratta chief of Sundoor, one of the Ghorpara family ; the kshetria rajah Narapati of Anagoondah, the descendant of the great king Rama of Vijianaggur, who was overthrown by the combination of the mahomedan kings of Golcondah, Kalburgah, Bijapore and Ahmednuggur; the Pathan nabobs of Shahnoor the Ghorpara chieftains of Gunjundurgurh and Akalkot, and at Ghoorgontah and Beder Shorapore are the descendants of that Beder soldier, Pid Naik, to whom Aurungzeb, for aid given at the siege of Bejapore granted a small territory in the Raichore Doab. The Beder race have only these two small sovereignties, and some of them, in Shorapore, are tall, well made, robust men.

The Beder race in parts of Mysore form a considerable part of the population and have many poligarships, and in Ceylon there remains a fragment of a prior stock, called Veddah.

Their name is variously pronounced, Beder, Baida, Baidara, Waida, Vedda, Vedar, Veddar, Vedan and Bedan. They are the race who gave their name to the Pindara who harrassed Central India for nearly 50 years. Some of them have become mahomedans.

The Baidar of Beder Shorapore, drink spirits, eat the hog, crocodile, porcupine (Sarsal) manis, Ali) Iguana, bullock, cow, buffalo, cat, rat, bandicoot, (Mus giganteus) and Jerboa rat.

The Baidera Wanloo, Tel. of Bellary, are mahomedans, keep numerous little horses which they use for carriage. They are great carriers and have been of use in several military operations.

The Pindari are mentioned in Indian history as early as the commencement of the eighteenth century ; several bands followed the Mahratta armies in their early wars in Hindostan. They were divided into durrah, or tribes, commanded by sirdars, or chiefs, and people of every country and of every religion, were indiscriminately enrolled in this heterogeneous community, a horse and sword being deemed sufficient qualifications for admission. A common interest kept them united : some of the chiefs acquired wealth and renown in the Mahratta wars, they seized upon lands which they were afterwards tacitly permitted to retain, and transmitted, with their estates, the services of their adherents to their descendants.—(*Cole, Myth. Hind. p.* 298)

Kakur are a dark colored, spare and sinewy migratory race, in the centre of the peninsula of India, who are usually regarded as identical with the Pindara that overran the south of India. They are found residing in most of the villages north of the Tumbudra river. They possess small active ponies, on which they bring the grass that they cut in the jungles, and otherwise act as carriers, but they might at any moment become active marauders. They are also screen or tatti-makers, and a few have become agricultural or engage in horse dealing. They elect a chief, to whom they give the rank of Rissaldar. They are all mahomedans and they use a dialect to which they give the name of Lahaura-ha-noche.

The *Taremook*, known as Bail Kambar in Canarese, Ghassari in the Dekhani and Lohar in the Mahratta, is a wandering black smith. Bail Kambar, means bullock blacksmith, but they style themselves Taremook. They wander from village to village, principally in the Northern Canarese speaking country.

The Dumur or Kollati, called by themselves Bhatu, are a wandering race, their women are athletæ and common.

The Kili-Katr, Muddikpor or Kotaboo are wandering minstrels. Many names have been given to this migratory people who dwell

in the southern Mahratta country; Kublgira or ferryman, Koli and Barkur, are the terms most usually employed, but Muddikpor is the designation they apply to themselves. They are generally tall and powerful men, with an olive yellow complexion and are now very numerous throughout that part of India; they say that their original locality was the village of Talicot near the town of Sorapoor, and that, however far they have dispersed, all classes continue to speak the Mahratta tongue, though it is requisite they should attain likewise a knowledge of the language of the countries in which they wander to enable them to gain a livelihood.

Bhowra, the wild hunter race of India, called Pardhi, Hirn Pardhi, Shikari, and Hirn Shikari. Though, seemingly, very poor and humble they are a migratory and predatory tribe. They snare wild animals which they bring for sale into towns. They also capture the larger beasts of prey. They work in certain tracts of country which they call their jungle, each section keeping to their own circle.

Soligaru, according to Buchanan, are a rude tribe inhabiting the southern ghauts, which separate Coimbatore from Mysore.—(*Hindoos, Vol.* 1.)

Yanadi,—It may serve to illustrate one feature of this country and show how long and effectually a race may remain sequestered in it, to notice this rude tribe. Though residing up to within 20 miles of Madras with its 500,000 people, though surrounded by the active and industrious Tamul and Telugu people and possessing the readiest means of communication by the Pulicat marine lagoon and Cochrane's canal, they are nevertheless almost in the lowest state in which human beings can remain.

The Yanadi dwell in the forests of the Sriharikottah muttah an island of the Chingleput Collectorate. They hold little or no intercourse with their more civilized neighbours. Until recently their ordinary avocations were the gathering of the wild products of the forests which the officers of Government bought from them at rates lower than the ordinary market prices, and paid them in kind, with grain, and clothes. Latterly, however, a few on the outskirts, have taken to charcoal burning and wood-felling, and they are now also paid partly in money, changes which bring them more in contact with the settled people around them. An effort was made in 1855, to induce them to engage in agriculture, but neither that nor subsequent attempts to persuade them to rear cattle and sheep have succeeded. In 1857, Government established a school for their children, and forty to fifty scholars were lately in attendance, for each of whom, an allowance in grain is given. The use of money has compelled them, to a small extent, to engage in the ways of ordinary life, but they are considered to be still insufficiently civilized to be left without the aid and protection of Government. The sum paid to them is about Rupees 1,800 a year. Some who reside on the outskirts of the forests, come a little more in contact with the every day world; but their ordinary locality is in the very depths of the forests, beneath the shade of pending branches, and only about ten or twelve families have huts made of branches of trees. In stature they are about the same size as the hindu people around them. A few are of a dark bamboo colour, but ordinarily they are black. The men are taller and more robust than the Tamul race, the women are decently clad. The men wear only the langoti. They have clear skins, but suffer much from fever. They seem to use warm earth baths in fever. Their food consists of wild fruits and roots, particularly those of the Kanduri, *Hind* (Bryonia grandis, *Linn.*) a few wild varieties of yams and the leaves of Capparis horrida, rice, the wild bean, Canavalia virosa, molluses, fish and flesh of every kind. They hunt with the bow and fish by torch light. They are polygamists, have up to four or even seven children. They bury or burn their dead, and pour libations on the grave. The men average 5 ft. 4⅝ in., in height and lbs, 100 in weight. The women average 4 ft. 6 in., in height and lbs. 82 in weight. There are about 20,000 of them in the Nellore district.

They have little intelligence cannot reckon up to ten, converse but little with each other, and are more taciturn with strangers, whose very presence even alarms them. The language they speak is said to be Tamul, and a similar race, it is stated, occupy the neighbouring forests on the hills at Naglawaram, and others are spread through Nellore, N. Arcot and Cuddapah.

Villi are a race dwelling in hamlets of five or six huts on the outskirts of most of the villages in the district of Chingleput, and are sometimes called Yenadi. They are herbalists. They have Mongol features, the men have scant hair on the lip or chin and no whiskers. They are polygamists. They eat all animal food except the flesh of the cow. They dig up the wild chayroot. The average height of the men was 5 ft. 5 in. and weight lbs. 88.

Korawa, with their sub-divisions (1) the Bajantri or Gaon Korawa or Sonai Kolawaru, (2) Teling Korawa or Kasbi Korawa, (3) Kolla Korawa, and (4) Soli Korawa, are a race in the peninsula of India. The Yerkal, Korawa, or Coonchee Kooree, are wanderers of whose original country they themselves retain no knowledge. They are darker than the usual tinge of hindoos around them. In their

own communities they style themselves 'Yerkal' and they give the same appellation to the language in which they hold communication with each other. Some of them seem to have been converted to the brahminical faith, and are now of the vaishnava sect. With the exception of the cow, almost all animals are used by them as food. Their dead are burned.

The Eruku, also called Yerkal, Yerkalvadu Kurshi-wanlu, Yera-kedi, Yera-kellu, Erukuluvadu, in the Canarese part of the peninsula of India, occupy themselves ostensibly as basket-makers, and in fortune telling. But they are notoriously predatory and steal girls whom they devote to prostitution. They are found in mat huts on the outskirts of most towns.

The Yerkala of the Nellore District are migratory mat and basket-makers, using the midrib and leaflets of the date palm. They also make wooden combs, work as labourers, and a few have settled and engaged in cultivation. They rear pigs, poultry, donkeys and dogs and eat the flesh of most animals. They are usually of a dark brown colour, the men are spare, and light make, but hardy, with low foreheads, small eyes, short nose. They wear only a strip of cloth and they tie their hair in a knot above their brow.—(*Balfour in Madras, Jour. Lit. & Science, Vol.* 18, *p.* 4.) They admit polygamy, do not remarry their widows.

Dr. French says there is a rude uncivilized race in the Kistnah district, who are bird catchers, and who have no feast or music at their marriages, but the bridegrooms pay a fine or price of Rs. 202 to the brides' parents. The men have only a loin cloth. They are said to eat cats, mungoose, squirrels, rats, parrots and minahs. They snare birds, rear pigs and donkeys and live by making baskets and mats from the palm leaves. The women are sooth-sayers. These seem to be the Korava race.

Also, Professor Wilson mentions the Koracharu as a hill and forest tribe in the Carnatic who make bamboo mats and baskets and carry betel nut from market to market. A Korawa race also inhabit the Pakhal hills and near the Godavery.

Yerawa are a migratory race in Coorg, of middle size, with coarse features, black and straight hair, they are labourers and are believed to have come from Malabar. Their language is said to resemble Malayalam ; they worship evil spirits and have no priests.

Pakenatti, a peaceful and innocent migratory race, found in Mysore and the Telugu country, who, about the beginning of the 18th century were driven from their houses by oppression.

Wadawar, are tank and road-makers.

Bunjara, often written Banjara, are called also Lambada, Lambadi, Ilambadi, and Binjara. Their Canarese name is Herkeri. The name of Banjara is supposed by Elliot to be derived from the Sanscrit Bunij, a merchant. Shakspeare derives it from the Persian Birinjar, a rice-carrier. In the Dasa Kumara Cheritra, a work written by Dandi, mention is made of a cock-fight in a Bunjara camp, but the Bunjara are even indicated by Arrian as one of the classes of Indian society. They are chiefly wandering grain merchants and salt merchants, but many have settled down in the tract under the northern hills lying between Goruckpoor and Hardwar. Some are mahomedans and say they came from Multan. Those of western India are usually Charuns, and their sacred character is a great protection to them. The Bunjara of Berar have been greatly predatory and are being removed.

The Turki Bunjara, who are mostly carriers, have 36 tribes or "got."

The Beid Bunjara have 11 " got," they came from Bhutnir and are now in Pilibit and Kant, and many are weavers and medical men.

The Lubana Banjara have 11 " got" are mostly agricultural. They claim to be descendents of Gour brahmins and to have left Runthumbor in Aurungzeb's time.

The Mookeri Banjara claim to have come from Mecca, and to reside in Jhujjur. They have 16 " got."

The Buhrup Bunjara are mostly hindu and lead a more wandering life. They are divided into the five tribes, Rathor, Chouhon or Koorri, Powar, Towur and Burtea, who are again subdivided into tribes or got. They claim to have come from Chittoor. They intermarry, but not with members of the same got. They have a close relation with those of the Dekhan, each community has a chief at its head styled Naik, to whom they yield implicit obedience. The Bunjara are scattered in communities all over India.

In the south of India, they style themselves Gohur. They are met with from Kashmir to the south of India and keep in Tandas or encampments. Their Tanda, Hind. Kepa, Mahr. in the extreme south of India have become greatly broken up, for they are predatory, engage in gang robbery, many of them are to be seen in jails, in the Mysore territory their women and aged men are breaking metal for the roads and the rapid extension of roads and railroads have done much to exclude them from their trade as carriers and collecting merchants. But, in Berar and throughout the Hyderabad country they are still in large numbers collecting from the lone hamlets the small quantities of grain, cotton, and wool obtainable, and bringing them into the larger marts. Their means of carriage is solely the bullock and the cow. Some of these are magnificent and it is a

grand sight to see a Banjara Tanda laden with cotton or grain, traversing the country through pathways and tangled trees and brushwood so intwining that portions of cotton are taken up at every step. Their value as travelling merchants, in times of scarcity or great demand is incalculable, for no other means could bring in the small stores of outlying hamlets. They will shortly disappear from traffic as rail and metalled roads increase. The Banjara are men of great energy. They have in some places fixed homes. Throughout Berar and in the northern parts of the Hyderabad territory some of them are to be found settled in villages as servants of the Potails and are recognised as village Banjara. On the borders of Rohilcund towards the Terai, they have considerable settlements, are considerable landed proprietors and important people. Campbell (p. 107.) A numerous tribe hearing this name are spread along the food of the Himalaya from Hurdwar to Gurukpur engaged in agriculture.

Wilson also says they are partly of hindu and in part of mahomedan belief and that the Bahurupa Banjara arrange themselves into the Rahtore, Chauhan, Powar Tuwar and Barka Banjara and some of them are accepted as guarantees for agreements similarly to the Charan and Bhat.

The Banjara is called by the Dekhan people Lambana. The Banjara man is a Gohur, a man, a woman however is a Banjarni.

The goddess Marri-Ai is a great deity with the Dekhan Banjara, and they invoke her in their most solemn oaths. They use a broken branch of the Azaderachta Indica, or nim tree, or as they call it, Lim Ka Dagla, in their solemn ordeals. They lay one on the ground, and will say to a woman whose virtue is in question, "if you be not a whore lift it," and her lifting it or otherwise, establishes her innocence or her guilt.

Their dress and appearance are singular, more particularly of the women, and their social habits and customs distinctive. The men wear the usual "Puggree" and "Dhoti" whilst the dress of the women consists of a boddice, "Choolee" with long sleeves, and a petticoat or skirt hung from the waists in ample folds, consisting of coarse cotton prints of bright colors, and a "saree" or scarf, of a similar texture, which is carelessly thrown over the shoulders, giving them a picturesque appearance, when combined with brass and deer-horn ornaments and gaudy colored tassels of cotton, with which their arms, ears, nose, neck, ankles and toes are profusely decked. They have, small well turned hands and feet; their movements are easy, graceful, and stately, rendered slow from the quantity of ornaments they wear. The hair is parted in the centre, combed back, plaited, and ornamented with a profusion of silk or cotton tassels. They seldom change their clothes, till they are tattered and torn, and are only renewed by a new suit. The women possess considerable natural charms, are as active as the men in their business avocations, and they carry burdens when travelling, chiefly their children, provisions, or utensils. They are capital needle-women, making their own jackets and petticoats, and frequently embroider these tastefully. The material used by the women of some branches of this tribe is manufactured from the fibre of a species of nettle, which is woven into cloth for themselves, and these are tastefully dyed in various colors, to suit their peculiar taste in this respect, frequently overgaudy. They visit the most remote and hilly regions and lone hamlets to collect and transport grain and other commodities to more civilized parts; no jungles or wild beasts deter them from travelling. In some districts they are addicted to thieving and thuggee. They settle their own disputes, either by arbitration, or by the decision of their Naeks and seldom or ever complain of their fellows. Their Code of Laws prescribes punishments for all crimes, the verdict of which, when carried out, is never disputed. Their Priests exercise the power of life and death over the community but this is masked under the cloak of religion and supernatural agency; and, as a tribe, they are bound to secrecy, whenever the extreme penalties of their laws are carried into effect. Unchastity is strictly punished with death, frequently both the woman and man suffer when detected, and their corpses are buried or burned together, and neither the justice nor execution are ever complained of. They recognize no authority, keep aloof from settled races, interfere with no one, and allow of no interference among them, in the matter of their laws or customs, &c., As carriers, distance and climate have no difficulties for them: they undertake extensive engagements in exporting merchandise, chiefly grain, cotton, cloths, oil seeds, &c., and carry them out with the utmost good faith—they never play false when once the work is undertaken by them; no instance has been known of goods entrusted to their care having been robbed. They are looked upon by other classes of natives with a superstitious dread, so that they can traverse the wildest and most jungly tracts with impunity and perfect security. It is reported that the Banjara of the hill districts (Bisram, Cuttack, and Jeypore) practise the Meriah sacrifice, as also do those who trade between Nagpore and the coast. Dr. Shortt from personal inquiries in Orissa, Nagpore, Hyderabad, South Arcot, Vizagapatam, Jeypore, &c., was satisfied that sorcery, witchcraft, human sacrifice, and infanticide, prevail among differ-

ent communities of the Banjara. Each community is localized by the term of "Tanda," having its own leader who is said to lead a peculiar ascetic life. On occasions of sickness among themselves or murrain amongst their cattle, the Priest is consulted, and should he attribute such visitation to sorcery, the Priest fixes the guilt on some individual belonging to the community, when the supposed evil-doer is immediately ruthlessly seized and murdered in the manner dictated by the Priest, to abate the evil. The execution is coolly and deliberately carried out in the most summary manner, and the deed is buried in oblivion. The practice of infanticide is in vogue among them, in consequence, it is said, of the large sums of money required to ornament their girls, in addition to the large dowries which they have to bestow on marriage. It is reputed that the practice is carried out by placing the new born infant in an earthen vessel or chatty, the mouth of which is tied over with cloths steeped in a decoction of turmeric, and ornamented with flowers, some trifling ceremonies being carried out, the chatty is taken to some remote place in the jungles, and there buried. Some of the Khond tribe carry out a similar practice as regards their female children.

The Banjara generally possess large herds of cattle, which they convert into pack animals—even cows are made to carry burdens, which, as a rule, no other class of Natives do; and it is no unusual thing to see among a herd of Banjara bullocks several cows laden with burdens, with young calves at their heels. One or more of their best bullocks are selected as leaders, their horns and the crests of their pack saddles are ornamented with cowries, scarlet cloths, peacocks' feathers, tassels of cotton variously colored, &c., their necks are encircled with a band of scarlet cloth or leather, to which is fastened numerous bells of sizes, and, as they walk, the bells give out a monotonous sound. The selected animal is supposed to be deified, forming the protector of the herd, and is termed Guru Bail; the jingle of the bells, and the ornamentation of the animals, are said to frighten away beasts of prey in their lonely and jungly marches. The cattle are let loose as soon as the march is over to enable them to pick up what they can by browsing in the vicinity, The Banjara is independent of villages generally in his travels. As soon as the encampment is fixed on, he unloads his bullocks, and packs the loads in tiers, and over them he stretches an awning of cloth or a cumbly, as protection from the weather. At night, the cattle are tied round the packages in a circle, in the midst, the Banjara lights a fire and lies down to sleep. He is up at sunrise, loads his bullocks, and proceeds to the next stage: the distance travelled is generally from 10 to 15 miles a day. On these travels, one or more of their women accompany them.

Nomades and Migratory, houseless races.—*Kurumbar*, a nomade shepherd race are the earliest known inhabitants of Dravidadesam, now known as the Carnatic and Coromandel. The Korumbar appear to have been at one time the most numerous and most powerful race in the peninsula. They seem to have established numerous petty principalities over the whole of the peninsula, which were ultimately absorbed into the Chola empire. Numerous sites attributed to this race and still called Kurumbar Kot are to be met with. The number of these sites and conditions indicate an extensive sway. They were a pastoral shepherd race, and Kuru in the Karnatic language means a sheep. Small communities exist all over the peninsula from north of the Kistna, wandering with their flocks, and others of them dwell in the less accessible hills and forests of the peninsula.

The Curb, Curubar or Kurumbar, nomade shepherds, who occupy the denser deeper jungles of the lower slopes of the Neilgherries, are occasionally stumbled upon by adventurous sportsmen, and the smoke of their fires may occasionally be seen rising from the lower gorges of the hills.

The Handi Kurubar, are Kurumbar who take service in towns.

Kurumeru, or, according to Buchanan, *Karubaru* (Journey through Mysore, Vol. 1. p. 395) according to the Abbe Dubois, are in three migratory tribes, one section of which engages in the traffic of salt and grain on the backs of asses, backwards and forwards from the coast to the interior. Another section manufacture osier panniers, baskets or mats. This section live in tents 3 feet high, 4 or 5 broad and 5 or 6 long, made of bamboos, and they move from place to place to obtain work. The third section are called Kalla bantru and are said to be robbers by profession.

The *Chensu Karrir*, are a migratory race mentioned by Buchanan as residing in the hilly tracts near Coimbatore. They are described as without houses or cultivation, but by snares or with the bow catch birds or larger game which they dispose of for rice: the white ant is said to be used by them for food. They approach their game under the shelter of a cow or buffalo, which they have taught to stalk. Their language is a dialect of the Tamil with a few Canarese words intermixed. Those near towns learn the use of Telugu words. A Tamular is unable to understand their language. A few reside in little huts on the outskirts of villages and have

a little blanket, but their ordinary clothing is a loin cloth and in the denser forests they dwell in caves or hollows of trees or under the shelter of a hut made of branches of trees, and use only a few leaves for covering. They describe the Animalai as their original country.

Ceylon.—The *Singhalese* language according to Rask belongs to the Turanian family of speech, but in Ceylon, where the Arian and Dravidian element is intermixed, a remnant of buddhists is still to be found who use the Pali scriptures. As in the whole line of coast in the extreme south-east, south and south-west of the peninsula of India, a large part of the population of Ceylon is of foreign blood.

The population in 1844 was estimated at 1,442,062, and in 1857 it amounted to 1,697,975 besides about 30,000 soldiers and foreigners. Since then an estimate has been made, which shows a population close on three millions. There are various statements as to the races occupying Ceylon. The European population is small and consist chiefly of British emigrants employed in the civil and military service or on the plantations.

Burgher is a term properly applicable only to white persons of pure Dutch descent, of whom there are now but very few in Ceylon; but the name has, by courtesy, been given to all those who in India are styled Indo-Britons, Eurasians, Anglo-Indians, East-Indians or more commonly half castes, namely, the descendants of Europeans by native women, therefore a race of mixed European and Native origin. The people of Ceylon are of a Tamulian or Dravidian stock. Those of Kandy, with their habits of polyandria, would seem to be more allied to the people of Coorg, but the coast tribes are of the same race as the Tamular of the peninsula. And there are a few wild, out-caste races, the Gahaleya, Rhodia and Veddah in the forests and unfrequented parts.

The *Singhalese* range themselves under the heads of Kandians, low-country Singhalese, and Rhodiah.

The *Tamul* people of Ceylon belong to the same race as the Tamular of Southern India, and consist either of those who have been on the island for centuries or who are recent emigrants. They are chiefly to be found in the north-east portion of the island, and the two towns to which they chiefly resort are Jaffna and Trincomalee. Their main occupation is agricultural. The labourers of the island are styled coolee, also a Tamul word. They come over in large numbers from the continent during the coffee-season.

Lord Valentia who travelled in Ceylon, says the races are the *Rajah Wansaya*, the king's caste.

Brahmana Wansaya, the caste of brahmins skilled in science:

Waniya wansaya, the merchant caste:

Gowi Wansaya, the caste of Gowi, who cultivate the ground, known in Ceylon by the name of Vellala, which however is not a Singalese word. These Gowi or Vellal are of the highest caste on the island, there being none of the three superior castes, except the king of Candy, who is of the first:

Chandalayo, inhabitants of the woods, who strip the skins of animals to make thongs for the king's use:

Veddo, a people who live wild in the woods, and kill wild beasts:

Duravo caste, commonly called Chando, which is not a Singalese word. The name Duravo is compounded of two words, which signify come from afar:

Karawo. There are nine sub-divisions of this race, which is commonly called the fisherman's caste; it derives its name from a compound word which signifies "evils doers," because the occupation of the caste is the destroying of animals, which by the religion of Boudhou is forbidden.—*(Valentia's Voyage and Travels, Vol. I., p. 492.*

Sirr (Ceylon) says the principal castes are four, viz.,

The *Surya Vanse* or royal race; this has two divisions, viz.:

Goe Wanse, a division of the Surya or royal race, cultivators, the most numerous in the island, and to it belong the nobles, chiefs, priests, and nearly all the Government servants.

Nille Makareya, or shepherds, is the second division of the Surya.

Brachmina Wanse, descendants of brahmins.

Wiepa Wanse, is divided into two classes, cultivators and shepherds.

Kshoodra Wanse, which has sixty subdivisions.

The Singalese are a small race, and by no means good looking. Their complexion is the same as that of the hindoos, but their features are in general disagreeable. The costume of the men is a long petticoat, fastened round the waist and reaching to the heels. Tortoise shell combs are worn by men as well as women. In the numerous excesses into which European costume has been carried, the size of the back comb worn by ladies has never attained that of the Singhalese men, who also wear a narrow long bent comb across the forepart of the head—the lighter colored shell is most esteemed by them. Five pounds is a moderate price for a tortoise shell back comb, which increases in value according to the size and quality of the shell: hair pins of tortoise-shell are worn by the women: gold and silver being substituted for full dress;

these hair pins are among the articles purchased by passengers in the steam-boats.—(*Rhode, M. S.S.*)

The rich and well watered delta between Colombo and Galle is an overgrown waste. The Singhalese, whose property it is, have covered it with cocoanut, bread-fruit and jack-fruit trees, and on those they are content to live, or rather exist, passing the great part of their time in sleep, while the women of their household work.

Kandians are the inhabitants of the hill-country and are a hardy robust race, never till recently intermingling with their low country brethren. Their language is made up of three component parts. Elu (or Singhalese pure) the Pali, and the Sanskrit. They possess an extensive literature, and their religion is Buddhism. The low country Singhalese are either Buddhists, Roman Catholics, or Protestants. The influence of Roman Catholicism is very great, and the people are divided into classes according to their occupations.

Among the Kandyans, and them only, polyandry is prevalent, and the wife has the possession of all the brothers. The children call the eldest brother father. A man can bring in another not a relation, to have joint marital rights with himself; indeed the first husband, can so introduce, as many as the wife will consent to receive as husbands. According to Polybius, polyandry was practiced in ancient Greece, and in Book xii. we read that it was an old and habitual practice in Sparta. In Kandy, in the *Beena* marriage, the husband goes to reside in the wife's house, and the woman shares the family inheritance with her brothers. The husband, in this marriage, can be dismissed summarily, by the family of the wife. In the *Deega*, a more respectable form of marriage, the wife leaves her own house for that of the husband—forfeits all claim on the property of her parents but acquiring some claim on that of her husband, and the wife cannot obtain divorce, unless with the full consent of the husband. Divorces are constantly sought for by women, on trivial pretences. A child born within nine months of the divorce, must be maintained by the husband. The Kandyans are a larger race of men than the Singhalese of the coast provinces. They have a saucy, independent mien, but are exceedingly indolent and thriftless.—*Sirr's Ceylon.*

Gahalaya are an outcaste predatory race, near Matelle in Ceylon who acted as executioners in the times of the Kandyan kings.

Gattaroo, an outcaste race in Ceylon.

Veddah are hunters, and are supposed to be the first occupants of the island. They are a wild semi-savage race residing in the interior. *The forest Veddah* dwell in hollow trees or caves, subsist on game which they kill with rudely formed bows and arrows, wandering from jungle to jungle, as the game becomes scarce. They will not hold the slightest intercourse with any natives but those of their own tribe, and their language is said to be unintelligible to all others. *The Village Veddah* dwell in certain districts, hold but slight intercourse with the other inhabitants of the island, will not intermarry nor mix with them. They can make themselves understood to the Singhalese. Their sole clothing is a strip of cloth which hangs down in front, and is fastened by a coir cord, which passes round their loins. Their hair, beards and whiskers are never shorn or cleansed, but hang down in matted masses. Tennent describes the Veddah as miserable objects, active but timid, athletic though deformed, with large heads and misshapen limbs. Their long black hair and beards fall down to the middle in uncombed lumps, they stood before him with their faces bent towards the ground, and their restless eyes twinkled upwards with an expression of uneasiness and apprehension. The children were unsightly objects, entirely naked, with misshapen joints, huge heads and protuberant stomachs; the women, who were reluctant to appear, were the most repulsive specimens of humanity he had ever seen in any country.—(*Yule Cathay, Vol. II. p.* 371.)

The forest Veddah are dexterous hunters, and especially skilful in snaring the wild elephants. The two sections of the tribe do not intermarry, as they mutually distrust each other. The Veddah generally deposit their dead in the jungle to be devoured by wild animals. They seem to worship the planets?, evil spirits and the spirits of deceased ancestors. They have their own headsmen whom they elect and obey. They use bows and arrows and clubs of iron wood. (*Sirr's Ceylon, Vol. II. p.* 216.) They occupy a district about 90 miles long and 45 broad in the south eastern side of Ceylon, lying between the sea and the base of the Badulla and Oovah hills. According to Sirr they are a remnant of the Yakko, the aboriginal inhabitants of Ceylon, who, 2,000 years ago, after the conquest of the island by Wijayo and his followers, returned into the wilds, as the Kuli in Guzerat, the Bhil in Malwa, the Putu in Cuttack, the Kond in Gondwana, and the Beda in Mysore retired before conquerors. The Bisadæ, or Besadæ, which in mediæval Greek is called Vesadæ, are alluded to in the tract of Palladius de Moribus Brachmanerum, written about A. D. 400, and the same name is applied by Ptolemy to a similar race inhabiting northern India. A forest tribe of Mysore, known by the name of Veda or Beda, are said to have formed part of the army of Tipu Sahib but this seems inaccurate as the Beder of Mysore and up to

the Kistnah river are an active agricultural people though predatory. The Veddah of Ceylon live by hunting and use the bow, in drawing which they employ their hands and their feet. They are omniverous and eat carrion and vermin roots, grain, fruit, birds, bats, crows, owls, and kites, but refuse the bear, elephant and buffalo. Their language is a dialect of Singhalese, free from Sanscrit or Pali, but the vocabulary is very limited and they have recourse to gestures and signs. They have no knowledge of God, nor of a future state, and have no temples, idols, altars, prayers, or charms, but have a devil worship. They do not bury, but cover their dead with leaves in the jungle. They are regarded by the Singhalese as of high descent. See Beder, p. 87.

Rhodia, a little numerous out-caste, scarcely civilized, race, in Ceylon, forbidden to approach a temple, or any of the higher castes. According to one tradition, they were hunters who, on the eve of a solemn occasion, failing to obtain game, &c., murdered a child and sent its dismembered body for the king; but another tradition is to the effect that this caste persisted in eating beef after its use as food had been prohibited. The native laws forbade a Rhodia to approach a temple of buddha or the gods; to build houses or to live in any abode enclosed within walls, nor even to cultivate the soil or possess land; and, even to this day, their dwellings are mere sheds. They were forbidden to approach much less to touch or breathe upon a caste man, and all things they touch are unclean. The men wander about in parties or tribes seeking their precarious subsistence. Their women perform feats of legerdemain, and tell fortunes, and their want of chastity is proverbial. Their numbers do not exceed a thousand, and they are principally in the Kandyan province, at Saffragam, Dombera, Wallepane, &c. Nominally buddhists they are also spirit worshippers. Rodeya or Rodda, in Singalese, literally means filth. In their social degradation, they resemble the Cagot and Caqueax, who from time immemorial have been held in abhorrence in the valleys of the Pyrenees and the plains of Bretagne, Poitou and Guienne.—*Sirr, Vol. II. p.*

Maldive Islands, Zabiyah ul Mohli, are a vast group, estimated at twelve hundred, extending southward from lat. 7° 6½' N., to 0° 42' S. A memoir of them, by Lieuts. J. A. Young and W. Christopher, I. N., is given in Bom. Geog. Trans. 1836-1838; Bombay reprint, vol. i. 54. These multitudinous islands and rocks have about 60 miles of breadth, the islands being formed into large groups which the natives call atoll or atollon. Of these there are nineteen, and they appear to be the summits of coral mountains. The inhabitants are mahomedans governed by a sultan or king, and engaged in trade and navigation.

The Laccadive islands are so called from two Hindi words, lacca and dipa, many islands. They are off the coast of Malabar and extend from Lat. 9° 17' N. to the parallel of 13° 52' N. Most of the islands are low and surrounded by steep coral reefs. They were visited and described by Mr. Robinson of the Madras civil service.

According to Lassen, the language of the Laccadives and Maldives, belongs to the Turanian family, but both the Maldive and Laccadive islands have the Arabic alphabet though their language is Singhalese.

Canarese, is essentially a plateau language. The ancient Hindu term, Carnatica, comprehended all the high table land in the south of India above the Eastern and Western Ghats, and its rulers seem never to have held sway beneath the ghats, though, in the present day, by a strange fatality, it is now only the countries below the ghats, the Carnatic on the east and Canara on the west, to which the name of the ancient Karnatica kingdom has come to be applied, and its name is now never given to the Bala Ghat or country above the ghats.

Canarese, properly Kannadi or Karnataka, is bordered by the Tamil and the Telugu on the east. It is spoken throughout the plateau of Mysore and in the western districts of the Nizam's territory as far north as the village of Murkundah lying 30 miles west of Bedar. Also it is much spoken in the ancient Tuluva country on the Malabar Coast, now long designated as Canara, a name which it acquired from having been subjected for centuries to the rule of Canarese princes. But, in Canara, the Malayalam, the Konkani and the Tuluva, are also spoken though less extensively than the Canarese. The Canarese character differs slightly from the Telugu, from which it has been borrowed, but the characters used for Tamul, Malayalam and Telugu are quite distinct from each other. The ancient Canarese character, however, entirely differs from that of the modern Telugu, and the Canarese language differs even more widely from the Telugu than it does from the Tamil. There is an ancient dialect of the Canarese language current, as well as modern, the latter differing from the former by the use of different inflexional terminations. The ancient Canarese dialect, however, has no connection with the Sanscrit character to which that name has been given, in which viz. the Hala Kannada, many very ancient inscriptions in the Maratha country as well as in Mysore are found. Dr. Caldwell estimates the people who speak the Canarese language, at five millions. This includes the Coorgs, but he has no means, he says, of cal-

culating the numbers in the Hyderabad country, where Canarese, Marathi and Telugu are spoken, where the Hindustani language is merely known to the mahomedans, the hindus and Kaets from Northern India, the resident population using it as a lingua franca. The common Canarese or Karnatic character and language are used by the natives of the countries within the parallels of the Eastern and Western Ghauts from Coimbatore north through the whole of Mysore, Belgaum, Dharwar, much of south and west Bellary, through Bijapore to Murgh and near Sangam, east and west of Beder and the people designate the line of villages and towns from Murgh to Sangam, as the Si-bhasha-basti, three tongued towns, for Mahratta, Telugu and Canarese there meet. This northern boundary is, therefore, more extended than that given to it by Mr. Walter Elliot, who draws its boundary line west and north, by a line from Sadasheghur on the Malabar Coast to the westward of Dharwar, Belgaum, and Hukairi, through Kagal and Kurandwar passing between Kelingaon and Pandegaon, through Brahmapuri on the Bhima, and Sholapur and thence east to the neighbourhood of Beder. From Sadasheghur, following the southern boundary of Sunda to the top of the Western Ghats, it comprehends the whole of Mysore as far as Coimbatore and the line of the Eastern Ghauts including much of the Chola and Belala kingdoms, and even Dwara Samudra, the capital of the latter, which was never captured by the Chalukya, *i. e.* the Carnatic dynasty of Kalyani. Mr. Walter Elliot tells us that this, the Chalukya, is the oldest ruling race of which we find satisfactory mention made in the records of the Dekhan: they seem to have belonged to the great tribe that, under the general name of Rajputs, exercised dominion over the whole of the Northern and Central India. The names anterior to Teilapa Deva (Saka 895) are given on the faith of two inscriptions which profess to be taken from older inscriptions on copper plates then extant, supported by confirmatory evidence. The inscriptions collected by Mr. Elliot relate to four dynasties of princes, reigning over the greater portion of that part of India now denominated the Dakshina or Dekkan, but at that time Kuntala-desa. The capital was first Kalyan in the mahomedan province of Kalburga, and subsequently Devagiri, now the moderu city of Dowlatabad. The limits of this kingdom seem to have been the Nermada on the N. the ocean on the W.; the line formed by the Kanarese language on the S. E. and on the S. W., they would include the province of Nuggar or Bidnur and of Sunda. The eastern boundary probably did not extend below the ghats, below which lay the kingdoms of Kalinga and Andhra.—(*Prinsep's Antiquities by Thomas, p.* 277.)

The people who speak Canarese are a tall and somewhat graceful race, with some of whom, as amongst the Coorgs and the Kandians in Ceylon, a community something akin to polyandry is very prevalent. In this they somewhat resemble the Nair of Travancore.

In recent times, until the British took possession in 1801, for nearly 200 years, the inland tract occupied by the Canarese speaking people had been traversed by great armies, bent on conquest, and since the fall of the great Vizianagar dynasty all comers seem to have crossed this tract without opposition. The great bulk of the Canarese speaking people are of one race who are pure Dravidians. They have adopted the Jangama sectarian faith, the followers of which by their tenets, ought to have no caste distinctions: most of their sub divisions are restricted to vegetable products as food, and so carefully do they act up to these that no one of these vegetarians will even bring any living creature for sale to any one of a flesh-eating people. Their sect is, perhaps, amongst the most exclusive of all in India. It is perhaps their tenderness towards animal life, that guides them to their avocations, which are mostly those of civil life, cultivators and shopkeepers and may have led to their non-resistance to invaders, but in all the great armies which the British have formed during the past century, perhaps of the Canarese Jangama sectarians, not more than a few thousand men may have become soldiers and certainly not even one of that portion who abstain from animal food. This branch of the Tiling and Canarese nations have, perhaps, till recently, continued equally advanced as to elementary school education, and though, in this respect, both races fall short of the progress made by the energetic, restless, impetuous Tamul race, they are greatly in advance of the Mahratta.

Mr. Campbell mentions (p. 74, 75-130) that in the north Canara district, in the high hilly country above and about the ghats and on the adjoining parts of Mysore, there is a large population of brahmins industrious and thriving cultivators, and landowners. Most of these are called Haiga brahmins, and culture of the betel nut is their especial pursuit. In a census of North Canara taken some years ago, there were 147,924 brahmins, 146,309 Banter (corresponding to Nairs) and 151,491 Billawar, an inferior class. They are very fair, with large eyes and aquiline noses. In the Nagar district of Mysore, they are very numerous, not very literary, or highly educated, but devoted to agriculture. In south Canara and the Tuluva country, are many Brahmins who do much cultivation and all down the west

coast to the extreme south of India, the country is said to have been extensively colonised by brahmins led from Calpee by Parasrama. They have been from political and hostile circumstances, much removed from Malabar, but they are very numerous in Travancore and Cochin, and in the Palghat valley, they are numerous and are industrious and good cultivators. On the South west coast, the chief class of brahmins are the Namberi and they have some very peculiar customs, but they principally engage in priestly offices. The Namberi brahmins resemble the Nair and the Hindu population of the S. W. coast, but are fair. The headman of a village is styled Gauda.

The *Wokul* or *Oocalaga* among the Canarese, are hindu cultivators whom the Abbe Dubois considered to be identical with the Tamul Vellalar. They eat flesh freely, and are not strict hindus. They are indifferent soldiers but serve locally. One of their sub-divisions are called Gangacara.

The Wani are a lingaet or jungum sect numerous in the Canarese speaking country and extending in the direction of Poonah and Bombay. They arrange themselves into the sections Rasot, Diksot, Melwant and Tailwant, who eat together but do not intermarry. The Tailwant drink only tank water, which is first strained and carefully covered with a cloth to prevent injury to animal life. The Rasot have no Guru, which the other three have. The Wani are shopkeepers and agriculturists. They marry girls when five to eight years old. The couple are placed sitting on a mat or bullock saddle, to which they are lifted on the crossed hands of four men, who put betel leaf in their mouths and complete the ceremony. Widows are remarried. They inter their dead in a sitting posture, and on the third day, sprinkle rice and milk on the grave.

The Coorg or Kodaga is spoken in the small principality of this name, lying on the western Ghats, and has hitherto been regarded as Canarese, modified by the Tulu. But Mr. Moegling states that it is more nearly allied to the Tamul and Malayalum than to the Canarese.

Dr. Nash describes the Coorg and Amma Coorg as of the same tribe. They have a Caucasian head, regular features, aqualine nose with chiselled lips, black eyes and dark hair. They wear whiskers and mustache, but no beard, have a fair complexion with intelligent countenances and general bold independent deportment. They follow agriculture and a few seek other employments, but, as a rule, they eschew military employ. They believe themselves to be descendants of the daughters of Chandra Varma, king of Matsa desha obtained by the intercession of Parvati. Chandra Varma is said to have come originally to Coorg. They chiefly worship the goddess Cavare Ammah or Parvati, but demon and ancestor worship are common. They have no guru of their own but are under brahmnical influence.

Holeya, a race of labourers in Coorg, ill-favoured with coase stupid features, short in stature but strong built, with dark and black skin and black straight hair. They practise demonology and are said to have no Gurus.

Tulu or *Tulava*, a cultivated Dravidian tongue is an idiom which holds a position midway between the Canarese and the Malayalam, but more nearly resembling the Canarese. Though once generally prevalent in the district of Canara, it is now spoken only in a small tract of country in the vicinity of Mangalore, by not more than 100,000 or 150,000 souls. It has been encroached upon by many languages, and is likely soon to disappear. The Tuluva, has a strong resemblance to Malayala, though the Tuluva speaking race are unable to understand their Malayalam neighbours. Malayalam and Tulu are considered also, by Dr. Caldwell, to be in gradual course of extinction. Malayalam extends from Cape Comorin to the Chandagiri river; or more strictly, perhaps, to Nileshwar (Nileswara), where a Nair rajah, conquered by Hyder, formerly ruled. The people speaking the Malayalam are said naturally to shrink from contact with foreigners, even from people of their own caste: retreating from the great roads, cities and bazars as eagerly as the Tamul flocks to them; and the Malayala speaking race are to be found isolated with their families in their high walled parambu, even in parts where the lines and centres of communication are entirely occupied by the more enterprising Tamul people whose language too seems gradually pushing the Malayala aside.—(*The Rev. Dr. Caldwell's Comparative Grammar, Sir Erskine Perry's Bird's Eye-View. Pers Obser.*)

Telugu, one of the Dravidian languages, extends to Chanda, where it meets the Mahratta, and from Ganjam where it intermixes with Urya, along the coast to the marine lagoon thirty miles north of Madras, known as the Pulicat Lake. At Vizagapatam, which is 120 miles south of Ganjam, this is the sole language spoken. On this line of coast, two monarchies formerly existed, the Andhra and Kalinga, both apparently enterprising races and seafaring people, and it is doubtless from the name of the latter dynasty that the Burmese and Malays have derived the appellation of "Kling," by which they distinguish all people from India. The Kalinga dynasty appear to have gained great possessions to the westward, as at the time of the mahomedan conquest, Warangal, seventy miles from Hyderabad, was considered by them the capital of Telingana. The eastern part of the nabob of Hyderabad's do-

minions, all the districts of Ganjam, Nellore and Cuddapah and much of the lands north-east of Bellary are occupied by Telugu speaking people. And the boundary line may be roughly drawn from immedately north of Madras, where it meets the Tamul, through Kirkambari, and Cuddapah to Bellary, where it meets the Canarese which it runs with to the west of Beder, then turning eastward and having Gondwana as its northern boundary it re-joins the line near Vizagapatam and at Chicacole, where it begins to meet Urya. The most westerly spot at which we hear it spoken is the small town of Murkundah about 30 miles west of Beder and it reaches this by a wavy line running westerly from Sedasheepet (Satyassi) on through Sangam and Beder and Dungapura to Moorghpettah or Moorkoonda or Murgh.

In ancient times, Telugu seems to have been spoken as far north as the mouths of the Ganges. This appears both from the geographical limits which the Greeks have assigned to the territory of the Andhra race or northern Telugu dynasty, and from many of the names and places mentioned by Ptolemy up to that delta being found to be Telugu. Even now the Teling are tolerably pure along the Southern boundary of Bustar, but Gond tribes are dwelling amongst them. Telugu is also called Telingu and Telungu, and is the Andhra of Sanscrit writers, a name mentioned by the Greek geographers, as that of a nation dwelling on or near the Ganges. It is the same language which, until lately, Europeans termed the Gentoo, from a Portuguese word signifying heathen or gentile. In respect to antiquity of culture and glossarial copiousness, it ranks next to the Tamul, in the list of Dravidian idioms, but it surpasses all of them in euphonious sweetness. The Telugu people are a taller and fairer race than the Tamular, many of the more northern of them being equal in stature to the Arian hindu of the north. They are more brahminical than the Tamulian races and are as energetic as the latter though less restless.

The Telugu people are the most numerous branch of the Dravidian race, although the Tamul surpass them in restlessness and enterprise and in that self-reliance which supports them in their emigrations. Including the Naik or Naidoo (Nayaka), Reddi and other Telugu tribes settled in the Tamul country, who are chiefly the descendants of those soldiers of fortune by whom the Pandiya and Chola kingdoms were subverted, and who number not less than a million of souls; and including also the Telugu settles in Mysore, and the Telugu inhabitants of the Nizam's territory and other native states, the people who speak the Telugu language may be estimated to amount to at least fourteen millions. Tamil and Telugu roots are in the great majority the same, but peculiarities in inflection and dialectic changes have so modified the modern tongues, that they differ from each other as much as Portuguese from Spanish, Irish from Welsh, Hebrew from Aramaic, and Hindi from Bengali.

The Tiling race are bold and self-reliant. They are good farmers, carefully storing the rainfall in artificial ponds or lakes. They have been good infantry soldiers, but are not horsemen; they repeatedly drove back the Golcondah armies. A considerable portion of the force with which Lord Clive fought the battle of Plassey was composed of Telings, and, until late years, perhaps even now, Tiling was the term given in northern India to the irregular foot soldiers employed there. Those engaged in civil life, push their way fearlessly amongst the other nations on their south and west: many of them are seafaring men, undertaking long voyages, and a portion of them, in former ages, conquered and held large islands in the eastern archipelago, where, under the term kling, from the Kalingapatam rulers, the peoples of India, are still known. The Tiling are partly Arian, partly a non-Arian people, but most of them follow, outwardly, the brahminical teachings, though adhering to many unorthodox rites; they are sober and staid, little impressionable and not easily excited. A body of them, known as Reddi, a very energetic enterprizing race, have held large municipal rights for centuries. An extensive colonization of southern India, by the Tiling race, took place under the Bijanagar dynasty, and they still exist there as distinct communities. The Reddi migrated from their original seats near Rajahmundry over the whole of southern India and even into the Mahrashtra country, where they are met with as far northwest as Poona and are considered the most thriving ryots. The Reddi are large men, good cultivators. Many of those in the Cuddapah collectorate were, till A. D. 1865, addicted to dacoity. In their marriages, in the south of India, a young woman of 16 or 20 may be married to a boy of 5 or 6 years, but she lives with some other adult male, perhaps a maternal uncle or cousin, or it may be with the boy husband's father, *i. e.* her father-in-law, but she is not allowed to form connection with the father's relatives. The offspring of these arrangements are fathered on the boy husband. When he grows up, the wife has become old or past child bearing, and he adopts the same course.—(*Madras Government Proceedings*, p. 6.)

The Ramusi are also a Tiling people who have spread themselves into the centre and western parts of the Peninsula and are partly predatory.

The Wadara wanloo, called also Waddiwar, or Waddar, also a Telooguo speaking race, are road and tank-makers. They are spread over the centre of the peninsula, from Central India, southwards. They are tall, robust men, seem to have no settled home, but live in tiny grass tents, and are constantly migrating from place to place to take up work. The great increase in railroads and roads, since 1850, ought to have made them wealthy, but they seem to live from hand to mouth.

The Tiling and Canarese are almost of similar physical frame :—have tall, graceful figures, but, as a rule, the Tiling are fairer than the Canarese. The great similarity of the two languages Canarese and Telugu imparts an impression that they are of the same stocks, who have separated in more recent times and that circumstances have modified their characters and personal appearance. As a rule, the inland tract of table land country occupied by the Canarese, from the southern part of the Mysore country, through Bellary in the Ceded Districts up to Bejapore, is arid, and the soil yields as food crops small cereal grains. Eleusine corocana; Setaria Italica and Germanica; Panicum italicum and Pencillaria spicata which even the humbler labourers of the south of India, only use on pressure when scarcity or dearth prevails, and a hot, arid, climate with a less nourishing food may have led to their darker complexions.

The Ailma or Velma or Yelmi in the Tiling country are a dominant agricultural tribe, with military proclivities and claim to be rajputs. They are soldiers and agriculturists.

The Rachewar (Rajwar?) of the Northern Circars claim to be descendants from Kshatrya hindus; they are a a brave race, with a high sense of honour.

The Kapu of Telingana is a cultivator.

The Bhoi-wanlu also called Ur-bhoi-wanlu, are mercenary soldiers who serve native sovereigns. They are never found in the ranks of the British army. There are a few of them in every large town in the South.

Mutraj, subdivide into bhooi and Mutraj and the Bhui of Tilingana is merely classed as a Tiling Sudra, who occupies himself as a palanquin bearer. But where settled, away from his fields and agricultural pursuits, the Bhui is engaged in catching fish by the net.

Naek or Naidu.—Many of the Tiling race are called Naidu the plural of Naik, an honorific term applied to masters, or chiefs of tribes. The bulk of the Tiling sudra take this honorific appellation.

The Kamma-Varoo in Tilingana are sudra agriculturalists.

The Besta of Telingana and Karnatica are a fisher race, commonly employed as palanquin bearers.

The Baljavadu, in Tilingana, are a sudra tribe.

The Uppari of the Tiling country are tank and well-diggers, salt-makers.

The Yerra Walleroo are a dhangar tribe in the Northern Division.

The Pariah race in the Telugu country are taller, fairer and more intelligent than those of the Tamul villages.

The Yanadi, in 1867, in the Nellore District, were estimated by Dr. Lloyd at 20,000, and the residents inland are more robust than those of the Striharicottah jungles.—(*Proc. Madr. Govt.* 1867.)

The Palalu, of the Northern Circars, are agricultural labourers who are regarded as slaves to the ryots, and are hereditarily attached to and transferrable with the land.

The Agari of Cuttack are said to be domestic slaves.

Gaita is the name of a barbarous tribe in the Rajahmandri district.

Forest races occupy the mountainous region from Mirzapore to the shores of the Bay of Bengal, and along the Eastern and Western ghaut mountains running on both sides of the peninsula.

The Patuah or Juanga are a forest race inhabiting the Tributary Mahals to the south of Singhboom in Cuttack, scattered in the mahals or killahs of Keonjur, Pal Lehra, (30 villages,) Dhekenal (6 villages,) and Hindole 6 villages. In Dhekenal alone their numbers are stated at 1,005 persons. The stature of the men does not exceed 5 feet 2 inches and in the women 4 feet 3 inches or 4 feet 4 inches. Their forms are slight with little muscular development, and physique weak. Their face is shorter and broader than that of the Uriah, nose is flat and nostril wide. Their colour is not darker than the Uriah peasant. The men are not handsome, but the women are repulsively ugly. The men dress like the peasantry of the neighbourhood, but all the covering of the women consists of two bunches of twigs with their leaves attached, one before and one behind, which are changed daily, kept in their position by a strip of bark or a string of glazed earthenware beads passed twenty or thirty times round the waist and over the stems of the twigs, hence the name of the tribe, Patuah, literally people of the leaf, but they call themselves Juánga. The women also wear necklaces of the same kind of beads, and their hair is gathered together in a knot at the back of the head fastened by a string with a silver or brass button at each end of it. The women wear no blanket or covering at night but sleep between two fires. Their traditions are to the effect that they were formerly vain of fine dress and were wont to lay aside their good clothes to

prevent them being soiled, and wear such leaves when attending to the cleaning of the cow-house or other duty, when one day, a thakurani, or according to some, Sita, appeared and commanded them as a punishment for their vanity always to wear such leaves. Dr. Shortt mentions that the legend of Killah is that a rishi commanded them to wear the leaves. They believe that if they violated these commands they would be devoured by tigers. Women dance in a circle to the sound of a large drum beaten by the men, moving round and round in the same measured step, occasionally advancing towards the musicians and then retreating, but keeping the body inclined towards the musicians. Their villages are in some clearing or opening in the forest; are small with about six or eight families, in poor and mean thatched huts of wattle and daub, each family in its own dwelling. They have no lands, but sometimes assist in the cultivation of the neighbourhood. Their avocations are chiefly those of the chase, using the bow and arrow and dogs; they kill deer, hogs and not unfrequently snakes, of the flesh of which, especially that of the Python molurus, they are very fond. Except the cow, they are omniverous. Their usual food is insipid and nauseous roots (tunga, kurba and panialu) and the seeds of the jungle grasses. They all call themselves pudhan, and have no system of caste. If they have any worship, it is one inspired by a desire to avert evil; they however deny that they worship any deity or have any image, but they pay homage to nameless spirits who inhabit the woods and mountains, and make offering of a fowl, a goat or rice or spirits to the genus loci. In the month bysakh, they offer libations to the manes of their deceased ancestors. They bury their dead. Marriages are arranged by the parents and are scenes of revelling and drunkenness. They adhere to one wife unless she prove unfruitful. Like many hindoos, they will not pronounce their wives names. Their language is not similar to Uria and it shows that they are connected with the Mundah of Chota Nagpore and that their nearest kinsmen are the Kheriah. But in their present position they are isolated from all other branches of the family, and they have no suspicion that they are connected with them. They receive the name of Patua from the sole covering used by the women consisting of bunches of leaves before and behind stuck into a waist-cord. p. 156.—*Mr. Samwells, in Ben. As. Soc. Jour. No.* IV *of* 1856.

The Sowrah or Soor, a tribe on the borders of Cuttack, under the hills north of the Mahanuddi are described by Mr. Sterling as small, mean and very black, harmless, peaceable and industrious; but without moral sense. According to Major Macpherson, the hill tribes south of the Kond and running up to near the Godavery are Sowrah. Dr. W. W. Hunter says the Sowrah also now live with the Oraon or Odaon of the Bengal frontier. The Sowrah race who occupy the hill ranges of the Northern Circars mostly those hills near Chicacole, near Kalahunda, and southwards as far as Bradachallum, bury their dead with their weapons. They seem in this respect to resemble the Chensuar of the hills further south.

Chensuar, or Chenchwar, (Suar or Surah) also Chentsu, are a wild, half-savage, forest tribe inhabiting the Eastern Ghats of the peninsula of India. They are known to their settled neighbours as the Chenchu kulam, Chenchwar, and Chensuar. Wilson names them Chenchuvadu (vadu, Tel., a man) They are about 1,200 in number, and dwell in the tract of jungle covering the westernmost range of the Eastern Ghat line, between the Pennar river and the Kistnah, and known locally as the Nulla-Mulla, and the Lankamulla. They inhabit clearings in the forest, and live in beehive shape huts like the African, Nicobarian and many of the ruder Asionesian tribes. These are of wicker-work with walls about three feet high, and a conical straw roof, with a screen for a door. The men are almost nude and have in general only a rag for covering The women dress like the wandering female basket makers whom they resemble in features. The features of the men are small, but the expression is animated, cheek-bones higher and more prominent than those of the hindus in general, nose flatter, and nostrils more expanded; their eyes black and piercing; in stature they are slightly shorter than their neighbours, and they are slightly, but well made, except about the knee, which is large, and the leg. The colour of the skin is darker, and there seems a tendency to cutaneous eruption. Newbold characterises them as between a Tiling and a Jakun of the Malay peninsula. They have no language of their own, but speak Telugu with a harsh and peculiar pronunciation. Brahmans say they formerly were shepherds of the Yerra Golla caste. They have large dogs, and a few are employed as hill police, in the pass from the Kuman to Badwail. The Nandial Chenchwar assert their ignorance of a god or a soul. They have no images. They are polygamists; they bury their dead, but sometimes burn, and, like the Tartars, they carry the deceased's weapons to the grave. They use the spear, hatchet, the matchlock, or a bamboo bow and reed arrow tipped with iron. They look on weaving and other manufacturing arts with contempt. They are patient and docile. It is suggested by Mr. Logan that the Chenchwar are a continuation of the

wild forest Surah of the mountainous tracts further north in the line of the Eastern Ghats. Vocabularies of six of the non-Arian tongues, the Kond, Savara, Gadaba, Yerukala, and Chentsu are given at p. 39, No. of 1856, of Beng. As. Soc. Journal.—(*Newbold in R. As. Soc. Journ,* 1865. *Logan. in Journ. Ind. Arch.*)

Orissa, Urya is the language of Orissa, and the country takes its name from the Or or Ordu tribe who seem to have come from the N. West. In the Orissa district, they appear to have had very narrow limits, viz. along the coast line from the Rasikulia river near Ganjam northwards to the Kans river, near Soro, in Lat. 21°10′, but in the process of migration and conquest under the Gangavansa dynasty the limits of Orissa (Ordesa) were extended to Midnapore and Hooghly, on the north, and Rajahmundry, on the Godavery, in the South. The Urya tongue is a tolerably pure dialect of Bengalee. At Chicacole, Telugu is the prevaling language ; in Vizianagram, Telugu only is spoken in the open country, and Urya in the mountains runs further down to the south ; Telugu is spoken to within 45 miles south of Ganjam and at Ganjam Telugu ceases. On the coast line Urya continues in the direction of Bengal as far as the Hijli and Tumlook divisions on the Hooghly. On the Western side of the Midnapore district, it intermingles with Bengalee near the river Subanreeka. To the westward, the Gond and Uria languages pass into each other, and at Sonepur, half the people speak the one, and half the other, language Amongst the Urya race high cheek bones seem to prevail with good features and straight hair.

A great many of the Urya bramins obtain their livelihood as cultivators, they also trade, and follow the occupations of brick-makers, brick-layers, &c.

The Pana of the frontier and south of Orissa are a wild predatory tribe.

The Poila or Poliya are slaves.—(*Wilson.*)

In the Urya, a dancing girl attached to a temple is called a Mahari.—(*Wilson.*)

Marathi.—The northern limits of the region in which this language is spoken stretches on the sea coast from the Kolwan hills or country of the Kol, near the Portuguese settlement of Daman, above the ghauts in a north-easterly direction along the Satpura range parallel to the Nerbudda, intermingling with the Gujarati, about Nandobar, in the jungly valley of the Tapti. It is spoken throughout Berar, in the open parts of the territories of Nagpur and the whole of its eastern border abuts on the countries and languages of the Gonds. From Nagpur, the Marathi exends to the south-west, and near the villages of Murghpetta and Ninni, about thirty miles west of Beder, it meets with the Telugu, and Canarese; touching in advance nearly on Bijapur and Shankashwar, and thence trends south-westerly to the coast at Sidasheghur, skirting the western boundary of the Canarese. From Daman in the northern Konkan, Marathi runs down the coast to the neighbourhood of Goa, both below and above the ghauts. It there meets the Konkani, a mixed tongue, which runs nearly as far as Mangalore. And the southern limits of this mixed language is a village four miles north of Upi or Oodapi near Condapore, where Tulu or the language of Canara begins. The Konkani, however appears to be only Marathi with a large infusion of Tulu and Canarese words, the former derived from the indigenous inhabitants of Tuluva or Canara ; the latter from the long subjection of this part of the Konkan to Canarese dynasties above the ghauts. Mr. H. Mogling, however, mentions that the Konkani speaking brahmans of Mangalore, consider it quite distinct from, though cognate with, Marathi. The limits extend from Goa below the ghauts, to the village above mentioned north of Upi. From this part of the coast in northern Canara, a diagonal line running in a north-eastern direction towards Beder, marks the boundary between Marathi and Canarese, of the latter at least above ghauts.

From Murghpetta, however, eastwards through Beder on to Sangam near Sedasheepet (Satyassi) the people designate the line of villages and towns as si-bhasha-basti, three-tongue-towns, for in them the Mahrathi, Canarese and Telugu mingle, though in all that line the people have seemed to me rather of the Mahratta than of the Canarese or Tiling type. At Sedasheepet, however, 20 miles further east the Tiling people and Tiling tongue alone occur.

The Maratha are supposed to have been originally a race of mountaineers, in Baglan on the crest of the ghauts, and cultivating the fertile valleys or mawals, and the country called Maharashtra, which is first mentioned in Indian history in the Mahawanso, probably obtained its name and received a distinctive language from the existence of a Marathi dynasty at some period not recorded in history. The Maratha are essentially mountaineers, herdsmen and soldiers, and, until lately were deemed bad farmers.

The races and tribes and fragmentary nations dwelling in the Mahratta country are numerous, The most prominent with many immigrants, are the Kunbi cultivator, the brahman, the gardener, the artizan, the shopkeeper, the Parsi and the village authorities, amongst whom are the Mhar and Mhang as predial slaves. The races daily seen are,

Brahman, Deshast'h or Mahratta, and Konkani.
Kunbi, cultivators.
Kulgărgi ,,
Wani Langaet cultivators.
Manwăr, cultivators.

Baghwan, or Mali, gardeners,
Kallal, palm-wine drawers,
Goliwar, keep sheep and goats.

Komti, banya, merchants, generally grain merchants, they wear the sacred thread, and are in several sections.

Teli, oilmen, oil-makers and oil-sellers ; many are of the lingaet sect; some of their sections are deemed impure and must not enter sacred places.

Jain, shop-keepers.	Búrùd, bamboo basket-makers.
Mahomedans, in every avocation.	Kaikari, palm-leaf „
Sempi, or tailor.	*Chamar*, leather workers.
Julai, or weaver.	Dher or Mhar, or pariah.
Wättan, or bangle-maker.	Mhang or tanner.
Kumhar, or potter.	Thakur.
Sutar, or carpentar.	Gosai.
Sonar or goldsmith.	Byragi.
Lohar or blacksmith.	Jangani.
Dhobi or washerman.	
Hajam or barber, *unclean.*	

In the Mahratta Dekhan, the municipal system is still very perfect and the servants and village authorities are known as Balute. These vary in every district. In some are the

Potail.	Sonar.	Bhat.
Jangam.	Bhisti.	Taral or Yeskar.
Ramusi.	Gharpagari or hail-conjuror.	Dauri Gosain.
Bhil.	Mhar.	Garsi or piper.
Koli.	Gondhali.	Bajantri.
Mali or Baghban.	Teli.	Kalavantin.
Darji, Suti or Sui, or Sempi.	Tambuli.	Vaidya.
		Ghotakhor.

The Village Accountant, is known as

Patwari.....MAHR.	Karnam..... ... ...TEL.
Kulkarni ..... CAN.	Conicopilly.....TAM.

and is usually a brahman. He keeps the village accounts for Government and sends same to the tahsildar.

Potail.—The Mahratta village head is the Potail, who rents the lands to cultivators, collects the Government land tax, and forwards it to the tahsildar. He is also the civil magistrate, and settles petty civil matters to the extent of two maunds of grain or five or six rupees, and sends higher claims to the tahsildar. In criminal matters he is only the police, and sends all to the amin. In lieu of pay, for the above services, the Potail is allowed from 25 to 50 bhigahs of land rent free, the land tax is about Rs. 3 or 4 the bhigah. For the cultivation of this allotment two to four bullocks would be needed, as, from 10 to 16 bhigahs, according as the rains are heavy or light, are all that a pair of bullocks can get over. There are generally two to four potails in a village, not always of the same caste ; for instance the village of Khanpur, zillah of Nandair, has four potails, two Mahratta, a Canarese speaking Lingaet, and a Kulkargah. There are a few brahman and mahomedan and pariah potails but a christian potail is unknown. In the Canarese speaking country the village head is called Goura or Ganda.

The Kunbi are the main body of the cultivating population of Guzerat, Khandesh, Mahrashtra and the Central Provinces. In Guzerat and Mahrashtra they are the chief owners of the soil and, though quiet and unpretending, are a robust, sturdy, independent agricultural people. Mr. Campbell considers them (pp. 93, 94,95) to be quite Arian in their features, institutions and manners, though their institutions are less democratic than those of the Jat and Rajput, and in the Mahratta villages they have at their head, a Potail. Few of these men ever enlist as soldiers. Sevaji and his descendants and some of his chiefs were however of this race, but their followers, were drawn from the Mawals of the Western Ghats and latterly their armies were composed of soldiers of fortune of every race. The Mawals of the mountain valleys of the Syhadri range of mountains, commence at the western extremity and extending about 100 miles east.—(*Wils. Glos.*)

The Mahratta chiefs sprung from the people of Sattarah and Poonah, but Holkar was of the shepherd, and the Gaekwar was of the cowherd castes, while the Peshwa who put the descendents of Sivaji aside, were Konkani brahmans. The Kunbi of the Hyderabad dominions are wholly illiterate. Indeed, no effort or attempt has been made to educate the people of the Hyderabad territories, though education is making enormous strides in Berar, and in British Maharashtra. There was no proper school met with in all my journeys amounting to about 9,000 miles and only occasionally a few lads, children of foreigners, were to be seen learning in a verandah, the elements of the Hindi or Mahratta. In that eastern part of the Mahratta country, a knowledge of reading and writing any tongue was almost wholly wanting. The Arjanna Kunbi reside in Western India.

The Kurmi are cultivators dwelling north of the Kunbi, but to the south of the Rajput and Jut. They form the bulk of the population in the part of Manbhum, near the Damudah river (*Dalton, p.* 157.) and are a very industrious class of quiet cultivators in considerable numbers in all the central and eastern parts of the N. W. Provinces or in Hindustan generally who there attend to the finer garden style of cultivation much more than the Jat and Rajput and like the Jat race are assisted by their industrious wives. They dwell to the south of the Rajputs and Jats, have villages of their own, and also spread in detached families or groups. Mr. Campbell considers them to be identical with the Kunbi and to occupy from the 23° or 24° N. to 16° N. and from the western frontiers of Guzerat. Very few of these from the countries watered by the Wyn Gunga and the middle,

lower and upper streams of the Nerbuddah, ever become soldiers, and in the valley of the Ganges they are looked down upon as mere humble tillers of the soil. They are more numerous towards the Jubbulpor and Saugor territories where they mingle with the Lodha. Thence westwards on both sides of the Nerbuddah, in Malwa where they meet the Jat. Throughout the southern borders of Hindustan there are numerous Kurmi who speak Hindi. (*C. p.* 92-3.) Those in Hindustan, are darker and less good-looking than brahmins and rajputs, but Mr. Campbell states (*p.* 94) that they are quite Arian in their features, institutions and manners. Other authorities, however, mention that there is no similarity in the physiognomy of the Kurmi and Kunbi. The Kurmi subdivide themselves into many tribes,

Jeshwar	Patan	Patrihu
Dhaniai	Adhonda	Ghora Charhao

Wilson says they have seven sections and that in Central and Eastern Hindustan west and North-west provinces they are the great agriculturists. He says that they are occasionally seen as predial slaves to which they have sold themselves or been sold.

The Ghameta of Behar are a sub-division of the Kurmi.

The Lodha, tribe are supposed by Mr. Campbell (193) to be cognate to the Kurmi and seem to have at one time occupied a very considerable position in the Jubbulpur and Saugor districts of the Central Provinces.

Gardener races —The Kăchi, Koeri, Morow, Kumboo, and Kisan, are gardening and cultivating tribes in northern India

The Kachi, of the Mahratta country state that they came there as cavalry and infantry soldiers from Bundelkund in the times of former kings, and of Alamgir, and that they had been villagers and servants. There are many in Poona and a few in Bombay but only one in Jaulnah. In Aurungabad, Poonah and Bombay, they are fruit-sellers, market and flower gardeners and agriculturalists. There are under one hundred houses in Begumpur in Aurungabad city. They are of a bamboo colour and speak hindi. They worship Seetla, in the form of a stone from the river, offering flowers and betel and use vermilion in sanctifying the stone. They also worship Hanuman, and Balaji. After death, they burn, but bury those who have died of small pox, also the unmarried, Of what may happen to them after death they know nothing.

Gaoli or Goli people have been settled from time immemorial along the Satpurah range, and once ruled the hill country round Baitul. (Campbell p. 7.) The *Gaoli* of Seoni have many sub-divisions. They are generally robust fair men.

Momin, in Berar, weavers and sellers of native cloths, the sarhi, susi, parban, khodi, and profess mahomedanism.

Sali in Berar are silk weavers, of sarhi and choli.

The Bombay fishermen are a strong-made race of men, and are the only labourers in India amongst whom a great degree of obesity is observed,—every fourth or fifth fisherman to be met with being more less corpulent—some of them very much so They are much given to the use of intoxicating drinks, and are often to be met with in a state of inebriety. A set of boats and nets belong to a dozen of fishermen, one often advancing the capital required to be contributed by the others ; the capture is divided amongst them on their reaching the shore, and is immediately taken charge of and carried to market by the women, who carry their baskets on their heads. The men carry baskets swung at the opposite ends of a bamboo across the shoulders. They are Christians.

The low caste tribes, are the humble village servants, the Ramusi, Bhil, Gond, Mhar and Mhang, all of whom serve as watchmen. The Ramusi, Kallar, Marawar, and Beder are sturdy semi military predatory races—(C. 133.) Below the Ghats near Bombay the dher are known as Parwari.

The Ramusi or Ramoosi tribe dwell near the Bombay Ghats. They have immigrated from Telingana within a recent period, and though they have adopted Marathi, they preserve a few words of their original Telugu for purposes of crime. They are a Telugu race who crossed into the west of India, and there assumed predatory habits.

Gurawa, a worshipper of Bhawani, professionally drum beaters before idols.

Garpagari or Garpadi in Berar, pretend to the ability of preventing hail showers on fields.

Burod, a caste of hindus in Berar, who weave bamboo baskets.

Baid.—There are two branches of this tribe the Adavi Goolar and Gaddha Goolar about 2000 in number. The Adavi Goolar are dwelling in the villages between Hyderabad and Poonah but a very considerable number dwell in Seroor, ten miles from Gulburgah. They call themselves Gol, from Go a cow, also Hanam Gol, and they claim to be of the Dhangar or herd race, but the people know them as Adavi Gollar, *i. e.*, country or wild Gollar; also as Bai-mandelwanloo; also Dowai Darman, and Dowa dene wale. The men are herbalists, collecting roots and plants for the native physicians, but those whom I have seen were unwilling to communicate any of their knowledge and strove to avoid questioning. The young and the women beg. Their physical appearance was strikingly like the races from Raj-

pootanah, about the same in colour, but more slender and not so tall. None of them had resemblance to any of the races of Southern India. They speak in Hindi, Teloogoo and Canarese: They wear clothes dyed red with red ochre, they seem poor. They do not eat the cow or bullock, but use the goat, sheep, hare, and other creatures. The Adavi Gollar tribe dwell between Kulburgah and the Bhima river, but principally in a village near Kulburgah, close to Hira-phool. They wear red dyed trousers, and jackets. They are travelling herbalists. Like the Baidar, they eat the crocodile. Their name means the wild Gullar. They do not intermarry with the Gaddha Goolar.

The Goddha Goollar dwell in the neighbourhood of towns and villages. The men wear beards, and rear dogs and asses, they hunt wild animals, and eat the jackal, crocodile, porcupine, iguana. The village Gullar are goatherds and the women beg. They are alleged to be thieves and dacoits.

Kunjana is the name given by mahomedans to a migratory tribe who style themselves Rajyognee. The people of this tribe are found in the southern Mahratta country. They are of ordinary stature, dark featured, and not well favoured, and state that they came originally from Bhopal which their forefathers left 150 years ago. They encamp without the walls of towns, and have no definite period of residence. The men play on musical instruments, and the women combine the art of dancing to fascinate the spectators. They call themselves hindoos and say they worship the brahminical deities, but they wear clothes like the mahomedans and never have brahmins to preside at their festivals. They also eat the cow, but never eat the hog. They bury their dead, place offerings of rice to the manes, and draw the most favourable omen of the state of the deceased by the offerings being eaten by a crow.

Patari, a wandering tribe of people who speak the Telugu language, some of whom have travelled into the Mahratta country pursuing their avocation of manufacturers of hand mills, from which they are also named "Chakki Karne-walay" by mahomedans, and are seemingly identical with the Takinkar. They have a deity whom they term Satwai, whose emblem is suspended around their necks, and resembles the forms worshipped as Hanumantu. They dwell within the walls, in huts made of a fine grass. They marry at all ages; they do not eat the cow or bullock, and they bury all their dead.

Beldar, stone-cutters, wall-builders.

Poshm-wanloo, a wandering Tiling tribe of sudra mendicants, on the banks of the Bhimah, who wander about with a small temple called Poch-amma.

Kaikari, Hind. Mahr. Tel. *Kaikadi*, in Berar, are makers of basket from stems of cotton plants and palm leaves.

Takan-Kar, in the Dekhan and Berar a migratory tribe who make and renew stone hand-mills.

Bhamti, migratory pick-pockets in Berar.

Garodi, a race of migratory jugglers, who exhibit serpents, and profess mahomedanism.

The Maharatta people profess brahminism: but, amongst them is a more general amount of demon, spirit, fetish, totem, shaman, and hero worship than is observed amongst the other races of the peninsula. The deities Hanuman, and the Nagserpent are to be seen in every village, south to the Tumbudra, and blood sacrifices of sheep and fowls are largely made at the village gods. Hanuman is the chief of the village gods, and is invariably smeared over with red lead, which also is applied to every bit of stone or wood that has been erected into a fetish god. There has seemed to me also, a more extensive polytheism, there, than in any other part of India, and an introduction even of the Semitic and Christian names. Between Ellichpoor and Oomraoti, the pariah races are ordinarily called Krishn, a variation of the word christian; all along the tract southwards to Oodghir the Bawa Adam, of near Punderpore is largely worshipped, and the Jabral Abral, worshipped in east Berar is evidently the Gabriel or Jibrail of the Semitic, races. Even amongst the Kunbi race, who profess brahminism, the hindi deities Siva and Vishnu are little heard of and with consent I put up for two days in the temple of the village of Assaye to which the villagers came at the usual periods to worship Hanuman and the serpent, and the officiating priest to wash and ornament its lingam. An officer of Sindiah's artillery had fallen in the battle of Assaye and been buried beneath a tree, and every one in the village continue to worship there his spirit. Sickness is usually attributed by them to the influence of a malignant spirit, and all through the Mahratta speaking district the practice of the "Bolwan" prevails, viz. the ceremony of propitiating the Bhuta or evil spirits who have entered a village inducing them to leave the village and conducting them across the borders with music and a procession. The conductors often move to the next village and thereby cause intense fear and anger, as the morbific influence is supposed to be conveyed to it. Ai, mother, equivalent to the southern, Ammun, is largely worshipped in the form of a rude stone smeared with red lead and her temples are to be seen in lone places, passes and defiles.

At Oomraoti the deities worshipped are named as under,

Male deities.	*Female deities.*
Jabral Abral.	Asra or Asrai.
Massoba.	Meskai.
Bahram.	Amba.
Mahadeo.	Marri.
Shadawal.	Satwai.
Kandoba.	Agachi Panna and her sister
Worba.	Jana Bai.
Yetoba.	

Jabral is worshipped at and near Ellichpur and seems to be the angel Gabriel, whom Mahomedans style Jabrail. In the alliterative habits of the Easterns, Jabral abral is commonly used and the silver figure, that of a man, is worn around the neck. I saw near Oomraoti a rag tree, with incense alters of mud at its foot, which the dher of Balgaon said was a Jabral.

Sakinath is a deity whose worship protects from snakes'.

Massoba.—In the Chauki pass, in the Lakenwara range, which forms the watershed between the Ganges and the Taptee about 10 miles North of Aurungabad, there is a shrine of this deity, to which, from a circle of a hundred miles, people of all castes resort, brahmin, and sudra or dher, but chiefly the Mahratta kunbi. The Jatra is held in the month Cheita, and lasts for four days, during which many sheep are offered in sacrifice. It is in the southern side of the pass, a mere block of stone, with smaller pieces at its foot all smeared with red lead. The objects of their visits are wholly personal, beseeching the deity to give them, or preserve, children, their flocks or their food.

Murli.—Several of the Indian races, the Dhangar, Dher, Mang, Koli and Manurwara and occasionally even the higher hindoo castes, under various vows, devote their girls to their gods. The deity to whom the girl is more frequently vowed, is some incarnation of Siva and his consorts. Amongst the Mahratta people on the western side of India, Kandoba is the usual Siva avatar, to whom the girls are devoted and his chief shrines are at Jejuri, Khanapur near Beder and at Malligaon.

The ordinary people believe that from time to time, the shadow of the god comes on the devotees (*deo ki chaya ati, ang par*)—and possesses the devotees person (*Murli Ke ang ko bhar deta*). These devotees are called Murli in Mahratta, Jogni or Jognidani in Canarese, and Basava in Telugu. They at times affect to be or really are possessed, during which they rock the body, but people occasionally make offerings to them as to an oracle or soothsayer, laying money at their feet, and await the possessing to hear a decision enunciated.

The female deity to whom those near the Bhima river are devoted is Yellamah; the Bhooili race, devote their Murli to Mata, Boys also are devoted, and styled Wagia, from "Wag" a tiger. Near Oomraoti it is to Amba and to Kandoba that the Murli and the Waghia are devoted. The Waghia does not associate with the Murli. At Oomraoti, the people say that Kandoba particularly moves on Sunday and selects a clean tree (clean Murli) whose body he fills.

Brahmins.—Scattered amongst the races in the peninsula, to the extreme south of India, are the brahmin people, belonging to the Arian family. In the more southern and central parts of the peninsula, amongst the Tamul, Telugu and Canarese nations, they are comparatively few, and do not possess lands, are not agricultural but are engaged in religious avocations or as servants of government, and have till lately been the undoubted aristocracy of those districts. In Malabar, the Konkan, in Maharashtra, Guzerat and Orissa, they have been more numerous. Mr. Campbell tells us (p.p. 56-67) that brahmins are one of the most numerous castes in India, and probably follow the greatest variety of avocations. In addition to the priesthood, in the north of India, in Hindustan they pursue agricultural pursuits, and in the south they are clerks and accountants. There are brahmins in the hills north of the Punjab, in the extreme northwest corner of India, occupying both the valley of Kashmir and the hills immediately to the west and south of it. Kashmir itself is a brahman country, all its people, though long since converted to mahomedanism, having been of the brahminical race. The educated class who maintained their own tenets and are still very numerous, are known as pundits and form quite an aristocracy. They are all educated, are exceedingly clever, and are an excessive and somewhat oppressive bureaucracy, which has ruled Kashmir under every successive government, and has sent out colonies to seek their livelihood in northern India. The features of the Kashmir brahmins proclaim them to be one of the highest and purest races in the world. They are quite high Arian type, very fair, handsome, with chiselled features. In many, the nose is high and slightly acquiline, but not Jewish, but in others the nose is straight. Their brow is a little more raised and their nose more arched than in the Greek statue. The ordinary Kashmiri has a strong, athletic figure, but none of them are martial, and the brahmans in these respects correspond: they rule by the brain and pen. They have a greater refinement and regularity of feature than the Afghan and others of a rougher type, with, however, a less manly looking physique, a colour less ruddy and more reduced to a somewhat sallow fairness. The Kashmir brahmans eat meat and are excluded by the Indian brahmans, alike from the five Gaur and from the five Dravid,

and form a separate brahminical class, being more secular than the priestly brahmans of Hindustan and the Dekhan, than whom they are altogether loose in their observances. The Kashmiri pundits are known all over northern India as a very clever and energetic race of office-seekers; as a body they excel in acuteness the same number of any other race with whom they come in contact. Almost all the secular pundits use the Persian character freely; they are perfectly versatile, and serving abroad, will mount a horse, gird on a sword and assume at a push a semi-military air.

The lower classes of Kashmir have long since been converted to mahomedanism, but they seem to be ethnologically identical with the brahmins, and tradition asserts that they are of the same race.

The brahmins of Kashmir are regarded by those of Bengal as of an inferior order, and the agricultural brahmins on the Saraswati banks are similarly regarded.

N. W. Himalaya, Kumaon and the Punjab.—Brahmans are numerous in Kumaon and Gahrwal, where education is more advanced and the Nagri character is used.

People of brahminical origin, approximating to the Punjabi, but in language, habits, manners and dress quite different from the Kashmir; dwell in the hills between Kashmir and the Punjab, but they have abandoned the hindu religion and are now partly Sikhs and in part mahomedans. Their language is a dialect of the Punjabi, they are good soldiers (*C. p.* 50, 60.) Mr. Campbell thinks that the brahmins of the frontier hills are even handsomer than those of Kashmir, the people in general of these hills being the handsomest of the human race.

The *Bamba* dwell in the hill frontier, beyond the Jhelum. They are of brahminical origin, but now profess mahomedanism, and on the eastern side of the Jhelum the hills are shared with other races and by a numerous tribe of Sikhs, converts from brahmans. Their brahmin ancestors became converts to the Sikh religion before it became a political power, and entirely threw off their hinduism. They are very useful soldiers and servants.

There are some brahmins at the foot of the N. W. Himalaya, they are not found beyond the Indus, but are pretty numerous in part of the Rawal Pindi district. South of the Salt Range, in the plains, the Rajput and Jat occupy the country. But there are villages of agricultural brahmans in the fertile plains under the hills in the districts of Sealkote and Goordaspore, and in the valleys of the broken country between Hushearpur and Kangra and in parts of the Umballa district and the adjoining Simla hills. They are not numerous near the source of the Saraswati but lower down its course in the somewhat desolate countries of Marwar and Jessulmir, where the lands are moist, the brahmans are still numerous, are good cultivators and claim to have occupied the country before Jats and Rajputs became dominant.

Central India.—The town of Palli seems to be a brahminical centre. The Marwari or Saraswati brahmans form a considerable portion of the most industrious of the cultivators in Malwa. The Saraswati brahmans seem to have kept much to the tenets of their forefathers.—(*C. p.* 60-61.)

The *Saraswati* brahmans are called in the south Kashastale brahmans; the oldest of the brahminical race, however, are the people of the upper hills in the western Himalaya, who date from a time anterior to hinduism. The Kashmiri were a civilized and literary brahminical people not yet fully hindu. The Saraswati brahmins were the earliest, most simple and pure hindus of Vedic faith; and those of the Ganges and the rest of India are in various of phases of modern hinduism. There are ten classes of Saraswati brahmans, who are supposed to come from the N. W. of India.

In the Punjab, Sind, and countries about the Saraswati, having been superseded by other races, there are few brahmans, except in the eastern part of those tracts, where they are industrious cultivators and claim to be the ancient occupants of the country.

Hindustan.—The main country of the brahmans is that part of Hindustan lying between the Vindhya on the one side and the Himalaya on the north, from the longitude of Kanouj and Lucknow to near the frontiers of Bengal, with a large segment of more especially Rajput country cut out of the centre of this tract.

The brahmans of Hindustan are generally good sized and on the whole well looking men with good features, not particularly fair. They are not of the high Arian type. The greater number are quite illiterate. The priests and pundits have never adopted the Persian writing character, they are not very clever, have little social position, but serve humbly as soldiers, and servants about courts and jails.

From the Gulcheter down to Dehli and in the country about Delhi, there are brahman villages, quite industrious and intelligent, the women working as well as the men, but brahmans do not form a large proportion of the agricultural population. They were kind to and protected fugitives during the mutiny. Some of the less pure agricultural brahmans of these parts are called Tuga or Gour Tuga. All the Dehli country is occupied by Gour brahmans. South of Delhi, in the Jaipur country, brahmans are numerous, and in the Saharunpur districts there are a good many brahmans following secular pursuits, besides the priests of Hurdwar.

About Benares, and the greater part of Behar, are a numerous class of bastard brahmans

called Bahman or Bhaban, or, according to Sir H. Elliot, Bhoonhar, to which the rajah of Benares and all the great landholders of Behar belong. They seem to be offspring of brahmans with some inferior caste.

Brahmans are common in the Banda district, numerous in Baghelcund or Rewah, and there, they condescend to very menial vocations and groom most of the horses on the Jubbulpur road.

In the proper brahman country some of them affect the Rajput prejudice against actually holding the plough, though performing every other agricultural labour and take the names of Dobi, Tewari and Chaubi, *i. e.* man of two of three and of four Veds, and are considered to be of very high caste. Between the Ganges and the Gogra, as we recede from the Ganges, the population becomes more rajput than brahman, but there are many brahmins about Ajoodiah the old Oodh. Beyond the Gogra, is a numerous brahman population, humble, not soldiers. Thence to the north of the Gogra and Ganges, all the way to Tirhut there are many brahmans, south of the Gogra, and thence across the Ganges, into the Arrah district (Bojpore) runs the Rajput dominions.

Bengal.—The brahmans of Bengal are numerous. They claim for themselves a northern origin, but they differ much from the Hindustan brahmans, in language, dress, and habits. They are fairer and larger than the mass of the Bengali population, and some are fine looking men in size and feature, and are largely employed as clerks and accountants, in learned professions, merchants and bankers, sharing the scriptory work with Kaets. They are acute and intellectually capable but not energetic. In Bengal, about nine per cent of the hindu prisoners in jails are brahmins. They will not put their hands to the plough, are aristocratic, but altogether unwarlike and effeminite, and, in mercantile business, are not equal to the Marwari. They are not numerous in Eastern Bengal.

Orissa and Ganjam.—There are many in Orissa, and in the Urya portion of the Ganjam district, many of the Urya brahmans are cultivators, and traders, and are stated to be also brickmakers and bricklayers, but this seems to need confirmation.

W. India—In *Guzerat*, brahmans are numerous, and are employed in public offices and in trade.

Brahmans are numerous from Damaun to Goa and from Bombay to Nagpore and the Wain Ganga, that is, all through the Mahratta country, they principally trace their origin from Kasyapa the first Rishi; there are two classes intermixing here, the Konkani brahman and the Mahratta brahman, the Konkani brahman is not tall, but fair, lithe and decidedly of Arian origin. The Mahratta brahman is dark, often squat, coarse featured, often with thick lips. The Mahratta brahmans are highly intellectual and have been distinguished as accountants and clerks, some of them, as the Peshwas, put aside the descendants of Sivaji and ruled over the greater part of India, and took the command of Mahratta armies. In their buruau duties, on the west of India, they are largely pressed by the Khetri caste, known as Purbho.

The *Koncan* is a hilly district of country to the south of Bombay. The Konkani or Konkanistha brahmans belong to that small strip of land lying between the Syhadri mountains and the Indian Ocean. They are all fair men, not large but with lithe and agile frames. They are good looking, though in this respect inferior to the Afghan and Rajput races, and their women are fair and have pleasing countenances with good figures, but even by their own relations are not considered to be equal to others of the women of India, amongst whom the fair jewesses of western India may be quoted. The race were agricultural until the British became supreme. The men are ready to move abroad in search of employment, and are now met with amongst the Mahratta nation, throughout Berar, and are largely employed on the various public offices, as accountants, clerks, in the educational department and in mercantile houses. They are not military nor agricultural, nor do they engage in trade. The Konkan brahman has a pleasant expression, is easily moved to laughter, much enjoys a joke, and is of an active turn of mind. They are easily distinguishable by the peculiarly large turbans which they wear.

The *Mahratta or Deshista brahmans* are dark swarthy men, much shorter than the Konkani brahman, with large features, large lips, and becoming, in advancing life, unwieldy. The men are not good looking, and the women are decidedly plain. The men are largely engaged in public offices as accountants and clerks. They are stolid men, inactive, and of sedentary habits, with literary tastes and may be justly proud of their poets.

The Konkani and Mahratta brahmins eat together, but do not intermarry. They do not marry in their own tribe or gote, but the Mahratta brahman will marry his mother's sister's daughter, and the Konkani brahman will not marry a relative unless very remotely related.

The Mahratta or Deshasth brahman is a reserved man, little inclined to seek friendship and rarely seen to laugh. They at one time filled almost every office under the Peshwa and under the British, and even in Madras till the middle of the 19th century the revenue accounts were kept in Mahrati, by these brahmins, and in their own country, they were zemindars, deshmookhs and deshpandes, and almost all the village accountants were Deshasth brahmins.

Both these castes have to compete for employment with the writers known as Purbhu, of which there are two classes the Patri Purbhu and the Kaesth Purbhu.

Karnatica.—Mr. Campbell mentions (74-75, 130) that in the north Canara district, in the high hilly country above and about the ghats and on the adjoining parts of Mysore, there is a large population of brahmins industrious and thriving cultivators, and landowners. Most of these are called Haiga brahmins, and culture of the betel nut is their especial pursuit. In a census of North Canara taken some years ago, there were 147,924 brahmins, 146,309 Banter (corresponding to Nairs) and 151,491 Billawar, an inferior class. They are very fair, with large eyes and aquiline noses. In the Nagar district of Mysore, they are very numerous, not very literary, or highly educated, but devoted to agriculture. In south Canara and the Tuluva country, are many brahmins who do much cultivation and all down the west coast to the extreme south of India, the country is said to have been extensively colonised by brahmins led from Calpee by Parasarama. They have been, from political and hostile circumstances, much removed from Malabar, but they are very numerous in Travancore and Cochin, and, in the Palghat valley, they are numerous and are industrious and good cultivators. On the South west coast, the chief class of brahmins are the Namberi who have some very peculiar customs, but they principally engage in priestly offices. The Namberi brahmins resemble the Nair and the Hindu population of the S. W. coast, but are fair. The headman of a village is styled Gauda.

In the festival of Bhaubij, on the 2nd day of the month Kartik, the wives of all brahmans, whether of the Saiva or Vaishnava sects, worship their husbands, standing before them, sacrificing with the lamp and ghi, and pouring rice over their heads.

Dravida.—Brahmans are scattered through Telingana and through the Tamul country, all tall, fine, fair, portly, men, are aristocratic, do not engage in any menial avocation but restrict themselves to priestly offices, to clerking in government establishments, but in these, the Sudra Naidu or Naik of Telingana and the Mudali and Pillay Sudra of Tamul districts and Vesya Chettiar, East Indians and Portuguese, descendants of Europeans, largely compete with them.

In Canarese speaking countries, the brahmans are largely employed as accountants and office clerks. They are much disliked by the vira-saiva lingaets. A village of Lingaets, near Kulladghee abstained from digging a well in their village to avoid attracting brahmins amongst them.

The brahman, kshatrya and vaisya hindu, at certain periods of life, are invested with the sacrificial cord. This constitutes the second birth, dwija, or dwijati, the first having been the natural birth.—(*Wils. Gloss. Mr. Campbell, pp.* 56 *to* 130.)

Kayasth.—The Kait or Kaest has twelve divisions, of which the Gaur Kayath is one. They are clerks and copyists, their habitual language is the Persian, they are largely employed as clerks about native courts. They say that they spring from Chatrgoputr the Secretary of Dharmaraja. They are hindus, generally worshippers of Siva, they allow their daughters to grow up before wedlock, many of them drink to excess. Their features, physical form and colour are more varied than those of any other section of the people. The *Kait* is acute in business, active and painstaking. In northern India they have adapted themselves to the British forms of administration and are useful servants. They have become in places considerable landed proprietors. In Bengal, they are more numerous and form an aristocratic class, have proprietory rights in the soil, and cultivate a great deal.

The Chandrasena Kayath of Bombay and Poona claim to be Kshatrya or descendants of raja Chandrasena a rajah of Malabar. This, the brahmins deny, and declare them to be of menial origin. They have however the honorific name of Purvoe (Parbhu Probabu or master and are distinguished as Patavi and Dawani Prabahu.—(*Wils. Glos.*)

The Khatri, are a scattered race, a Khatri village is unknown. They, however, monopolise the trade of the Punjab, of the greater part of Afghanistan and further to the west in Central Asia and even to St. Petersburgh. They are the only hindus in Central Asia. In the Punjab they are almost the sole people who perform the scriptory work and there they are the chief civil employés of Government and in the villages they keep the village accounts, act as bankers and buy and sell the grain. They are also the gurus of the Sikhs; both Nanak and Govind were Khatri and the Sodi and Bidi of the present day are so. They do not usually engage in military pursuits, but the dewan Sawan Mull, governor of Multan, and his successor, Mulraj, and very many of Ranjit Singh's chief functionaries were Khatri. It is said that a Khatri was dewan of Badakhshan or Kunduz. Under the Afghans, a Khatri was Governor of Peshawar, and Akbar's famous minister, Tudar Mull, was a Khatri; Joti Persad the Agra contractor, is a Khatri. The Khatri claim to be descendants of the old Khetrya. They are hindus, none have ever become mahomedans, and few have become Sikhs. The Khatri of northern India are a very fine, fair, handsome race. Those of the Western part of

Peninsula of India, about Bombay, are equally fair. In Bombay and the adjoining districts, they are part of the writer class whom Europeans style Purbho and the Ror or Rora of northern India are said to be Khatri. In Afghanistan they are petty traders and shopkeepers, many of them in the Punjab hold land and cultivate.

The *Kukka*, a handsome race on the east of the Jhelum, are said to have been Khatri, originally and of the *Gaddi*, an interesting race of fine patriarchal looking shepherds in the interior of the Kangra hills, the most are Khatri.

In Behar is an agricultural class, called Kshatri, Khatri or Chatri, who sometimes serve as soldiers or as darwans in Calcutta.

In Loodianah there is a large number of thriving merchants of the Khatri race with a numerous colony of Kashmir shawl weavers C. p. 109, 112.

Multani is a term applied to several trading classes in the north west of India, wandering pathan merchants and others.

Hyderabad.—The territories of the nizam of Hyderabad, contain four distinct nations, the Canarese, Mahratta, Teling and Gond, with numerous fragmentary tribes, and many wandering, houseless races. The Hyderabad territory has an area of 95,337 square miles, a population of 10,666,080 and an annual revenue of Rs. 16,500,000 or £1,650,000. Berar, now assigned to the British, belongs to the nizam. It has 17,334 square miles, with a population of 2,231,565.

Koli.—On all the western side of the nizam of Hyderabad's territories, also to the N. W. and S. W. in British territories, are numerous clans of the Koli race. In the autumn of 1867, a small body of Koli settled at the village of Kulloor about nine miles south of Hominabad. They had erected small huts for themselves outside the village, the men engaged themselves in mat-making from the leaves of the date tree, and the women in disposing of these and in begging. They were well made men, darkened from exposure, but very poor. They called their tribe Haravin or Halavin, but asserted that they were Kol, or Kablgiri or Ganga wakl. The villagers stated that they were honest. But they are alleged to engage in dacoity and thieving. The Koli, according to Captain Mackintosh, are to be found on the west in every part of Guzerat, constituting a large part of the agricultural population, in several parts of that province. They are numerous in Attaveesy and there are many settlers in the northern Konkan. In the hilly tract of country lying between Moosa, S. W. of Poona and the hill fort of Tambuk, the source of the river Godavery, the inhabitants are chiefly Koli, and a few are scattered over the districts of Kandesh, Ahmednuggur, Poona and Sholapore, along the Balaghat on the western frontier of the Hyderabad territory. They seem to have early occupied Guzerat and the Attaveesy, and part of the latter country is still called Kolwan. They are arranged into many separate tribes, but all of them retain the appellation of Koli. The Raj, Salesi, Tonkri, Dhour and Dunggari Koli reside in the Attaveesy and in the Wun, Dandory and Nassik districts, and worship the hindu deities Khandoba, Bhairu and Bhawani. A few Raj Koli are settled in the Konkan and Jowair. They are the same people, an offshoot of the Mahadeo Koli, and are said to have been expelled for some offence. They are farmers and labourers, but the Dhour are the lowest in civilization, are the greatest drunkards and eat the flesh of animals which have died a natural death. They are ruled by chiefs termed Naiks. The Koli have, in some instances, attached themselves to the Bhil, and taken the name of that race. The Mullar or Panburri or Choomli Koli, is respectable. He is employed in every Dekhan and Kandesh village as a member of the third division of the Balottah and supplies water to travellers, wearing on his head the choomli or twisted cloth, hence the name, on which to rest the water pot. This Koli is also found in the Hyderabad Balaghat, extending eastward to Khanbar, Indore and Bodin, between the Godavery and Hyderabad, also near Naldrug, and eastwards down the banks of the Bhimah and Kistnah to Alpur near Kurnool.

The *Ahir Koli* of Kandesh reside along the banks of the Girna and Tapti rivers and are employed as watchmen.

The *Murvy Koli* is one of the Balotta, in every village in the northern Konkan, and in Bombay families, theyare employed as palanquin bearers. Some Koli are settled as soldiery in Angriah Kolaba and, at Bombay and Kolaba, in 1837 there were 1,000 families, and 500 to 600 families at Bassein, employing themselves as fishermen and seamen. At their meetings, whether for congratulation or condolence, they consume large quantities of spirits. Many are wealthy.

Mettah Koli who reside in Bombay, are fishermen and seamen, and many have wealth.

In Bombay, Tannah, Bhewndi, Kallian, Bassein, Daman, &c., are a great number of christian Koli, said to have been of the Sone section and to have been forcibly converted by the Portuguese, but, terrified by the cholera in 1820-21, a portion reverted to paganism.

Chanchy Koli are farmers and labourers, settled in Bombay, who came from Junaghar in Kattiwar.

In Guzerat the Koli are of three sections; the most numerous, the Tullabdah, then the Puttunwaria, the Kahrez, the Dhandur and Bhabria. They are in the Barodah district north to Khyrallu and Massanah in the Mahi Kanta, and form a large portion of the population. In 1837, in the Khanir district alone, there were 70,000. They are labourers and watchmen, and a few under the same of Selottah, form escorts of treasure.

The *Mahadeo Koli* reside in the valleys of the Syhadri range, extending from Moossa S. W. to Poona, northwards to Trimbuk, the source of the Godavery river, between lat., 18° 15' and 20 N. and long. 73½ and 74 E. These small valleys are known as Mawil, Khorah, Nahir and Dang, *i. e* valleys, glens, straths and wilds. They are classed into 24 kula or clans each of which has many subdivisions. Their numbers in 1837, were estimated at about 50,000 souls. The members of the same kula, do not intermarry. With the exception of the cow and village hog, the Koli eat all other animals. The women are generally slender and well formed with a pleasing expression of features and some are very pretty. They are chaste and have large families. The Koli are fond of charms and amulets. (*Captain Mackintosh in Madras Lit Soc. Journ.*)—Colonel Tod describes a lofty three peaked mountain, on which is a temple dedicated to Aya-Mata, also called Isani, the tutelary divinity of the Koli. This, and the effigy of the horse, are the only objects of adoration among this aboriginal race. This was the first time he had seen a personification of Mother Earth; for such is Isani, from Isa, 'goddess,' and Anani, 'earth,' the universal nurse-mother (ayamata). Whether the worship of the horse is typical of the sun, the swiftest of created representing the swiftest of uncreated objects, he says, he does not know, but in this they resemble the other forest tribes, the Bhil and Surya—(*Travels, p.* 137-37.)

Berar.—The other races occupying the Maharashtra, Carnatica, and Telingana portions of the Hyderabad country having been already noted, (pages 68 and 94) it only remains to mention the inhabitants of Berar, the Gonds, nd the broken tribes.

The inhabitants of Berar are

Jew ...	16	Sudra	1,441,271
Parsi ...	75	Vaisya	28,018
Christian...	903	Kshatrya	36,831
Mahomedan	154,951	Brahmin	49,843
Helot Castes	301,379		
Aborigines	163,059		2,231,565
Hindu sectarians	55,219		

The Kunbi, in Berar, allot themselves into eleven classes.

Mali.	Haldi Mali	Sagar.	Vindesa.
Ful Mali.	Wanjari.	Atole.	Pazni.
Jerat „	Gantadi.	Telale.	

With the exception of the Haldi Mali and Pazni, they have roti vya whar, amongst each other, but not Beti vya whar; *i. e.* they eat with each other but do not intermarry. The Kunbi and Mali, alone, of the Sudra people, are 834,588 souls. The Kunbi and Mali eat flesh, drink liquor in moderation, and their widows may all re-marry if they choose, except those of the deshmukh, who follow the high caste custom. The Dhangar sheep farmer race are of two sections, the Kota Pullia Dhangar who keep sheep, and the Barji Hatkar or "shepherds with the spears." The latter still hold much land on the borders of the Nizam's territory and, until the British domination, were notorious for pugnacity and rebellion, they even still continue a quarrelsome and obstinate race. They are supposed to have come from Hindustan, in twelve tribes, and been impelled by the Gonds towards Hingoli and Bassim, which locality got the name of Barah Hatia, or the twelve tribes. They now occupy the hills on the north bank of the Pyn Ganga. To die in the chase or in war is deemed honorable and the Hutkar who are so killed are burned. The Hutkar are fine, able bodied men, independent but arrogant; many of them never shave or cut the hair of their face.

The Bhui are in number 17,980.

The Banjara, 51,982, most of whom belong to the Bhukyava tribe, are supposed to have rajputs from Central India.

The non-Aryan races in Berar, 163,059 in number, are as under:—

Gond	68,542	Arakh	384	Korku	28,709
Bhil	2,279	Lajar	1,309	Kurki	8
Ramusi	7	Audh	28,037	Kolam	9,969
Koli	21,224	Nihal	2,591		

The Gond of Berar inhabit the Melghat and a strip of wild country along the Wardha river. They arrange themselves into thirteen sections, viz.

Manes	Dalwe	Pardhan	And'h
Gowari	Kahilwar	Jaduwan	Khatulia
Raj gond	Thotli	Kohalin	Thakur
			Buchadi

The men, and women of the Gond never associate at work, but labour apart. A Gond desirous of having a wife and having resolved on a particular girl takes with him a band of his comrades to the field where the women are at work and he, suddenly, alone, runs towards, and attempts to capture, her. His comrades will not, however, aid him to carry off the girl, unless he succeed in touching her hand before she reach the village shelter. By touching the girl's hand, the marriage contract is sealed and

cannot be broken; nevertheless the women often fight every inch of the ground, inflict the most serious hurt and sometimes shameful defeats, continuing the contest even after the bridegroom has touched the brides' hand and, if the village skirts be reached, the men turn out, to aid the women, and pursue the attacking party back to their own village.

The Bhil of Berar occupy the eastern slopes of the Gawilgur range to its western extremity and stretch far westwards into Khandesh. They belong to the Turvi clan, all now, are mahomedans.

The Koli are in two distinct tribes, but they are agricultural and there are several substantial potails amongst them.

The Andh are also called Pardhan, and are said to be helot Gond, but they are cultivators, and do not eat animals that die of disease.

The Kolam are a Gond tribe, who have settled to agriculture.

The Lajar are woodcutters in the Satpura range.

The Nihal are a helot class among the Gonds.

The helot races and migratory, houseless, tribes are in number 301,379.

Mhar ...	227,824	Madigi ...	1,718

THE CENTRAL PROVINCES, is a term by which, under a resolution of the Government of India, during Lord Canning's rule, the provinces of Nagpore and the territories of Saugor and Nerbuddah were united under a Commissioner. The Central Provinces consist of perhaps the grandest plateau on the face of the globe, but more than half of it is covered by the densest jungle, where the wild beast finds its lair and the Gond savage a precarious subsistence. The plateau is in the very centre of the Indian peninsula. From it, as a focus, radiate the great rivers of the Deccan. To the north flow the Sone into the Ganges, the Cane, the Betwa, the Sindh and the Chumbul into the Jumna. To the west are the Taptee and Nerbudda, and to the East the Wein Gunga, Wurda and Pein Gunga, which form the Godavery. What the Kuen Lun mountains are to the river system of Central Asia, and the Himalaya to Northern India, that is the Mahadeo range to the Deccan. It is true that the Godavery and Nerbudda series of rivers are little more than mountain torrents, but engineering science will do much for their navigation, and railways with their feeders will supplement them. On this vast tableland there is soil of surpassing fertility, wood, whether useful like teak or ornamental like ebony, which, with proper conservation, is inexhaustible, and such mineral resources as coal, iron, precious stones and gold. Here, but for the want of population, all the emigrants of England for the next decade might settle and grow rich. The area is 111,238 sq. miles, of which 47,299 are unculturable, and in 1868, about half of the remainder was under cultivation. In 1862, the provinces yielded 80 lakhs a year, but, in 1867, the revenue had increased to 120 lakhs. The Satpura range runs 800 miles, with an average breadth of 60 miles. The Chouradadur plateau is 100 sq. m., and the Nowagaon lake is second only to the Deybur lake in Oodeypoor.

The Nagpore province and the Saugur and Nerbuddah territories occupy almost the old territorial division of Gondwana and they were reunited under the designation of the Central Provinces, containing nineteen districts viz:

Saugur and Dumoh on the Vindhyan table land.

Mandla, Jabulpur, Narsinghpur, Hoshungabad and part of Newar in the Nerbada valley.

Baitool, Chindwarah, Seoni and Balagahat on the Satpura table land.

Nagpore, Warda, Bhandara and Chanda, on the Nagpore plain, in the valleys of the Warda and Wain-Ganga.

Raipur and Bilaspor on the Chatisgarh plain, and Sumbulpor in the valley of the Mahanuddy.

Upper Godavery, on the left bank of that river.

The Satpura plateau runs nearly east and west for 600 miles. It is the true barrier between Northern and Southern India and is the line on which the settlers from Hindustan met the emigrants from the Dekhan and Maharashtra, each of them pressing the prior races into the great natural fastnesses of the mountain range. The Satpura mountain range extending from Rajpiplah to Asirgarh, is a belt of mountainous country 40 or 50 miles in breadth with an average height of 2,000 feet.

In Gondwana there are now only two millions of aborigines, out of a total population of nine millions. The remaining seven millions almost amount to a microcosm of the people in India, and justice is administered in the Central Provinces in five different languages, viz. Urdu, Hindi, Marathi, Uriya and Telugu. In round numbers the seven millions may be thus classified:—1½ millions speak Marathi—half do. speak Uriya,—5 millions speak Hindi.

Dr. W. W. Hunter gives the following as the languages peculiar to Central India. :—

Ho (Kol.)	Mundala.	Naikude.	Khond.
Kol (Singhbum.)	Rajmahali.	Kolami.	Savara.
	Gondi.	Madi.	Gadaba.
Santali.	Gayeti.	Madia.	Yerukala.
Bhumij.	Rutluk.	Kuri.	Chentsu.
Uraon.		Keikadi.	

He arranges the races and tribes speaking these into Kolarian and Dravidian, viz.

1. The Kolarian,

Santal.	Bhumia.
Kol.	Bhui.
Mundah.	Mair.
Korku.	Mina.
Bhil.	

2. The Dravidian, or people of the Tamil tongue.
Oraon.
Gond.
Khond and S Peninsula aborigines.

A Committee included as Kolarian,

Bhilalah.	Bhumiah.	Bhil.	Kawar.
Bygah.	Korku.	Dhangar.	Nahur.
Bhunjia.	Kol.	Gudba.	Manji.
Binjwar.			

Kolarian tribes occupy the broad belt of hilly country that runs almost continuously across India from the Santal tracts to the Kurku settlements. The Santal in the east and the Kurku in the west speak a language substantially the same. The Kolarian tribes of the Central Provinces are—

Kol.	Bhunjiah.	Gudba.	Mahto.	
Kurku.	Bhumiah.	Kawar.	Soura.	Doubtful.
Bhil.	Bygah.	Nahur.	Goli.	
Binjwar.	Dhangar.	Manji.	Aguriah.	

The Dravidian tribes of the Central Provinces are—

Gond.	Durweh Gond.	Khond.	
Bhuttra Gond.	Khutalwar ,,	Dhunwar.	Doubtful.
Maree-Gond.	Aguriah ,,	Nahur.	
Maria or Gotawar.	Hulbah.	Punkah.	
	Koy.		

The non-Aryan occupants of the Central Provinces are

Bhil.	Bygah.	Kunbi.	TilingKomati.
Korku.	Parwar.	Relee.	Mahratta.
Gond.	Kachi.	Oorya.	Mariah.
Lodhi.	Chamar.	Kond.	Jharia.

with a sprinkling of rajputs, brahmins and mahomedans, in almost every district.

In the extreme west in Nimar, are the Bhil.

From thence, going to the North East, we find along the Satpura range the Kurku and Gond, —the Kurku belonging to the Kolarian family, and the Gond to the Dravidian.

The Kurku are not numerous, and are chiefly to be found in the hilly part of the Hushungabad, and the adjoining northern part of the Chindwara, districts, in these localities, they meet with the Gond, and a few Kurku are also found in Baitool.

The Gond are numerous in the plateau district of Seone, and in the south of Jubbulpur, and they are found also in the hilly parts of Jubbulpur.

The Gond, Bygah and Kol form a large section of the population of Mandla, and the Gond and Bygah are also in the hilly parts of Balaghat, south of Mandla.

The Ooriya occupy entirely the Sumbulpoor district.

The *Khond* dwell in the country surrounding the Ooriya in Sumbhulpur and to the south.

The Hindoo races are numerous in Raepur and Belaspoor but a number of Gonds are scattered about and the Gond are numerous in the wild parts of Nagpur and Chanda and, on the Pranhita and Godavery rivers, the Maharatta and Teling races meet.

The Marathas proper consisting, chiefly, of Maratha brahman and Kunbi, scarcely exceed half a million in number, but owing to the prominent and powerful position so long occupied by them in the country, they have imposed their language and some of their customs on about twice their own number of menial and helot races, such as Dher and Mang, who, Maratha, in Nagpur, speakers of Hindi in the Nerbada valley, only retain their individuality because they are too low in the scale for absorption. The Maratha influence, however, did not penetrate much beyond the Nagpur plain, consisting of the lower valleys of the Wardha and Wainganga. To the south of this area the Teling races are intermingled with the settlers from the west, though not in large numbers.

To the east, Chhattisgarh is inhabited, after some fifteen centuries of Rajput ascendency, mainly by hindu races, except in the remote eastern district of Sambalpur, which, by language, belongs to Orissa.

The northern line of demarcation may be drawn along the southern crest of the Satpura range, for though a few Marathas are found on the table-land, there are probably more Hindi speakers, below the ghats, in the Nagpur plain and the almost universal language of the three Satpura districts, Seoni, Chindwara, and Betul, is Hindi.

The older settlers are in many districts called "Jharia from Jhar" (underwood, forest,) and are much looser in their observances than later comers of the same caste, eating forbidden food, and worshipping strange gods. For some generations after their arrival the northern importations generally keep up their home connection by marriage, fearing to ally themselves with degenerate brothers who may have carried their carelessness in social matters so far as to permit mesalliances, and, perhaps even to have contracted some taint of aboriginal blood. Thus in the Hoshangabad district the Ghori (moham-

madan) kings of Malwa seem to have attained this dignity without distinction of persons, and a hindu in difficulties would as soon invoke the "Ghori Badshah" as any other supernatural power. At Murmari, ten miles from Bhandara, the villagers worship at the tomb of an English lady, ignorant, and probably careless, of the object for which it was erected. The Gujar race are among the steadiest members of the community, and have a great deal too much property of their own to admit the idea of professional cattle lifting as a possibility amongst civilised people. The Lodhi, mere agricultural drudges in Upper India, have attained some distinction as swash bucklers and marauders in the Narbada country, and some of their chiefs still retain all the popular respect due to families which have forgotten to live on their own industry. On the other hand, there are rajputs who have taken to banking.

Damoh has a population of 262,641 souls, they are a few mahomedans who are cotton carders, weavers and the like. There are upwards of sixty different castes or sects of hindoos, amongst whom are

Kurmi	34,907	Brahmin	23,666
Lodhi	31,980	Ahir	15,281
Chamar	28,401	Bania	9,783
Gond	26,724	Rajput	9,187

The Lodhi came from Bundlekhund three centuries ago.

The Kurmi came from the Doab about A. D. 1620. The Kurmi are a large class of cultivators in the eastern and central portion of Bengal, few in Delhi and in the Upper Doab. According to Sir Henry Elliot, under the different names of Coormee, Koormee, Kumbhi, Kunabi, Koombhee, they extend throughout the greater part of Hindostan, Berar, and the Western Dekhan. They are famous as agriculturists, but frequently engage in other occupations. The Kurmi women, like the Jatni, assist the men in husbandry, and have passed into a proverb for industry.

Bhulee jat koonbin kee k'hoorpee hat'h
K'het nirawen apne pee ki sat'h.

The Coormee of the Hindustan provinces are said to have seven sub-divisions, which are usually enumerated as K'hureebind, Puturya, G,'horchurha, Jyswar, Canoujea, Kewut and Jhooneya.—(*Elliot.*)

The *Gond* of Mandla have the "Lamjina shadee," in which the betrothed lad serves an apprenticeship for his future wife. A Gond girl, however, may exercise her own will and run off with a man, but it is quite allowable for her first cousin or the man whom she has deserted to abduct her from the man whom she has chosen. The *Shadi Bandhoni* is a compulsory marriage. In the *Shadi Baitho*, a woman goes to a man's house. Widows re-marry either to a younger brother of their deceased husband, or to some other man.

To burn dead men is deemed the most honorable mode of disposing of the remains; women are always buried. When the father of a family dies, if well to do, they clothe the corpse in a new dress, and bury or burn the remains; his spirit is, however, supposed to dwell in the house till it be released and till released, the spirit is the only object of worship in the house. After the funeral, a piece of turmeric and a pice are tied up in a cloth and suspended to one of the beams of the house. When the time comes to lay the spirit, the cloth is removed and, with a portion of the flesh of a goat or a pig, is offered to the village deity, a feast is given to relatives and the elders and the release is complete.

The Baiga are supposed to be the prior occupants of the Mandla district, and take the title of Bhumia or landlord. The Baiga language is almost pure Hindi. They have three sections, Binjwar or Bichwar, Mundiya, and Bhirontiah, each of which is subdivided into seven sections. Even where the Gond and Baiga occupy the same village, the Baiga live apart from the Gond. They are of a slight, wiry build, hardy, extremely active, fearless, trustworthy and independent. They cultivate by the "Dahya" system and sow the kodo or Paspalum frumentaceum in patches called "Bemar."

Nimar.—The population of Nimar numbers 1,90,440 souls of whom 34,805 are Bhil, Kurku, &c. There are scarcely any Gond in Nimar.

The Bhil, as a distinct tribe, are found chiefly in the block of hills surrounding the fortress of Asirgarh. Until of late years, they were a troublesome set of robbers and they are still a dissipated and idle race. They are, however, improving and a good many of them have cattle and have settled down to regular cultivation.

The other population of Nimar consists of

Dher Mhang and other non-Aryans	18,446	Hindoo immigrants ...	118,508
Europeans ...	402	Mahomedans...	18,279
Brahmins ...	6,783		

The best cultivators in Nimar are the Kunbi Gujur, Mali and Rajput races. The language is a mixture of Hindi and Marathi with a good many Persian words and it is written in a peculiar current Devanageri character.

Kurku occupy Nimar, the Gawilghur hills of Berar, and Kalibhit. Kurku or Kur occupy the western Satpura, in the hills about Gawilghur, near Ellichpur and northwards towards Indore. Major Keatinge describes them as a tribe of Gond but this is a mistake, they are Gond, but are a branch of the Kol family. The Kurku and Gond keep themselves separate, and they each have a separate language. According

to Voysey, the Gond consider themselves a distinct tribe from the Kur and neither eat nor intermarry with them. Their language has a great resemblance to that in use by the Lurka Kol and Santal. None of these correspond with the words of the Dravidian tongues.—(*C. P.* 41-2.) The Kurku language is identical with that of the Kol.

Nagpore district population numbers, 634,121, viz.

Europeans	2,462
Maratha, Kunbi and cognates . .	177,183
Kansar, Sipi, Sonar, Gurao, Beldar Barhai, Koshti, Dhobi, Khatik, Nai, Bhoi, Dhimar, Banjara, Madrassee, Bhamtya, and Rangari, ...	118,019
Dher, Chamar, Mhang, Bhangi ...	114,407
Pardesi, Teli, Mali, Ahir, Pardhan Barai...	106,483
Bania, Ponwar, Marwari, Halwai, Kalal...	17,118
Brahman	26,597

Vidur (illegitimate brahmins) ...	5,094
Gosain	5,203
Gond with a few Kurku and Bhil...	30,698
Mahomedan	27,371
Parsee	28

The language is a mixture of Hindi and Marathi. The bulk of the population worship Siva as Mahadeva.

The agriculturists are chiefly the Kunbi, Marathi, Pardesi, Teli, Lodhi, Mali, Barai, and Pardhan, of whom the Kunbi is the best and most numerous.

The Koshti and Dher are weavers.

Raipur population in 1866 amounted to 952,754, almost all of them immigrants,—Kurmi, Teli, Lodhi, Chamar, Ahir, Gaira, Ganda, Kanwar, from the north, the Halba from Bastar and Chanda, and Mahrattas. The Kurmi, Teli, Chamar and Halba are the chief agriculturals.

The Kanwar are regarded as the prior occupants, they prefer the jungle tracts, but are supposed to be Rajputs imperfectly hinduised.

The Halba are immigrants from the south. Once in his life-time, a Halba sacrifices three goats and a pig, one to each of the national deities, called Narayen Gasain, and Burha Deo, male deities; Sati and Ratna, female deities.

Balaspur contains a population of 780,503, amongst whom the chief divisions are

Immigrants.		*Non-hindu prior races.*

Other hindus	133,833		
	598,268		
Mahomedans	9,041		

Sambulpur population amounts to 812,348 of whom 497,774 are engaged in agriculture—the Kolta, the Agharia, and Brahmin are the largest cultivators. The Kolta are a hindu race; the Agharia claim to be rajputs: the brahmin are of two sections, the Uriya and Jharwa. The Uriya brahmin are a lazy improvident sect, and subsist chiefly by begging. The Jharwa brahmins are intelligent, careful and hard working, cultivate the soil, engage in trade. The labourers are the Pab, Saoura, Ganda, Gond, Mali and Gaoli races. The Mahanti are clerks, the Bhulia, Mehra and Koshti are weavers.

Upper Godavery district has many cromlechs; kistvaens and cairns. The present population is 54,680 of whom the Dhobi are a large part.

The *Boi* or Dhimar are fishers, palanquin-bearers.

Gote and Koe or Koitor are the prior occupants. The Gote and Koe belong to the Gond family, they are fond of spirits and worship ancestors. They are timid, inoffensive and tolerably truthful. Some of them have settled and have sheep and herds and money.

Sagor population numbers 498,642 half of whom are engaged in agriculture; the best are the Kurmi, Kachhi, Lodhi and Dangi. Those most addicted to crime are the Lodhi, Bundela, Brahman, Khangar, Churar, and Kohri.

Gond.—"The name Gond or Gund," says Mr. Hislop, "seems to be a form of Kond or Kund. Both forms are most probably connected with Konda—the Telugoo equivalent for a mountain—and therefore will signify 'the hill people.'" And this name they must have borne for many ages, for we find them mentioned by Ptolemy, the Geographer (A.D. 150) under the name of Gondaloi. Of their history we know but little; under all changes they appear to have preserved their own forms of worship, and social habits, but some adopted

to a greater or less extent the forms of hinduism, and a still fewer number have become mahomedans. The rajputs from Malwa seem to have pushed their conquests into the country and intermarried with them. Their descendants are still known as Rajputs or Gond Rajputs. They established governments, *one* of which ruled the Narmada valley and had its capitals at Mundala and at Garha near Jubalpur. It was founded by Jadu Rai, who succeeded his father-in-law Nagdeo, the Gond raja of Garha (A.D. 358) Mundala was conquered by his descendant Gopal Sa, A.D. 634. Sungram Sa, the 47th in descent from Jadu inherited only three or four districts in 1480, but at his death, in 1530, he ruled over fifty-two. Ferishta tells us that when Asif Khan invaded Garha in 1563, Bir Narayan was raja. Hirdi Sa, the 54th raja, built the temple at Ramnagar near Mundala, and Seoraj, the 59th began to reign in 1742 when Balaji Baji Rao invaded the country. A *second* kingdom had its seat on the southern slope of the Satpura hills—at Deogarh in Chindwara, one of the rajas of which, Bakht Baland, was either taken prisoner by one of Aurangzib's generals, or visited Delhi of his own accord, where he was converted to mahomedanism, and then permitted to return to his country, where "his descendants," says Mr. Hislop, "though adhering to this change of creed, " have not ceased to marry into Gond families " and hence the present representative of that regal house is not only acknowledged by the whole race about Nagpur as their head and judge, but " is physically regarded a pure Raj Gond." A *third* Gond principality had its capital at Kherla in Baitul, to which belonged the famous forts of Gawelgarh and Narnallah. In 1433 its raja, Narsingh Rai, who is represented as powerful and wealthy, was slain in battle by Hushang Ghori, king of Malwa, and Kherla taken. At a later date it appears to have become subject to Pandu Gauli, the raja of Deogarh, and continued so under his successors. Not far from Kherla we find a hill raja at Saoligadh in Aurangzib's time, who seems to have maintained his independence till swept away by the Mahrattas between 1760 and 1775. A *fourth* Gond kingdom was that of Chanda on the Warda, which extended far to the east and south east. The four dynasties arose before the ascendancy of the Moghuls in India, and have left architectural and other monuments of great interests, and of which we still want satisfactory accounts: " The principal architectural remains are at Mandla, at Garha near Jubalpur; at Chauragadh near Narsinghpur, at Deogarh near Chindwara; at Kherla near Baitul and at Chanda." But besides the preceding kingdoms, there was a *fifth* Gond Rajput dynasty at Warangal or Orankal in the Dekhan, to the south of the Godavari, which is said to have been founded by Kakati of the Ganapati family about A.D. 1088. The kingdom became very powerful about the end of the 13th century, and the raja of Orissa, becoming jealous of his neighbour's power, solicited the aid of Allah-ud-din who sent an army in 1303, through Bengal, to attack Warangal, but his expedition failed. Malik Kafur was then despatched with 1,00,000 horse into the Dekhan, and after a siege of some months he took Warangal in 1309 and made the raja, Ladderdeva, tributary. In 1321 it was again besieged by Alif or Jema Khan, the son of Ghiyas-ud-din, Tughlak, but he was obliged to retreat with the loss of nearly his whole army. He returned, however, and in 1323 reduced the place and carried the raja prisoner to Delhi. It is said he was afterwards released and restored, at all events Warangal re-asserted its independence in 1344, and assisted Hasan Ganga, Bahmani, in his revolt. From this time the Bahmani kings of Kulburga involved the native rajas in continual wars. Firuz Shah (1397-1422) especially, obtained great successes over the rajah of Kherla, and finally Amad Shah, Wali, took permanent possession of Warangal, forcing the raja to relinquish his ancient capital and flee northward across the Godavari, where he established himself in wild independence among the inaccessible forests. The Gond rajas still maintained their independence however, and in 1513 we find them joining in a powerful confederacy on the side of Medon Rai against Mahomed II of Malwa. At the close of the 16th century, Akbar reduced the western portion of Gondwana, but it was not till the middle of the 18th that permanent progress was made. About 1738 Raghoji Bhonsa interfered in a disputed succession in Deogarh and secured half the revenues, but in 1743 the Gonds raised an insurrection which Raghoji quelled, and annexed the principalities of Deogarh and Chandah to his own dominions, and in 1751-52 he took the forts of Gawelgarh, Narnalla, and Manikdrug with the districts dependent on them. From this period large numbers of Mahrattas settled in these districts and the Gonds became more restricted to the hills.

The Gonds divide themselves into twelve and a half castes: viz,—Raj Gond, Raghuwal, Dadare, Katulya, Padal, Dholi, Ojhyal, Thotyal, Koilabhutal, Koikopal, Kolam, Madyal, and an inferior sort of Padal as the half caste. The first four, adds Mr. Hislop, with the addition, according to some, of the Kolam, are comprehended under the name of Koitor—the Gond—par excellence. This term in its radical form Koi, is the name given also to the Meria sacrificing tribes of Orissa and to the wild tribes skirting the left bank of the Goda-

vari from Rajahmandri to near the mouth of the Indrawati. The Persian word koh, a hill, approaches this more closely than even the Telugu konda. The Koitor, as a rule, resent with no small vehemence, the imputation of belonging to any portion of the hindu community. The first three classes generally devote themselves to agriculture; the fourth includes those who have begun to conform to the hindu religion and ape hindu manners. The Padal, Parhadi, Pardhan, or Desai, called Raj Pardhan to distinguish them from the Marathi speaking half caste, who play on wind instruments of brass and spins cotton thread, are the religious counsellors or bhats of the upper classes. The Dholi are musicians, and a subdivision of them in jungly districts are employed as goatherds. The Ojhyal are wandering bards and fowlers. The Thotyal (i. e. 'maimed') or Pendabarya 'ministrels of God' are also called Matyal, because their songs are chiefly in honour of Mata, the dreaded goddess of small pox. They make baskets also. The Koilabhutal are the third wandering caste, and their women are dancing girls. "They follow their profession chiefly among the hindus, it being reckoned disreputable by the people of their own race." The Koikopal, i. e., Gondi Gopal are a settled class devoted to cow-keeping. The Madya, called Jhodia in Bastar, are savages on the Beila Dila Hills and in the remoter parts of Chanda, the only clothing the women wear is a bunch of leafy twigs fastened with a string round their waists to cover them before and behind. In this they resemble the Juanga to the south of the Kol country, the Chenchi near the Pulicat lake and to the north of Ellore and till about A. D. 1830, a similar custom existed among the Holier near Mangalur. The Kolam extend along the Kandi Konda or Pindi Hills, on the south of the Warda river, and along the table land stretching east and north of Manikgadh and thence south to Danttanpalli, running parallel to the right bank of the Pranhita. They do not intermarry with the common Gond, but the one attend the nuptials of the other and eat from their hands. Connected with the Gonds, though not included in the preceding classes are the Badiya between Chindwara and the Mahadeva hills, who have conformed to the hindus in their language and some religious observances; the Halwa, pretty numerous in Bastar, Bhandara and Raipur, who covet the distinction of wearing a sacred thread, a privilege, till recently, sold to those in Bastar by the raja; the Gaiti Gonds in Bastar who call themselves Koitor; the Moria Gond, who are the principal agriculturists in Bastar and the Naikude Gond inhabiting the jungles on both banks of the Pain-Ganga and especially the tracts between Digaras and Umarkhed and found about Aparawa-pet and as far as Nirmal,—who have adopted the hindu dress and will not eat beef, but they live by the chase, or cut wood and grass, and are a terror to their neighbourhood by their depredations.

Quite distinct, in language at least, from the Gond tribes are the Kur or Muasi and the Korku to the N. W. and W. of the Mahadeva hills. Of the latter of these, Mr. Elliot, gave interesting details in the 2nd number of the Journal of the Antiquarian Society of the Central Provinces: they belong to the Kol or Munda family.

Physically the Gond are below the average of Europeans in stature, and in complexion they are decidedly darker than the generality of hindus. They are somewhat thick-set and muscular, but well proportioned. Their features are rather ugly; they have roundish heads, wide mouth with thickish lips, and somewhat distended nostrils. Their hair is straight and black, and the beard and moustache scanty. But their hair and their features, says Mr. Hislop, 'are decidedly Mongolian. They have an average amount of intellect, and remarkable quickness of observation. They are truthful in their statements, faithful to their promises, and observant of the rights of property among themselves; they nevertheless do not scruple to plunder those to whom they are under no obligation to fidelity. They are not deficient in courage when a proper occasion arises to call it forth, and more than once in late years they have saved British officers from death by wild beasts. They are shy in their intercourse with strangers, simple-minded, superstitious though free from fanaticism, but unfortunately habitually drunken. No festival, says Mr. Hislop, can be held in the forests or village in honour of their deities, no birth, marriage or death can take place in their families, without an excessive indulgence in ardent spirits.

Their religion is also as distinctively of Scythian origin as their language and physique. All introduce figures of the horse, made of earthenware, in their worship, which they offer instead of living sacrifice. They propitiate the names of their ancestors, by offerings of earthenware horses, rice and other grains, eggs, fowls, or sheep. On one occasion, at Jami, a cow was sacrificed at the grave of a Gond, but the authorities of the Bhonsla government hearing of it, the relatives were publicly whipped and all were interdicted from the repetition of such an act. Those who have conformed to hindu customs, and the Madia of Bastar burn the bodies of adults, but children are everywhere buried, and adults very frequently.

Their panthcon is but a small one; the entire number of divinities worshipped over the whole country being probably less than thirty; but of these only about ten seem to be generally recognised, and scarcely any class worship more than seven, and many six, five, four, or three gods. They have no images in their houses; and at their religious ceremonies in the jungle, they employ only the rudest symbols,—knobs of mud, stones, iron rods, pieces of wood, chains, bells, &c., Their festivals are associated with their crops, and are celebrated under the shade of the Saj or Ein tree, three or four times a year, as when the rice begins to be sown, when the new rice is ready, when the Mhowa tree comes into flower.

1. The Creator, under the name of Bhagwan, is occasionally worshipped in their houses by prayers, and burning sugar and ghee in the fire; but the inferior gods have the greater share of their attention. The principal of these are:—1 Badu dewa (great god) or Budhal Pen (the old god) and the same as Bura Pen of the Konds. He appears to be the same as Rayetal or the sun-God, represented by an iron tiger three inches long, and possibly the same as Marung Bura of the Sonthal. He is worshipped once a year at rice harvest, when a hog is sacrificed to him. Among the Gaiti, he is represented by a copper pice kept in a tree in the jungle. This they take down at the festival, and, selecting a small area about a foot square under a tree to be cleaned, they lay on it the pice before which they arrange as many small heaps or handfuls of uncooked rice as there are deities worshipped by them. The chickens brought for sacrifice are loosed and permitted to feed on the rice. Goats also are offered, and their blood presented in the same manner. Until prohibited by the hindus, sacrifices of cows were also common. On the blood, arrack is poured as a libation to their deities. The pice is now lifted and put in its bamboo case, which is shut up with leaves, wrapt in grass, and returned to its place in the tree, to remain there till it is required in the following year. Both Budhal and Matiya are sometimes said to be of iron and a foot long.

2. Matiya, called Mata by the Kurku, is both the god (or goddess?) of small pox and of the town, indicative perhaps of the constant dread of the scourge. Among the Gonds of Seoni, Matiya is represented as the attendant or Kotwal of Budhal Pen, and they offer him a pig: by the Kurku he is supposed to reside inside the village, and receives offerings of cocoanuts and sweetmeats, but no blood. In the south of the Bandara district, Mr. Hislop informs us, the traveller frequently meets with squared pieces of wood, each with a rude figure carved in front, set up somewhat close to each other. These represent Bangaram, Bangara Bai, or Devi, who is said to have one sister and five brothers, the sister being styled Danteshwari, a name of Kati, and four out of the five brothers being known as Gantaram, Champaram, Naikaram, and Potlinga. These are all deemed to possess the power of sending disease and death upon men, and under these, or different names, seem to be generally feared in the region east of Nagpur city. Kali, as the goddess of small-pox is much worshipped by the aboriginal tribes, and Gonds, fishermen, and other low castes may officiate at her shrines even in behalf of hindus. In India generally, Kali is worshipped as Sitala. At Chanda and Lanji, Kali has temples in which human victims have been offered almost within the memory of the present generation. The victim was taken to the temple in the evening and shut up, and in the morning he was found dead, the great goddess having shown her power by coming in the night and sucking his blood. At Dantewada, in Bastar, about 60 miles S. W. of Jagdalpur, near the junction of the Sankani and Dankani, tributaries of the Indrawati, is a famous shrine of Danteswari, at which, about A. D. 1830 it is said that upwards of twenty-five full grown men were immolated on a single occasion by a late raja of Bastar, Since then, adds Mr. Hislop, "numerous complaints have reached the authorities at Nagpur of the practice having been continued, though it is to be hoped that, with the annexation of the country, it has entirely and for ever ceased." Major Macpherson mentioned the same bloody rite as celebrated only last generation by the hill rajas of Boad, Gumsur, &c. Among the Moria, Bhowani is worshipped as the small-pox goddess and as Maoli or Danteshwari.

3. The next on the list is Sale or Sali, and among the Gaiti Gonds, Saleng. He is said to be nearly equal to "Badu-dewa the "great god" and sits with him on the same gaddi. He is offered a she-goat, and is probably the protector of cattle.

4. Gangara, Ghangara, Gagaral, Gongaro Mal, is the bell-god, and is represented by a bell, or by an iron chain of four links.

5. Palo is only known by name as yet. The appropriate offering to him and Ghangara is a cow.

6. Gadawa is the god of the dead, the Pluto of the Gonds, and is perhaps the same as Chawar, and indentical with Dichali of the Chaibassa Kol.

7. Khan or Kank usually closes the list of the Sat-dewala or seven god-worshippers. He is worshipped under the Saj tree (Pentaptera tomentosa).

Besides these there are some others deserving of mention:—Kodo Pen, common to Gonds and

the Kur, is the horse-god. Mr. Driberg believed him to preside over a village, and thus he would correspond to Nodzu Pen of the Konds. Mr. Hislop conjectures he may be the god of crops, Kodo (Paspalum frumentaceum) being one of the chief sorts of grain cultivated by the Gonds. In the wilder villages near the Mahadeva hills Kodo Pen is worshipped by new comers at a small heap of stones, through the oldest resident, with fowls, eggs, grain, and a few copper coins, which become the property of the officiating priest. Among the Kurku, Mutua or Mutya Deva, is a heap of small stones inside the village and besmeared with sandur. He is connected with the prosperity of the village and is worshipped with a goat, cocoanuts, limes, dates and a ball of sandur paste. Pharsi Pen or Pharsapot is represented by a small iron spear-head. The name may possibly be connected with barchi (Hindi) a spear, and he may be the same as Loha Pen, the iron-god or god of war of the Konds. Pharsa also means 'a trident' in Gondi. He is worshipped at full moon of Vaisakh, every third, fourth or fifth year, when the people assemble from great distances and the ceremonies are conducted with much secrecy; no hindu or even Gond woman being allowed to be present. They offer him a white cock, a white he-goat, and a white young cow. He is apparently related to, if not the same as, Dula Dewa, the god of the battle-axe of the Gaiti Gond, who is represented by that instrument fastened to a tree. The Cholera god is worshipped at Amarkanthak as Hardal, which Mr. Hislop suspected might only be another name for Budhal Pen. Among the Kurku he is called Lala Hardal, and is probably the same as Gohem of the Chaibassa, the god of fever, and among the Kol of Chaibassa, where he is associated with Dichali and Gohem already referred to, and with Chondu, the god of itch, and Negra of indigestion. Bhiwasu or Bhim Pen is the god of rain in the Mahadeva hills, where a festival lasting four or five days is kept in his honor at the end of the moonsoon, when two poles, about 20 feet high and 5 feet apart, are set up, with a rope attached to the top, by means of which the boys of the village climb up and then slide down the pole. Offerings of fowls, eggs, and grain are presented to him. All over Gondwana he is generally worshipped under the form of an unshapely stone covered with vermillion, or of two pieces of wood standing from 3 to 4 feet above ground, like those set up for Bangaram. Before these the Moria Gond regularly perform worship previous to sowing. But a little S. W. from Bajar Kurd, N. of Parseuni is a large idol of Bhiwasu, 8 feet high, formed into shape, with a dagger in one hand and a barchi (javelin) in the other. A Bhumuk is the Pujari; and the people repair to worship on Tuesdays and Saturdays, offering hogs, he-goats, cocks, hens, cocoanuts. The patel of Awareghat, who is a mahomedan gives 2 rupees, and hindu cultivators give rice for an annual feast, which takes place at the commencement of the rains when the Bhumuk takes a cow by force from the Gowar, and offers it to Bhimsen in presence of about twenty five Gonds.

To Sasarkund, a pool in the Mahur jungle, where the Pain Gunga is said to be engulfed, the Naikude Gonds go on pilgrimage in the month of Chaitra. There a huge stone rises in a gorge and goes by the name of Bhimsen, before which Naikude Gonds mingle with Raj Gonds and Kolam in worship. The worshippers, towards evening, cook a little rice and place it before the god, adding sugar. Then they besmear the stone with vermillion and burn resin as incense, after which all offer their victims,— sheep, hogs, and fowls, with the usual libations of arrack; the pujari affects to be inspired, rolls his head, leaps widely about, and finally falls down in a trance, when he declares whether the god has accepted the service or not. At night, drinking, dancing, and beating tom-toms go on, and in the morning after an early meal they return home. Those unable to go on this pilgrimage, perform similar rites under a Mhowa tree.

Besides these other deities are reverenced in particular localities: the tiger-god, Waghoba, is worshipped by the Nikude Gonds; and under the name of Bagh Deo by the Kurku; Sultan Sakada is worshipped by the Kur; Saka deva or Sakla Pen-the chain god, in Seoni and elsewhere. The spirits of the departed, Sanyal Pen or Sanalk, are worshipped or propitiated for a year after death, but persons of note, headmen of villages or priests, are treated as gods for years or generations, and sacrifices are annually offered at their st'happana or shrines of earth.—(*Extracts from portion of a Newspaper sent by Asst. Surg. Porter, M. D. seemingly the Times of India* or *Bombay Gazette*).

The word "*Gond*," according to Hislop is a form of Khond and according to Macpherson, Khond means mountain. The Gond race in the centre of India, meet the Arian hindus on the north, the Tiling in the south, and the Mahratta in the west.—(*C. p.* 40.) In the wilder parts of the tract occupied by the Gond, they speak their own language and seem, there, to be a simple and not intractable people following both pastoral and agricultural pursuits. Gondi is not a written tongue. The Gond are broad faced, have high upper maxillary bones with large lips. Occasionally great curly, woolly, hair are seen. They object to vaccination. The women do not wear the choli or boddice. The Raj Gond, generally dark, are of middle

size with high cheekbones and good teeth. Some of the wealthier are of a light bamboo colour the hair of the women is generally wavy or curly. The lips of the Gond rajah of Nagpore are as thick as those of an African. This family are fair skinned and for generations past have professed mahomedanism. According to Major Keatinge, Gond, Kur and Bhil tribes meet about Asirghur and these in the centres of their country, are very black, with a decidedly African expression. Captain Probyn says the more civilized Gonds are fairer than those less advanced, but have somewhat African features.

The chiefs have none of the features of the race, owing to their bringing into their households the women of other races. But the savage Gond, in the forests of the Wain Ganga have features of the African type. The Gond of the forests of Bustar and thence running up towards the Wain Ganga are called Maree. They are extreme savages, black, ugly, barbarous and dangerous. They are almost independent, and own a scant allegiance to chiefs whose blood is for the most part Gond. Thence the Gond extends north to the valley of Sumbhulpur, and occupy a broad tract east and west wherever the country is hilly or jungly.—(*C. pp.* 22, 31-2.)

The clothes of the Gond are few. The women have many glass and metal rings and bracelets and all are more or less tattooed : the tattooing is performed by the Pardhan Gonds.

The *Raj Gond* claim descent from the Pandu, who are regarded as minor deities, and, with Dripadi and Krishna, are worshipped by one or other of the Raj Gond sections. All, however, worship Phersa Pend, whose emblem is small pieces of iron about six inches long, placed in an earthen pot and suspended from a tree. At the summer solstice and again in winter these are taken to a river and washed and worshipped with sacrifice, formerly of human beings, then of cows, and now of goats. The Raj-Gond are supposed to be a mixed race. They do not eat beef, and worship Barra-Deo.

The Maraila Gond is an offshoot of the Raj Gond and deify their dead. Ten days after death, they sacrifice a hen pouring its blood on a pot, on which they previously put some oil. They then tie the pot on the branch of a tree and after a year they bury it near the raised platform (chabutra) of their Burra Deo, and from this time the dead is ranked amongst their tutelary gods.

The Bhaigia, Bhumia, Khutola, Pahari, Burko and Bhuria tribes of Gonds all speak the same language and resemble each other in stature, and features. The bridegroom lives for several months serving for his bride in his father-in-law's house and the bride goes to the bridegroom's house to be married.

The *Raj-Gond* commences the harvest by the owner cutting a sheaf which is divided into two portions, one of them being devoted to Phersa Pend, the other to the goddess of Suttee, Both halves are boiled and eaten, the former by the men, the latter by the women. They believe in witches and use scourging and throwing into deep water as ordeals. The Murmi or Shadi marriage is with a maid, the Pat is between a widower or widow or divorced couple. In the Murmi, offerings of oil and turmeric are made to Mar Ai, the goddess of smallpox and cholera, and subsequent prostration to the household gods. Occasionally, still, when a father refuses to give his daughter, the bridegroom's friends carry her off by force. When they burn the dead, the axe, with its head reversed, is employed in parts of the ceremonial, and a cock for a man or hen for a woman is offered and then eaten (Cor. ix.)

The Raj Gond are frank and merry, truthful, and of late years peaceable. Infidelity among married women is lightly regarded. The Raj Gond are agriculturists or servants. They are permitted to eat the flesh of every slaughtered animal, but by many who are mixing with hindus, the cow is not eaten. Wild fruits and roots with scraps of meat are the common articles of diet

The *Khutulwar Gond* are Raj Gond in the N. E. of Chota Nagpur who ape rajputs.

Durweh Gond of the Ghatkul pergunneh are less civilized than the Raj Gond.

Mareh Gond are in the South East.

Purdhan Gond are the Gond bards and they are beggars and are to the Gond what the Bhat is to the Hindu.

Thotee Gond are the Pardhan Gond.

Hulba Gond are East of the Waen Ganga. —(*C. I. P. Com. Rep. p.* 2 to 25.)

The *Gour Gond*, extend on the east, into the borders of the Chota Nagpur Agency, of Udipur and Sargojah, but they are there much hinduised and have lost their language.

Dhulya Gond are musicians.

Punka, Dhunwar and *Nahil* are subordinate Gond tribes.

Aguriah Gonds work in Iron, from Agur Hindi iron.

Koy Gond are very dark.

Gotta and *Matta* Gond are copper coloured, broad faced, smalleyed, giving a strong Tartar like appearance. The Koy, Gotta, Maria, Bhuttra or Purja, Hulba and Gudba Gond tribes of the Godavery, Pranhita and Sevory rivers and Bustar, have manners and customs nearly alike.

On the death of a Maria Gond, a cow is killed and there is drink and music. The body is tied in a standing position to a mahwa tree, Bassia

latifolia, and then burned. Captain Glasfurd notices the absence of hair on the faces of the Koy, Gotta and Maria. The Gotta, Maria and Muriah erect large monumental slabs to the memory of the dead, placing at the foot of the slabs a flat stone on four small round stones.

Under the names of Bura deo, Narain deo and Bahwani deo, the object of worship of the Belaspur Gond is a raised earthen mound. The branch of the Saj tree, set upright, is also worshipped.

The Gond of the hilly districts of the Central Provinces bury their dead and sacrifice a bullock or buffalo for the benefit of the dead. On the 3rd year, a buffalo or bullock is again sacrificed and the dead is ranked as one of the tutelary divinities of the family.

Dulha Deo, is a favourite deity in Bundelkhund and amongst the Gond of Central India. It is the apotheosis of a bridegroom (dulha) who died in the marriage procession, and whose death so affected the people that they paid him divine honours. The worship of Adonis is similar, and also that of Thammuz whose annual wound in Lebanon allured the Syrian damsels to lament his fate.

The Gond think no harm of appropriating the property of others.

Kaikari, this houseless, wandering race were recently treated as rogues and vagabonds, and a number fled the central Provinces, a remnant changed their name to escape the persecution. The Kaikari are scattered over Berar and along the northern frontier of the Hyderabad territory. They are a small statured, slender race. They arrange themselves into six sections, the Hindu Kaikari, Chari or thieving; Kasbi Kaikari; Pungi bajani wala; Samp Khelne wala and the Kuchi wala. The Hindu Kaikari are basket makers from the date palm leaf, cotton, ambari and turatta stalks, and speak hindi and mahratta. They reside in towns and are permitted to approach the village gods, all the other sections are migratory and are prohibited from approaching the deities. The hindu Kaikari marry when young; they worship Maroli, Bhawani and Khanderao and they bury or burn their dead. They are an olive yellow, large mongol faces and mark their forehead thus ⌣

Sherria, are a wild race dwelling about the sources of the Nerbuddah.—(*C. p.* 44.)

The *Kawur* tribe are found in large numbers east of Belaspur and the N. E. of Raepur. They worship Siva and bury the dead.

Soura are in the Eastern part of Raepur.

The *Mali* are gardeners and husbandmen, but are not landowners. They take their tribal name from "male," a man.

Mahra, a tribe in Mundla are joining the Kabir Panti sect.

The *Nahur* tribe are in the easterly parts of the Central Provinces.

Mana a strong built dark complexioned race, in the Central Provinces, speaking Mahratta. They were formerly a military race, and served as soldiers, but though retaining military traditions they are now agriculturists or private servants. They are truthful, industrious and courageous. In customs and religion they much resemble Mahrattas. Their widows re-marry.

Kohiri a truthful, honest, and somewhat timid Mahratta speaking agricultural tribe, in the Central Provinces, of middle stature, slight make, and bamboo colour. In religion, they are the same as the Mahratta and in manners, customs and dress same as the Mana. The form tanks with great skill applying all their spare means to works of irrigation. Their houses are large and clean and each member of the family has a bed room.

The Sevaka is a Chota Nagpore slave.

The Kamia of South Bahar, are a low caste agriculturist, a temporary, or permanent predial slave.

Pemka, a low caste tribe of Mundla and Raepur who are there joining the Kabir Panti sect.

The Bygah and Binjwar of Mundla are the same. They are becoming hinduised. They perform priestly offices for the Gonds.

Bhumij and *Bhumija* are only known quite on the eastern border of the Central Provinces. Bum, in the Singpo, means hill. Among the Bhil, Bhumia means head man or high priest: among Kurku, Bhumka stands for high priest, and among the Gond, Bumiah means a medicine man. The Bhumiah and Bygah, speak hindi. Bhumi, Manji and Mahto of the hilly tracts of Belaspore are short and spare made men, capable of great endurance. Their language is allied to Gondi. The Mahta worship their fathers until they have a son, and then worship their first son,—if he die the second son and so on.

The *Settled Races in the Central Provinces*, most largely represented are, from the north, brahman, Rajput, Ahir (herdsmen), Lodhi and Kurmi cultivators, and Chamars; from the south and west brahman and Kunbi. Teli (oil-pressers), Kalal (distillers), Dhimar fishermen and bearers, Mali (gardeners), and Dher, are also numerous throughout the province, but have taken, in each part of it, the impress of the dominant race, speaking Marathi in Nagpur and Hindi in the Narbuda country. Of mahomedans there are only 237,962 not three per cent. of the population, and many of these are of mixed origin.

The Koli and Bhil, seem to be of a similar origin. The Koli are scattered over a great portion of the Bombay presidency from

the Thur and neighbourhood of Sind, southwards to Goa and eastwards, along the banks of the Bhima and Kistnah and Tumbudra, into the centre of the peninsula as far as Kurnool, where they are engaged as ferrymen. Considerable numbers live in Guzerat and in the hills adjoining that province and the hills east of Guzerat are called Kolwan. They are mixed in the north with Bhil, but in the south they form part of the ordinary population. The wilder Koli are like the Bhil, but the more civilized are fairer, more sly and cunning, and less truthful. Many live in villages, and adopt some hindu practices The Koli it is said, frequently marry Bhil wives.—(*C. p.* 42, 43.)

The Bhil are described by Mr. Forbes, as wearing few clothes, of diminutive stature, with swift and active habits, independent in spirit; éyes which bear an expression of liveliness and cunning, bold in assault but rapid in flying to the jungles; formidable in anarchy, but incapable of uniting amongst themselves and as by far the most numerous of the predatory races who, in former days, resided in the hills between Guzerat and Rajputanah and disturbed the country. Their arms, are bows and arrows; they are robbers, averse to industry, addicted to drunkenness and quarrelsome when intoxicated.

The *Bhil*, *Mair*, and *Koli* seem to have had, at one time, considerable power in Rajputanah and Guzerat. (*C. p.* 44.) The Bhil race, now occupy the mountains and forests of Malwa, Mewar, Khandesh, and in the Dekhan to the north of Poonah; in the northern part of the chain of ghauts running inland parallel with the coast of Malabar. On one side they are bordered by the Koli, and on another by the Gond of Gondwana. They are considered to have been aborigines of Central India; and with the Koli, Gond, and Ramusi are bold, daring, and predatory marauders, and occasionally mercenaries, but invariably plunderers. The northern part of the chain of ghauts and the country at its base is inhabited by Bhil; that part of the south of Bauglan and the country at its base, as far south as Bassein, is inhabited by the Koli tribe who somewhat resemble the Bhil but are more civilized and less predatory. The Bhil possess the eastern part of the range, and all the branches that run out from it towards the east, as far as south of Poona; they even spread over the plains to the east, especially north of the Godavery, and the neighbourhood of the Wurda. On the north, they extend beyond the Taptee and Nerbudda. The Bheel and the Koli are both numerous in Guzerat. South of Poona the Bhil are succeeded by the Ramusi, a more civilized and subdued tribe, but with the same thievish habits as the Bhil. They have no language of their own, are more mixed with the people, and resemble the Mahratta in dress and manners; whereas the Bhil differ from the rest of the people in language, manners and appearance. Of the Bhil Mr. Elphinstone remarks, that although they live quietly in the open country, they resume their wild and predatory character whenever they are settled in a part that is strong, either from hills or jungle. The Ramusi do not extend farther south than Solapore, or further east than the line of Bejapoor. The Koli of Guzerat, and the Gonds, have maintained more of their original character than the Bhil: they have probably been less disturbed. (*Coleman.*) The Bhil, seem the prior possessors of the hills of the Satpura and Vyndhia ranges and extend into Rajputanah, but are scattered over parts of the Bombay presidency. They are numerous in Kandesh, and are found in the adjoining parts of the Dekhan. They sometimes find their way to the western coast where they are stated to be known as the Dubla or the Kala Puruj or black men. Many of the wilder Bhil live much apart in their own hills and jungles, almost independent, but they do not seem to possess any separate language. (*C. pp.* 42,34,44.) The Bhil seem to have been the aborigines of the hills near Mount Aboo, but at some time or other to have become mixed with marauding rajpoots from the plains, and with the workmen who were so long engaged in building the Dilwarra temples. This mixed race called themselves Loke and are now in possession of almost all the land under cultivation. Bhils occupy the petty states of Dunduka, Rompur and Gogo—between the Mahi and the Nerbudda and Nerbudda and Tapti, and Rajpipla N. E. of of Surat; and as a rule, Kandesh is Bhil.—(*Latham.*)

According to Malcolm, in a sanskrit vocabulary, at least seven hundred years old, the term Bheel occurs to denote a particular race of barbarians subsisting chiefly on plunder, and found more particularly in the mountainous woody tract of the Nerbudda. But there is still earlier mention of them in the Mahabarat, in which the Bhil are not only minutely described, but a long fabulous account given of their origin. The Caba race now almost extinct, was famed, even in the days of Krishna, 3,300 years ago, as the savage inhabitants of Saurashtra. It was a forester Bhil who mortally wounded Krishna, having mistaken him for a deer. When the Bhil was expressing his contrition for the unintentional act, he was forgiven, with the remark, that it was only retributive justice, as, in a former birth, as the godlike Rama, he, Krishna had slain him. Rama thus appears as the subjugator and civilizer of these indigenous tribes, of whom the Caba are described as plundering Krishna's family

after his decease.—(*Tod's Raj. V. II. p.* 217.) The Bhil are one of the many tribes who seem to have entered India prior to the Aryan and the Rajput races and been forced by the later emigrants into the more secluded forest tracts. There are many such tribes in Central India the Bhil, Kol, Gond, Meena, Mera, Chooar, Serya, Sarja, Ahir, Goojur, several of them dwelling in the forest tracts of the Son, Nerbudda, and Mahanuddy, the mountains of Sargooja, and the Chota Nagpore, a number of them still but little removed from savage life, and with dialects as various as their manners. These are content to be called the 'sons of the earth,' or 'children of the forest,' while their conquerors, the Rajputs, arrogate celestial descent. The census of British India shows that these aborigines still number twelve millions or one-twelfth of the population of India and the Mahomedan and Sikhs, double that number

	Census.	Number.

Excluding the feudatory states, the following may be roughly accepted as the relative proportions of creeds and races in India :—

Asiatic Christians...	...	1,100,000
Buddhists ...	...	3,000,000
Aborigines ...	...	12,000,000
Mahomedans ...	...	25,000,000
Hindoos ...	...	110,000,000

The Bhil clans, are now in a state of great moral transition ; but those of Kandesh, nearly to the middle of the 19th century, continued to sally from their fastnesses and committed great ravages upon the villages of the plains. When measures were taken by the Bombay Government in 1818 to reclaim the Bhils of Khandeish, sir John Malcolm considered that success would only be partial unless corresponding measures were adopted for reclaiming the Bhils of Burwan and this was given effect to.

Fire-arms, says Tod, are only used by the chiefs and headmen ; the national weapon being the *kumpta*, or bamboo bow, having the bowstring (*chulla*) from a thin slip of its elastic bark. Each quiver contains sixty barbed arrows, a yard long. The Bhil, from ancient times, use the fore and middle fingers of their right hand to the string of their bow, holding the arrow between the two fingers. Although they claim descent from every race of rajpoot, and prefix the tribe, as Chohan Bhil, Gehlote Bhil, Pramar Bhil, &c., their origin is evinced in the gods they worship and their prejudices as to food. One tribe the Oojla Bhil, or pure Bhil, will eat of nothing white in colour, as a white sheep or goat ; and their grand abjuration is, by the white ram !—(*Tod's Travels, p.* 34.)

Their ancient position is well illustrated by the circumstance of their claiming the right to instal rajput princes. When Bappa fled, the companions of his flight were two Bhil, one of Oondree, in the valley of the present capital ; the other, of Solanki descent, from Oguna Panora, in the western wilds. Their names, Baleo and Dewa, have been handed down with that of Bappa, and the former had the honour of marking the teeka of sovereignty with his own blood on the forehead of the prince, on the occasion of his taking the crown from the Mori. The descendants of Baleo of Oguna and of Dewa the Oondree Bhil still claim the privilege of applying the teeka on the inauguration of the descendants of Bappa.—*Tod's Rajasthan, Vol. I. p.* 724.)

Oguna Panora, says Colonel Tod, "is the sole spot in India which enjoys a state of natural freedom. Attached to no state, having no foreign communications, living under its own patriarchal head, its chief, with the title of rana, whom one thousand hamlets scattered over the forest-crowned valley's obey, can, if requisite, appear at the head of five thousand bows." He is a Bhoomia Bhil of mixed blood, from the Solanki rajpoot, on the old stock of pure (oojla) Bhil, of Mewar. Besides making the teeka of blood from an incision in the thumb, the Oguna chief takes the prince by the arm and seats him on the throne while the Oondree Bhil holds the salver of spices and sacred grains of rice used in making the teeka.

CHOTA NAGPUR.—Kol is the term applied to the aborigines of the hill country of Chota Nagpur, Mirzapur and Rewah. Europeans apply the term to the Dravidian Oraon, as well as to the others, but perhaps erroneously and most of the tribes have other distinctive names. In the south of the Chota Nagpur country, about Singhbhum, it is applied to the Lurka Kol.

The Kol of Chota Nagpore, are in two tribes, Mundah and Oraon. These are occupying the same villages, cultivating the same fields, and their festivals and amusements are the same, but they are of entirely distinct origin and cannot intermarry without loss of caste. The Mundah were the prior occupants.

The Kol, Lurka Kol, and the wilder Lurka Kol of the hills to the west of the Singhbhum district, speak nearly the same language as the Ho, Sontal, Bhumi and Mundah.—(*Campbell, pp.* 27, 36.)

The Kol, the Kur of Ellichpur, the Korewah of Sargujah and Juspur, the Mundah and Kheriah of Chota Nagpore, the Ho of Singhbhum, the Bhumij of Manbhum and Dhulbhum and the Sontal of Manubhum, Singhbum, Cuttack tributary mahals, Hazaribagh and the Sontal Pergunnahs, are kindred peoples numbering several millions.

Amongst the Kol, man and wife eat together, as is the custom with some christian and mahomedan races. The Kol, the Mundah and Oraon tribes and all those cognate to the Mundah are passionately fond of dancing, which they commence in very early life and regard as an accomplishment. They also sing well and have musical voices and a great variety of simple melodies.

Their dancing assumes a national character at their great periodical seasonal festivals and fairs, called Jatra, at which the young men treat their partners with fairings.—(*Dalton, pp.* 158, 185.)

The Kol have a belief in, and greatly dread, witches and have killed many people whom they believed to be so.

Chota Nagpur, properly Chuttia Nagpor, is the country on the eastern part of the extensive plateau of Central India, on which the Koel, the Subunreka, the Damudah and other rivers have their sources. It extends into Sirgujah and forms what is called the Upar ghat or highland of Juspur, and it is connected by a continuous chain of hills with the Vindhya and Kymor ranges from which flow affluents of the Ganges, and with the highlands of Amerkantuk on which are the sources of the Nurbudda. The plateau is, on the average, about 3,000 feet above the level of the sea with an area of about 7,000 sq. miles. It is on all sides difficult of access, is a well wooded, undulating country, diversified by ranges of hills and it has a genial climate. The population, in 1866, was estimated at about a million, and is formed of a number of non-Arian tribes who had fallen back to that refuge from the plains, more than half of them, however, being the race known to Europe as Kol, the other races in *Chota Nagpore* and its adjoining tracts, are the Lurka Kol, Ho, Bhumi, Mundah and Sontal.—(*Campbell, p.* 27.)

The Kol, in former times, possessed the whole of Chota-Nagpur, which may now be said to be divided between them and the Dhangar or Uraon, who came from Rotasghur. The chief men in most of the villages are still, however, of the old Mundah or Kol tribe, and they do not intermarry with the Dhangar. The greater part of Singhbum is inhabited by Kol, and we find them numerous in Bamanghotty, and dispersed to the vicinities of Cuttack and Midnapore.

The *Lurka Kol*, as they are termed, inhabit those extensive tracts, which go under the name of the Kolehan. Part of these wilds is is situated in the Singhbum district, and the inhabitants pay a nominal obedience to the maharajah of the province, but the greater proportion of this population is more under the influence of the rajah of Mokurbunj than of any of the other powerful chiefs in that part of the country. But even his orders are obeyed only where they are supposed to tend to the advantage of the Kol themselves. Upon the whole it may be said of this singular people that, living in a primeval and patriarchal manner under their Moonda and Manki, they have managed to preserve a sort of savage independence, making themselves dreaded and feared by their more powerful and civilized neighbours. The Kolehan with its wilds and jungles is divided into different peer or purha, as they are termed, or pergunnahs. These peer are, generally speaking, not of any great extent, two or three moderate marches carry a traveller through each of them.

There can be little doubt, and such is the tradition among the people themselves, that the Lurka Kol came originally from Chota-Nagpur, and are descendants of the old Moonda or Moondai of that district. They emigrated finding the romantic hills and valleys of Chota-Nagpur too confined for their increasing numbers. The same cast of countenance prevails in the two races, though, perhaps, tinged with a wilder and more fierce expression in the Lurka Kol. The Uraon, who inhabit great part of Chota-Nagpur, regard the Kol as a tribe inferior to themselves, and do not intermarry with them. The villages in the Kolehan are ruled by Moonda and Manki, as in Chota-Nagpur. The former, the Moonda, is

the proprietor of one village; while the latter holds six, eight, or twelve. These village potentates used frequently to wage fierce war with one another, and bitter and long existing feuds have often prevailed amongst them. There is this peculiarity in the Kol character, however, that serious and bloody as may be the domestic quarrels, no sooner are they threatened with hostilities from without, than all their animosities are laid aside and forgotten for a time. The villages are generally built on some elevated spot surrounded by trees, and, at some little distance from the principal entrance to the villages, the Kol standard or ensign, a pair of buffalo horns, is suspended in a conspicuous situation. The dress of both sexes is alike, a strip of cloth brought round the loins and passed between the thighs forming their only covering; the women wear a profusion of coloured beads suspended from their necks, and have their ears pierced with a number of small brass rings. Their diet is of a very promiscuous nature; every thing almost that can be considered eatable being relished by them, and much of what we consider carrion is eagerly sought for. In this respect they do not differ from the Kol of Chota-Nagpur. They are greatly addicted to drunkenness.

With the Lurka Kol, the great divinity is the sun (suruj), next to the sun ranks the moon (chandoo), and then the stars, which they believe to be the children of the latter. They uniformly, upon solemn and great occasions, invoke the sun, and by him many of these lawless men have, at times, sworn allegiance to the late E. I. Company. Another form of oath used by them is that of swearing upon a small quantity of rice, a tiger's skin and claws, and the earth of the white ants' nests. Besides the sun and moon, other inferior divinities are supposed to exist, to whom the Kol offer up sacrifices of various kinds. These spirits are supposed to inhabit the trees and topes in and around the village. The belief the Kol entertain of the power and influence of the Bhonga must be considerable, as they will on no account allow those trees to be denuded of their branches, and still less cut down. It is the universal custom in the various Kol villages that, when a woman is seized with the pains of labour, she is immediately removed to a lonely hut, the door is shut upon her, offerings of various kinds are suspended near it to propitiate the Bhonga and no one ventures near till all is over. The women, it may be observed, are not secluded or shut up. When a Kol youth has fixed his affection on a lass, generally the inhabitant of some neighbouring village, she is waylaid and carried off to his house by himself and his friends. So soon as information of this reaches the parents of the girl, they proceed to the village of the ravisher, not however in general, with any hostile purpose. Interviews take place between the friends on either side, and at length matters are brought to a final settlement; the new husband paying to the father of his spouse a certain number of cows, goats, or buffaloes, according to his means, or the beauty and comeliness of his bride. After this a scene of feasting and intoxication generally follows, in which women and children as well as men participate. The Kol burn their dead, carefully collecting the bones and ashes and burying them with offerings of rice in or near their villages, placing perpendicular or horizontal slabs of stone over each particular grave. Those grave-stones form a remarkable object, and strike the eye of every stranger on approaching a Kol village. The only weapons used by the Kol, whether in war or hunting, are the bow and arrow, and the tulwa or axe.—(*Journal of the R. A. S., Vol.* XVIII *of* 1861, *p.* 370 *to* 375)

Manbhum, a district of Chota Nagpore has numerous remains of Arian colonization close to its southern and eastern approaches, but none on the plateau itself.—*Dalton, p.* 60.

Singhbum.—The Kol, and Lurka Kol and the Sura, in Singhbum, north of the Gond, are regarded by all writers as of the prior Scythic stock. The estate of the rajah of Singhbum, afterwards styled the rajah of Porahat, was confiscated for rebellion in 1857. The Lurka Kol were subdued in 1821, and an agreement (No. LXXI) was made with them by which they bound themselves to be subject to the British Government, and to pay a fixed tribute to their Chiefs. In 1857, a large number of the Lurka Kol espoused the cause of the rajah of Porahat a rajput chieftain near the Kolehan, but on the restoration of order they reverted to peaceful pursuits. The total revenue from the district is about Rupees 45,000. The expenditure including a police battalion, amounts to about rupees 30,000.—(*Aitchison, Treaties, &c. page* 170.)

Three lists of Kol words were obtained by Captain Houghton from Chyebassa in Central India, and two by Colonel Ousely from Chota Nagpore, all of which Mr. Hodgson regarded as dialects of the great Kol language, and by means of the Uraon speech he further traced, without difficulty, the connection of the language of the Kol with that of the hill men of the Rajmahal and Bhagalpur ranges. He considers that between those several Kol tongues and that of the Gond of the Vindhya there are obvious links, and Mr. Elliot showed that much resemblance both in vocables and structure existed between that Gond language and the cultivated tongues of the Dekhan.

The Sontal call the Kol, Ho-lar-Ka. Marang Booroo is a god of the Kol, of the Ho and Oraon tribes, the Sontal, Bhoomij and Munda. Booroo, however, means a mountain, and every mountain has its spirit.

Dara, worshipped by the Oraon and Mundah of Chota Nagpore, is a carved stick, stuck up where the great jatra are held, or in the village dancing place, and is worshipped with much revel and wassail, with much drunkenness amongst the old, and dancing and love-making amongst the young.—*Dalton.*

Kol arms are the bow, a piece of bamboo with bamboo string, the arrow barbed and the battle axe.

The *Kol* intermixed with the Gond on the Sumbulpur borders, are said to be called Kirki. —(*Campbell, p.* 36.)

In Chota Nagpore, the *Sanwak* is a hereditary slave; the Bandha Sanwak a slave for life, but whose children are not slaves and the Chuta Sanwak is described as a slave for debt. Also, in Chota Rangpur, Ramgurh, and Hazaribagh, there are Sanwak life slaves generally from the hill tribes.

The Naga, is a serpent deity, and on the Nagpanchami, held on the fifth lunar day of the month Sravan (July, August) offerings are made to snakes, of milk, grain and other articles poured into holes. The crest and signature of the raja of Chota Nagpur is the head and hood of a snake called Nagsant.—(*Wils. Gloss.*)

Urya.—On the north eastern edge of the peninsula, the Urya is spoken by a tall, fair, somewhat slender race, in Orissa or Ur-desa, a country which is bounded on the north by Bengal, on the south by the Northern Circars, on the west by Gondwana and the east by the Bay of Bengal.

The original site of the Or or Odru tribe of Orissa appears to have had very narrow limits, viz., along the coast line from the Rasikulia river, near Ganjam, northwards to the Kans river, near Soro, in lat. 21° 10′ but in the process of migration and conquest under the Ganga-vansa line, the limits of Orissa (Ordesa) were extended to Midnapore and Hooghly on the north and to Rajahmundry on the Godavery in the south. Urya is a tolerably pure dialect of Bengali. In the direction of Bengal, it follows the coast-line as far as the Hijilli and Tumlook divisions on the Hooghly. On the western side of the Midnapore district, it intermingles with Bengali near the river Subanrekha. To the westward, the Gond and Uria languages pass into each other and at Sonapur half the people speak the one and half the other language. About Ganjam, the first traces of the Telugu or Tiling language occur, though the Uria still prevails forty-five miles south of Ganjam, on the lowlands of the seashore, beyond which Telugu begins to predominate. At Chicacole the latter is the prevailing dialect; and in Vizagapatam, Telugu only is spoken in the open country though Uria, in the mountains runs further down to the south.

Oraon.—The *Kol and Sura* dwell towards the north of the Gond and Kond in Central India; their languages contain Dravidian words, but they belong to a totally different family of tongues. The Kol inhabit the forest and mountain tracts of Benares, south Bahar and Chota Nagpore on the north of the Kond, in Ghondwana, and border on the people in the Rajmahal hills, dwelling in the east at Sumbulpur, Sirgujah, Gangpur, Chota Nagpur, Ramgurh and Mongir. The Kol were described by Lieut. Tickell in 1840, in the Bengal Asiatic Society's Journal. One tribe called Oraon, was driven at an early period from the neighbourhood of the Ganges, and found the Moonda Kol tribe in possession of Chota Nagpore. The Moonda call themselves Ho, though more generally known as Kol.—(*Mason Burmah, pp.* 131, 132.)

The *Uraon* according to their own traditions, were driven across the Sone by the intrusion into their native land of gangetic hindus, and ultimately settled in Chota Nagpur, the country of the Kol tribe of Munda or Ho. At a later period, hindus spread, also, into this territory, reduced the more civilized Uraon to slavery, drove the wilder Kol into revolt, and eventually forced them to migrate to the southward and eastward into the land of the Bhuian. The more northerly of the eastern emigrants passed out into the low country and mixing with the Bhumij and Bhuian natives, formed the class of Tamaria. The more southerly moved into Singbhum and Kolehan, living at peace with the Bhuian pre-occupants, until the intrusion of hindus from Marwar, who first leagued with the Bhuian, against the Kol, and then with the Kol against the Bhuian, and finally appropriated Singbhum, leaving Kolehan, or Hodesham to the Kol or Ho, as the southern tribe call themselves. Portions of the Kol are still found to the northward in Chota Nagpur and they appear to be also spread to the northwards towards Rajmahal.

The *Sonthal tribe*, appear to be very widely spread. It is found in Chota Nagpur and in the skirts and valleys of the Rajmahal hills. It is enumerated by Mr. Stirling in his list of the tribes of Cuttack, and, according to Captain Sherwell, its range is from Cuttack through Chota Nagpur to Rewa, thus embracing the territory of both divisions of the eastern Vindyan races.

The *Male and Uraon* languages are mainly Dravidian, and it is remarkable that although the Male are now confined to the N. E. extre-

mity of the Vindhya, where the Ganges washes and bends round the chain, and are separated from the South Dravidian nations by the Kol, their language is more Dravidian than the Kol itself. The explanation is probably to be found in the circumstance of the Uraon and Male having originally formed an uninterrupted extension of the Gond tribes and dialects that extended from the Godavery to the N. extremity of the Vindhya.

Uraon, according to Dr. Caldwell, is an uncultivated idiom, and contains many roots and forms belonging to the Kol dialects and so many Dravidian roots of primary importance, that it is considered by Dr. Caldwell as having originally been a member of the Dravidian family of languages.

The Kol and Male-Uraon are physically Ultra-Indian more than Dravidian, and the occupation of the eastern Vindhya and hills on the opposite side of the Gangetic valley, by Ultra-Indians, seems to imply that the valley itself was at one time possessed by the same race,—the simplest conclusion is that the Kol were an extension of the ancient Ultra-Indo-Dravidian population of the lower Ganges and of the highlands on its Eastern margin.

The Kond language of Gumsur appears to be merely a dialect of the Gond.—(*Mr. Logan in Jl. In Arch.*)

Ho, the Ho language differs so little in phonology and glossary from the Mundah, Bhumij and Sonthal, that Captain Tickell's account of its grammar, may be taken as that of the Kol language generally.

The Mundah Kol or Ho comprise about two-thirds of the population of the five pergunnahs of Silli, Tamar, Barundah, Rabey and Bundu, all others being recent settlers. But many of the Mundah Kol have been dispossessed of their ancestors, lands, by middlemen, brahmans, and rajputs. Mundah settlements are chiefly in the eastern and southern parts of Chota Nagpore.—(*Dalton, p.* 154, 163) The Mundah and Sonthal are amongst the ugliest of mankind, the Sonthals being remarkable for good nature and ugliness. They are more like Hottentots than Negroes.—(*C. p.* 150-151.) The extreme featured of the Mundah race have high cheek bones, small orbits often with an oblique setting, flat faces, without much beard or whisker, and in colour from brown to tawny yellow. Mundah features are flat and broad, the richer people of the Mundah, who aspire to be zemindars, wear the poita, reverence brahmans, and worship Kali, but the mass continue in their original faith. The great propitiatory sacrifices to the local deities are carousals at which they eat, drink, sing, dance and make love and the hindus settled in the province propitiate the local deities. The Mundah country is arranged into Purha or divisions, each consisting of twelve or more villages under a chief, and the chiefs meet at times for consultation. Many of the Oraon and some of the Mundah clans or Kili, are called after animals, the eel, hawk, crow, heron, and the clans do not eat the animal whose name they bear. The Mundah and Ho dead are placed in a coffin along with all the clothes and ornaments used and all the money the deceased had and all burned. The larger bones are preserved till a large monumental stone can be obtained, and the bones are interred below it, the Ho near the houses, the Oraon separate from the village. They are taken to the tomb in a procession, with young girls with empty and partly broken pitchers, which they reverse from them to him to show that they are empty. The collection of these massive grave stones under the fine old tamarind trees is a remarkable feature in Kol villages. The stones are sometimes so large that the men of several villages are required to move one. The bones are put with some rice into a new earthen vessel, deposited into the hole prepared for them and covered with the big stone. The Mundah and Oraon races are fond of field sports and all game, large and small, disappear from near them. They form great hunting parties. Fishing and cockfighting are also resorted to. The Mundah and Ho have a Shamanite religion. They have no worship of material idols, but Singbongu, the sun, is the supreme being, the creator and preserver, a benificent deity, and they have secondary gods all invisible, and generally malevolent. Sacrifices to Singbongu are made of fowls, pigs, white goat, ram, and buffalo.

The Oraon worship the sun under the name of Dhurmi, as the creator and preserver, and offer white animals to him in sacrifice.

The Mundah Ho and Oraon are all divided into families, called Kili or clan, and may not take to wife a girl of their own Kili.

Manki, is the name applied to the Mundah chiefs, in the southern parts of Chota Nagpore. The Manki of Chota Nagpore have acquired considerable estates.

Mundah and Ho houses are more isolated with better accommodation than those of the Oraon, with verandahs, and separate apartments for the married and unmarried members. Every Mundah village has its own dancing place —(*Major Dalton, pp.* 76, 158, 159, 163, 168, 188-9.)

Sonthal.—The Sonthal, Mundah, Bhumi and Ho speak languages nearly identical. They occupy most of the British districts of Chota Nagpur, Singbhum, Manbhum and the hilly part of Bhagulpur, (the Rajmahal hills excepted) now known as the Sonthal pergunnahs; also, parts of west Burdwan, Midnapore and Cut-

tack—an extensive region west of Calcutta. The Sonthal are a simple, industrious people, honest and truthful, and free from cast prejudices Their country is healthy, their numbers are increasing, and they are much sought after and prized as labourers, by the Bengal Indigo planters also, for the railways, and other works of western Bengal, and in the Assam tea plantations. These tribes live apart in detached houses or isolated hamlets.—(*Campbell, p.* 33, 34, 35.)

The Sonthal are a branch of the Mundah Kol. They seem to have separated when the Mundah and to have fallen back on Chota Nagpur from the Damudah river, which the Sonthal call their sea, and they preserve the ashes of their dead until an opportunity occurs of throwing them into that stream or of burying them on its banks. The Sonthal are now most numerous in the Sonthal Pergunnahs but there are many in Mohurbunj and there are several colonies of them in the Singbhum district. They are an erratic race ; but, Lt. Col. Dalton thinks that they left their chief settlements on the Damudah river from having been pressed by the Koormi. The Sonthal, Bhumij and Mundah tribes have long been known to be intimately connected, and they have affinities with the wild clan of the Korewah of Sirgujah and Juspur, with the Kheriah tribe of Chota Nagpur and the Juanga of the Cuttack tributary mahals. Since the beginning of the nineteenth century they have intruded themselves into some of the Rajmahal districts, which therefore now contain two populations, allied to each other, but speaking languages said to be mutually unintelligible.

The Sonthal and Bhumij races have suffered in esteem in consequence of the human sacrifices offered at the shrine of Kali as Runkini, but these races personally do not much care for this goddess, at whose shrine the establishment and ritual are essentially brahminical.—(*Dalton, pp.* 154, 157.) The Sonthal and Rajmahali are markedly different in habits, appearance, manners and national characteristics and on the Chota Nagpore plateau these differences are very marked. The Sonthal are a very ugly race, with flat broad nosed features. They are a more simple, mild, industrious race than the Rajmahali, Gond or Khond. Though the Sonthal are geographically near the plains, they seem to be more shy and more socially isolated than the Mundah, Bhumi and Ho. They have kept much to themselves, preferring locations surrounded by jungle and segregated from the world, and cultivating the lower lands of their country, but they have latterly taken to labour for hire.—(*Campbell, p.* 35.)

Captain Walter, S. Sherwill, Revenue Surveyor, in his "Notes upon a Tour through the Rajmahal Hills says the Sonthal has the honour of being aboriginal to India. It was his forefathers who first occupied and inhabited the land then known under name of Colar. From them the country was usurped by invaders from the Ariana of the Greek Geographers. The Aryan followers of Brahma first settled in the Punjab, the Sapta Sindhoo of the Vedas and the Hapta-Hindoo of the Zendavesta and the Sonthal is singled out by his short-make, his thick lips, high cheek-bones, flat nose and small eyes. He has little or no beard. The Sonthal race are usually quiet, but in 1855 they were impelled by a sense of wrong to a headlong rebellion and then gave much and prolonged annoyance. In the suppression of the rebellion half their numbers perished. They occupy the district surrounded by Bhagulpore, Berhampore and Birbhum, and are now ruled by a commissioner. The Kumea in the Sonthal pergunnahs was a person, who for a period voluntarily bound himself to slavery. The Sonthal are truth-telling, patient, kind of heart, honest and ingenuous and characterised for their simplicity. They are reserved and phlegmatic. Latham says the Sonthal believes in Chandabunga, an all pervading deity, to whom, once in 3 or 5 years, he sacrifices a goat on a Sunday. Holding the goat under his arm, he stands on one leg, and looking heavenward he calls on Chandabunga, kills the goat and eats it. They have four gods of the woods (Dryads) called Jaihirira, Monikoh, Marungburu and Gosaira, who seem to resemble the Lares and Penates of the Romans. These are represented by four stones buried in a clump of trees called the Jairthan and no Sonthal village can be settled till the Jairthan is established. A familiar deity is Manjiharam in the shape of a stone, which is buried in the centre of the village in a small open shed. The shed is called Buddhathan, for Manjiharam is also called Buddah Manji, a Manji and Sonthal being synonymous. The panchayats of the Sonthal assemble here. In the months of April and May, when the leaves are bare, 2,000 to 4,000 Sonthals assemble with bows and arrows, for their great Seudra or hunting expedition, during which they make great circles to enclose and kill all the smaller game. They eat the flesh of every animal. Their most solemn oath is taken when touching a tiger's skin. They dance in bodies of one or two hundred to the wild, gloomy, monotonous, music of flutes and drums. The men go round one way, while the women circle the other. The men step in time without much action, but the women drop their heels and toes in a double shuffle, and bend their bodies forward to a half kneeling position, as though paying homage to the men. Peacock's feathers enter largely into the paraphernalia required in some dances. They marry at will, but can be divorced through the

panchayat. When death occurs, the body is burned and the ashes taken to the Damudah. In the Mission school in their neighbourhood about 300 boys were under education in 1869. The houses of the Sonthal are in enclosures made with the green boughs of the Sakua, planted in the ground and tied together they keep each family distinct from its neighbours, they generally contain a Sonthal and his wife, several married children and their families a pig-stay, buffalo-shed, and a dovecot, a wooden stand holds the water-pots, the water from which is used for drinking or cooking, there is also a rude wooden press for expressing oil from the mustard seed. In a corner of the yard there will be a plough or a couple of solid wheeled carts, whilst numbers of pigs and poultry are seen in every direction. Each of the enclosures contains to the number of ten souls.—*Tr. of Hind. Vol. I.* 181.

The Paharia of the Sonthal pergunnah are arranged into two tribes, those who live in the Rajmahal hills, and the Naiga Pahariah on the plains to the west. The former live by grain crops reared on the slopes of the hills, and by bartering in the plains the hill bamboos, the grass and timber, which grow in luxuriant profusion in every direction. The Paharia are given to great lying and drunkenness. The Bhagulpor Hill Rangers are principally composed of this people. But since Mr. Cleveland's settlement in the beginning of this century many of them receive pensions. The other body, the Naiga Paharia, have more than all the vices of their tribe on the hills, but are worse off, having no right of forest or well wooded hills and readily take to brigandage. Both the Paharia tribes are low in the social scale.—(*Cal. Review, Dec.* 1860.)

The *Sonthal* and *Male* or Rajmahali are regarded by Mr. Logan as a displaced portion of the prior inhabitants of the country. The Male and Kol tribes are supposed by him to resemble the coarser Binua tribes of the Malay peninsula, more than the Burmans, the Malays, or other Indonesian tribes. But the same type as the Male and Kol are found amongst Malays and Burmans, although generally softened, and the short and turned up nose are Binua, as also is the small stature and the vertical turned up head. The *Male* or Rajmahali are described as mostly very low in stature, but stout and well proportioned. There are many less than 4 feet 10 inches and perhaps more under 5 feet 3 than above that standard, but 5 feet 3 inches is about the average height of the men. Their nose is flat and their lips thick, though less so than the Kafir of Africa, but their lips are thicker than those of the populations of the neighbouring plains. Buchanan Hamilton says that the features and complexion resemble those of all the rude tribes whom he had seen on the hills from the Ganges to Malabar. Their noses are seldom arched and are rather thick at the points, owing to their nostrils being circular, Bishop Heber says that the *Male* nose is rather turned up than flattish, but they are not so diminutive as the noses of the Tartar nations, nor flattened like those of the African Negro. Their faces are oval and not shaped like a lozenge, as those of the Chinese are. Their lips are full, but not at all like those of the Negro; on the contrary their mouths in general are very well formed. Their eyes, instead of being hid in fat and placed obliquely like those of the Chinese, are exactly like those of the Europeans. Their women, though hard worked are far from having harsh features. Bishop Heber says that the Malay or Chinese character of their features is lost, in a great degree, on close inspection. The *Male* head like that of the Kol has more of an elongated oval than that of a lozenge shape. The forehead is not narrow and the lateral projection of the zygomata is comparatively small. Nothing is said respecting the shape of the back of the head, a very important point in comparing Turanian tribes, the *Male*, or Hill man is described by Captain Sherwill as much shorter than the Sonthal and of a much slighter make. He is beardless or nearly so, is not of such a cheerful disposition, nor is he so industrious.—(*Mr. Logan in Jl. In. Arch.*)

Ho—In the mountains S. W. of Calcutta, are the Dhangar, Oraon, the Kol, the Lurka Kol or Ho, and the Khond.

The *Ho* are a comparatively small tribe. Their country proper is the part of the Singbhum district, called Colehan, a series of fair and fertile plains studded with hills, it is about 60 miles from N. to S. and from 35 to 60 in breadth, and has to the South and S. E., the tributary estates Mokurbung, Keonjur, Bonai and Gangpur, inhabited by Urya speaking hindus: to the east and north the Bengali pergunnah of Dhulbhum and district of Manbhum; and to the N. and N. E. the Hindi district of Lohardaggah. The Ho is the most compact, the purest, most powerful and interesting and best looking division of the whole Mundah nation. The more civilized Ho have an erect carriage and dignified, fine manly bearing, with figures often models of beauty: the occupants of the less reclaimed parts are more savage looking. Their tradition is that they came from Chota Nagpur and that they brought with them their system of confederate government of Purha, which they call Pirhi or Pir. The Ho of Singhbum are also styled Laraka Kol and have a tradition that they once wore leaves only, as the Juanga women now do, and not long since they threatened to revert to

them unless cloth-sellers lowered their prices. The Ho of the border land have probably much intermixed with the Urya and are less ugly than the race is usually described to be. Towards the close of the eighteenth century a maharajah of Chota Nagpur at the head of twenty thousand of his own men in co-operation with the forces of the Rajput chiefs of Singbhum, entered the Colehan to enforce the submission of the Ho. They allowed him to enter, but then fell on his army in masses and routed it with great slaughter. From 1819 to 1836, they continued hostile to the British Government but were then thoroughly subdued, and placed under British protection. The people and cultivation has immensely increased and the people are peaceful, prosperous, and happy, with hindu villages and colonies amongst them. The Ho of the lower part of Singbhum and Maunbhum are tolerably civilized are more dignified, more resemble North American Indians and have considerable physical qualities. The men are reserved, but often indulge in excess. The girls have a modest demeanour with frank open manners and womanly grace. The Ho are sensitively alive to abusive language and occasionally commit suicide on an angry word. They are eminently truthful and are all kindly affectionate to one another. A Ho bridegroom buys his bride, or rather his father buys her for him, the price being so many head of cattle.—(*Latham's Ethnology. Campbell, p.* 22, 35, 181. *Dalton, p.* 197. 166-8. *Capt. Tickell. As. Soc. Jour. Vol. IX. pp.* 783, 997-1063.)

Khorewah, a considerable tribe dwelling near the Oraon and to the north of the Lurka Kol, in the highest hills to the north of Jushpore and in those between Sargujah and Palemow. They speak much the same language as the Ho, Sontal, Bhumi and Mundah, and they appear to be of the same stock, though much less civilized. They are described as of small stature, with shaggy heads of hair and some beard, and to be of a lighter colour, and better looking than their neighbours. They occupy the hills and highest table lands of Sargujah and Jushpur, and they possibly were forced into that position by one of the Gond tribes. They are a considerable, ugly, and ill favoured tribe in the district of Palemow, in Singrowli, the hilly country of Mirzapore and Rewah, and on the borders of Benares and Behar and westwards in parts of Sargujah and Jushpur, and they are numerous to the N. E. in those parts of the plains adjoining the hills. They are also found on the outskirts of the Patna and Arrah districts. A division of the Kharawa tribe is the Bhogtah. The Kharawa are the dominant tribe of Palamow and Singrowli. They are labourers, palanquin bearers and porters. The Kharawa are mentioned by Captain Blunt (Vol. VII. As. Res.) as very savage and speaking quite an unintelligible language. This, they now seem to have forgotten as they speak a dialect of Hindi. The rajahs of Singrowli and Jushpur are Kharawa, though claiming to be Rajput. They have no caste distinctions and eat anything. The Kharawa of Sargujah do not use the plough. The race are mostly short of stature but with well knit muscular frames, complexion brown, not black, sharp, bright, deep set eyes, noses not deficient in prominency, somewhat high cheek bones, but without marked maxillary protuberances. The Kharawa of the hills are wild savages, armed with battle axes, bows and arrows. The Korewah are nomadic and migrate every second or third year. Their villages are therefore mere standing camps, consist of about forty houses built round a large square in the centre of which is the dancing arena.—(*Dalton, p.* 176. *Campbell, p.* 36, 40, 378.)

Oraon, is a tribe found amongst others in the Chota Nagpur territory. Their language is of the Dravidian stock. They are located in the highlands east of the Udipur and Sargujah district of the Chota Nagpur division. They form a considerable part of the population of the Jushpore highlands and these Jushpore Oraon are the ugliest of the race. Thence, eastwards, the Oraon have pushed themselves into the country of the Mundah in the plateau of the Chota Nagpur district and adjoining country. They are not, at present, a dominant race. They are laborious and industrious and are engaged as labourers in Bengal. The Oraon, call themselves Khoonkir. They have traditions that they were once settled in Guzerat, but on being expelled from there travelled eastwards fighting unsuccessfully on the road, and finally settled on the Rhotas hills where some of them seem to have remained until the mahomedans erected a fort there. There is no similarity between the language of the Oraon and that of the Mundah and their cognates; the Mundah is soft and sonorous, while the Oraon is guttural and harsh and the Oraon language of the Rajmahal hills and the Tamul have a near connection. The Oraon, when driven from the Rhotas hills, brought with them to the plateau large herds of cattle and implements of husbandry previously unknown to the Mundah. Also the Oraon, when driven from the Rhotas hills, separated into two great divisions, one of these moving to the S. E. formed a settlement in the Rajmahal hills, and are now known as the Male or Rajmahali; the other sought refuge to the south in the Palamow hills, and wandered from valley to valley in those ranges, till they found themselves in Burwai, a hill-locked estate in Chota Nagpur proper. From thence

they occupied the highlands of Jushpur and formed the settlements in the vicinity of Lohardugga, on the Chota Nagpur plateau where they still constitute the bulk of the population. —(*Dalton, p.* 160. *Campbell, p.* 33.)

The present customs of the Oraon have been derived from the Moondah, and differ therefore from those of the Rajmahali people whose isolated position has preserved their ancient ceremonies. In the marriages of the Oraon, a public recognition that the couple have slept together is a part of the ceremony; the Oraon burn their dead. They are sworn on the Doob grass. Their supreme deity is the sun, called Dhurmo, a Sanscrit word. Amongst the Rajmahali people, it is customary for the engaged couple to sleep together before marriage. They bury their dead. They swear on salt. They worship Bedo Gosain, an invisible spirit. The Rajmahali is less cheerful than the Sonthal, less industrious and does not join in the dances to which the people of the Moondah stock are so devoted.

The Oraon are more lively than the Moondah, quite as industrious and the most active and nimble footed of the dancers.—(*Dalton, p.* 171 172.) The Oraon are now a good deal interposed between the Kharawa and the Mundah, but though the Kharawa and Oraon are in contact, they are described by Colonel Dalton as very unlike one another in language, appearance, manners and customs.—(*C. p.* 39.) Oraon settlements predominate in the western parts of the Chota Nagpur plateau and each village group has its peculiar flag. The Oraon are a very small race, but well proportioned. The young men have light graceful figures and are as active as monkeys. Those residing in isolated positions are generally black or dark and ill-favoured. They have wide mouths, thick lips, projecting maxillary processes, nostrils wide apart, no marked elevation of the nose, and low foreheads, though not, in general very receding. The Oraon who dwell in mixed communities have more varied features and colours softer, fairer and pleasing when young and improve in appearance with civilisation.—(*Dalton, pp.* 134, 169-70.) The Oraon, according to Colonel Dalton have more of the African type of feature, he has seen woolly heads amongst them and the wild Oraon have almost an ape like physiognomy. The Juspur Oraon, according to Colonel Dalton, are the ugliest of the race, with very low foreheads, flat noses and projecting cheek bones, and approach the negro in physiognomy and in manner the Oraon are more like bright hearted Negroes (*C. p.* 22.) are fond of gaiety, decorating rather than clothing his person, whether working or playing, always cheerful, and young Oraon boys and girls are intensely fond of decorating their persons with beads and brass ornaments which they discard on becoming christians. Oraon youths and maidens speedily acquired the songs and the steps of the Mundah. The Oraon have small, ill-built, untidy huts, in which the family reside. But they have in each village, of old standing, a Dum-Kuria, or bachelor's hall in which all boys and unmarried men of the tribe are obliged to sleep. Any absentee is fined; in the Dum-Kuria, also, is placed all the flags, instruments used in their dancing and other festivals, and in front of it is a clear circular space for the dancing ground. In some Oraon villages, also, the unmarried girls have a house to themselves with an elderly woman to look after them—she has always a stick in hand. The Oraon have no gardens or orchards belonging to individual houses, but they have some fine trees, common property within the village, and outside, their groves of fruit trees form a beautiful feature of Chota Nagpur scenery. The Oraon have a veneration for salt; Mundah and Oraon marriages as a rule are not contracted until both bride and bridegroom are of mature age, the young people often making love and suiting themselves. In Chota Nagpur amongst the agricultural classes, and in Singbhum amongst all classes of Kols, girls have a fixed price sometimes up to 40 head of cattle; and girls often long remain unmarried, even to be old maids. When they are married, the bride clasps a mahwa tree, the groom a mango tree, and at the close of the ceremonies the bridesmaids pour a jar of water over the heads of each of the couple who then retire to change their wet clothes. The next morning the bridesmaid burst into the nuptial chamber and bring forth the bride and groom.—(*Dalton, p.* 175, 179, 198) In villages east of Ranchee, wholly inhabited by the Oraon, the Mundah, not the Oraon is the language spoken.

Mundah and Oraon village officers are the Bhumhar, whose head is called Mundah;—the Mahto or assessor, Bhandari, his assistant; the Pahan or priest: Gorait or messenger, and Kotwar or Police.

Bustar, a large district and dependancy in Central India surrounded by the Tiling in the south, Khond and Mári Gond on the east and hindus to the north.

Gudba is a Kolarian tribe numerous in the eastern part of Bustar and Jeypur, but scarce to the west of Bustar some of their most important words are identical with those used by the Kurku in the west, and by the Kol and Sonthal on the east.—*C. I. P. C. Rep. p.* 6.

In *Singbhum*, occasionally, in the markets, a young man will pounce on a girl and carry her off by force, his friends covering the retreat.—(*Dalton, p.* 181.)

The Khond, Kund, or more properly the Ku, is the language of the people who are common-

ly called Khond but who designate themselves Ku. They dwell in the country surrounding the Urya in Sumbhulpur and to the south, they inhabit the upper parts of Gondwana, Gumsur and the hilly ranges of Orissa and their horrid rites of offering children and young people in sacrifice (see Meriah) are generally known. Kimedy is peopled by Khond, who, during the past thirty years have been repeatedly in rebellion. The hilly tracts of India from Moorshedabad down to Ganjam, and southwards on the skirts and in the valleys of the mountains as far as Cape Comorin, are peopled by hundreds of small tribes, who form amongst themselves independent nations, who have not yet felt the effects of civilization and—as with the Sonthali,—the Sauriah and the Khond, occasionally rise in open rebellion against the British power. It was known in 1833, that the Khond race were addicted to the sacrifice of human beings,—Meriah,—to the earth goddess ; and, ever since then, the British Government have made continuous effects to suppress this rite. Since 1857, the Khond of Kimedy have again been surging up, from time to time, but the true reasons are not known, though those alleged are their hopes of renewing the Meriah. Kond savages occupy the eastern parts of the highlands between the Godavery and the Mahanadi and are notorious for their human sacrifices. Those near Berhampoor average in height 5 ft. 5¾ in. and in weight 8 stone, with well developed muscles and tendons standing out hard and firm. They are wiry and active, have an upright gait, carry their heads erect, straight noses, narrow nostrils, thin lips, black eyes, not high cheek bones, slight projecting lower jaw, white and regular teeth with oval faces, as if of a mixed caucasian and mongolian origin. Their ordinary food consists of the wild farinacous products of the hills. They are social, but easily excited, and more truthful than natives of the plains. Animal food and palm wine are only used on festive occasions. The deities of the Khond are the same as those of the S. E. Gond. Pen and Pennoo are common to Khond and Gond. Dula deo was a bridegroom who perished in the marriage procession and received divine honours.—(*Mr. Campbell, p.* 31. *Pr. Mad. Govt.*)

Sowrah, Sour or Saur.—This term, identical with Sairea, is applied to populations occupying the fastnesses of the Eastern Ghats, along with the Kond and Kol. The Sourah are wholly within Telingana, and extend from the Godavery to the southern frontier of the Khond. An insurrection in 1858, was neither aided nor led by Khonds, the principal actor in the affair was a man named Danda Sina, of Garbah Goomah, a village occupied by the Sowrah tribe, a race of savages armed with bows and arrows and battle axes, who occupy the hilly tract which extends from Parla Kimedy to Berhampore (Ganjam.) It is bounded on the East by the narrow belt which separates the hill tracts from the sea, and on the West by the Khond clans of Chinna Kimedy and Jeypore. The Sowrah are believed to be prior occupants, but in habit and barbarism they bear a strong resemblance to the Khond. Danda Siua had sometime before been apprehended by the authorities of Ganjam, on a charge of dacoity. He was convicted and sentenced, but the sentence required confirmation, and in the interim he contrived to effect his escape. Flying to his own village, he collected a large body of his clansmen, and with 10,000 followers attacked the manager of Purla Kimedy. Seven peons were killed upon the spot, and though the manager escaped, the whole country was immediately in a state of excitement. The Sowrah had previously been irritated by the execution of two of their number for murdering the headman of a village, and had openly threatened vengeance for their deaths. An old device also was employed to stimulate them to action, and give additional coherence to the movement. As in the Sonthal rebellion, an avatar descended, though he was not, as with the Sonthal, in the shape either of a cart wheel or of a piece of paper. The Sowrah appear to be advanced beyond that point in theology, and their idol was a little brazen image. But in all other respects the device was identical with that employed among the Sonthal. The avatar issued commands, the active leader is sole interpreter of them, and the commands authorized armed resistance to regular authority. The Sowrah country is one of the most difficult in the world, a hilly tract covered with a jungle as deadly to sepoys as the lowest swamp in the Sonthal Pergunnahs.

Bhui or Bhuya, a very numerous tribe dwelling all along the borders of Bengal, Orissa and part of Behar. The Bhui of the south of India keep asses, which the Bujhwa or Bhui of Northern India do not keep. The Bhuya seem to belong to west Bengal and Orissa on the one side and to Assam on the other. According to Colonel Dalton they were once the dominant race in Assam, but they seem to have been the prior occupants of Bengal and they have apparently no connection with the Bhumi or Boyar. They appear to be the original occupants of much of the lower country to the south of the Chota Nagpur plateau, great part of Singbhum and Bonai and the borders of Orissa. They have been partly driven from a portion of their country and they are partly dominated over by Kol, themselves probably impelled south and east by pressure from the north and west. But they are still very numerous in all the districts and petty states thereabouts, and are found more or less all the way across

the lower hill country to the borders of Behar, close up to Gya were they are succeeded by the kahar as palanquin-bearers. The Bhuya are the palanquin-bearers of Chota Nagpur. Major Tickell describes them as originally rich in cattle, and Mr. Campbell deems it possible that the hindus have changed them to Goali who are a most numerous race in Bengal and Orissa. They are a dark complexioned race with rather high cheek bones, but not otherwise peculiar and approximate in appearance to the Urya. Those in the hills towards the Bahar border have a darker complexion. They have no language of their own, but speak Urya on the Urya borders, Bengali, on the borders of Bengal, and Hindi further north.

Kaur, according to Col. Dalton, the Kaur next to the Jushpur Oraon, are the ugliest race he had seen, dark, coarse featured, wide mouths and thick lips. They are a very industrious, thriving people, about Korea and Udipur, in the extreme west of the Chota Nagpur Agency, of Nagpur proper. They speak Hindi. They are considerably advanced in civilization, but are very black, with broad noses and thick lips. They eat fowls and do not reverence brahmins, but worship Siva. They bury their dead. They claim to be descendants of the Kuru who fought the Pandu.—*Campbell, pp.* 22, 40.

Bhur, a tribe near Palemow mentioned by Buchanan, of whom little is known —(*C. p.* 39.)

Gour, a race on the east of the Gond, who extend into the borders of the Chota Nagpur agency in Udipur and Sargujah. They are the dominant tribe in Sargujah and the Sargujah rajah is supposed to be a Gour though claiming to be a rajput. They are much hinduised. —*C. p.* 32.

Dhoonkur or Dhankur or Dhungur in the Lukti territory bordering on Udipur and Sultanpur, a short but muscular and able-bodied tribe who speak a separate language. The tribe is confined to Chota Nagpur, and the adjoining districts. They do not follow hindu rites and they have no temples, but set up near their villages a stone with some rude carvings, which they worship in times of famine or sickness or calamity. They bury but sometimes burn their dead.—*C J. P. C. R. p.* 6 and 7.

Gowari, a tribe of agriculturists speaking the Mahratta language dwelling in the more civilized parts of the Central Provinces. They resemble Raj Gond, but are fairer.—*C. J. P. Com. Rep., p.* 20.

Kheriah, an aboriginal tribe settled on the plateau of Chota Nagpur, they venerate the Koel river, as the Sonthal does the Damudah river. Kheriah build substantial comfortable houses. They say that their first settlement was Pora, a village on the Koel river. Their language, customs and appearance is sufficiently approximate to those of the Mundah as to evidence a consanguinity.—*Dalton, p.* 155. *Campbell, p.* 36.

Bendkur, a race in the south of Chota Nagpure.

Birhore, a race in the south of Chota Nagpur.

Bhuhar, or *Boyar* a race in the north of Chota Nagpur.

The Kherria, Bendkur, Birhore and Bhuhar are described as regularly wild inhabitants of the hills and jungles who have no fixed villages, but move about from place to place, burning down the jungles, sowing in the ashes, and after the harvest, moving elsewhere.—*C. p.* 36.

Bhumi, means man of the soil, but Bui also is earth or soil. The Bhumi are numerous. They form the majority of the population in all the estates of the Manbhum district to the south of the Kassai river. As they approach the confines of Chota Nagpur they appear to be called indifferently, Mundah or Bhumij, and they intermarry. More to the east, the Bhumij have greatly assimilated to the Bengali, many have acquired estates and influence as Sirdar Ghatwali, the hereditary guardians of the passes. They tenaciously cling to their national songs and dances. Bhumij are to be found in Mohurbunj and Keonjur, and it is this branch of the Mundah race which has spread farthest in an eastern direction. The *Bhoomi* of the lower part of Singhbhum and Manbhum are tolerably civilized. All the wild tribes of Central India worship relatives immediately after death. Bhunjia, Bhumij, and Kol tribes or clans practice the ceremony whereby the soul of a man just deceased is attracted or conjured into some tangible thing which is brought back into the house soon after the funeral, apparently that the soul may thencefourth be worshipped as a household spirit. Traces of this superstition may be found all the world over. It is practiced by hindus. Herodotus and Homer show its antiquity. Captain Burton mentions it in Africa.—(*Cent. Ind. Prov. Com. Rep. pp.* 5, 9. *Dalton, pp.* 147, 156. *Campbell, p.* 33.)

Male.—The Rajmahal hills form a kind of knot, at the extreme eastern point of the hill country of Central India dividing Bengal from Behar. They are to the east of the Oraon, but are entirely different from their neighbours the Sonthal. Rajmahali people are known as Male. They are better looking than the Sonthal. The skin is dark, face broad, eye small, and lips thicker than those of the men of the plains.

Their language abounds in terms common to the Tamul and Telugu, and contains so many Dravidian roots of primary importance, though it also contains a large admixture of roots and forms belonging to the Kol dialects, that Dr. Caldwell considers it had originally belonged to

the Dravidian family of languages. It is spoken by the Male, or inhabitants of the hills. The brief vocabulary of the words of the tribe inhabiting the Rajmahal hills in Central India, as contained in Vol. V. of the Asiatic Researches and Mr. Hodgson's more complete collections prove the idiom of this tribe to be in the main Dravidian. Test words show an identity of language among the Rajmahali on the east: and the Maria in the remote jungles down to the Godavery and the Gond who live along the Satpura as far west as Nimar and Malwa. It is akin to that of the Oraon. Latham says Bedo is one of their gods, and is the same as the Batho of the Boda, the Potlang of the Kuki and Buddha, and their priesthood like that of the Bodo consists of Devian and Dewasi."

It was the Male race, amongst whom Mr. Cleveland so successfully laboured to impart to them settled habits. They have been successfully reclaimed, are quiet cultivators and formed the bulk of the corps known as the Bhagulpur hill ranges. Ghatwall estates are particularly numerous in the Bhagulpur and Bherbhum districts adjoining the Rajmahal hills on either side. The estates pay no revenue, but are held on the condition of guarding the passes against hill robbers, murderers and cattle-lifters.—(*Latham. Campbell, p.* 25 *to* 33.)

The Gond dialect, says Mr. Logan, is Dravidian, hardly at all affected by Gangetic. The Khond, if not identical, probably agrees with it more than with Kol, and the basis of the latter is Dravidian. The Uraon and the Male or Rajmahali dialects are still closer to the Gond and south Dravidian than the proper Kol.

For the Male or Rajmahali, the most eastern dialect, and those which it might have been supposed, were longest in contact with the east Gangetic, we have vocabularies by Major Roberts (A. R. iv. 127) and by Mr. Hurder (in Mr. Hodgson's series, J. A. S. XVIII, 553.) The Uraon vocabulary of Colonel Ousely (Hodgson's series) has so much resemblance to the Male that it may safely be set down as a dialect of the same language. It frequently agrees with the Male where it differs from the co-dialects, with which it is now in contact in Chota Nagpur. This may be considered as confirming the tradition of the Uraon that their original country was Rotas and parts of Rewa, or the hills along the northern bank of the Sone (to the southward of Benares) According to the tradition, they were driven across the Sone by the intrusion of Gangetic hindus into their native land, and ultimately settled in Chota Nagpur, the country of the Kol tribe of Munda or Ho. At a latter period Hindus pushed into this territory, reduced the more civilised Uraon to slavery, drove the wilder Kol into revolt, and eventually forced them to migrate to the southward and eastward into the land of the Bhuians. The more northerly of the eastern emigrants passed out into the low country, and mixing with the Bhumij and Bhuian natives, formed the class called Tamaria. The more southerly moved into Singbhum, and Kolehan, living at peace with the Bhuian pre-occupants until the intrusion of Hindus from Marwar, who first leagued with the Bhuian against the Kol and then with the Kol against the Bhuian, and finally appropriated Singbhum leaving Kolehan or Hodesam to the Kol or Ho, as this southern tribe call themselves (*Tickell, J. A. S.* 1849, *pp.* 694-7.) Remnants of the Kol are still found to the northward nearer Chota Nagpur, and they appear to be also spread to the northward towards Rajmahal. One tribe, the Sonthal, is found in Chota Nagpur and in the skirts and vallies of the Rajmahal hills. It is enumerated by Mr. Stirling in his list of the Kol tribes of Cuttack, and according to Captain W. S. Sherwill its range is from Cuttack through Chota Nagpur to Rewa, thus embracing the territory of both divisions of the eastern Vindhyan.

The Male and Uraon languages are mainly Dravidian, and it is remarkable that although the Male are now confined to the N. E. extremity of the Vindhya, where the Ganges washes and bends round the chain, and are separated from the south Dravidian nations by the Kol race, their language is more Dravidian than the Kol itself. The pronouns and numerals, for instance, are Dravidian, while those of the Kol are Gangetic, Himalayan and Ultra Indian. The explanation is probably to be found in the circumstance of the Uraon and Male having, originally, formed an uninterrupted continuation of the Gond tribes and dialects that extended from the Godavery to the N. E. extremity of the Vindhya. The Kol, again, must have formerly had a greater extension either on the north, breaking through the Male Gondian band, into the Gangetic valley, or on the south to the seaboard of Cuttack and the lower valley of the Ganges, where they would be exposed to the influence of maritime visitors and settlers, Ultra Indian and Gangetic. But as both the Kol and the Male-Uraon are physically Ultra Indian more than Dravidian, and the occupation of the Eastern Vindhya and the hills on the opposite side of the Gangetic valley by Ultra Indians implies that the valley itself was at one time possessed by the same race, the simplest conclusion is that the Kol were an extension of the ancient ultra Indo-Dravidian population of the Lower Ganges and the highlands on its eastern margin. The peculiarities of Kol, when compared with the S. Dravidian, and the Male-Gondian or purer north Dravidian dialects, are chiefly glossarial.—*Journal of the Indian Archipela-*

go. No. IV. and V. April and May 1853, *pages from* 196 *to* 198.

Hindustan,—as known to Europe, is a term applied to British India generally. To the people of British India, however, and to Europeans in India the name is restricted to that part of India, which lies between the Himalaya and the Vindhya mountains. But, in considering the ethnological relations of India, the countries from the Indus and west of the five rivers of the Punjab, south easterly to the mouths of the Ganges have been so often in the occupation of so many different races, whose fragments are now found in larger or smaller scattered portions throughout the region indicated, that it will be well to notice the occupants of Central India, Rajputanah, Bengal, Oudh, the N. W. Provinces, and the Punjab as inhabitants of Hindustan, amounting to 136 millions of people.

Bengal is a political division of British India, comprising Bengal proper, Behar, Orissa including the tributary Mahals, Assam, Chota Nagpore, and the native states of Hill Tipperah and Cooch Behar. It extends from the Meridian 82° to 97° E. L. and lies within the parallels of 19° 40' and 28° 10' N. Lat. On the N. West is the Native state of Rewah in Central India, also the districts of Mirzapore, Ghazipur, and Goruckpur belonging to the North West Provinces.

From the Chumparun district as far east as the Bhootan Dooars, the Himalaya range, running through the independant states of Nepal, Sikkim, Tibet and Bhutan, form the northern boundary. Further east, along the northern frontier boundary of Assam, lies a tract inhabited by the Akha, Dafla, Miri, Mishmi and other wild tribes: along the eastern frontier lies a part of the independant province of Burmah; below that is the Munnipore State: still lower are various hill tribes, the Naga, Looshai, Khyen, Mikir, &c. and at the extreme south east is British Burmah. On the south of Chittagong, which is the south eastern district of the province, is the Akyab district of Arakan. Between Chittagong and Orissa is the Bay of Bengal. On the South West of Orissa, is Ganjam in the Madras Presidency; on the west, are the Tributary Mahal estates, and also the Sumbulpore and Belaspore districts of the Central Provinces.

The population is supposed to be near 60,000,000. About two-thirds of the population profess hinduism, in its various sects, and about one-third are mahomedans, with a small number of christians, and inclusive of the hill tribes on its S. W. West, Northern and N. Eastern borders. Many of the higher caste hindus are recognized as former immigrants, but the origin of the vast bulk of the mahomedans is obscure. Calcutta contains about 377,924 inhabitants, amongst whom are many foreigners: viz.

Europeans	11,224	Asiatics	1,441
Indo-Europeans	11,036	Parsees	98
Greeks	30	Africans	53
Armenians	703	Chinese	409
Jews	6,881	Hindoos	239,190
		Mahomedans	113,059

Central Hindustan, or Central India, was the Madhya-desa, of the ancient Aryans, the middle region or Aryavarta, the Arya country. In a slokam in the Sanscrit work, the Amarakosha, the ancient boundaries of it are thus defined

"Ariavartaha punia bhumi hi.
Mad'hiam Vindhya Himava yoho,

i. e the Arian country, the sacred land (lies) between the Vindhya and Himalaya," in this way indicating both the ruling race and the boundaries of the country held by them, at the time that Amara Sinha wrote the Amarakosha. The first known dynasty was the Bharata, so called from the first king Bharata, and the last of the dynasty was Samvarama, who was driven westward by the Panchala of Canouj B. C. 589. The Bharata kingdom seems to have been established between B. C. 2,600 to B. C. 2,200. Central India is a tableland of unequal surface, from 1,500 to 2,500 feet above the sea, bounded by the Aravalli mountains on the west, and those of the Vindhya on the south, supported on the east by a lower range in Bundelcund, and sloping gradually on the north east into the basin of the Ganges. It is a diversified but fertile tract. The *Patar*, or plateau of Central India, is distinct from the Vindhya to the south and the Aravalli to the west, and its underlying rock is trap. Aravalli means the refuge of strength, and these hills have afforded protection to the most ancient sovereign race in the east or west —the ancient stock of the Suryavansa, the Heliadæ of India, or children of the sun, the princes of Mewar, who, when pressed, were wont to retire to its fastnesses, only to issue again when occasion offered. The Aravalli hills are connected by lower ranges with the western extremity of the Vindhya mountains on the borders of Guzerat, and stretch northwards to a considerable distance beyond Ajmir, in the direction of Delhi forming the division between the desert on the west and the central tableland. It would be more correct to say the level of the desert, for the south eastern portion, including Jodpur, is a fertile country. Amarkantak, a great plateau, forms the watershed of the Mahanadi, Son, Tons, Johilla, and Nerbudda. The rivers, though large and full of water even half way from their mouths, are very irregular in the slopes of their beds, and are disturbed by frequent rapids, so that, owing to these impediments, increased still further by the rocky character of the river beds

or their banks, navigation is limited for the most part to the lower portions of their course. Many parts of Central India are covered with dense jungle.—(*Ann. Ind. Ad., V.* XI *p.* 349.)

The Central India, of the British Indian Government, however, is a political division, under the care of a political agent. It has an area of 83,600 square miles, with a population of 7,670,000 and a revenue of 2,612,600. In this political division, there are 71 feudatory or mediated chiefs, of whom 4 are Mahratta, 7 are mahomedans, 17 are Bundela, 33 are Rajpoot, six are brahman, and 4 belong to other races. Of these, six are feudatory states, Gwalior, Indore, Bhopal, Dhar, Dewas and Jowrah, but the 71 states are as under :

Indore Residency, Indore, Dewas, Bagli.

Gwalior Agency, Gwalior.

Bhopal Agency, Bhopal, Rajgurh, Nursingurh, Kilchipore, Koorwai Muksoodingurh ; Mahomedgurh, Basoda, Patharee ; Larawut Gwalior districts, Seronje.

Bheel Agency, Dhar, Jhabooa, Ali Rajpore Jobut ; Mutwarh ; Indore, and Gwalior district British Pergunnah of Mundpore and State of Burwani.

Western Malwa Agency, Jowrah, Rutlam, Goonah and Sillana.

Bundlecnnd Agency, Sohawal, Jignee, Ajeygurh, Baonee, Beronda, Bijawar ; Chirkary, Chutterpore, Duttia, Kotee, Myhere, Nagode ; Oorcha, Punna Rewah, and Sumpthur. Of the principal states Gwalior, Indore, Bhopal, Dhar, Dewas, and Jowra, Bhopal and Jowra are under mahomedan rulers and the rest Mahratta. The petty states hold under the immediate guarantee of the British Government, but have feudal relations with one or other of the larger states, and occasionally with more than one.—(*Treaties, Engagements, and Sunnuds, Vol. IV. pp.* 195, 196 & 197.)

At the close of the Pindaree war, the districts in Central India and Malwa were left in a disorganized state, the mahratta chiefs had parcelled out amongst themselves the possessions of the Rajput chiefs and the smaller states were all subject to Sindia, Holkar or the Puar, and sometimes to all three. Many of the smaller chiefs had been driven from their possessions, and had sought refuge in the jungles and mountains where they robbed or levied "tankhah" or black-mail from the larger states. These robber chiefs were twenty-four in number in Sir J. Malcolm's time.

Of the feudatory territory, consisting of 71 states, supervised by the Central Indian Agency, the head quarters is Indore, but has three grand divisions. The North East division comprises the native states of Bundelcund and Rewah. The Northern division consists of the Northern and Central districts of the Gwalior States. The South West division comprises the table-land known in modern times as Malwa, though far within the ancient limits of the province of that name, and the submontane territory between it and the Nerbudda, as also a considerable tract south of that river, extending to the Kandesh frontier. The first, or N. East division extending from the Bengal Presidency in the east to the Gwalior State in the west, includes Rewah and 35 other states and petty chiefships. Its area is about 22,400 square miles ; its population about 3,170,000 souls, and its public revenues aggregate about Rupees 63,58,000. The 2nd or Northern division extends from Bundelcund and the Saugor district, and has an area of about 19,505 square miles ; its population is about 1,180,000 souls, and its public revenue about Rupees 67,65,000. The 3rd or South West division goes on, westward, to the Bombay Presidency, and contains the remainder of Gwalior, Holkar's states, Bhopal, Dhar and Dewas and other small states. The area of this division is about 41,700 square miles, its population about 3,320,000 souls and its public revenues about Rs. 1,30,00,000. The states and petty chiefships in Central India, form a political and are in a natural, division of British India, and included in an area of 83,600 square miles and a population of 7,670,000. This territory is divided thus, viz,

	Principal states.	Secondary.	Minor and Petty.	Total.
Mahratta. ...	2	2		4
Mahomedan...	1	2	4	7
Bundela. ...	—	6	11	1
Rajput. ...	1	12	20	
Brahmins &c.	—	1	3	
	4	23	44	71

with a total revenue of Rupees 2,61,23,000.

Bhil.—The desolate wilds and jungles of the western Sathpura range, and parts of the country which extend from them to the Vindhya hills, are occupied by Bhil tribes, who abhor field labour or manual labour of any kind.

Malwa, Agricultural.—Adjoining this, are the richly cultivated plains of Malwa with occasional intervening tracts of hill and jungle, from the Myhee on the west to Bhilsa on the east, a stretch of nearly 200 miles, and from the crest of the line of the Vindhya to Mundissore and Oomutwarra, a distance of 100 to 120 miles, and occupied by a thrifty agricultural people.

Hilly tract.—This is succeeded by the more hilly and jungly tract of Oomutwarra, Seronge and Keechiwarra, with a scanty population.

Gwalior.—Northwards, towards Gwalior, the country becomes more open, except on the wild border tracts of Kotah of Bundelcund till we

come to the carefully cultivated plain of Gwalior stretching for a distance of 140 miles between the Chumbul, Pahooj and Sind rivers.

Bundelcund : Bundela.—A vast portion of Bundelcund is hilly and unproductive, forming the northern slope of the table land of the Vindhya.

Rewah : Baghel.—The plains of Rewah are fertile ; but the valley of the Sone to the south of the Kymore range is desolate. The people are indolent and untrustworthy : though widely different in other respects, there is one characteristic common to the Baghel of Rewah, the Bundela of Bundelcund and the rajput of Gwalior and Malwa, a dislike to labour or service away from their homes, they generally leave the tilling of the soil to the inferior and servile classes, and are regarded as the heads of the local society. Many of the Rajputs in the states of Central India, give themselves up to sloth and the immoderate use of opium Malwa and Gwalior are great centres of Trade. In Malwa, the towns of Indore, Bhopal, Oojein, Mundipore, Rutlam, Dhar, Jowra, Augur, Neemuch, Shoojawulpoor and Bhilsa are the principal marts.

Indore is the capital of the maharajah Holkar.

Gwalior is the capital of the maharajah Sindiah.

Rajputanah Agency.—Rajputanah stretches from 23° 15′ to 30 N. L. and from 69° 30′ to 78° 15′ E. L. containing an area of 123,000 sq. m., with a population estimated at ten millions and includes eighteen principalities, viz.

Mahomedan.

Tonk.

Enclosed in these are two purely British districts, Ajmir and Mhairwara.

Rajputs.—The territory known as Rajasthana and Rajputana, spreads through the Indus deserts and to Sind westward, and southwards to Cutch and Guzerat, and takes its name from the Rajput races ruling in it. But there are innumerable sub-divisions of them in Malwa and extending from Bahar and Benares through the N. West Provinces of India up to the Punjab. The Rajputs claim to have sprung from the ancient solar and lunar dynasties and form themselves into the Suryavansa and the Indra or Chandravansa tribes, and there is a race styled Agni Kula from having sprung from a sacred fire (ignis) which Agastya kindled on Mount Aboo. The three Solar races are the Gehlote, Rahtore and Kachwaha : The four Agni Kula races are the Pramara with 35 Sakha; the Parihara with 12 subdivisions ; the Chalukya and Chauhan, with 24 branches. Of the Pramara, the Mori are best known, and of the Chauhan, the Hara, who give their name to Haraoti, and have the two rajahs of Kota and Bundi. The single lunar race, or that of the Yadu or Jadu, sprung through Krishna, has eight branches, of whom the Jhareja with their raja of Cutch and the Bhatti with their rajah of Jaisalmer are best known.

The *Dogra* of the Jummoo Hills claim to be rajput and there are rajputs in the Kangra and Simla hills.

Rajputs rule in Rajputanah, where they are a numerous and dominant aristocracy, organised on the feudal principles necessary to domination, though the greater part of Rajputanah is ethnologically more Jat than Rajput. Rajputanah lies in the centre of a circuit all round the edge of the more compact mass of the Jat people,—from the Salt Range, through the northern Punjab and adjoining hills, to Rohilcund, Oudh and the Centre Doab : thence by Bundlecund through Sindiah's territory, Malwa, Mewar, Guzerat and Kattywar into Lower Sind. They are not found in any numbers to the north of the Salt Range nor are they in any of the hill country west of the Jhelum. A large proportion of the Rajputs scattered about the Eastern Punjab, Cis Sutlej territory, and Dehli districts are now mahomedans, as are occasional Rajput villages all over Hindustan and a good many Rajput rajas, their conversion having been influenced by the Moghul emperors. But east of Dehli, conversion is quite the exception. But a small Rajput tribe, called Jan-jua, now, mahomedans is found about the Salt Range.

In the N. E. Punjab near the hills, the Rajput population is more numerous, and hindu Rajputs are the dominant race in the Jummoo and Kangra districts of the Himalaya. The Kangra and Jummoo rajahs and their clans claim to be of very pure blood, and they are fine handsome men, the Kangra Rajputs in particular, they wear many jewels and are very fair. The women of the hills are in deserved repute and much sought after in the plains. The Jummoo men, called Dogra Rajputs, are less handsome than those of Kangra, but more robust and brave, quiet, staunch, steady and reliable, without disagreeable hindustani airs. The Rajput population of these hills must be very considerable. East of the Sutlej, in the Simla hills, many of the rajas and their followers are rajputs.

In the valley of the Ganges, the body of the Rajput population lies next to the Jat race to the east ; in the Middle Doab, Rohilcund and

Oudh, and still further East the country is shared with a brahman population. In lower Rohilcund, where they are called Thakur, rajput communities are strong and numerous, also numerous in western Oudh, but they have never largely entered the British sepoy army. In the Central Doab, in the districts of Mynpuri, Futtehgur and Etawah, rajputs are numerous, and many served in the British native army, but Eastern Oudh, especially most of the broad tract between the Gogra and the Ganges, is the home of the great rajput population which supplied so large a portion of the Bengal native army. At home, these rajputs are a purely agricultural population. Baiswara, the country of the Bais rajputs lies almost parallel to the Brahman country of the Lower Doab, and furnished many sepoys.

To the east of Oudh, rajputs are pretty numerous in Azimghur and Ghazipur.

In the Gangetic valley, the Rajputs spread over a broad region into a large population, and are essentially the cultivators of that valley. Physically, the rajput and brahman of that region are not different. The modern rajput is quite as strict a hindu and more prejudiced than many brahmans, and upon the whole, was the worst class in the rebellion of 1857-58.

The Rajput in general is illiterate, and they confine themselves to arms and agriculture, they also keep cattle. They every where speak dialects of the ordinary Hindi. They are not supposed, by Mr. Campbell, to be the old Kshatrya race, noticed in the early brahminical books, as existing many hundred years before the christian era, though they have taken the place assigned to the Kshatrya. Rajput, son of a Raja, is not a term used by all Rajputs. In some parts of their country, they call themselves Thakur, which means chief or noble. They are, however, frequently distinguished by the name of their tribe as Chouhon, Rahtor. Their practice is not to marry into their own but into another clan, and this has assimilated the tribes to each other.

The Baghel, also Waghel is a Rajput tribe in Rewah.

Europeans have become acquainted with them as soldiers, but in their own villages, on the plains of the Ganges, they are simple agriculturalists of a constitution very like that of the Jats, only less pure and complete.

Rajputs are falling in the world. The armies they have furnished has exhausted the material; infanticide has diminish their numbers: and their wives, shut up like those of mahomedans, give no aid in agriculture. Over great tracts, the rajput are a feeble minority. In some parts, however, the agricultural Rajput villages are strong and numerous, every Rajput is free and equal, the land is divided amongst them and the commune is administered on democratic principles: wherever this is the case, their institutions resemble those of the Jat race.

They do not greatly revere brahmins, but the Rajput unlike the Jat has adopted fully all the ceremonies and superstitions of hindu caste, are very particular about caste marks, and cook once a day with great fuss and every man for himself. Their daughters are married to men of the best tribes and their widows are not permitted to re-marry, and it is the point of honour as to their daughter's marriages, that led to the practice of infanticide.

The north eastern Punjab and Cis Sutlej districts seem to have first been a Brahman, then a Rajput country and subsequently advanced upon by the Jat. It is not clear whether the Bhatti of Bhattiana, were originally Rajputs or really are Yuti or Jat.

But from Bhattiana northwards, Rajput villages are scattered about in considerable numbers amongst the Jat and there are traces of more extensive Rajput possessions. The Rajputs seem to be here undergoing gradual submersion. But, in the extreme north of the Baree and adjoining Doabs of the Punjab, there is still a strip immediately under the hills which may be classed with the adjoining hill country as still mainly Rajput. Even in Rajputanah proper though it has Rajputs for the dominant race, the population is much more Jat than Rajput, the Jat extending continuously from the Indus to the Ganges. The great seat of Rajput population and ancient power and glory was on the Ganges: since vanquished there by the mahomedans, the principal Rajput families have retired into the comparatively unfruitful country to which they give their name, but where, nevertheless, the Jat forms the most numerous part of the population. Before the Rajputs were driven back from Ajoodea and the Ganges, northern Rajputanah was partitioned into small Jat republics. The more open parts of Rajputanah are shared amongst the Meena, the remains of the Brahman population, the Jat and the dominant Rajput, but the Jat possess the largest share in the cultivation. The southern and more hilly parts of Rajputanah is much occupied by the Meena, the Mhair and Bhil, and the province of Malwa is occupied by Rajput, Kunbi and Jat. Rajputs and Jats occupy the plains south of the Salt Range, and seem later immigrants than the Brahmans.—(*Campbell, pp.* 61 *to* 93.)

Briefly, the Rajput race now occupy from the north and west of the Punjab, south easterly to Behar and Benares, and southwards along the left bank of the Indus to Malwa, Guzerat and Cutch and give to their south westerly holdings the name of Rajasthana or Rajputana. They are no doubt of Aryan origin, and are part of a later movement than the branch who came down by the Saraswati,

and up to the latest dates have shown themselves a brave people, delighting in war and in bloodshed.

The three *Solar Dynasties* are :—

1. Grahilote or Gehlote with 24 sakha or branches, of which the Sisodea is the most distinguished. The rana of Udayapur is a Grahilote.

2. Rahtore, said to be descended from Rama by Kusa, his second son. It has 24 branches, and the raja of Jodhpur or Marwar belongs to this tribe.

3. Kachhwaha, also sprung from Kusa. The rajah of Jeypore is of this tribe. It has 12 kotri or houses.

The *Lunar Dynasty* is sprung from the moon, Soma, or Chandra, through Yadu or Jadu, and is called Yadu or Jadu. It has eight branches, of which the Jhareja and Bhatti in Cutch and Jeysulmur are the most powerful.

The *Agnikula* have four tribes and 87 branches, viz :

1. Primara 35 branches.	3 Chalukya 16 „
2. Parihara 12 „	4. Chouhon 24 „

In the 36 royal tribes are others the origin of which is not known, such as

Chaura or Chawara.	Sarwaya or Sari.	Bingujar.
Tak or Takshak.	Aspa.	Sengar.
Jit or Jat of the Panjab, Jumna and Ganges.	Jetwa.	Sikharwal.
	Kamari.	Bais.
	Dabi.	Dahia.
Hun.	Gor.	Johya.
Katti.	Doda.	Mohil.
Batta.	Garhwal.	Nikumba.
Jhalamakwahana.	Chandela.	Rajpati.
Gohil.	Bundela.	Dahirya.
		Dahima.—

The Rajputs in the south and west of Malwa and in Mewar are called Rangari, a name the derivation of which is obscure.

Almost all hindus who have taken to soldiering, Mahrattas, aborigines and Jats claim a Rajput origin, a recognition of the superior martial qualities of the rajput race.

Rajputs of the N. Western hills are ethnologically a much purer and finer race than those on the plains, but even they assert that their ancestors came from Ayodia or Oudh.

Agnicula Rajputs.—The four Agnikula or fireborn tribes, the Chohan, Solunki, Powar or Prumar, and the Purihar, are now mainly found in the tract from Ujain to Rewah near Benares. The unnamed progenitors of these races seem to have been invaders who sided with the brahmins in their warfares, partly with the old Khetri, partly with increasing schismatics, and partly with Græco-Bactrians, and whose warlike merit as well as timely aid and subsequent conformity, got them enrolled as "fireborn," in contra-distinction to the solar and lunar families. The Agnikula are now mainly found in the tract of country extending from Oojein to Rewah near Benares, and Mount Aboo is asserted to be the place of their miraculous birth or appearance. Vikramajeet, the champion of brahminism, according to common accounts was a Powar.

The Chahuman or Chohan has been the most valiant of the Agnikula, and not of them only, but of the whole Rajpoot race. Its branches (sak'ha) have maintained all the vigour of the original stem; and the Hara, the Kheechee, the Deora, the Sonigurra and others of the twenty-four, have their names immortalized in the song of the bard. The derivation of Chohan is coeval with his fabulous birth from the four-handed warrior *Chatoor-booja, Chatoor-baha Vira.* The Chohan trace their descent from Prithi raj. They are found all over the N. W. Provinces, also in Malwa and Rajasthan, in Central India, in Rajor, Pratapnir, Chakarnagar and Manchana of which last the raja of Mainpuri is the head, and is one of the highest of the Chohan clan.

The Purihara or Pritihara, is scattered over Rajasthan, but do not seem to have any independent chieftainship there. At the confluence of the Cohari, the Sind, and the Chumbul, there is a colony of this race, which has given its name to a commune of twenty-four villages, besides hamlets, situated amidst the ravines of these streams. Mundawur (classically Mundodri) was the capital of the Purihara and was the chief city of Marwar which owned the sway of this tribe prior to the invasion and settlement of the Rahtore clan. The *Purihara* is the least of the Agnikula. They never acted a conspicuous part in the history of Rajasthan. —(*Wils, Gloss. Tod. i. p.* 106. *History of the Sikhs, Capt. Cunningham, p.* 12.)

Guzerat rajputs.—Several tribes of Rajpoots and Kat'hi are found in the peninsula of Guzerat or Kattiwar, within the 66th and 72nd degrees of east longitude, and the 20th and 23rd of north latitude. The inhabitants of the province may be classed under the following heads :—

a. Rajpoot, amongst whom there are several tribes, standing in power and wealth thus: 1. Jharejah ; 2. Jhallah ; 3. Goil, and 4 Jetwah.

b. Kat'hi, of whom there are three families, Walla, Khacher, and Khooman. They are originally of the same stock, but have now their respective districts.

c. Kuli, Kaut, and Sindi, called Bawar.

d. Kunbi, Mar, Ahir, Rhebarri, and the other industrious classes.

The Jharejah, are the most powerful and numerous of the rajpoot tribes of Guzerat and possess all the western part of the peninsula. They are a branch of the family of the rao of Kutch, who in consequence of intestine feuds, left their country about A. D. 800 ; and having crossed the Runn, at the head of the gulf of Kutch, established themselves upon the ruins of the Jetwah rajpoots and a few petty mahomedan authorities which at that time existed in Halar. The Jhareja are, also, said to trace their origin from Jhara, a chief of the mahomedan tribe of the Summa of Sindh. The lands appear to have been divided in common among the whole tribe, the teelat, or eldest branch of the family, reserving to itself the largest portion, whilst the bh'yaud or brotherhood held their respective villages by a pure feudal tenure. The outlaws, amongst them, the Bharwuttia, acted with great violence. If he failed in getting flocks, he seized the persons of such villagers as he could find, and carried them off. These were styled bhan, or captives, for whose release sums of money were demanded. The life of a Bharwuttia was one of blood and rapine, until he was killed, or by the fury of his feud he compelled his chief to grant him redress ; and the security of Charon (religious persons) and Bhat (Bards) races having been given on both sides, the outlaw and his family returned to their homes and occupations in perfect security.

The Bhomea of Kattiwar still preserve a great portion of that spirit of hospitality for which their ancestors were celebrated.

All the inhabitants of Guzerat are much addicted to opium and spirituous liquors. A custom prevails throughout the country, of erecting a stone to the memory of those who have died a violent death ; but it appears to be now common, also, to those who have departed in the course of nature. This stone is called a pallia : it resembles a European gravestone, has the name, date, and mode of death engraven, and is surmounted by a roughly executed figure, representing the manner in which the deceased fell. Thus you see them on horseback with swords and spears ; as also on foot, or on carts, with the same weapons : or on vessels, and this of course is applicable to fishermen. In the upper parts of the pallia are the sun and moon rudely represented.

The practice of "traga," or inflicting self-wounds, suicide, or the murder of relations, formed a strong feature of the manners of the people. This practice, which in Kattiwar was common to the bhat and charon of both sexes, and to brahmans and gossein, has its rise in religious superstition, and although tragas seldom wore a very formidable aspect, still they were sometimes more criminal, by the sacrifice of a greater number of victims. The traga ceremony borders much upon the brahman practice of dharna, but is more detestable. The Charan, besides becoming security for money on all occasions, and to the amount of many lacs of rupees, also become what is called fa'il zamin, or security for good behaviour, and hazir zamin, or security for re-appearance. The Bhat are more immediately connected with the Rajput clans, and the Charan with the Kat'hi. The two castes will eat of each other's food, but will not intermarry. The women of the Charan and Bhat are clothed in long flowing black garments, and have a sombre, if not actually horrid appearance. They do not wear many ornaments, and are not restricted from appearing in the presence of strangers, accordingly, in passing a Charan village, the traveller is sometimes surrendered by women who invoke blessings on his head by joining the backs of their hands, and cracking the knuckles of their fingers in that position over their heads. The Kat'hi women are large and masculine in their figures, often dressed in long dark garments like the Charan women, but have the character of being always well looking, and often remarkably handsome, They are more domesticated than the Rajpoot, and confine themselves solely to the duties of their families. They are often brides at seventeen and sixteen years of age, which may probably account for the strength and vigour of the race. A Kat'hi will do nothing of any consequence without consulting his wife and a Charan, and be in general guided by their advice. In the marriage ceremony of the Kat'hi tribe there is a trace of the custom found amongst the Gond and Kolarian races, and in almost all Indian castes. The Katti to become a husband must be a ravisher, he must attack with his friends and followers the village where his betrothed resides, and carry her off by force. In ancient times this was no less a trial of strength than of courage ; stones and clubs were used without reserve both to assault and repel, and the disappointed lover was not unfrequently compelled to retire, covered with bruises, and wait for a more favourable occasion. The bride had the liberty of assisting her lover by all the means in her power; and the opposition ceased when her dwelling was once gained by the assailants, and the lady, then bravely won, submitted willingly to be carried off by her champion. The Katt'hi do not intermarry with any other caste. The Katt'hi follow the hindu religion, although no hindu will eat with them. A Rajpoot will, however, eat food dressed by a Katt'hi. He worships the cow, leaves a lock of hair on his head ; and adores Mahadeo and other hindu deities, although he is more attached to the

worship of the Sooruj (Surya or the sun), and to Ambha and other terrible goddesses. The Kaut, the Mar, the Ahir and the Rhebarri, of Guzerat are cultivators, but until recently some of them plunderers when opportunity offersed.—(*Cole. Myth. Hind. p.* 284.)

In the chief rajput districts of Bikanir, Jesulmeer, Marwar, Mewar, Ajmir, Jeypur, Bundi, Kotah and Malwa, a rajput, even of the humbler people, has a bold and dignified appearance, and their women are singularly beautiful.

Mewar.—the capitals of Mewar, are Chitor and Udayapur, and its rulers, styled "rana," are of the race who ruled in Saurashtra. After the destruction of the Balhara monarchy of Saurashtra, and two centuries sojourn of the family in the Bhander desert, Baph or Bappa conquered Chitor, and founded a new dynasty, in A. D. 727. The hereditary title was changed from Gehlote to Aditya. In 1828, Jewan (Javan) Sinh, the only survivor of the race of Bappa, was on the throne. The hills of Mewar and the neighbourhood are, however, still held by aboriginal tribes.—(*Campbell, p.* 80. *Prinsep, p.* 258.)

Malwa.—The capitals of Malwa, are Ujjayana and Mandor. Its rajahs are known from the writings of Abul Fazl, whose information is supposed to have been furnished from Jain authorities. It would appear that in early ages, Mahahmah founded a fire temple, which was destroyed by buddhists, but restored in B. C. 840 by Dhanji (Dhanan Jaya) a name of Arjun. About 785, before Vikhramaditya, A. D. 866, and A. D. 1390, the country repeatedly changed hands from hindu to mahomedan sovereigns, from the time that, in 866, Maldeva was conquered by Sheikh Shah, father of Ala-ud-din, to 1390, when Dilawar Khan Ghori, viceroy of Malwa assumed sovereignty in A. D. 1390.—(*Thomas' Prinsep, p.* 259.)

The Bais or *Beis* rajputs are one of the 36 royal races and intermarry with the Chohan Kachwaha and others. They claim to have come from Manji Paithan in the Dekhan, and to be descendants of its king Salivahana A. D. 78.

Colehan.—There are four rajput chiefs near the Colehan, viz. the rajahs of Mohurbunj and Porahat, the koer of Seraikilla and the thakur of Khursowan.

The Cuchhwaha tribe, are the ruling race in Ambar of Jaypur, its raja is a Cuchhwaha.

The Bhatti are of the Yadu Bhansa race and rule in Jeysulmur, and give their name to the Bhatti country between Hisar and Garhi.

The Bundela is a rajput tribe descended from the Garhwar of Kantit and Khairagarh, who settled in Bundelkhand in the 13th or 14th century and gave their name to that province.

The Baghel are a branch of the Sisodhya rajputs of Guzerat, who migrated to the East, and gave their name to Baghelkund or Rewah, but others of the tribe have spread through Bundelkhand Allahabad, Benares, Cawnpore Gorakpur and Furrukhabad.—(*Wils. Glos.*)

The Chahil or Chahira rajpoot tribe, is now for the greater part, converted to mahomedanism. There are a few in the Hissar district and on the borders of Bikaneer. Though mahomedan, they nevertheless retain charge of the tomb of Goga Chauhan, a hindu prince now esteemed a saint.

The Macheri rajput in Mewat were formerly turbulent.

The Chundel rajput tribe are scattered in various parts of the N. W. Provinces, and for the most part came from Muhoba in Bundlecund. Before the mahomedan conquest Muhoba appears to have been the capital of a principality that extended to the Nerbudda, and included the province of Chunderee, which is called after their name. They are styled Sombunsee, but they are not considered to be of pure descent, and their sons are carefully excluded from marriages with the higher clans. This tribe expelled the Baland tribe from Ajoree, Burhur and Mirzapur,—(*Elliot. Supp. Gloss.*)

The Birgujar, one of the 36 royal races of rajputs, are settled along the Jumna from Rohilcund to Matura, some are mahomedans.

The Dogar tribe in the N. W. of India, are predatory and pastoral, following mahomedanism but claiming to be Chohan rajputs. The other converted Chohan, however, believe them to have been Jat and Gujar. The raja of Kashmir is a Dogar. In the 18th century they occupied a considerable tract on the banks of the Sutlej and made themselves formidable to the mahomedan government of Delhi.

Rajputs of the Punjab and adjoining hills are supposed to be not so high on the scale of rajput orthodoxy as the Solar and Lunar races of Ayodiah.

In the lower Doab, the Rajput take the hindu royal designations of Raja, Rao, Rana and Rawat Many Rajputs object to hold the plough. Rajput dominions run south of the Gogra and thence across the Ganges into the Arrah district (Bojpur.)

The ranks of the British Army of Bengal were filled with Rajpoots, Pathans and Brahmins, nearly all from the provinces of the upper Ganges, the inhabitants of which have become greatly modified in character by complete

conquest and mixture with strangers.—(*Cunningham's History of the Sikhs, p.* 183.)

The Charan race, in western and Central India, are Races dwelling under rajput rule and are the bards, heralds, and genealogists of the Katth'i race. The Kachili Charan are carriers of grain, salt and groceries. The Maru or desert Charan do not engage in trade. Their becoming personal security for an agreement is sufficient. They are analogous to the Bard.

The Bhat, or Bard, is the herald, genealogist and chronicler. In western India the Bhat has, like the Charan, the privilege of being security for agreements. In Upper India, there are village communities of Bhat who do not take so high a place.—*Wils. Gloss.*

The Meena constitute a large portion of the population of Rajputanah, especially in the Jeypur country between Ajmir and Delhi. They are supposed to be related to the Mhair, and out of their own country are fine powerful men, principally known as dacoits.—*Campbell, p.* 45. Colonel Tod, writing in the early part of the nineteenth century says the Meena affords an excellent practical illustration of Menu's axiom, that " the right in the soil belongs to him who first cleared and tilled the land." The Rajpoot conqueror claims and receives the tribute of the soil, but were he to attempt to enforce more, he would be brought to his senses by one of their various modes of self-defence-incendiarism, self-immolation, or abandonment of the lands in a body. Throughout India, he adds, where traces of originality yet exist, it will invariably appear that the right in the soil is in the cultivator, who maintains, even in exile, the *huk bapota-ca-bhom*, in as decided a manner as any freeholder in England. The Meena were the prior occupants of Mewar and Jeypoor, till driven out by the Rajputs. The most powerful clans of the Marwar Meena found shelter in a strip of country at the junction of Boonda, Meywar, Jeypoor and Ajmir, called the Kherar. They are a very brave, bold race. The Jeypoor Meena in like manner have their stronghold at the junction of the Ulwur, Jeypoor and British districts. In Serohee, the Meena are still the aborigines. —(*Colonel Brooke, in Literis.—Tod's Rajasthan*, Vol. *II. p.* 672.)

Cheeta-meena, is a branch of the Meena race from whom sprung the Mair or Mera race, the mountaineers of Rajputanah, one of the aboriginal races of India, whose country is styled Mairwarra, or " the region of hills."

The Mair is a branch of the Meena or Maina. The Mair is also called Mairote and Mairawut ; *Mera* is ' a mountain' in Sanscrit ; Mairawut and Mairote ' of or belonging to the mountain;— the name of the Albanian mountaineer, Mairote, has the same signification. Mairwarra is that portion of the Aravalli chain between Komulmer and Ajmeer, a space of about ninety miles in length, and varying in breadth from six to twenty. Rajpootana rises from three to four thousand feet above the level of the sea. The Mair are a branch of the Cheeta, an important division of the Mena, a race which consists of as many branches as their conquerors, the Rajpoots. All these wild races have the vanity to mingle their pedigree with that of their conquerors, though in doing so they stigmatize themselves. The Cheeta-Mena accordingly claim descent from a grandson of the last Chohan emperor of Delhi: Unail and Anoop were the sons of Lakha, the nephew of the Chohan king. The coco-nut was sent from Jessulmur, offering princesses of that house in marriage, but an investigation into their maternal ancestry disclosed that they were the issue of a Mena kept women and their birth being thus revealed, they became exiles from Ajmeer, and associates with their maternal relatives. Unail espoused the daughter of a Mena chieftain, by whom he had Cheeta, whose descendants enjoy almost a monopoly of power in Mairwarra. The sons of Cheeta, who occupied the northern frontier near Ajmer, became mahomedans about fifteen generations ago, when Doodha, the sixteenth from the founder of the race, was created Dawad Khan by the hakim of Ajmer ; and as Athoon was his residence, the " Khan of Athoon" signified the chief of the Mairote. Athoon is still the chief town of the Mair race. Chang, Jhak, and Rajosi, are the principal towns adjoining Athoon. Anoop also took a Mena wife, by whom he had Burrar, whose descendants have continued true to their original tenents. Their chief places are Burrar, Bairawara, Mundilla, &c. The Mena were always notorious for their lawless habits, and importance has been attached to them so far back as the period of Beesildeo, the celebrated prince of Ajmer, whom the bard Chand states to have reduced them to submission, making them "carry water in the streets of Ajmer." Like all mountaineers, they broke out whenever the hands of power were feeble. The *Mhair* country is situated but a very few miles west of Ajmere, and is composed of successive ranges of huge rocky hills, the only level country being the valleys running between them. From the sturdy valour of this race, the rulers of India never made any impression on them, notwithstanding their vicinity to the occasional residence, for a long period, of the emperors of Hindustan. In later times the Mhair were the terror of their lowland neighbours; and even the Rajpoots, perhaps, with the sole exception of the Rohilla, the bravest men in India, dread-

ed their approach. The Mhair of the Mhairwara hills, occupy the Aravali range running towards Ajmir. Their chiefs claim to be of Rajput descent, but the Koli assert their relationship to them, and they admit having intermarried with the Bhil and Meena, and Colonel Dixon says that for hundreds of years, they have been recruited by refugees and all sorts of rascals from Hindustan, and they are probably a very mixed race. They are described as rather good looking. Colonel Briggs states that the Mahrattas and Mhairwara have their origin from Mhair.—*Campbell, p.* 45. *Tod's Rajasthan, V. I. p.* 681. *Cole. Myth. Hind. p.* 299.

The *Baugri*, is one of the predatory tribes of Central India. Several of these tribes the Moghi, Baugri, Bheel, Sondi, and Bheelalah, in the 18th century, were for many years the worst enemies to the prosperity of this country. The two principal were the Baugri and Moghi, who came to Central India originally from the western parts of India, chiefly from the neighbourhood of Chittore. The Moghi hardly passed the Chumbul, but the Baugri settled in the eastern parts of Malwa in considerable numbers: and about the beginning of the 19th century the Solunkee Rajpoots introduced no less than four hundred of them to garrison the small fort of Sattanbaree in Bersiah in which district and others in its vicinity there had been for a long period many settlers of this tribe. The Baugri are a very brave race of men, and though they till the soil and pursue occupations of industry from necessity, their favourite pursuits were thieving and plundering. In these arts they were at once expert and bold. They were also mercenary soldiers, ready to serve any one, and to engage in any cause for prey. The Baugri were foot soldiers, their jamadars or leaders, whom they obeyed implicitly were usually mounted, Whenever they settle, they remain in colonies and even when three or four families fix on a small village, they live distinct from the other inhabitants. This tribe, though scattered, preserved a correspondence, which made them formidable enemies to the internal peace of any country in which they were numerous. There were not more than twelve hundred in the countries of Bagur and Kantul, and their immediate vicinity. The Meenah and Goojur of Hindustan who have settled in Central India (though the greater proportion of them are cultivators) have not forgotten the habits of their ancestors; and many of these classes have distinguished themselves as expert and successful thieves and robbers. The same may be said of the Gond who inhabit its southern frontier.—*Malcolm's Central India, Vol. II. p.* 185.

The aborigines of Central India, reverence in a mild inoffensive way, the sun, moon, tiger and bhut or household spirits. They use tiger's claws as charms, heap up cairns, and tie bits of rags to trees, but in these last they resemble the hindu.

The *Naikra*, a tribe in the hills of Udipur are said to be like the Bhil, but less humanized. —*Campbell, pp.* 30 45-6.

The *Goojar*, are a numerous race in the N. Western Provinces of India, formerly notoriously predatory, but gradually becoming more settled to habits of peaceful industry. Their importance may be rated by their having given name to the provinces of Goojerat on the Western Coast of India, and to Goojerat in the Punjab; also, a great part of the district of Seharunpoor was called Goojerat during the eighteenth century. By the Goojar, themselves, it was said to consist of three parts, and the division is known amongst them to this day, and is usually adopted in ordinary converse. They are sometimes considered to be among the prior occupants of India and have been so reckoned by Tod, who, likewise, declares them to be a tribe of rajpoots. Sir R. Jenkins says that in the Nagpur territory, they consider themselves to be Rajpoots, descendants from Lava, Rama's second son, and according to this descent, if authentic they have an undoubted right to be so considered. The Goojur are spread all over the Delhi territory, the Upper Doab and Upper Rohilcund, and they enumerate 84 different tribes. In Delhi, the chief tribes are the

Chumayen,	Khare,	Rowal.
K'hutana,	Bursoee,	

In the Doab,—

Sookul,	Jindhur,	Budkana,
Bysle,	Peelwan,	Kusane,
Mavee,	Butar Adhuna,	Rouse,
Rat'hee,	Cheche Kulseean,	Khoobur,
Bhuttee,	Ramayn,	Moondun,
Kusounee,	Khare,	Kudahun,
Bulesur,	Nagree,	Touhur,
Dede,	Chotkune,	Gorsee
		Kunana.

In Rohilcund,—

Butar	Motle,	Jindhur,
K'hoobur.	Sooradne,	Muhynsee,
K'hare,	Poorbur,	Kusane.
Jattee,		

All these tribes intermarry, on terms of equality, the prohibited Got or clan being only those of the father, mother, and paternal and maternal grandmother. The Goojar race has largely pressed into the central provinces of Central India and have settled down to agricultural pursuits, and those in Hoshangabad and Nimar are good farmers. In 1811, Colonel Tod's duties called him to a survey amidst the ravines of the Chumbul of the tract called

Goojurgar, a district inhabited by the Goojur tribe. Turbulent and independent, like the sons of Esau, their hand against every man and every man's hand against them, about the middle of the eighteenth century, their nominal prince, Sooraj Mul, the Jit chief of Bhurtpore, had pursued exactly the same plan towards the population of these villages, whom he captured in a night attack, that Janmeja did to the Takshac, as described in the Mahabarat, he threw them into pits with combustibles, and actually thus consumed them. During the mutiny and rebellion of 1857-58 in Northern India, many of the Gujars of Hindostan again gave play to their predatory propensities — (*Tod's Rajasthan, Vol.* I.—*Elliot's Supp. Gloss.*)

Oudh,—lies between Nepaul and the N. W. Provinces. It contains no mountains. In the Gondah district, the boundary is on the ridge of the first range of low but abrupt hills of the Himalaya; elsewhere it is in the plains and is a part of the alluvial valley of the Ganges and of some of its tributaries. It consists of 12 revenue districts, in 4 divisions, with an area of 24,060 sq. miles and a population of 11,232,368.

The Chamar are included amongst the Hindoos and Sikh and are 654,406 in number.

Bhil or *Bheel*.—The Bhil are one of the many tribes who entered India prior to the Aryan race and the rajput, and been forced by the later emigrants into the secluded forest tracts. There are many such tribes in Central India, the Bhil, Kol, Gond, Meena, Mera, Chooar, Serya, Sarja, Ahir, and Goojur, many of them dwelling in the forest tracts of the Son, Nerbudda, and Mahanuddy, the mountains of Sargooja, and Chota Nagpore, a number of them being still but little removed from savage life, and whose dialects are as various as their manners. These are content to be called the 'sons of the earth,' or 'children of the forest,' while their conquerors, the rajpoots arrogate celestial descent.

Colonel Tod writing in the early part of the 19th century, tell us (*Travels*, *p.* 84) that taking a section of about sixty miles in the alpine Aravalli, from the ascent at the capital of Oodypoor (Udipur), passing through Oguna, Panurpa and Mirpoor, to the western descent near Sirohi, the land is inhabited by communities of the aboriginal races, living in a state of primeval and almost savage independence, owning no paramount power, paying no tribute, but with all the simplicity of republics, their leaders, with the title of rawut, being hereditary. The rawut of the Oguna commune, in Colonel Tod's time, could assemble five thousand bows, and several others could, on occasions, muster considerable numbers. Their habitations are dispersed through the valleys in small rude hamlets near their pastures or places of defence.

The Bhil inhabit the northern part of the chain of ghauts running inland parallel with the coast of Malabar. On one side they are bordered by the Koli, and on another by the Gond of Gondwana. They came prominently and unfavourably before their British rulers, in the early part of the 19th century. During the contests for supremacy in Khandesh between the Mahrattas and the mahomedan Moghul, from which in A. D. 1803 a fearful famine resulted in the country north of Ahmednuggur, the whole of the Bhil race formed into gangs of plundering assassins, and settling them occupied the British Government from 1825 to 1833. But their readiness to become predatory has marked them as bold, daring, and predatory marauders, and occasionally mercenaries, but invariably plunderers. The northern part of the chain of ghauts, and the country at its base, is inhabited by the Bhil; that part to the south of Bauglan and the country at its base, as far south as Bassein, is inhabited by the Koli, a tribe somewhat resembling the Bhil, but more civilized and less predatory. The Bheel possess the eastern part of the range, and all the branches that run out from it towards the east, as far as south of Poona; they even spread over the plains to the east, especially north of the Godavery, and the neighbourhood of the Wurda. On the north, they extend beyond the Taptee and Nerbudda. Both the Bheel and the Koli are numerous in Guzerat, south of Poona the Bheel are succeeded by the Ramusi, a more civilized and subdued tribe, but with the same thievish habits as the Bhil. They have no language of their own, are more mixed with the people, and resemble the Mahratta in dress and manners; whereas the Bhil differ from the rest of the people in language, manners and appearance. Of the latter Mr. Elphinstone remarks, that, although they live quietly in the open country, they resume their wild and predatory character whenever they are settled in a part that is strong, either from hills or jungle. The Ramoosi do not extend farther south than Kolapore, or further east than the line of Bejapoor. The Bhil, the Kuli of Guzerat and the Gond are considered to be remains of aborigines of India. The two latter classes here alluded to, have maintained more of their original character than the Bheels: they have probably been less disturbed.

The Bhil clans are now in a state of great moral transition; but those of Kandesh, nearly to the early part of the 19th century continued to sally from their fastness and committed great ravages upon the villages of the plains. When

measures were taken by the Bombay Government in 1818 to reclaim the Bhils of Kandesh Sir John Malcolm considered that success would only be partial unless corresponding measures were adopted for reclaiming the Bhils of Burwani and this view was given effect to.

Fire-arms, says Tod, are only used by the chiefs and headmen; the national weapon being the *kumpta*, or bamboo bow, having the bow-string *(chulla)* from a thin slip of its elastic bark. Each quiver contains sixty barbed arrows, a yard long. The Bhil, from ancient times, use the fore and middle fingers of their right hand to the string of their bow holding the arrow between the two fingers. Although they claim descent from every race of rajpoot, and prefix the tribe, as Chohan Bhil, Gehlote Bhil, Pramar Bhil, &c., their origin is evinced in the gods they worship and their prejudices as to food. One tribe the Oojla Bhil or pure Bhil will eat of nothing white in colour, as a white sheep or goat; and their grand abjuration is, by the white ram.

Their ancient position is well illustrated by the circumstance of their claiming the right to instal rajput princes when Bappa fled, the companions of his flight were two, one of Oondree, in the valley of the present capital; the other, of Solanki descent, from Oguna Panora, in the western wilds. Their names, Baleo and Dewa, have been handed down with that of Bappa, and the former had the honour of marking the teeka of sovereignty with is own blood on the forehead of the prince, on the occasion of his taking the crown from the Mori. The descendants of Balco of Oguna and of Dewa the Oondree Bhil, still claim the privilege of applying the teeka on the inauguration of the descendants of Bappa.

Oguna Pancra, says Colonel Tod, is the sole spot in India which enjoys a state of natural freedom. Attached to no state, having no foreign communications, living under its own patriarchal head, its chief, with the title of rana, whom one thousand hamlets scattered over the forest-crowned valley's obey, can, if requisite, appear at the head of five thousand bows." He is a bhoomia Bhil of mixed blood, from the Solanki rajpoot, on the old stock of pure (oojla) Bhil, of Mewar. Besides making the teeka of blood from an incision in the thumb, the Oguna chief takes the prince by the arm and seats him on the throne while the Oondree Bhil holds the salver of spices and sacred grains of rice used in making the teeka.

The Bhil have now no separate language, and have been largely converted to mahomedanism.—*(Tod's Travels, p. 34. Tod's Rajasthan, Vol. I. p. 724.)*

Dhimar of Central India, are fishermen, boat men and palki-bearers.

Mogkya, a low tribe in Sagur.

Golur, a tribe in Bhandara.

Chamar, is a tanner, a currier, a leather worker, shoe-maker, and has his name from chamra, leather. The Chamar race have many divisions, and form a large part of the non-hindu and non-aryan races of Hindustan. In the Peninsula, they are few and reside outside villages. They are generally said to be divided into seven classes: viz. the "Jatooa," in the North-West, Dehli, Rohilcund and the Doabs; the "Kateean," in Bundelcund and Sagur; "Kooril," in the Central and Lower Doab; the "Jyswara," near Allahabad, Jounpur, Mirzapur and Benares; the "Jhooseea" in Ghazipur and Behar; the "Azimghurea," in Azimghur, and Gorukpur, and the "Birberea," and "Kori" or "Korichamra" in Oudh.—*(Elliot. Supp. Gloss.)* These seven do not eat together nor intermarry. The Jatooa are chief in the North West; the Dehli territory, Rohilcund, and the Upper, and part of Central Doab are their seats. The Kaean are in Bundlecund and Saugor. The Kooril occupy the greater part of the Central and Lower Doab. The Jyswara meet them in the neighbourhood of Allahabad, and extend through Jounpoor, Mirzapoor, and Benares, to the neighbourhood of Sydpoor Bhitree, where they are met by the Jhoosea, who occupy Ghazeepoor and Behar. The Azimgurhea have their seats in Azimgurh and Goruckpoor; and the Koree or Korchamra in Oudh. The last are generally engaged in the occupation of weaving.

Other names are mentioned besides these seven, as the Jatlote of Rohilcund; the Ahurwar, Sukurwar and Dohur, of Central Doab; but as these latter avow some connection with the Kooril, they may perhaps be included in that tribe. In Behar we meet also with subdivisions of Gureya, Megahi, Dukshinia, Canoujea as well as the Jhoosea and Jyswara abovementioned; all tending to show that the division into seven clans is imaginary.

The Dohur are mentioned in "Steele's Summary," p. 128," as existing in the Deccan along with Kutnee (coblers) and Duphgur (Dubgar maker of oil bottles); but he does not include them amongst Chumars, of whom he enumerates the following classes; Sultangar, Mar'at'he, Paradosh, Purdesee, Huralbhutel, Dubalee, Woje, Chour. The race are deemed unclean,

Kurea Brahmin gor Chumar,
In ke sath na ootriye par—

that is, go not in the same boat with a black brahmin or a white chumar, both objects being considered of evil omen. Many of the Chumar of Central India have joined the reformed Sat-nami sect. The Chumar of Hindustan, in respect to nnmbers and avocations, are

in the same position as the pariahs of the south of the peninsula. The general belief as to the non-Aryan races is that they are a section of the great Turanian stock, who have been subdued and depressed by the Aryan and by origin and nature are averse to caste distinctions and brahminism. In Central India, there has been a great spiritual movement of the non-Aryan races, the Chamar, the Dhobi and others, who have been joining the reformed sects of the Kabir Panthi, Satnami and others. The Chamar of Chatis-ghur have become Sathnami sectarians and have raised themselves in the social scale. The Chamar of northern India perform all the labours to which the Dher or pariah of Southern India attend, as also the work of the Chamar, and the Dhor of the South of India. The Chamar are the labourers of hindustan, in addition to their own profession of curing skins. They are the sudras of modern hindu society. The Chamar form a large proportion of the population of Hindustan, and are labourers, cultivators, leather-workers and shoe-makers : most of the syce, or horsekeepers of Hindustan are Chamar. The Chamar of Bengal is dark, rather small, but active and well knit. They have never been soldiers. They often are village watchmen, and they act as coachmen, coolies and hired labourers. In Chatesghar in the Central Provinces a colony of Chamar of the reformed faith have acquired landed rights and occupy quite an aristocratic position. In Bengal the lower people of the Chamar race eat the dead cattle which they skin and they are much addicted to drink. In the great isolated plain of Chattisgarh, where the jungle has not even yet been thoroughly mastered by man, the Chamar, who make up some twelve per cent. of the population, are nearly all cultivators. The creed adopted by them is the "Satnami" or "Rai Dasi" a branch of one of the most celebrated dissenting movements in Indian religious history. (*Rost, Edition of Wilson's Essays on the religion of the Hindus, Vol. I. p.* 113 (1862). No images are allowed, it is not even lawful to approach the Supreme being by external forms of worship, except the morning and evening invocation of his pure name (Sat-nam), but believers are enjoined to keep him constantly in their minds, and to show their religion by charity. Even if the creed be weak as a moral support, it is strong as a social bond, and no longer weighed down by a sense of inferiority, the Satnami hold together and resist all attempts from other castes to re-assert their traditional domination over them. They are good and loyal subjects, and when they have grown out of a certain instability and improvidence, which may be the natural result of their long depressed condition, they will become valuable members of the community.—(*Elliot. Campbell, pp.* 11, 107, 123, 124.)

In Bastar, the leaf-ordeal is followed by sewing up the accused in a sack and letting him down into water waist deep ; if he manage, in his struggles for life, to raise his head above water he is finally adjudged to be guilty. Then comes the punishment. The extraction of the teeth is said in Bastar to be effected with the idea of preventing the witch from muttering charms, but in Kumaon the object of the operation is rather to prevent her from doing mischief under the form of a tiger, which is the Indian equivalent of the loupgarow.

Hadi, is a helot race spread over all Bengal, and take their name from the aboriginal Santali word for man, "*had*," and from their name has been supplied such terms as "*hadd*," base low-born ; "*haddu*k" a sweeper : "*hunda*," hog, blockhead, imp ; hudduka, a drunken sot, &c., also, "*Hadi*," in low Bengali, "*Hadicath*," is the name of a rude fetter or stock, by which the landholder used to confine his serfs until they agreed to his terms. It means literally the helot's log and it was also used for fastening the head of the victim in the bloody oblations which the Aryan religion adopted from the aboriginal races, especially in the human sacrifices to Kali, to which the low castes even now resort in times of special need. In an account of the last human offerings to Kali, during the famine of 1866, it was mentioned that the bleeding head was found fixed on the "har-cat," *i. e.* helot's log.—(*W. W. Hunter, p.* 30.)

The Kurmi, are the semi-aboriginal cultivators north of the Kumbi, but to the south of the Rajput and Jat. They form the bulk of the population in the part of Manbhum, near the Damudah river. (*Dalton, p.* 157,) and are a very industrious class of quiet cultivators in considerable numbers in all the central and eastern parts of the N. W. Provinces or in Hindustan generally, who there attend to the finer garden style of cultivation much more than the Jat and Rajput, but, like the Jat race are assisted by their industrious women who have passed into a proverb for industry-Bhale jat, Koonbin ki, K'hoorpi hat'h, K'het nirawen apne pi ke sat'h.

They dwell to the south of the Rajput and Jat, have villages of their own, and are also spread in detached families or groups. Mr. Campbell considers them to be identical with the Kunbi and to occupy from 23° or 24° N. to 16° N. and from the western frontiers of Guzerat to the countries watered by the Wynganga, the middle Ganga, and upper streams of the Nerbuddah. Very few of these become soldiers, and in the valley of the Ganges, they are looked down upon as mere humble tillers of the soil. They are more nu-

merous towards the Jubbulpore and Saugor territories where they mingle with the Lodha. Thence, westwards, as on both sides of the Nerbuddah, in Malwa where they meet the Jat, and throughout the southern borders of Hindustan, there are numerous Kurmi who speak Hindi. Those in Hindustan, are darker and less good looking than brahmins and rajputs, but Mr. Campbell states (p. 93, 94) that they are quite Arian in their features, institutions and manners. Other authorities, however, mention that there is no similarity in the physiognomy of the Kurmi and Kunbi. The Kurmi sub-divisions are

Jeshwár.	Pātăn.	Patrihu.
Dhăviai.	Adhonda.	Ghora Charhao,

but Sir H. Elliot says the seven sub-divisions are usually enumerated as K'hureebind, Puturya, G'horchurha, Jyswar, Canoujea, Kewut and Jhooneya.

Wilson, also, says they have seven sections and that in Central and Eastern Hindustan, West and N. West provinces they are the great agriculturists. He says that they are occasionally seen as predial slaves to which they have sold themselves or been sold.

The *Ghameta* of Behar are a sub-division of the Kurmi. They form, says Elliot, a large class of the cultivators in the Eastern and Central portion of Bengal, few in Delhi and the Upper Doab. A race, or races, under the different names of Coormee, or Koormee, Kunbhi, Kunabi, or Koombhee, extend throughout the greater part of Hindustan, Berar and the western Deccan. They are famous as agriculturists, but frequently engage in other occupations. The Kurmi, Kunbi, Jat and Rajput, are chief territorial tribes of Northern India.

The Koormi are supposed by Tod to be the Koolmbi of the Dekhan and to be perhaps the most numerous, next to the Jat, of all the agricultural classes.—*Tod's Rajasthan, Vol. II. p.* 371.—*Elliot's Supp. Glossary.*

Hun or Hoon.—Amongst the Scythic tribes who have secured for themselves a niche with the thirty-six races of India, is the Hun. At what period this race, so well known by its ravages and settlement in Europe, invaded India, we know not. D'Anville, quoting Cosmas, the traveller, informs us, that the white Hun occupied the north of India; and it is most probable a colony of these found their way into Saurashtra and Mewar. It is on the eastern bank of the Chumbul, at the ancient Barolli, that tradition assigns a residence to the Hoon; and one of the celebrated temples at that place, called the Sengar Chaori, is the marriage hall of the Hoon prince, who is also declared to have been possessed of a lordship on the opposite bank, occupying the site of the present town of Bhynsror. In the twelfth century the Hun must have possessed consequence, to occupy the place he holds in the chronicle of the princes of Guzerat. The race is not extinct. One of the most intelligent of the living bards of India pointed out to Colonel Tod the residence of some in a village on the estuary of the Myhie, though degraded and mixed with other classes. —(*Tod's Rajasthan, Vol. I. p.* 109, 110.

Bhomia, from bhom land, a landed proprietor, in Rajputanah, the allodial proprietor of Mewar, offshoots of the earliest princes. The term bapota implies the inheritance or patrimony, and its holder, if a military vassal, is called 'Bhomia,' meaning one actually identified with the soil (bhom). It is the mahomedan term wuttun-dar, or meeras-dar and the Caniatchi of Malabar is the Bhomia of Rajasthan. The Bhomia is vested with the rights of the crown, in its share of the bhog or rent. But when their own land is in the predicament called 'gult'has,' or reversions from lapses to the commune, he is 'seized' in all the rights of the former proprietor, or by internal arrangements, they can convey such right by cession of the commune. The bhom is exempt from the jureeb (measuring rod); it is never assessed, and his only sign of allegiance is a quit-rent, in most cases triennial and the tax of khur-lakur, a war imposition, now commuted for money. These allodial tenants, are the yeomen of Rajasthan, and as in the districts of Komulmer and Mandelgurh, constitute the landwehr, or local militia. The Rajpoot vaunts his aristocratic distinction derived from the land; and opposes the title of 'Bhomia Raj,' or government of the soil, to the 'Bania Raj,' or commercial government, which he affixes as an epithet of contempt to Jeipoor; where "wealth accumulates and men decay." 'Bhom rakhwali or land [in return for] preservation, is one kind of Bhom, the crown itself holds 'bhom rakhwali' on its own fiscal demesnes consisting of small portions in each village. In S. 1782, the turbulent Bhomia on the western frontiers were checked by the Rajput chief on their borders and the Sindil, the Deora, the Bala, the Bora, the Balecha and the Soda were then compelled to servitude. The ancient clans, prior to Sanga Rana, had ceased, on the rising greatness of the subsequent new division of clans, to hold the higher grades of rank; and had, in fact, merged into the general military landed proprietors of the country under the term 'bhoomia,' The Bhoomia, the scions of the earliest princes, are to be met with in various parts of Mewar; though only in those of high antiquity, where they were defended from oppression by the rocks and wilds in which they obtained a footing, as in Komulmir, the wilds of Chuppun, or plains of Mandelgurh, long under the kings, and where their agricultural pursuits maintained

them. Their clannish appellations, Kombawut, Loonawut, and Ranawut, distinctly show from what stem and when they branched off; and as they ceased to be of sufficient importance to visit the court on the new and continually extending ramifications, they took to the plough. But while they disdained not to derive a subsistence from labouring as husbandmen, they never abandoned their arms; and the Bhoomia, amid the crags of the alpine Aravalli where he pastures his cattle or cultivates his fields, preserves the erect mien and proud spirit of his ancestors, with more tractability, and less arrogance and folly, than his more courtly, but now widely separated, brethren. They form a considerable body in many districts, armed with matchlock, sword and shield. In Mandelgurh, when their own interests and the prince's unite, four thousand Bhoomia could be collected. They held and maintained without support the important fortress of that district, for their prince, during half a century of turmoil.—(*Tod's Rajasthan, Vol. I. pp.* 169, 498.—*Campbell.*)

Cheru, a tribe near Palanow, mentioned by Buchanan of whom nothing is known (*Campbell, p.* 39.)

Cheroo, aborigines in Ghazeepur, in part of Gorukpur, the southern part of Oudh, Benares Mirzapur and Behar. They are sometimes said to be a branch of the Bhur. They seem to be the same as the Sivira or Seoree, but Buchanan considered them distinct. The Cheroo declare themselves to be descended from the great serpent, from which they may be supposed to be the Nagbunsi of Magadha. Remains of buildings attributed to them are found near Buddha Gya, Sasram and Ramghur, and the images of Siva and Hanuman found in them indicate that they belonged to the hindu religion. They appear to have been expelled from their ancient abodes by the Pramara of Bhojpur, the Hyobun of Hurdi, and the Bhoonhar, a little before the first mahomedan invasion, about which time there seems to have been a general convulsion in India, during which several tribes acquired their present possessions. The features of the Cheroo are said to resemble the occupants of the Vindhya mountains. They live by cutting timber, collecting drugs, and killing game, and though their numbers are very low they continue to create a rajah for every five or six houses, and invest him with the tilak in due form. The emperor Sher Shah subdued Muharta, a Cheeroo zemindar of Behar, which seems to have been a last but strong effort of the Cheeroo race. The chief of Singrowli in Mirzapur is a Cheeroo, though he calls himself a Benbans. Sir. H. Elliot suggests that the Sivira, Seori and Cheroo, may perhaps be the Sauraseni. In the Harivansa is the following passage, "From this race came the Sauravira, and Saurasena. The great king Saurasena has given his name to the country over which he reigned."—(*Elliot. Glos.*)

Bhur, an aboriginal race who settled in parts of Oudh, Benares and Behar—*Campbell, p.* 21.

The Lodhi came from Bundlekhund three centuries ago. The *Kurmi* from the Doab about A. D. 1620.

Rajawar, a widely spread aboriginal tribe in Palamow and Singruli and Rewah, westward in parts of Sirgujah and Jashpore, and numerous to the N. E. in the parts of the plains adjoining the hills. They are the chief labouring class in the Gya district, near the hills. They live in villages as a kind of serfs and bearers of burdens, carry palanquins, and when out of employ are apt to be thieves and robbers.—*Campbell, p.* 37-8.

Badava-krita, a man who becomes a slave that he may marry a female slave in the family. —*Wils. Glos.*

Chuyar are a tribe of mountaineers inhabiting the mountains bordering on Bengal in the West, in Ramgurh and the neighbouring districts.—*Wils.*

Marwari, the various tribes who are known as banker, soukar and sarraff or shroff, are the Marwari, the Bhattya, the Vesya Komati, the Modi grain seller, and the Bania. The Marwari arrange themselves into twelve tribes, amongst whom are the Mestri, Agrwala, Urwar, Oswal, Sarogi, Kandelwal, Bijabargi Porwal, some of whom are hindus, and some are Jain. The Mestri, the Urwar, Bijabargi, Kandalwal and Porwal are of the vaishnava sect of hindus; the Agrwala are partly vaishnava and partly Jain, but the Sarogi and the Oswal are wholly jain and it is from amongst the Ossi tribes that the jain priests of Abu are chosen. They never use animal food, their offerings are fruits and sugar, and the Oswal and Sarogi never eat the prasadh, or meat offered to the idols.

The banking races are less frequently of the sect; they are distinct races, altogether dissimilar in personal appearance, the Marwari from the desert being tall, bulky, yellow men while the Wani or banya of the peninsula are smaller and dark coloured. The Banya or Komati are generally vaisya hindus, though some of them worship saiva and some of them vishnu. The Banya are most numerous in Tilingana and in Madras: in the north and west of Dekhan there is not perhaps one of them in seventy villages, their places then being taken by the Marwari and Gujerati. There are, however, many in Punderpore, and Sholapore. Those who die unmarried, are buried, all others are burned whether belonging to the saiva or vaishnava sects. Their language in their families is Telugu, and it is spoken by them as far as Bombay. But as the west is approached, mahratta becomes mixed with it.

The Banya are essentially shop-keepers of dry grains, but do a little in mercantile business, and cultivate, but do not hold the plough. They are mostly dark men, of short stature. In their marriages the bridegroom is before or after puberty but girls are under age ; the ceremonial is performed at the house, by a brahmin. The death shradha are conducted by brahmins. Their Janami is put on and the mantrum taught when married. The Wani do not marry nor eat with the Komati Banya. They are in considerable numbers in the northern part of the Nizam's dominions adjoining Berar, Gorakpoor, Cawnpore and Farakhabad.

Baghelcund, a territory in Central India, also known as Rewa, whose princes are of the Baghel or Baghela race. The *Baghel*, according to Wilson are a branch of the Sisodhiya rajputs of Guzerat, who migrated eastwards. Sub-divisions of the tribe, under different denominations are widely spread through Bundelcund, Allahabad, Benares, Gorakpur, Cawnpore and Farakhabad. They are also said to be of the Chouhone race, descended from Komarphal (died A. D. 1166) sovereign of Guzerat. The princes of Baghelcund are of this race. In Guzerat there are many petty chieftains of this tribe, as Lunawarra, Mandvie ; Mahera ; Godra ; Dubboye, &c., &c. Another account makes the Baghela rajput race, descendants of Sid Rae. They gave their name to Baghelcund, an entire division of Hindustan. They also occupy Peetapoor and Theraud in Guzerat.

Buchgoti.—A rajput tribe in Jonpur and Gorukpur formerly notorious for turbulence, part of them became mahomedans prior to Sekundar Lodi's rule. The Bilk-huria, the Rajwar, and the Rajkumar are off shoots from the Buchgoti.—*Elliot.*

Bagri, according to Wilson, is the race occupying Bagar the tract lying between the S. W. borders of Hariana and the Sutlej. The tribe are regarded as of the Jat race. Bagar is also a tract on the S. W. Malwa ; and a robber race called Bagri have settled in the eastern parts of Malwa, Hissar and Bhattiana. Sir H. Elliot says they were originally Rajputs, but are now classed as Jats. Some Bagri are professed robbers.—*Wilson's Glossary. Elliot Supplement.*

Bagadi, a servile race in Bengal and Cuttack, who follow unclean, out of door, avocations. They are one of the most numerous of the non-mahomedan castes of Bengal. They are cultivators, fishermen and watchmen, but addicted to dacoity.

The Yadu of Jessulmer, who ruled Zabulisthan and founded Guzni, claim the Chaghtai as of their own Indu stock : a claim which, Colonel Tod deems worthy of credit.

Bawari, a predatory tribe, scattered throughout India. Wilson describes them as robbers by profession and known in different places by different appellations, but calling themselves Bawari. He says that they are all hindus, and use a peculiar dialect, which is said to be spoken in some parts of Guzerat. They seem to be the Bhaora of Peninsular India, who are styled Harn-pardi and Harn shikari and are the wild hunters of the jungles and forests.

Bauri of Bengal, swine herds by avocation. —*Wilson.*

Bunturia, a class of wood-rangers, in the northern parts of Goruckpur, they are now cultivators.

Choola, a tribe of Tuga in Baghput, so called from having come from Chooloo or Chooro in Bikanir.—*Elliot.*

Gandhila, Hind. A low vagrant caste in the N. W. Province, who make mats, and exhibit feats of activity, they are also thieves.—*Wilson.*

Gadaria also Gaduria, from Gadar or Gadur, a sheep, are shepherds of the N. W. Provinces. They have several divisions who do not eat together nor intermarry. The younger brother marries the widow of the elder brother. The elder brothers do not marry the widow of a younger brother.—*Wilson.*

The Koeri of Hindustan are gardeners and in Bahar grow the poppy.

Malli or Garden Malli are supposed by Mr. Campbell, p. 105-6. to be a considerable and widespread people.

Between Umballa and Delhi are a good many Malli villages, and they are scattered about the N. W. provinces as gardeners. They are common about Ajmir, and on the southern frontier of Hindustan : South of Jubbulpoor, they are many and mixed with the Koormi, and extending with the Kurmi far to the east, the Malli into Orissa and the Kurmi into Manbhum and other districts of Chota Nagpore all through the Mahratta country, they are mixed with the Kumbi, and most of the potails are either Kunbi or Malli.—*C. p.* 106-108.

Mallial, very industrious cultivators and gardeners, on the north-west frontier of British India, above the Salt Range, and extending up into Peshawar. They now profess mahomedanism.—*Campbell, p.* 108.

Rai or Raian, are a fair good-looking class of men dwelling throughout the plains of the Punjab in villages of their own or holding divisions of villages on equal terms with the Jat and others, and under a similar constitution. They are not martial, but apply the finer cultivation to the best lands, for which they pay a high revenue and are much appreciated by native Governments. They are the best cultivators in the province.

Punjab, in the Persian language, means literally the five rivers, and is a geographical term

applied to the territory on the north-west of India, watered by the rivers Sind or Indus ; the Jhelum or Hydaspes ; the Chenab or Ascesines ; the Ravee or Hydraotes, and the Gharra or Hyphasis. In the time of Runjeet Singh, the Punjab revenues were estimated at £3,250,000, of which, in 1844, the customs and excise duties amounted to £240,000. In the time of Baber, the rhinoceros was hunted on the plains of Attock and wild animals are still very numerous. The whole population of the Punjab, both high and low, is above the average Arian type. The Punjabi is tall, handsome, high featured and long bearded. The plains of Upper India, in which as Colonel Cunningham remarks (*Hist. Sikhs, p.* 4) the Brahmin and Kshutree races had developed a peculiar civilization, have, however, been overrun by Persian or Scythic tribes, from the ages of Darius and Alexander to that of Baber and Nadir Shah, and the prominent changes introduced by them have been alterations in the nature worship and polytheist religions of the earlier occupant races, the subsequent introduction of the mahomedan creed, and the long antecedent immigration of hordes of the Jut from the plains of Upper Asia. The several civilized nations in the Indian plains still differ from each other in manners and language, nearly as much as those inhabiting the corresponding portion of Europe.

The Hindi tongue has several dialects. One of these, the Brij-Bhasha or Brij-Bhaka is the form spoken near Mathura, and takes its name from Brij, the tract about Mathura and Brindban, where Krishna sported with the Gopin.

The *Rangari* or Rangri dialect of Hindi is spoken in the western parts of Hindustan. It is bounded by the Indus on the west, Bundelkund on the east, the Satpura hills on the south and Javpur Jodhpur and Jeysulmer on the north.—*Wilson's Glossary of Indian terms, Elliot's Supp. Gloss.*

The Hindustani race, on the Ganges are the tallest, fairest and most warlike and manly of the natives of British India, they wear the turban, and a dress resembling that of the mahomedans, their houses are tiled, and built in compact villages in open tracts ; their food is unleavened wheaten bread.—*Elphinstone's History of India, p.* 323, 325.

The Bengali, are in many respects different from any other people of India. Most of the population of Bengal have the appearance of being Arian, though dark, but some are very dark, and have thick lips with features either aboriginal or Indo Chinese. Some have curly hair, as if related to the black woolly headed aborigines, who may have stretched across from the Rajmahal to the Garrow hills, others of the Bengali people, especially the Uria, with the Bhuya seem rather to have straight hair, with high cheek bones, and complexions not very dark, suggesting an Indo-Chinese element stretching from Burmah across the Sunderbuns, (*C. p.* 106.) Though good looking, the Bengali are small, black, and effeminate in appearance, remarkable for timidity and superstition, as well as for subtlety and art. Their villages are composed of thatched cottages, scattered through woods of bamboos or of palms ; their dress is the old hindu one, formed by one scarf round the middle and another thrown over the shoulders. They have the practice, unknown in Hindustan, of rubbing their limbs with oil after bathing, which gives their skins a sleek and glossy appearance and protects them from the effect of their damp climate. They live almost entirely in rice, and, although the Bengali and Hindustani idioms are more nearly allied than English and German, the Bengali language is quite unintelligible to a native of Hindustan.

The native of Bengal, alike hindu and mahomedan, in physical organization, is feeble even to effeminacy. His pursuits are sedentary, his limbs delicate, his movements languid. During many ages, he has been trampled upon by men of bolder and more hardy breeds. Courage, independence and veracity are qualities to which his constitution and his situation are equally unfavorable. His mind is weak, even to helplessness, for purposes of manly resistance, but its suppleness and its tact move the children of sterner climates to admiration, not unmingled with contempt. Large promises, smooth excuses, elaborate tissues of circumstantial falsehoods, chicanery, perjury, and forgery are the various weapons offensive and defensive of the lower Ganges. All its millions do not furnish one sepoy to the native army. In Bengal and Bahar the work of labourers is done by Bhui, Rajwar and other aboriginal tribes, but Chandal, Dosad, Hari, Bhumali are names of other outcaste races.—(*Campbell, p.* 106, 124. *Elphinstone's History of India, p.* 325.)

The Buimal, in Bengal, is the lowest or sweeper class.

The Rajwar are out-caste labourers of Bengal and Bahar.

The Kolita race in the west of Bengal and in Assam, are good looking and considered to be high caste hindus.—*Campbell, p.* 54.

Nafr.—In the west of Bengal the Nafr and his offspring are slaves for ever and are transferable and saleable. In Purneya the Nafr is sometimes a domestic slave, sometimes an agricultural slave.

Raj-bansi is a name used by the people of Cooch Bahar to designate themselves. They have adopted many hindu customs.

The Praja of Cooch Bahar are cultivators almost in a state of serfdom, and in Cuttack, the barber, washerman, fisherman, weaver,

leather-worker, and tari-gatherer are classed as Praja and often sell themselves and families into slavery.—*Wils. G. C. S.*

The Bagdi of Bengal and Cuttack are a servile race who follow uncleau out of door avocations. They are one of the most numerous of the non-mahomedan castes of Bengal. They are cultivators, fishermen and watchmen, but addicted to dacoity. These seem identical with the Bagari of Malwa. —See p. 148.

Agriculturists.—Many of the cultivators in Bengal are mahomedans; and in all eastern Bengal where mahomedans are numerous, the majority are cultivators.

Goali.—Amongst the hindus of Bengal, the Goali are the most numerous; after them, the Brahmin and Kaist races, are the Bagdi, an aboriginal people, and a class of cultivators called Kyburto.

The best specimen of the hindu character, retaining its peculiarities while divested of many of its defects is found among the Rajputs and other military classes in Gangetic Hindostan. It is there we are most likely to gain a clear conception of their high spirit, their enthusiastic courage and generous self-devotion, so singularly combined with gentleness of manners and softness of heart, together with a boyish playfulness and almost infantine simplicity.—*Elphinstone's History of India, p.* 375-376.

Pastoral races, of whom the Ahir, and the Gujar are the chief.

The Ahir, also styled Abhir and Abhira, distinguish themselves as the Nand-bansa, Jad or Yadu-bansa and Gwal or Go-wala-bansa. These intermarry and eat together, and sometimes, as near Delhi, they eat with the Jat, Gujar, and Rajput. The Ahir are spread in different proportions all over the N. W. provinces, west of the Jumna, in the Upper, Centre and Lower Doabs, in the province of Benares, in Rajputanah and the Punjab. Some of the Jadbansi have been converted to mahomedanism and are known as Rangar. Those of the Dehli district who eat with the Jat and Gujar, conform to the usage of the marriage of the widow of an elder brother, with the next in seniority. The Ahir succeed the Gujar as cattle keepers to the east and south. They seem to be the pastoral people of the rajput and brahman countries as the Gujar are of the Jat districts. The Ahir are not strict hindus, they are a good looking people like those of the upper class of Hindustan, and in addition to cow keeping, they have villages, in considerable tracts are almost the principal landholders, and are fair agriculturists. The Ahir are not found in the countries occupied either by the Jat or the Gujar, and do not extend generally east into Bengal, but there are many of them in the tract just between the proper Jat and the Rajput country about the Ganges, to the east of Merut and Alighur, in part of Rohilcund, they seem to extend into the S. E. of Rajputanah and of the Dehli country, are found about the Jumna near Muttra and in many places further east, and there are many of them in the Benares and Behar divisions. They are said to have been well known in ancient times in Guzerat and the Mahratta country, about Asirghir, and to be numerous still in Katyawar. Indeed, the western country was Abhira or the country of the Ahir, and they are said once to have been powerful in Guzerat. Asirghir derives its name from Asa Ahir, a noted leader of the tribe.—Abhira, the country of the Ahir was the ancient name of the western countries of Guzerat and Katyawar.

In Hindustan, the term is now professional; but in the Mahabarata, the Ahira are mentioned as a shepherd or pastoral race in Saurashtra, and the Abhira are mentioned as a pastoral shepherd race, settled near the lower course of the Indus, in a tract known to classical writers as the Abiria of Ptolemy, lying north of the Sahyadri mountains and of Syrastrene.—*Wils. Gloss. Campebell, pp.* 102-4.

Gujar, the name of a race spread through Hindustan who are supposed to have given their name to the Gujerat districts of the Panjab and to the peninsula of Gujerat. They are well known agriculturists in the North Western Provinces. Whether of the hindu or mahomedan faith, they everywhere prefer pasturage to the plough. The Gujur, are numerous everywhere in the Sikh territory. The Gujuru, in Kashmir, are shepherd proprietors, said to have come from Guzerat in the Punjab. They live in loghouses, in recesses at the foot of the Panjab, and in the woods. The Gujur are numerous in the Punjab and probably of primitive antiquity. They have not lost the pastoral habits of their race; but they devote much attention to agriculture, and they are more industrious and less predatory than their brethren of Hindostan.—(*Records of Govt. of India, No. VII.*)

In 1857, in the Revolt in India the whole of the Gujar villages all around Delhi, after fifty years of compulsory quiet, broke out and plundered all over that district within a few hours of the outbreak of the mutiny; whenever any fugitive, during the mutiny, came to a Gujar village they were invariably plundered. The instant the strong arm of a Government was removed, these and other predatory races resumed their ancient habits. They are now cultivators and keepers of cattle and buffaloes living in separate villages of their own, numerous about Delhi, and in the Merut and Saharunpur districts of the Doab.

Professor Wilson says they profess to descend from Rajput fathers by women of inferior castes. Mr. Elliot considers them as having

given their appellation to the principality of Guzerat, in the west of India, and to the district of the same name in the Punjab. Sir John Malcolm says the Gujar, who are also Hindus have raised themselves to power by means not dissimilar to those used by the Jat. Almost all the thieves in Hindustan are of this tribe. They are numerous in Punjab, on the Northern frontier of British India, in Swat and the adjacent hills,and in the hills about Kashmir and they are said to have preceded the Swat tribe as the inhabitants and owners of part of the Hazarah district, east of the Indus. In the hills about Kashmir, the Gujar have pastoral vagrant habits. They are very numerous in the Punjab country and give their name to the town and district of Gujerat, in the plains of the Punjab, where, also, names from the same race are frequent. In all the northern, if not in all the Jat country, the Gujar are much mixed with the Jat and form a considerable part of the population. They are numerous in all northern Rajputanah, and extend into Malwa and the adjoining parts of Central India as far east as Bundelcund, one of the chiefs in which is a Gujar. The last Nagpore prince is stated to have been a Gujar, but there are at present, no Gujar in Guzerat and according to Mr. Campbell, the origin of the name of this district is not known. Those located in the east in hindustan, trace their origin from the west.

The Gujar are generally a fair good looking people especially those towards the N. W. frontier of India, and have no resemblance to the pre-Arian races. Those to the North of Delhi are mahomedans, but to the East and South they are sometimes half mahomedans sometimes half hindus, but so very lax as to be considered a sect apart.—(*Campbell, p.* 1013. *Wilson's Glossary: Malcolm's Sikhs, p.* 136. *Elliot's Supp. Glos.*)

Sikh.—The Sikh are not a race, but a body of religionists, who take their name from the hindi word, "sikhna" to learn, Sikh meaning a disciple. For a short time, the sect rose into a great nation in the country lying between India and Affghanistan. During the 16th and 17th centuries, Nanak and Govind, of the Khutree race, with their succeeding gurus, obtained a few converts to their religious views among the Jat peasants of Lahore and the southern banks of the Sutlej. Towards the close of the 18th century, they grew to be a great nation, with an influence extended from the Karakorum mountains to the plains of Sind, and from Delhi to Peshawur. Their dominions were included between the 28th and 36th parallels of north latitude, and the 71st and 77th meridians of east longitude. This tract consists of broad plains slightly above the sea level, or mountain ranges two or three miles high. The Sikh population of the Punjab has commonly been estimated at 500,000 souls, but Captain Cunningham considered a million would be the more correct number. The total in all India is $1\frac{1}{4}$ million. In the former Sikh territory, all were not of the Sikh religion. The people and dependent rulers of Ladakh profess Lamaic Buddhism, but the Tibetans of Iskardo, the Durdoo of Gilghit and Kuhka and Bimba of the rugged mountains, are mahomedans of the shia sect. The people of Kashmir, Kishtwar, Bhimbur, Pukhli, and of the hills south and west to the Salt Range and the Indus, are mostly sunni mahomedans, as are likewisethe tribes of Peshawur and of the valley of the Indus southwards, as also the inhabitants of Mooltan, and of the plains northward as far as Pind-dadun-khan, Chuneeot and Depalpoor. The people of the Himalaya eastward of Kishtwar and Bhimbur, are hindus of the brahminical faith, with some buddhist colonies to the north and some mahomedan families to the southwest. The Jat of the Manjha and of the Malwa districts, in the Panjab, are mostly Sikh, but perhaps not one-third of the whole population between the Jhelum and Jumna, has as yet embraced the tenets of Nanak and Govind, the other two-thirds being still equally divided between mahomedanism and brahminism. Most of the modern Sikh in no way separate from their tribes and are known as Jat, or Khatri, or Brahman Sikh, one member of a family being frequently a Sing'h while others are not. Their written character in use is called Gurumukhi. It is the Devanagari, in form, but with different powers to the letters. The Sikh are the only sect whose religion teaches them not to smoke tobacco. They have, however, no objection to other narcotics, opium and bhang,—snuff taking is not so common. Smoking was first prohibited by the tenth Guru, Govind Sing'h, whose chief objection to it appears to have been that the habit was promotive of idleness, as people would sit smoking and do nothing.

Jat, a great race along the banks of the Indus from the Punjab to Sindh and to the banks of the Jumna, in Hurriana, in the N. West provinces, Bhurtpor, Dholpor, and Bikanir, some of whom, according to Wilson, claim to have come from Ghuzni and the far West, and others, claim to be descended from Yadu, an ancient prince, eldest son of Yayati. They are supposed to be the descendants of the Getæ or Yue Chi of antiquity. They are a bold, industrious people, and the rajah of Bhurtpore is a Jat. There are two sub-divisions of them, the Dhe and Hele, or Rachhade and Deswale, but there are many tribes. They are partly of the Sikh, partly hindu and partly of the mahomedan religions.

The Jat race is regarded by Mr. Campbell as belonging to the Arian family, but to have appeared in India later than the brahminical

hindus. The Jat are hindu in much of their speech laws and manners, but have some grammatical forms of speech not to be traced in the earlier brahminical writings. The Jat tribes present the most perfect example of the democratic and more properly Indo-Germanic races. They constitute, over a great part of India, an upper and dominant stratum of society, and have, to a great degree given their own tone and colour to many provinces. In great part of Jat land, the great body of the free people are Jat, and retain their original institutions in the greatest purity, little modified by modern brahminical laws. In the west country their name is pronounced Jat, but in the Punjab and in the east country, it has the long sound of Jat.

Some of the Jat are of the mahomedan religion some of the hindu faith in the west and in Sindh: of the Sikh sect in great part of the Punjab, and some in the east and near Bhurtpore, assimilating in their dress to their religious confreres. This has impressed many with the belief that these religionists differ from each other also in race, but by tracing this population, the differences in the type disappear and the one extreme is found to merge into the other. There may, however, be a different race on the west, and those on the west are pastoral and predatory, while Captain Burton mentions without quoting his authority, that a wandering predatory tribe bearing their name is found on the western parts of Central Asia, about Candahar, Herat and Meshad.

The *Jat* of the lower Indus, appear to be of the same race as the Brahui and are almost black.

The Jat are not found in Afghanistan, but in Beluchistan in proceeding eastwards by the Bolan Pass and other routes, there, they succeed the Tajik and Dehwar of the west of Afghanistan and the vicinity of Candahar, and occupy the plains and the hilly country, descending into the plains, spread to the right and left along the Indus and its tributaries, occupying upper Sindh on one side, and the Punjab, on the other. But in the Punjab, they are not found in any numbers north of the Salt Range, and in the Himalaya, they are wholly unknown, which would seem to show that the Jat did not enter India by that extreme northern route. Also, the Jat does not occupy lower Sind and they are not found in Guzerat. The Jat is, however, the prevailing population in all upper Sind and their tongue is the language of the country. They were once the aristocracy of the land, but latterly have been dominated over by other races and thus have lost somewhat of their position as the higher classes of the society. In the south and west of the Punjab, too, they have long been subject to mahomedan rulers. But latterly, as the Sikh, they became rulers of the whole Punjab and of the country beyond as far as the upper Jumna, in all which territories they are still, in every way, the dominant population. Over great tracts of Hindustan, three villages out of four are Jat, and in each Jat village, this race constitute perhaps two-thirds of the entire community, the remainder being low caste predial slaves, with a few traders, and artizans. The Jat extend continuously from the Indus over Rajputanah. The great seat of Rajput population and ancient power and glory was on the Ganges; but since vanquished there by mahomedans, the chief Rajput houses have retired into the comparatively unfruitful countries now known as Rajputanah where, however, the Jat is the most numerous part of the people. They share the lands with the Meena, the remains of the Brahmin population and the dominant Rajput, but they have the largest share of the cultivation. The northern part of Rajputanah was partitioned into small Jat republics before the Rajput were driven back from Ajoodiah and the Ganges. The southern and more hilly parts of Rajputanah are not Jat, but are occupied by the Mhair, Meena and Bhil; but in Malwa, again, the Jat are numerous and seem to share that province with Rajputs and Kunbi. Those of Beluchistan are described by the people of Candahar, as fine athletic men, with handsome features but rather dark. Those in Upper Sind, up the course of the Indus, and in the south-western Punjab, are for the most part of the mahomedan religion. They have been long subject to foreign rule and seem to be somewhat inferior to their unconverted brethren. In all the east of Beluchistan, the Baluch are but a later wave and upper stratum. There, about the lines of communication between India and Western Asia, in the provinces of Sewestan and Kuch Gandava. The Jat form probably the largest portion of the agricultural population and claim to be the original owners of the soil. In the west, advancing through Rajputanah, we meet the Jat of Bhurtpore and Dholpore. Gwalior was a Jat fortress belonging, as is supposed by Mr. Campbell, to the Dholepore chief. They do not go much further south in this direction. From this point, they may be said to occupy the banks of the Jumna, all the way to the hills. The Delhi territory is principally a Jat country and from Agra upwards, the flood of that race has passed the river in considerable numbers and forms a large part of the population of the Upper Doab, in the districts of Alighur, Merut and Muzafarnagar. They are just known over the Ganges in the Moradabad district, but they cannot be said to have crossed that river in any numbers. To sum up, therefore, the Jat country extends on both sides of the Indus from L. 26° or 27° N. up to the Salt Range. If from the ends of this line two lines be drawn nearly at right angles to the river, but inclining south, so as to reach

Lat. 23° or 24° N. in Malwa, and L. 30° on the Jumna, so as to include Upper Sind, Marwar, part of Malwa on one side, and Lahore, Umritsur and Umballa on the other, then connect the two eastern points by a line which shall include Dholpore, Agra, Alighur and Merut, and within all that tract the Jat race ethnologically predominates, excepting only the hills of Mewar and the neighbourhood, still held by aboriginal tribes. Advancing eastwards into the Punjab and Rajputanah, we find hindu and mahomedan Jats much mixed and it often happens that one-half of a village or one branch of a family are mahomedans and the other hindus. Further east, mahomedan Jats become rarer and rarer, and both about Lahore and all that part of the Punjab along the line of the upper Sutlej and Jumna, the great mass remain unconverted. In the Punjab, the Jat all take the designation of Singh, and dress somewhat differently from ordinary hindu Jats; but for the most part, they only become formally Sikhs, where they take service and that change makes little difference in their laws and social relations. The Jat of Dehli, Bhurtpur, &c, are a very fine race, bear the old hindu names of Mull and such like and are not all Singhs. In Rajputanah, the Jat are quiet and submissive cultivators. They have now long been subject to an alien rule and are probably a good deal intermixed by contact with the Meena and others.—(*Campbell, pp.* 77 to 81.)

The Jat Singh of the Punjab and upper Sutlej may probably be taken as the best representative type of the race. Compared to northern races, they are dark; they are tall, large and well featured, with plentiful and long beards, fine teeth and a very pleasant open expression of countenance. They are larger and taller than the Afghan Pathan with the upper part of the body especially well developed but not so stout limbed or quite so robust. They are a fine, remarkably handsome, race of men, not excelled by any race in Asia. In courage, energy, and military qualities, they excel the more beautiful non-Pathan races of the northern hills and they are as energetic in the peaceful arts as in that of war. They are good cultivators, hard-working and thrifty; they let little land lie waste and pay their land tax punctually. Their women work as well as the men and make themselves generally useful. They are not learned, though many men and some women can read and write. They have a great craving after fixed ownership in the soil. They are essentially agriculturists, seldom gardeners, and in Hindustan are never pastoral. They breed cattle largely, and sometimes rear camels when the country is suitable, and in Jat countries both ordinary carts and large mercantile waggons are usually plentiful, and as waggoners they not unfrequently carry their grain and other produce to distant markets on their own account. The Jat formerly dwelt in Rajputanah in republics, such as, in the time of the Greeks, were alluded to as democratic institutions, and one recognised republican state, that of Phool or Maraj, came down to the present day, and was the last recognised republican state in India. It was a Jat republic, and gave the chiefs who founded the states of Patialah, Nabah, Jheendca. The old territory of the Phoolkian race was recognised by the British and treated amongst the protected Sikh States, but has recently been brought under the general rule of British dominion. Every Jat village, however, is, on a small scale, a democratic republic, every man having his own separate and divided share of the cultivated land. The union in a joint village community is rather the political union of the commune, so well known in Europe, than a common enjoyment of property. A father and son may cultivate in common, but commensality goes no further. The village site, the waste lands and grazing grounds and, it may be, one or two other things belong to the commune, and the members of the commune have, in these, rights in common. For all the purposes of cultivation, the remainder of the land is in every way separate individual property. The government is not patriarchal, but a representative communal council or punchayet. Re-marriage of widows is permitted. All the Jat are subdivided into many Gentes and Tribes, after the usual fashion of the peoples of the Arian or Indu Germanic stock, and the usual fashion is to marry into another Gens. The Jat have little of the hindu ceremonial strictness, and in Punjabi regiments, they mess freely like Europeans, and have their two or three meals a day comfortably. The Jat, Rajput and their congeners are branches of one great stock. Brahmans of Kashmir and the frontier hills are hindus in an earlier stage of brahminical developement. The Jat country is just such as would be occupied by a large stream of people issuing through the Bolan Pass, in Lat 28 or 30° north, and the Rajput are ranged in a semi circular form around the eastern and northern and south edge of the Jat area, the mass of them occupying the richer valley of the Ganges. Mr. Campbell's conjecture is that the Rajput are an earlier wave from the same source as the Jat who came in by the same route, have farther advanced and been completely hinduised, while the Jat have come in behind them. Punjabi is the language spoken by the Jat, but which, in upper Sind, is called Jati Gul or the Jat tongue, and Mr. Masson calls it Jetki. It is an Indo-germanic tongue allied to the Sanscrit. In its main grammatical and essential features it is not widely different from the Hindi of the Rajput and

other Hindustan people. It is one of the most pracrit of Indian vernaculars.—(*Campbell, pp.* 82 to 85.) The Jat, Jot, Jet Jut, or Jhut, thus occupy the North West and bordering provinces, also the Punjab, and Sind. They are partly hindu, partly Sikh, and partly mahomedan. They all refer to the west of the Indus and to Ghazni as their original seats, and the Dhe or Pachhade reached India from the Punjab about the middle of the 18th century. The other section is the Hele or Deswale. The Jat seem to have entered by the Bolan pass, occupied the high pastoral lands about Quettah and thence descended into the plains which they still occupy. The Jat is the great agricultural tribe in the Punjab and in the Punjab parlance, Jat and zamindar or cultivator are synonymous. There are no Jat in Kashmir or within the hills. The Aodi tribe of Jat dwell in Paniput and Soneput. The Aolania Jat in Paniput claim to be above other Jat by having had the title of malek or king conferred on them. The race, however, spread from Herat, Kabul and Kandahar, throughout the Panjab, down the Indus into Kach Gandhava, and eastwards to the Jamna and Ganges, is the same, and wherever spread, they retain a dialect of their own to which, in Sind, has been given the name of Jetki. Mr. Masson seems to imply that they are descendants of the Getæ who, he says, once possessed the whole of the countries immediately east and west of the Indus. The zamindars, or cultivators of the soil, at Jell as throughout Kachi, are Jet, who there seldom move abroad but on bullocks and never unless armed. A Jet may generally be seen half naked—seated on a lean bullock, and formidably armed with matchlock and sword, and to the north and west of Kach Gandhava, as also in Herat, Kandahar, and Kabul, they are seen as itinerant artizans, like gypsies. In the Panjab, they are not found west of the Jilam, but east of that river the Jet cultivators use waggons. The Jet has been so long settled in Kach Gandhava, as to appear the aborigines. Amongst their numerous subdivisions are the Kalora, Kokar, Hampi, Tunia, Abrah.—(*Masson's Journeys, Vol. ii. p.* 125, *Masson's Kelat, p.* 352.) According to Mohan Lal, the Sikh Jat are polyandrous, and one brother takes his brother's wife: but in saying so, he seems to allude to the custom among the Jat, of Curao, also written karao seemingly from "karana," to cause to do, the term given among the Jat, Goojur, Ahir, and other races and tribes in western Hindustan to concubinage generally; but more especially to marriages of widows with the brother of a deceased husband. The practice which is also known to the eastward by the name of Ooorhuree, in the Deccan of Butt'hhee; and, in other provinces, by the name of Dhureccha, is followed among the races, but is not very openly confessed even among them, as some degree of discredit is supposed to attach to it. It is only younger brothers who form these connections, elder brothers being prohibited from marrying their younger brother's widows, but among the Jat of Delhi even this is not prohibited. The practice has been common among several nations of the East. The Jews followed this custom, and in Egypt it was admitted for a childless widow to cohabit with a brother of the deceased husband. When the laws of Menu were enacted, Curao appears to have been a recognized institution. But as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten according to law on the wife of a man deceased, or impotent, or disordered, after due authority given to her, is called the lawful son of the wife (Ch. IX., v. 176.) From the fact of Draupadi marrying the five Pandoo brothers, we learn that polyandry must have prevailed amongst the heroes of that period; and if polyandry, the practice of Curao was, no doubt, not uncommon: indeed, the compiler of the Mahabharata, Vyasa, was himself appointed to raise up offspring to his deceased brother. There is perhaps no circumstance which so strongly shows the northern descent of the deified Pandava heroes, as this marriage. Herodotus tells us that polyandria prevailed among the nomadic Scythians as it does at present among the Bhotia. The practice is adopted also by the Nairs of Malabar, between whom and the people of the Himalaya, Wilson traces the obscure vestiges of a connection. Amongst the Jat, Goojur, and Ahir, children born Curao are considered legitimate, and are entitled to inheritance accordingly. Children begotten by the woman previous to Curao, except in the case of fraternal Curao, are known by the name of Kudhelura, and do not inherit the property of the father-in-law.—(*Elliot Sup. Gloss. Recherches Phil. surres Egyptiens et les Chinois, Selections from the Mahabharata, pp.* 8 *and* 66.)

Captain Postans tells us that the Jut, in Sind, like all the tribes in the Sind countries, are divided into innumerable sub-divisions called "Koum," and are a hard-working oppressed race, occupying themselves in rearing camels, feeding flocks, or cultivating the soil. They are invariably found in large communities, often living in temporary huts or "wand," and migrate all over Sind and its confines, as shepherds, in search of pasture. Where this is not the case, they are farm servants either of the Biluchi chiefs or wealthy zamindars, who repay their labour

with a modicum of the produce. The Jut in Sind, are a quiet inoffensive class, and exceedingly valuable subjects, but have hitherto been much depressed. Their women are, throughout the country, noted for their beauty and, to their credit be it also spoken, for their chastity. They work as hard as the men, and the labour of tending, driving home their flocks, milking the cattle, &c. is fairly divided. The Jut are very numerous and form a large division of the population of Sind, though seldom found in its towns, being dispersed over the whole face of the country particularly eastward to the desert tract which separates Sind from Cutch, known as the Runn on which this tribe rear large flocks of camels. There are other pastoral and peaceable classes besides the Jut, of mahomedan persuasion, such as the Khosa in Upper Sindh, Sikh Lohana in the Delta, and emigrants from the Punjaub, who have in many instances become amalgamated with the people of the country. The Khosa become a predatory tribe on the eastern confines of Sind, verging towards the Cutch terrritories, where Rajputs are located: they are very troublesome. They are also on the eastern boundaries, as wandering herdsmen. The Daood Putra, who inhabit generally the country of that name in the north, are to be met with in various parts of Sindh. The Sumah are Jut, though they are generally known by the former title. Such, also are the Machi and numerous other subdivisions of the Jut tribes. The Jut is as inseparable from the camel throughout Sind, as the Arab from his horse in Arabia; they are invariably camel drivers and feeders, and are consulted on every occasion where the health or efficiency of this valuable animal are in question. The Jut of Sindh and Kach Gandhava have become mahomedans. The Jetki is, everywhere, according to Mr. Masson, the language of the Jet.—(*Masson. Vigne. Postans.*)

According to dictionaries, Jat means a race, a tribe, while Jut means a manner, a kind, and likewise matted hair: also throughout the Punjab, Jut implies a fleece or fell of hair, and in Upper Sind a Jut means a rearer of camels or black cattle, or a shepherd in opposition to a husbandman. In the Punjab generally, Jut means, a villager and husbandman in opposition to an artist or handicraftsman. The Jat, latterly, acquired great power. The Birk or Virk is one of the most distinguished of the Jat tribes. The Sindhoo, Cheeneh, Vuraitch, Chhuttheh, Sidhoo, Kurekal, or Kurreeal, Gondul, &c., are Jat sub-divisions in the Punjab and their numerous sections, added to their following varied religious sects, have given rise to doubt as to the unity of the race. The Jat in the north and west of India are industrious and successful tillers of the soil, and hardy yeomen, equally ready to take up arms as to follow the plough. On the Jumna, their general superiority is apparent, and Bhurtpoor bore witness to their merits. Some of the Jat are said to be descendants of the Kahkar of the Salt Range.—(*Cunningham's History of the Sikhs, Masson, Vigne, Postans.—Campbell, p.* 5.

Godara, a Jat tribe near Hariania.

Guddee, a race in the Kangra hills.

Sauree, the low castes of the Punjab, are the Sauree, Bouria and Hurni.

Purbia.—A Sanscrit term applied to the natives of the eastern countries of India, or those lying on the east of the Ganges, beginning from Behar. At the commencement of the revolt of 1857, the Purbia of Oude and Hindustan in general, constituted three-fourths of the regular army of Bengal, and all of them, from community of country, although of different races, castes, and religions, had so strongly united together that the army had become quite a close service, open only to the few favoured classes. The strength of this feeling only became known when the Government tried and failed to introduce two hundred Sikhs into each regiment of the line.

The *Kori*, Koli, or weaver and the Tili or oilmen of northern India take a low place amongst the castes. All the weaver caste throughout Hindustan are stated by Colonel Tod to be Koli. They call themselves Julai, but are sometimes styled Kori. The Koli of the Simla hills are merely inferior castes living amongst the other populations.—*Tod.*

Rajkumar, a numerous and wealthy agricultural race in the N. W. provinces long notorious for the murder of their infant daughters.

Lodha of the N. W. provinces are husbandmen.—(*Wils. Gloss.*)

Tanti or weavers are a prosperous class of cultivators and own a good deal of land.—(*Campbell, p.* 107.)

Teli, oil-manufacturers and oil-sellers, throughout India, are part of the agricultural community.—*Campbell, p.* 107.

Bhuinhar, in the district of Gorakhpur, Azimghur and Benares, is an agricultural tribe who call themselves Bhuinhar or Bhun-har. They claim to be brahmans, and take the titles of Thakur, Misr, and Tewari; the raja of Benares belongs to them.—*Wils. Gloss.*

Rawat also Raji, a small savage tribe in the Rohilcund Terai.—*C. p.* 47.

Nat, or *Nut*, in Bengal, is a wandering tribe, who are dancers, actors, athletae. They resemble the gypsies in habits.

The Nut called also Sirki bash (dwellers under mats) met with in the Dekhan are not distinguishable from Dher.

Kahar, a sudra race of Bahar, who follow agricultural pursuits and are palanquin bearers, many of them are slaves and are considered impure. The Kahar palanquin-bearers of Hindustan are found all through Hindustan and the east of the Punjab, are a considerable class, and are strong, hard working, rather good looking, men. They are water carriers, fishermen and cultivators. Hindus drink water from their hands. Near Gya, they are also employed as palanquin bearers —*Wils. Gloss. Campbell, p.* 120.

Dhimar are fishermen, a branch of the Kahar, but are sometimes considered offshoots of the Malla.

Hardoul in the villages of Upper India may be seen the Khardour or Hardoul mounds studded with flags to avert disease.

Hela, a division of the Bhangi, but eat the leavings of hindus only.

Dom of Kumaon is merely an inferior caste dwelling amongst the general population. In the north of India, under the Himalaya and in the Kumaon Hills, the Dom were once a considerable tribe. They are still a numerous helot section of the population, being in fact the only inferior class and ordinary labourers as well as artizans. The Dom are very black with curly hair and altogether aboriginal in appearance, the Dom or Domar in the labour market of Northern India take the place of the Mang of the south of India. The Dom of Northern India are rope, fan, basket and mat-makers. In Oudh and Bengal the Dom are sweepers, and carry dead bodies. The Dom are also musicians. The Mirasi Dom are mahomedans and called Mir and Mirasi.—*Campbell, pp.* 16, 124. *Wils. Gloss.*

Dhanuk in Bahar and Hindustan, a tribe who are fowlers and archers and live on their prey: they are also employed as house guards and Dr. Buchanan describes the Dhanuk of Bahar, Bhagalpoor and Puraniya as engaged in agriculture like the Kurmi. Many of them however are agricultural slaves.—*Wils. Gloss.*

Hari, semi-aboriginal tribes of Bengal.

Chungur.—A wandering houseless race in the Punjab, probably the same as the Chinganeh of Turkey, the Italian Zingaro, the Spanish Gitano, and the English Gipsy. About Delhi, the race is called Kunjur, a word which, in the Punjab, implies a courtesan dancing girl. See Zingarro.

The Cheroo, aborigines in Ghazeepur, a part of Gorukpur, the southern part of Benares and Mirzapur and Behar. They are sometimes said to be a branch of the Bhur. They seem to be the same as the Savira or Seoree, but Buchanan considers them distinct. The Cheroo declare themselves to be descended from the great serpent, from which they may be supposed to be the Nagbunsi of Magadha. Remains of buildings attributed to them are found near Buddha Gya, Sasram and Ramghur, and the images of Siva and Hanuman found in them indicate that they belonged to the hindu religion. They appear to have been expelled from their ancient abodes by the Pramara of Bhojpur, the Hyobun of Hurdi and the Bhoonhar, a little before the first mahomedan invasion, about which time there seems to have been a general convulsion in India, during which several tribes acquired their present possessions. The features of the Cheroo are said to resemble the occupants of the Vindhya mountains. They live by cutting timber, collecting drugs, and killing game, and though their numbers are very low, they continue to create a rajah for every five or six houses, and invest him with the tilak in due form. The emperor Sher Shah subdued Muhartu, a Cheeroo zemindar of Behar, which seems to have been a last strong effort of the Cheeroo race. The chief of Singrowli in Mirzapur is a Cheeroo, though he calls himself a Ben-bans. Sir H. Elliot suggests that the Sivira, Seori and Cheroo, may perhaps be the Saura, descendants of the Surasena. In the Harivansa is the following passage:—From this race came the Sauravira and Saurasena. The great king Sourasena has given his name to the country over which he reigned.—*Elliot's Supp. Gloss.*

Sivira or Seoree, a race in Ghazepur, Gorukpoor, Behar, Benares and Mirzapur, whom Buchanan thinks identical with the Kol and the Cheru.—*Elliot.*

Bhinar, an aboriginal tribe of the upper Doab, called in the Doab, Bheimhar and in Rohilcund, Behar. They were expelled from Nirauli and the neighbouring districts by the Bir Gujar rajputs.

Bhar of northern India, called also Bharat, Raj-bhar and Bharpatwa, an aboriginal race following the meanest of avocations, especially that of swineherds. In the hills east of Mirzapur, there are some Bhar rajas. Tradition ascribes to them the whole country from Gorapur to Bundlekund and many old stone forts. Prof. Wilson supposes it possible that the name comes from Bharata an ancient name of India.—(*Wils. Gloss.*)

Boksa, a forest tribe in western Rohilcund, and in part of the forests or Sewalik hills of Dehra Dhoon. They are of short stature and spare habits with broad faces, depressed noses, prognathous jaws, thick lips, very scanty beard and mustaches, but not darker in colour than the ordinary hindus of the country. They are reputed to be skilful in witchcraft. They are very ignorant and indolent, but simple, inoffensive and good humoured. They have a scanty rude cultivation, and collect forest produce and wash gold, but they have no caste,

eat almost anything. They have no separate language. They are supposed to be dying out. They are said to enjoy a wonderful immunity from the efforts of malaria.—*Campbell, p.* 47.

Baori, the vagrant Baori of the Bhatti country and west of Delhi subsist chiefly by stealing. The Baori of the Jangal Mahal, are a low caste of cultivators and palankin-bearers.

Bagari, a tribe inhabiting the district of Bagar, between the South West borders of Hariana and the Sutlej. Said to have been Rajputs but also supposed to be Jat. A robber race of this name is settled in Malwa.—(*Wils Gloss.*)

Mewati, a thieving tribe of cultivators who seem to have come from somewhere in Rajputanah. They are found here and there along the S. West borders of the N. W. Provinces of India. The Alwar country near Delhi seems of late to have been called Mewat, but they extend further east than the Gujar, and in Malwa are common as regular soldiers and depredators. They are supposed to be mostly mahomedans.—*Campbell, p.* 103.

The Chura, of the Panjab, are serfs. They are the direct descendants of the Chaura or military outcastes of the Mahabarata.—*Dr. W. W. Hunter.*

Ghosee, also g'hosi, herdsmen, said to be descended from the Ahir race. Most of them have now been converted to mahomedanism; indeed, the name is generally considered, according to the dictionaries, to be exclusively applied to mahomedan milkmen. The name is derived from a sanscrit word signifying a cattle-pen. The eastern G'hosi who have been converted are called Bundee G'hosi. In many parts of the country, as in Delhi, the G'hosi are those who trade in milk, without any reference to their caste or religion.

Guddee, a tribe resembling the G'hosi. They are now mostly mahomedans, and have a few scattered communities in several pergunnahs, such as in Gurhmooktesur and Surawa of Meerut, and the Rampoor territory. It is not unusual to call any converted hindoo a Guddee, which is looked on by a mahomedan as a term of reproach.—*Elliot's Supp. Gloss.*

Gudurea, a shepherd, also written gadaria. There are several sub-divisions of the Gadaria in Hindustan, Neek'hur; Tusselha or Puchhade, Chuck, Dhangur, Bureyea, Pyhwar and Bhyeatur. Of each of these there are also many divisions.—*Elliott's Supp. Gloss.*

The Dilzak, are the predecessors of the Pathan tribes in the Peshawar valley, seem to have considerable Pathan blood, and are supposed by some to be earlier Pathans.—*Campbell, p.* 96.

Mahomedans.—The Syed race of Barh in northern India, furnished many persons of note to the courts of Delhi from the reign of Akbar to that of Ferokser. They are still numerous in Mozuffernugger.

Kamin, in the North West provinces is the term applied to the artificers and servants of a village.—*Wils Gloss.*

Batti of Bhattiana, west of the Sutlej, a tribe of fine handsome people, whose origin is obscure.—*Campbell, p.* 97.

NORTH-WEST BORDERS.—These notices of the races occupying British India have brought us to its north -west borders.

The characteristics of race are, perhaps, more deep seated and enduring than those of religion; but, in considering any people, the result of birth and breeding, of descent and instruction, must be held jointly in view. The Jut or Jat are known in the north and west of India as industrious and successful tillers of the soil, and as hardy yeomen equally ready to take up arms and to follow the plough. They form, perhaps, the finest rural population in India. On the Jumna their general superiority is apparent, and Bhurtpoor bears witness to their merits, while on the Sutlej, religious performances and political ascendancy have each served to give spirit to their industry and activity and purpose to their courage. The Raien, the Malee, and some others, are not inferior to the Jut in laboriousness and sobriety, although they are inferior in enterprise and resolution. The Rajpoot are always brave men, and they form, too, a desirable peasantry. The Goojer, whether of the hindoo or mahometan faith, everywhere prefer pasturage to the plough. The Baluch do not become careful cultivators even when long settled in the plains, and the Baluch tribes adjoining the hills are of a turbulent and predatory disposition, they mostly devote themselves to the rearing of camels, and they traverse Upper India in charge of herds of that useful animal. The Afghan are good husbandmen when they have been accustomed to peace in the plains of India, or when they feel secure in their own valleys, but they are even of a more turbulent character than the Baluch and they are everywhere to be met with as mercenary soldiers. Both Baluch and Afghan are, in truth, in their own country little better than freebooters, and the mahomedan faith has mainly helped them to justify their excesses against those of other persuasions and to keep them together under a common banner for purposes of defence or aggression. The Khuttee and Urora of the cities and towns are enterprising as merchants and frugal as tradesmen. They are the principal financiers and accountants of the country; but the ancient military spirit frequently reappears amongst the once royal "Khshutree," and they become able governors of provinces

and skilful leaders of armies. The industry and mechanical skill of the stout limbed, prolific, Cashmiri are as well known as their poverty, their tameness of spirit, and their loose morality. The people of the hills south and east of Cashmeer, are not marked by any peculiar and well determined character, excepting that the few unmixed Rajpoots possess the personal courage and the pride of race which distinguish them elsewhere, and that the Gukker still cherish the remembrance of the times when they resisted Baber and aided Humayun. The Tibetans, while they are careful cultivators of their diminutive fields rising tier upon tier, are utterly debased in spirit, and at present they seem incapable of independence and even of resistance to gross oppression. The system of polyandry obtains among them, not as a perverse law, but as a necessary institution. Every spot of ground within the hills which can be cultivated, has been under the plough for ages; the number of mouths must remain adapted to the number of acres, and the proportion is preserved by limiting each proprietary family to one giver of children. The introduction of mahomedanism in the west, by enlarging the views of the people and promoting emigration, has tended to modify this rule, and even among the Lamaic Tibetans any casual influx of wealth, as from trade or other sources, immediately leads to the formation of separate establishments by the several members of a house. The wild tribes of Chibh and Buhow in the hills, the Jun and Kathee, and the Dogher and Bhuttee of the plains, need not be particularly described, the idle and predatory habits of some, and the quiet pastoral occupations of others, are equally the result of position as of character.—(*Cunningham's History of the Sikhs, p.* 18.)

The Sikh owes his excellence as a soldier to his own hardihood of character, to that spirit of adaptation which distinguishes every new people, and to that feeling of a common interest and destiny implanted in him by his great teachers. The Rajput and Puthan are valiant and high-minded warriors; but their pride and their courage are personal only, and concern them as men of ancient family and noble lineage; they will do nothing unworthy of their birth, but they are indifferent to the political advancement of their race. The efforts of the Mahratta in emancipating themselves from a foreign yoke, were neither guided nor strengthened by any distinct hope or desire. They became free, but knew not how to remain independent, and they allowed a crafty brahmin to turn their aimless aspiration to his own profit, and to found a dynasty of "Peshwa" on the achievements of unlettered sudras. Ambitious soldiers took a further advantage of the spirit called up by Sevajee, but as it was not sustained by any pervading religious principle of action, a few generations saw the race yield to the expiring efforts of mahomedanism, and the Mahratta owe their present position, as rulers, to the intervention of European strangers. The genuine Mahratta can scarcely be said to exist, and the two hundred thousand spearmen of the last century are once more shepherds and tillers of the ground. Similar remarks apply to the Goorkha, that other Indian people which has risen to greatness in latter times by its own innate power, unmingled with religious hope. They became masters, but no peculiar institution formed the landmark of their thoughts, and the vitality of the original impulse seems fast waning before the superstition of an ignorant priesthood, and the turbulence of a feudal nobility. The Sikh looked before him only; the ductility of his youthful intellect readily receives the most useful impression, or takes the most advantageous form, and religious faith is ever present to sustain him under any adversity, and to assure him of an ultimate triumph.

The Rajput and Pathan will fight as Pirtheerai and Jenghiz Khan waged war; they will ride on horses in tumultuous array, and they will wield a sword and spear with individual dexterity: but neither of these cavaliers will deign to stand in regular ranks and to handle the musket of the infantry soldiers, although the mahomedan has always been a brave and skilful server of heavy cannon. The Mahratta is equally averse to the European system of warfare, and the less stiffened Goorkha has only had the power or the opportunity of forming battalions of footmen, unsupported by an active cavalry and a trained artillery. The early force of the Sikhs was composed of horsemen, but they seem intuitively to have adopted the new and formidable matchlock of recent times, instead of their ancestral bow and the spear common to every nation. Mr. Foster noticed this peculiarity in 1783, and the advantage it gave in desultory warfare. In 1805, Sir John Malcolm did not think the Sikh was better mounted than the Mahratta; but in 1810, Sir David Ochterloney considered that, in the confidence of untried strength, his great native courage would show him more formidable than a follower of Sindhia or Holkar, and readily lead him to face a battery of well served guns. The peculiar arm of the contending nations of the last century passed into a proverb, and the phrase, the Mahratta spear, the Afghan sword, the Sikh matchlock, and the English cannon became a proverb.

In the valley of the Upper Indus, that is in Ladakh and little Tibet, the prevailing race is the Bhot subdivision of the great Tartar variety of the human race. Lower down that

classical stream, in Ghilghit and Chulass, the remains of the old and secluded Durdoo and Dungher races are still to be found, but both in Iskardo and in Ghilghit itself, there is some mixture of Toorkaman tribes from the wilds of Pamer and Kashkar. The people of Cashmeer have, from time to time, been mixed with races from the north, the south, and the west; and while their languages is hindoo and their faith mahomedan, the manners of the primitive Kush or Kutch tribes, have been influenced by their proximity to the Tartar races. The hills westward from Cashmeer to the Indus are inhabited by Kukka and Bumba, of whom little is known, but towards the river itself the Eusofzye and other Afghan tribes prevail; while there are many secluded valleys peopled by the widely spread Goojer, whose history has yet to be ascertained, and who are the vassals of Arabian "syeds," or of Afghan and Toorkaman lords.

In the hills south of Cashmeer, and west of the Jehlum to Attock and Kalabagh on the Indus, are found Gukker, Goojer, Khatir, Awan, Junjooh and others, all of whom may be considered to have, from time to time, merged into the hindoo stock in language and feelings. Of these, some as the Junjooh and especially the Gukker, have a local reputation. Peshawur and the hills which surround it, are peopled by various Afghan races as Eusofzye and Momund in the north and west, Khuleel and others in the centre, and Afreedee, Khuttuk and others in the south and east. The hills south of Kohat, and the districts of Tank and Bunnoo are likewise peopled by genuine Afghans, as the pastoral Waziri and others, or by agricultural tribes claiming such a descent, and indeed, throughout the mountains on either side of the Indus every valley has its separate tribe or family, always opposed in interest, and sometimes differing in speech and manners. Generally it may be observed, that on the north, the Afghan on one side, and the Toorkaman on the other, are gradually pressing upon the old, but less energetic Durdoo.—*Cunningham's History of the Sikhs, p.* 6-7.

The languages spoken in the north-western border of India, between it and Afghanistan, and those of India adjoining Afghanistan, are dialects of Hindi, but sufficiently distinct to be called Sindi, Panjabi and Kashmiri. The late Lieut. Leech indeed, has given vocabularies of seven languages spoken on the west of the Indus. The western border tribes are still mostly under patriarchal governments. In the south are the various Belooch tribes in the territories to which they give their name and whose language is said by Captain Raverty to be a mixture of Persian, Sindi, Punjabi, Hindi and Sanscrit. The Brahui tribes in Saharawan and Jhalawan, whose great chief is the Khan of Kelat, ethnologists looking at their language, consider to be of the same Scythic stock as the Dravidian races in the south, and infer from this that the passage of Dravidian tribes from Turan was along the valley of the Indus.

Further north, in the Derajat, are warlike Baluch and Afghan tribes, the most unyielding of whom are the Waziri, who have continued to resist the efforts made by the English to restrain their inroads on the plains. Still further north and west are the numerous tribes of Afghanistan of whom may be mentioned the powerful Durani race and the Tajik tribes. The Mongols of Kabul, Persia and Herat, called Kalmuks in Herat and Afghanistan and Eimak and Charmak in the Hazara, dwell north of Kabul and Herat. In the Bunnu valley, there are mixed races, and we may notice the Durdu in Giljit and Chulas.

According to Captain Raverty, the people who dwell about Kabul and Kandahar, Shorawak and Pishin are designated B'r-Pushtun or Upper Afghans; and those occupying the district of Roh, which is near India, are called L'r-Pukhtun or Lower Afghans. Persian is the official language of Afghanistan, but colloquially the Pushto is alike the common tongue of the uneducated people, of the families of the Sadozye kings, and of the dwellings of the Amir. There are, however, two divisions of the Afghans, termed Pushtun and Pukhtun, who speak Pushto and Pukhto respectively. The Pushto being the western dialect with affinity to Persian, and the Pukhto the eastern with many Sanscrit and Hindi words. The Pushto is spoken, with slight variation in orthography and pronunciation, from the valley of Pishin, south of Kandahar, to Kafiristan on the north; and from the banks of the Helmand on the west, to the Attok, Sindhu or Indus river, on the east; —throughout the Samah or plain of the Yuzufzye—the mountainous districts of Bajawar, Banjhkora, Suwatt and Buner to Astor, on the borders of Little Tibet,—a tract of country equal in extent to the entire Spanish peninsula. Also, throughout the British districts of the Derajat, Banu Tak, Kohat, Peshawar and the Samah or plain of the Yuzufzye, with the exception of Dera Ghazi Khan, nine-tenths of the people speak the Afghan language. Since the invasions of Mahmud of Ghazni, in the twelfth century, there has been a constant influx into India of Afghans, as conquerors and settlers and this has been so great from particular districts that some tribes have altogether disappeared from Afghanistan. In some localities in India, the Afghan settlers have preserved the Pushto, almost in its purity, up to the present day, having from the outset married amongst

themselves. In some parts of Bundelkund and in the territory of the nawab of Rampur, whole towns and villages may be found in which the Afghan language is still almost exclusively spoken and is the medium of general communication. Captain Raverty considers that although, on numerous points, the Pushto bears a great similarity to the Semitic and Iranian languages, it is totally different in construction and idiom also from any of the Indu-Sanscrit dialects.—(*Capt H. G. Raverty's Grammar and Dictionary of the Pushto, Pukhto, or Afghan language.)*

AFGHANISTAN.—Afghan is a name applied to the various peoples who occupy Afghanistan. They are supposed by some to be descendants of some of the lost tribes: by others to form part of the descendants of the Greeks of Alexander the Great, but they are doubtless of mixed, perhaps of Scythian, origin. The language spoken is called Pushtoo or Pukhta which is believed to be connected with the Zend, and Pehlavi and the Hebrew. They are mahomedans, having been converted to this creed within half a century from the first promulgation of that religion.

From the middle of the tenth century, the boundaries of Afghanistan have fluctuated with the vicissitudes of war. At the date of the invasion of the country by the British, in A. D. 1838 the kingdom consisted of four sub-divisions, Cabul, the Hazara country, Candahar, and Herat. Taken in this extent, Afghanistan is bordered on the north by Bokhara, Kunduz, and Kaferistan; on the east by the British province of Peshawur and the Soliman range of mountains; on the south by Beloochistan; and on the west by Persia. Its greatest length from north to south is about six hundred miles; its breadth measures about the same distance.—(*Townsend's Outram and Havelock's, p.* 85.)

The population of Afganistan is divided into two very distinct portions, first the Afghan, properly so called; secondly, the Tajik, descendants of the ancient conquerors of the country, and who may be subdivided into two classes, the Parsivan or inhabitants of the towns and the Eimak or nomade races. The following is an approximation to the actual numbers. In the province of Herat, 300,000 Afghan and 600,000 Parsivan or Eimak. In the province of Kandahar, 600,000 Afghan and 300,000 Beloochi. In the province of Kabul, 1,600,000 Afghan and 800,000 Parsivan and Kuzzilbash. Total, 500,000 General Total 4,200,000 inhabitants.

The Afghans are at present the dominant race and the Tajik are subject to them both in Herat and Kandahar. The Kuzzilbash or Persians established in Kabul by Nadir Shah, and numbering 12,000 families, hold to the Tajik, to whom they assimilate in religion, both races being shiah mahomedan.

After the death of Alexander, his Lieutenant, Seleucus, succeeded to the sovereignty of Afghanistan and the other Asiatic conquests. Under his grandson, Afghanistan was taken from the Seleucidæ, by the aboriginal chiefs, and soon after, formed, with Bactria, an independent state which existed during 150 years. Subsequently the Tartars made themselves masters of Afghanistan and appear to have held possession of it up to the death of Mansoor when one of his officers, Sabaqtagin, established an independent dominion over all the southern parts of Afghanistan, making Ghizni his capital. His son Mahomed, who died A. D. 1028, enriched Afghanistan, with the spoils of India. In the reign of the cruel Bahram, one of the Tartar's descendants, the Sabaqtagin dynasty were deprived of all but the Punjab, and this too, in A. D. 1160, they lost. Although the tribes known by this name speak the Pushtoo as a common language, the tribes are not all of the same origin, they are distinguished by marked characteristics, moral as well as physical. The Afghans of Kabul consider themselves as Indian Afghans, whereas those of Herat say they are Khorssani Afghans: one tribe repudiates another, and denies its Afghan origin. The names of Patan, Rohilla, Afghan, which serve at the present time to designate the Afghan nation, are really those of so many distinct races blended together. In our day, in their own country, they make no matrimonial alliances except amongst themselves, indicating their feelings, as an original race. Their origin is involved in obscurity, and the soldiers left by Alexander the Great, the Copts of Egypt, the Chaldæans, and even the Armenians, have been at various times supposed to be their ancestors. But several writers consider them to be descendants of one of the ten tribes of Israel,—and this is an opinion of some Afghans themselves. Mr. Ruffin considers that they had their origin in the Albanians of Asia, who in consequence of their numerous revolts were transported from one extremity of Persia to the other and driven into Khorassan. They were a warllke people and known as Aghvan or Avghan. He says that Aghvan is the Greek word AB, and considers it to be a proof of their Albanian origin. On the other hand, M. Eugene Bore, considers them to have been an ancient people dwelling in the mountains and valleys of the provinces of Daghestan and Shirvan, bordering on the Caspian Sea, and first brought to our notice by Pompey at the time of his expedition into the Caucasus. Afghan is only the arabic plural of the word *feghan,* which was applied to them about the time of

sultan Aboo-Seid of the race of Chengis Khan, because of their constantly disunited state among themselves. The primitive tribe of the Afghans, was called "taifeh," a word which corresponds with that of nation. The first division of this primitive tribe are called "firqa," a tribe; and the subdivision of this "tireh" or branches.—(*Bunsen. Chesney. Latham.*)

Khyber, a formidable pass 18 miles in length, leading from Peshawar to Kabul. Its water is prejudicial to health. As it approaches the Kabul territory, it becomes more formidable. Nadir Shah paid a sum of money to secure his passage through it.

The tribes exact tribute from travellers. Some live in miserable caves and the *Momuzye Afridi* are said to sell the wives and children of a deceased brother and interchange their own wives. The Khyber valley is of an irregular form, but the average breadth is about fifteen hundred paces; the hills which border it may be about seven hundred feet high. When Moorcroft passed, each house was enclosed by a high wall, in some part of which was a tower for look out and defence. They are tall for mountaineers, and of a singularly Jewish caste of features: some of the young women whom he saw, had in arch, lively look, but he saw none that could be regarded as pretty. The men were dressed in long cotton tunics of a kind of plaid, in which blue was the prevailing colour: the women wore an imitation of chintz. He occasionally saw them in groups of fifty or sixty, but whether numerous or few, they were impudently urgent in their demands for sheep, by which they intended money. They were glad to give them a trifle in general to be rid of them, but on one or two occasions were obliged to reject their demands, even at the risk of an affray.—*Moorcroft's Travels, Vol.* II, *p.* 352.

Amongst neighbouring tribes, *the Waziri*, although notorious robbers, in common with other lawless tribes, regard the descendants of their prophet with awe and a feeling of respectful reverence, and esteem themselves fortunate to receive their benedictions and other little aids, which their superstition teaches them to think essential.—*Masson's Journey, I.* 101. Further south a tribe, called the *Suliman Khail*, occupy the district which ranges from north to south on the Ghuzni side of the pass. There are said to be about twelve thousand of them, nearly all thieves, but not so blood-thirsty or formidable as the Waziri of the mountains near Derabund. They will not kill a man in cool blood without reason, and their attacks rather resemble those made by the nightly prowlers of India, who creep into your house or tent, and steal a ring from your finger, or take a sheet from under you, without waking you. The Suliman Khail were in possession, Vigne was told, of a million of sheep and they paid a yearly tribute of one camel, for every forty men, to Dost Mahomed Khan. Their country extends from north to south, for seven or eight caravan marches, between Ghuzni and Kandahar and for two or three from east to west. Once a year, in the winter season, they send a kafila of three or four hundred camels into the plains of Derabund and Derah-i-Ismael Khan.—*Vigne's, a personal Narrative, p.* 106-7.

Shenwari Khyberi, are a race even more infamous for their robberies than the Afridi Khyberi.—*Moorcroft's Travels, Vol.* II. *p.* 354.

Thus, in the *Khyber pass*, itself, and stretching away on the north and south, along the north-west frontier of the Punjab, are tribes of barbarous, warlike and predatory habits,.

INDEPENDENT TRIBES.—Dwelling along the outer face of the north-west Punjab frontier and inhabiting hills.

Adjoining frontier of Hazara District.—Hussunzye.

Adjoining frontier of Peshawur District.—Judoon, Bunoorwall, Swatee, Raneezye, Osmankheyle, Upper Momund.

Adjoining frontier of Peshawur and Kohat Districts.—Afreedee.

Adjoining frontier of Kohat District.—Buzotee, Sepah, Orukzye, Zymoosht Affghan, Tooree.

Adjoining frontier of Kohat and Dehra Ishmael Khan Districts.—Wuzeeree.

Adjoining frontier of Dehra Ismael Khan District.—Sheoranee, Osbteranee, Kusranee, Bozdar.

Adjoining frontier of Dehra Ghazee Khan District.—Khutran, Kosah, Lugharee, Goorchaniee, Murree.—Boogtee.

BRITISH TRIBES.—Tribes within the frontier, and British subjects, inhabiting partly hills and partly plains.

Hazara District.—Turnoulee, Gukkar, Doond and Suttee, Kaghan Syud and other tribes of Hazara.

Peshawur District.—Eusufzye, Khaleel, Momund of the plains.

Peshawur and Kohat Districts.—Khuttuk.

Kohat District.—Bungush.

Dehra Ishmael Khan District.—Bunnoochee, Murwutee, Butanee, chiefs of Tank, chiefs of Kolachee, chiefs of Dehra Ismael Khan, Nootkanee, Loond.

Dehra Ghazee Khan District.—Dreshuk, Muzaree.

General Ferrier gives the following approximately as the amount of the population in Af-

ghanistan. In the Provinces of

Herat.....	300,000	Afghan.
	600,000	Parsivan or Eimak.
Kandahar.	600,000	Afghan.
	300,000	Parsivan and Baluch
Kabul.....	1,600,000	Afghan.
	800,000	Parasivan and Kazzilbash.

Total 2,500,000 Afghan, and 1,700,000 Parsivan, Eimak Baluchi and Kazzilbash making a General Total of 4,200,000 inhabitants.

Though the population of the Afghan states is not numerous, they are all above the English standard in height, and are brave to recklessness. Of the races in Afghanistan, the Afghan properly so called, are at present the dominant race, and in Kandahar, Kabul and Herat, hold the Tajik in subjection. The Tajik are the descendants of the ancient conquerors of the country, and may be sub-divided into the Parsivan or inhabitants of towns, speaking Persian, and the Eimak or nomades. The Uzbek are in numbers; the Hazara, of Tartar, perhaps a Turkoman origin, and the Eimak who graze their flocks in the Paramisus, are brave and relentless, and Afghans when travelling, whether proceeding from Balkh, Kabul, Kandahar or Herat, never enter into the mountain districts of these intrepid nomadic tribes. One of the Eimak tribes is known as the Feroz Kohi after the city of that name about 63 miles from Teheran. Timur exasperated at the depredations which they committed, transported the whole of them into the mountains lying between Persia and India. The races occupying Afghanistan are distinguished by marked characteristics, moral as well as physical. General Ferrier tells us (*p.* 5) that the Afghans of Kabul consider themselves as Indian Afghan, whereas those of the Herat say they are Khorassani; one tribe repudiates another, and denies its Afghan origin, and there is not the least sympathy between them. The names of Patan, Rohilla, Afghan, which serve at the present time to designate the Afghan nation, are really those of so many distinct races now confounded in one. That officer further says that the reason of their success against the other Asiatic hordes up to this day has been their clan in the attack, their courage, but not any clever disposition or a knowledge of military operations. He mentions that for the theatre of combat between their armies the Afghan always select large plains, in order that their numerous cavalry, on which they place a blind reliance, may be able to deploy freely. Though they are entirely ignorant of the art of attack and defence of towns and fortresses, the Afghans are remarkable for the obstinacy of their resistance and the correctness of their aim when they are behind walls. The arms of the Afghan are the firelock, the carbine, the swivel-gun, or a pair of lead pistols; sometimes a bow, or a lance with a bamboo handie.

The Afghan, are tall, robust, active and well formed; their olive and sometimes sallow complexions and strongly marked hard features give their countenances a savage expression; the lids of their black eyes, which are full of fire, are tinged with antimony, for this, in their opinion, gives force and adds beauty and a dazzling brilliancy to them; their black beard is worn short, and their hair, of the same colour, is shaved off from the front to the top of the head, the remainder at the sides being allowed to fall in large curls over the shoulders. Their step is full of resolution, their bearing proud, but rough. They are brave even to rashness, excited by the smallest trifle, enterprising without the least regard to prudence, energetic, and born for war. They are sober, abstemious, and apparently of an open disposition, great gossips, and curious to excess. Courage is with them the first of virtues, and usurps the place of all the others: Their principle is "Give or I take." Force is their only argument, and it justifies everything; an individual who is merely plundered considers himself extremely fortunate, as, generally speaking, life is also taken. There is no nation in the world more turbulent and less under subjection, and the difficulties in rendering them submissive to a code of just laws would be almost insurmountable. Afghans are as incapable of a continuous course of action as of ideas; they do every thing on the spur of the moment from a love of disorder or for no reason at all, it matters little to them who give them laws, they obey the first comer directly they find it is to their advantage to do so. Their cupidity and avarice is extreme; there is no tie, they would not desert to gratify their avidity for wealth. This surpasses all that can be imagined; it is insatiable, and to satisfy it they are capable of committing the greatest crimes. For it they will sacrifice all their native and independent pride, even prostitute the honor of their wives and daughters whom they frequently put to death after they have received the price of their dishonor. Gold in Afghanistan is, more than anywhere else, the god of the human race; it stifles the still small cry of every man's conscience, if, indeed, it can be admitted that an Afghan has a conscience at all; it is impossible to rely on their promises, their friendship, or their fidelity. They enter into engagements, and bind themselves by the most solemn oaths to respect them, only to depart from them if they see advantage in so doing.

Captain Burton, on this point, says that the Afghans and Persians are, probably, more formidable liars than the Sindhi, both on account of superior intellect, more stubborn obstinacy

and greater daring in supporting the falsehood.—(*Richard T. Burton's Sindh, p.* 404.)

Excitement, says General Ferrier, the clash of arms, and the tumult of the combat are to the Afghan life; repose is for an Afghan only a transitory state of being, during which he leads a monotonous existence; the sweets of domestic life, mental quietude, the endearments of his family, have no charms for him, and a life without commotion and agitation loses all its poetry. He is only really a man when he is fighting and plundering; then his eye is full of fire. There is no shade of difference between the character of the citizen or the nomade; a town life does not soften their habits; they live there as they live in a tent, always armed to the teeth, and ready for the onslaught, devoid of a right-minded feeling, and always animated by the most ferocious instincts. Though they are full of duplicity, their greatest anxiety, is to ascertain how they can get their daily bread without having to pay for it.

Language, the Persian is met with all over Afghanistan; the great families speak it, and other correspondence is carried on in that tongue: the people are acquainted with it, but they prefer speaking the Pushtoo, the language of their nation, which is a mixture of ancient Persian, Arabic, and Hindi. They have a few works in this language, but they read Persian authors by preference, and have through them formed imperfect ideas of geography, astronomy, medicine, and history; but these works, full of fictions and deficiencies, have not materially assisted in developing their faculties.

Religion, the Afghans are sunni mahomedan with the exception of the tribe of Beritchi, who are shiah. The Parsivan and Eimak who are subject to the Afghans, profess mahomedanism. Besides the two sects just mentioned some of them are of the Ali-illahi sect.

The lower valleys of the Kabul country were once occupied by hindu races, and the Pathan tribes have advanced into the north-east corner of Afghanistan within comparatively recent historical times and the peaks of the Safed Koh, between Jelalabad and Kabul, bear such hindu names as Sita Ram. The Afghan have never migrated in large bodies, but have accompanied the mahomedan rulers of India, all of whom have entered from Afghanistan and brought bodies of the Afghan with them, and they are known in India by themselves and others by the name of Pat'han. Some of these have settled in many places throughout northern India and in some parts of the south, some of them in villages, where they own and cultivate the soil. These have been in considerable numbers in the native army of British India, and particularly in the corps of irrregular cavalry, and in northern India, in the Civil Service of Government. A few Pathan settlements are found in the Punjab and about Delhi, they are numerous in the upper Doab and Rohilcund, and all over India, Pathan principalities, jaghires and families are met with. All the Pathan, to the west of the Indus, as well as a few to the east of it, in the north of the Hazarah district and west of that of Rawal Pindi speak Pushtu. The Pathan are the only people of Central Asia who in comparatively recent times have come to reside to any considerable extent in India. The *Tajik* are the original agricultural class of all the west of Afghanistan and Baluchistan.

The term *Afghan*, is hardly known to the people when Europeans so designate.

Physically, the Afghan people are among the finest on the earth with a broad, robust, ruddy, manly look, and they are hardy and bold. They have a pleasant frank, simple, unaffected way. About Kabul, they are fair, many with red hair and blue eyes, but some of the tribes in the lower and hotter hills and valleys near India, have somewhat dark skins. The majority are astute, intriguing, ambitious and faithless, avaricious, fickle, uncertain and crafty, and in bold unblushing lying, a hindu is a mere child to an Afghan. They are not trusted as mercenaries. The eastern tribes are politically quite independent and the amir of Kabul does not pretend to any authority over them. These have been largely employed in the native army, and been becoming more and more the military retainers of British India.

The purer Afghan are quite illiterate, The Euzufzye and other tribes in the north are comparatively recent conquerors of the northern hills and valleys, where they have mixed with a free hindu people and are fairer than the other Afghan tribes.

The government of the tribes is a democracy, their representation and self government being by their Jirgah and Ulus, but like most rude people no man's nationality extends beyond his own clan. Mr. Campbell supposes them to be Arian and probably of similar origin to the Jat. The Afghans in Peshwar and Kohat are British subjects. A tribe, somewhat mixed, called Dehwar are found about Candahar.—(*Campbell, p.* 78 *to* 145.)

Afridi, Waziri, and others, whose previous occupation was rapine and plunder, have, since the inauguration of British rule, sold their horses and bought oxen, and taken to agriculture with zeal. The Rajput has an inveterate contempt of the plough, yet multitudes indolent as they are, have been forced by sheer necessity to till or die. The tea cultivation in the Kohistan has given employment to many

more.—(*Powell's Hand Book, Econs. Prod. p.* 254 *and* 255.)

The Afghan, properly so called, are at present the dominant race throughout Afghanstan, and in Kandahar, Kabul and Herat, hold the Tajik in subjection. The Tajik are the descendants of the ancient conquerors of the country, and may be subdivided into the Parsivan or inhabitants of towns, speaking Persian, and the Eimak or nomades.

The Persian language is met with all over Afghanistan, the great families speak it, and their correspondence is carried on in that tongue; the people are acquainted with it, but they prefer speaking the Pushtoo, the language of their nation, which is a mixture of ancient Persian, Arabic, and Hindi. They have a few works in this language, but they read Persian authors by preference, and have through them formed imperfect ideas of geography, astronomy, medicine, and history, but these works, full of fictions and deficiencies, have not materially assisted in developing their faculties.—*Ferrier's Hist. of Afghans, p.* 290.

Derajat, is a portion, about two-thirds, of a narrow strip of land, which lies between the Indus and the Suliman mountains, and extends from the hills and valleys of the Kohat district to the Sind frontier. A thin fringe of cultivation and jungle extends along the bank of the great river, and terminates, as you advance into the interior, in a flat desert country where a precarious supply of water from the hills affords a poor cultivation in the vicinity of the thinly scattered villages. Lower down, the hill streams become smaller, and the aspect of desolation still greater, so that for miles not a human being is visible, nor can a drop of water be procured to quench the thirst produced by these scorching plains. The Pathan and Baluch tribes who inhabit the hills, have the same attachments to their chiefs, internal hereditary feuds, dislike to combination, and predatory habits, which distinguish so many mountain races, but have withal a martial bearing and love of independence. The scarcity of water limits cultivation, and their wealth consists in their herds which find a scanty pasturage at the foot of the hills; amongst the mountains occur a few fertile patches: the country being traversed by footpaths known only to themselves, the hill tribes were accustomed to issue from it in raids on their wealthier neighbours in the plains, harrying their cattle and retreating in safety to their impracticable mountains. To stop this, in the beginning of 1857, after one of such inroads, the Punjab Government sent an expedition from amongst the troops of the Punjab Irregular Force, to reduce the Bozdar tribe, and names known to fame, in the Indian mutinies, Chamberlain, Coke, Nicholson, Hodson, Probyn, Watson, Wylde, and Green, were all trained in this school of warfare, involving severe marches, incessant fights and exposure to all the seasons of the year. (*Medley's Year's Campaigning, p.* 1 *to* 5.) The hills are inhabited by predatory Pathan and Belooch tribes, who cultivate little fertile patches, called *kuchee*, lying within the mountains.

Bozdar, a border tribe with about 2,500 fighting men, west of the Derajat. They dwell in the hills opposite Mungrota, about 50 miles north of Dera-i-Ghazi Khan, and were given to make troublesome inroads on the plains.

Butani, an Afghan tribe dwelling in the Dehra Ismail Khan district. They were a robber tribe until they became British subjects.

The Awan are the most numerous and the best of these frontier tribes, and there is no better people in India. They are settled in large agricultural communities on the "Chuch" plain, on the Eastern side of the Indus, and in smaller bodies further east, on the Jhelum, Guzerat and Sealkot Districts. They are good soldiers.—*Campbell, p.* 96.

Dhund, Tanaoli, Alpial, Kurral, Awan, and Gukkar, petty tribes known only by their tribal names without any common appellation living north of the Salt Range, who are described by Mr. Campbell as the finest and handsomest men in India perhaps in the world. They profess mahomedanism and have fanciful mahomedan genealogies, but are wholly Indian in their language, manners, habits and constitutions. Their language is Punjabi. They have no connection with the Pathan races, and they claim none with the Jat and Rajput, the Dilzak alone claiming to be of Hindustan origin. Their features would seem to show that they have kindred with the Kashmiri, or with the pre-hindu congeners of the earlier Indians found in the hills far west, but their language and character, dress and the architecture of their houses would indicate that they are nearly allied to the Punjabi.

The Dhund, a very handsome race and the *Tanaoli*, dwell to the north in the outer range of the Himalaya, and about the Indus near Torbela, but they are not considered to be brave or trustworthy. The Awan of the lower lands and *Dhund*, &c. of the higher lands have democratic village institutions.—*Campbell, p.* 97.

The Durani Afghans on the west, are an agricultural, but chiefly a pastoral, race, who term their summer and winter ground, Eilak and Kishlak, dwelling in their coarse black camlet tents, called Kishdee, the same with the Kara ulli of the Turks and Siah-chader of the Persians. The number of Durani tribes are nine, the names of seven of which end in "zye," which means the same as the beni, or

walad of the Arabs, and the mac of the Scotch. The names are the

Mauku.	Populzye,	Noorzye,
Khongani.	Allekzye.	Alizye, and
Barukzye.	Achikzye.	Ishakzye.

The Durani are stout and well made, with long hair and beards, many of them being above the standard of Indo-Germanic races of Europe. Some have round and plump faces. With others, the countenance is strongly marked, and with most the cheek bones are prominent. When a family is by itself, the men and women eat together ; but few restraints are put upon the female, and her influence is considerable. The Durani tribes, all but the Achikzye, are religiously given, but not intolerant. They are of the Suroni sect. Their national dance, called Attun, is danced almost every evening with songs and tales to accompany it. They have a strong love of country.

They are fond of tales, fond of the chase, and except the Achikzye about 5,000 in number, all are religious. The Durani, especially the men of Kandahar, have a powerful love of country. The Durani is rarely a merchant or adventurer. They are hospitable and brave, and are the most important of the Afghan tribes.

The Ghilzye is next to the Durani tribe in importance. It has eight divisions or subtribes, or clans, viz. the

Houtuki,	Ali Kheil,	Turruki, and
Tohki,	Subak,	Kharoti,
Suliman Kheil,	Under,	

Of these, the Suliman Kheil is the most important numbering from 30,000 to 35,000 families.

Buruki, a race who claim to be of Arab origin, occupying Logur and Butkak, who are said to have been settled there, S. of the Kabool river, by the sultan Mahmood in the 11th century. Their number is about 8,000 families, but they arrange themselves into tribes with chiefs. They are good soldiers. The Buruki tribes of Loghur and Butkak, reside in the Ghilzi portion of the Afghan country. —*Latham.*

The Stanizye are an agricultural, and the Ahmedzye a pastoral tribe, as also the Kaiser Kheil and Summulzye or Ismail Zye, who have migratory habits, but dwell to the south and east of Ghizni, are sub-divisions of the Suliman Kheil. The *Shirpan* are an associated body, formed out of the other kheil. Ghizni is a Ghilzye town.

Berdurani, are Afghan tribes on the north-eastern part of Afghanistan, occupying the lower course of the Kabul river, and the parts between the Indus, the Hindu Coosh and the Salt Ranges, touching the Ghilzye on the west, the Siahposh on the north, and the Indians of India on the east, the Indus being their boundary, but Peshawur is a Berdurani town.

About Peshawur, lie the Mahmudzye, Dawudzye in Hastnuggur, Momund, Guggiani in Hastnuggur and the Khalil.

The Momund are arranged into those of the hills and those of the plains.

The Khuttuk, under the British, lie to the south of the Kabul river and to the west of the Indus, though some extend into India.

The Bungush occupy the Bungush valley, and are British subjects.

Khyberi of the pass, are divided into the Shainwari, Urukzye and the Afridi. The Khyber pass is 25 miles long. The people are lean, but muscular and dark skinned with prominent cheek bones and high noses. They live in mud huts or huts of mat, as also in excavations of the rock : dress in a dark turban, dark blue tunic and straw sandals. Their arms are a sword, a short spear-and a matchlock.

Urukzye are herdsmen who pass the winter in the lower levels of the Kohat and the Tiri hills, and in summer drive their flocks and herds to the mountain tops. The Shikhan, Mishti and Rakew-Kheil occupy districts in the British territory.

The Afridi lie between Peshawur and Kohat, and the road runs through the Kohat and the Gulli or Jewaki passes. The Afridi are fierce, factious and strong, and with the Bungush, the Jewaki, Bari, Bussi Kheil and Busti Kheil, as also the Sipah and Buzotu are border tribes with more or less independence.

The Eusofzye, are the least controlled and most quarrelsome of the Afghans. While the Durani are a feudal tribe, the Eusofzye are democratic and in small communities, with patriarchal government. They are agricultural, lying in warm and fertile valleys, touching the Indus on one side and the Punjkora, on the other, extending on the south to Kabul, occupying the northern part of the plain of Peshawar, Bunir, Swat, Punjkora and Chumla. The Swat, Bunir, Punjkora and the Euzofzye part of the Kabul valley, are the lands of the Akhozye, the Mullezye and the Lawezye— The clans of the Eusofzye and Mahmudzye have a system of periodical interchange of lands called Waish. The numbers of the Eusofzye are estimated at from 700,000 to 900,000 souls, and are of Afghan, Indian and Cashmir blood, with the old occupants of the land, the Dehkani and Swati. Many Eusofzye have fair complexions, grey eyes and red beards, are stout and brave, quarrelsome and proud, and those in the plains are very immoral.

Turkaun—Next to the Eusofzye, are the Turkaun or Turcolani, in Bajour, and the Othmankheil in the hills between Bajour and Swat.

Afghans on the Punjab Frontier, are those in the Daman or skirt of the Solimani range, the Shiah Turi, the Jaji, and the Esakheil. The Jaji dwell in houses with a teh-khana or excavation in the earth. The Esakheil occupy the banks and islets of the Indus, engaged in the cultivation of wheat, but are also robbers.

Bunnu valley is held by mixed races, who dwell in walled villages. They are undersized and sallow skinned. They are quiet, orderly and regular in revenue matters, but immoral, capable of reckless perjury and deliberate assassination.

The Afreedee of the Khyber Pass, among faithless tribes, are considered the most faithless. Thieves and robbers from this vicinity, despite all precautions, long continued to infest nightly the Peshawur cantonment. A section of these Afreedee named the Kookeekheyl, early manifested symptoms of a friendly spirit towards the British. The Afreedee on the south-western corner of the Peshawur border have not signalized themselves.

The British Government has been concerned chiefly with the Afreedee of the Kohat Pass or Gullee and the Jewakee Pass. For the guardianship of these passes the Afreedee received some kind of consideration from successive dynasties, Ghiznivide, Mogol, Doorance, Barukzye, Sikh, and British; and have broken faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawur market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation on their rugged hill-sides would not alone suffice to afford. In controlling them, this was deemed a fortunate circumstance, inasmuch as the British authorities can, by blockading the mouths of the Passes stop the trade and reduce the Afreedee to sore straits.

These passes are of importance. The Gullee or Kohat Pass is the direct and best route from Kohat to Peshawur. The government post between these two important stations runs usually by this route.

The Afreedee of the Jewakee Pass, even among the Afreedee clans were considered particularly daring and ferocious. When the Afreedee of the Kohat Pass misbehaved, the Jewakee Afreedee offered to engage for that pass, or to conduct the communication through their own pass. The Jewakee pass was actually used for a short time, but the Jewakee Afreedee soon proved themselves to be worse even than their neighbours. They committed numerous raids and murders in the Peshawur and Kohat districts and even robbed boats on the Indus. They also murdered a British officer, named Dr. Healy, who was travelling towards Kohat, for no other reason than that he was a defenceless christian with a little property about him.

The Bungush tribe of the Kohat valley, and British subjects, offered to guard the Kothul, and asserted that they had a claim stronger than that of the Afreedee to hereditarily occupy the ridge. The Kothul was then made over to them, and as the Afreedee refused to open the pass, it was resolved to establish a blockade; so again the Afreedee were debarred from entering the Kohat and Peshawur valleys.

While these arrangements were progressing, the Gullee Afreedee suddenly attacked the Bungush people on the Kothul, and seized that post. Several Bungush chiefs were killed in the encounter, and Major Coke who was present, was slightly wounded. Upon this check, the Bungush people obtained the alliance of two small, though warlike tribes, named Buzotee and Sepah. These were independent and dwelt in the hills near the Pass. The southern section of the Jewakee Afreedee also joined the league.

Sepah and Buzotee are small, but very brave tribes, numbering:—Buzotee 500, Sepahs 300 fighting-men. They live in tolerably close connexion with their more powerful neighbours, the Afreedee, and manage to hold their own. They have acted up to their engagements in regard to the Pass and have generally behaved well towards the British.

Orukzye, country extends from the Sepah tract (which adjoins the Afreedee hills) round the North western corner of the Kohat district, and then nearly onward to the top of the Meeranzye valley (which belongs to Kohat) till it joins the country of the Zymoosht Afghans. The tribe is one of the largest on the frontier, and numbers 20,000 fighting-men, most of whom are good hill soldiers. The Orukzye hills stretch a long distance to the west. In the interior of these hills, there is the cool table-land of Terah, where the clansmen resort in the summer with their cattle, and in the winter return to the pasturage grounds of the lower ranges near the British frontier. The sections of the tribe that have come in contact with the British, are the Shekhan, the Mishtee, and the Raabeuhkheyl. In the portions of the Kohat district adjoining the Orukzye hills are the sub-divisions of Samilzye.

Zymoosht.—After the Orukzye are the Zymoosht Afghans, they are a small, but brave tribe, numbering about 5,000 fighting men, some of whom are well mounted. They inhabit a valley leading from western Meeranzye onward, towards the crest of a range called the "Powar Kothul." Their country of

right belongs to the Cabul kingdom. They are usually ready to combine for mischief with the Tooree and Orukzye, and to threaten Meeranzye; they hold some land in the plains, which holding affords some pledge for their good behaviour.

Tooree, a warlike tribe, occupying a portion of the valley of the river Khoorrum; they can muster 5,500 fighting men. They are nominally subjects of Cabul, and belonged to the jagheer of sirdar Azim Khan, one of the ameer's sons, but they are under no real control. They have repeatedly leagued with other tribes to harass the Meeranzye valley. They would sow among the Meeranzye people, they would harbour fugitives from either party, they would encourage all to resist the British, they would attack some villages in force. They frequently committed raids on the Bungush and Khuttuk villages of the Kohat district. In August 1853, Captain Coke seized a Tooree caravan on its way to the salt mines, taking the property as security for repayment of value of plundered property, and the men as hostages for their tribes. This measure was soon followed by an embassy from the tribe, and an agreement was concluded with the tribe from the commencement of 1854. The value of plundered property was made good, the prisoners were released, and five Tooree were made over to the British as hostages, but within one month the tribe again gave way to "evil counsels," and in the following March (1854) a serious attack was made by the Tooree with 2,000 men (foot and horse,) on a Meeranzye village.

Wuzeeree, is one of the largest and most important tribes, brave, warlike, but predatory. They hold the rugged and lofty hills adjoining the south-west portion of the Kohat district (that is the western part of the Meeranzye valley and the hills round Bahadoorkheyl,) and the north-western border of the Dehra Ismael Khan, that is, the valley of Bunnoo, and the plains of Murwut and Tank. These hills run down to the point where the great Suleeman range commences; near this point the Goomul range debouches from the hills almost opposite Tank. The valley of the Goomul forms the Golaree pass through which a large portion of the traffic to and from Afghanistan and Central Asia enters into India, and scarcely inferior to the Khyber pass of Peshawur or the Bolan pass of Sindh. The hills on either side of this pass are held by Wuzeeree, the Wuzeeree hills form the western limit of the Joorduk pass, which is the main line of communication between Bunnoo and Kohat. Just to the east of this pass lies Buhadoorkheyl and also the villages of Kharrah and Lutumur at which three places the Trans-Indus mines are situated. The Wuzeeree hills also command the outlets of the Koorum and Goombelie rivers into the Bunnoo valley. The Wuzeeree are a numerous tribe, sub-divided into various sections. The birth-place of this race would seem to be the snowy range, which runs to the south-east of the Jelallabad and Cabul. From this range they appear to have moved downwards towards the Derajat border. They are noble savages, of pure blood, pastoral habits, fierce disposition, and wild aspect. They can muster probably (were the whole tribe united), as many as 20,000 or 30,000 fighting men, and if combined might make themselves formidable. But though they are less addicted to internecine contests than other hill tribes, and are so far united, they are yet not apt to join all these forces together against an external foe. They are bold and ferocious: but, as soldiers, not equal to the most martial tribes. Many of them live in tents, or in temporary dwellings resembling tents; in the winter frequenting the more genial clime of the lower ranges, and in summer retreating to feed their flocks in higher altitudes. Some of them have engaged in cultivation and have encroached on the weaker tribes of the plains; of these, again, many will only cultivate during the cold months; and as the heat approaches will reap their crops and retire to the mountains. But the tendency to extend their cultivation, and even to settle in the plains, has of late years, been increasing among the Wuzeeree. The tribe generally is quite independent, both of the Kabul and the British governments; but some members of the clan who have taken up their abode as cultivators in the Bunnoo valley have become British subjects. Many sections of Waziri ever since British connexion with the frontier, maintained peaceable relations with the British. These people, driving the aborigines of Bunnoo before them, have occupied pasturage grounds on the western border of the valley, and have taken possession of cultivated lands in the same vicinity, amounting to about one-third of the culturable area of the valley. Under the Sikh regime, there were constant disputes between these Wuzeeree and the government (inasmuch as revenue could in those days only be collected by force of arms), and also between them and the Bunnoo people, who asserted claims they could not enforce, to a patrimony which had been gradually usurped. In 1848, Major Edwards effected a settlement with these Wuzeeree and with all the inhabitants of the valley on behalf of the Sikh government; he confirmed them in their possessions and arranged with them for the regular payment of their dues to the ruling power. These Wuzeeree continued, as valued agriculturists and taxpayers. The condition of these people is satisfactory to themselves and creditable to British rule, three sections of the Wuzeeree tribe, mis-

behaved, namely, the Cabulkheyl, the Mushood Wuzeeree, (both of which entirely dwell in the hills and have no possessions in the plains,) and the Omerzye Wuzeeree, which latter clan originally cultivated in Bunnoo and afterwards rebelled. The Cabulkheyl Wuzeeree inhabit the northern portion of the Wuzeeree hills, not far from the right bank of the Koorrum. They are near neighbours of the Tooree. They overlook the western portion of Meeranzye and they adjoin the Bahadoorkheyl sub-divisions of the Kohat district. They were a wild lawless set, always ready to join with the Tooree, Zymoosht Afghans, and Orukzye, in any mischief or annoyance if the term may be used, such as raids on the Bungush and Khuttuk villages of the Kohat district. In the autumn of 1850 they signalized themselves by an audacious attack on Buhadoorkheyl and its salt mines. For this purpose they assembled in considerable force and induced many of the Khuttuk villages round Buhadoorkheyl itself to league with them. The affairs with the Omerzye have been serious. Like other Wuzeeree, they at first cultivated in the Bunnoo valley lands which had been wrested from the Bunnoochee of the neighbourhood. The head of these Bunnoochee was a local chief named Bazeed Khan. The Omerzye used to pay their revenue through this man, who was responsible for the collection. Some of the Omerzye used to reap the harvest, go off to the hills, deserting their land, and leaving Bazeed Khan to pay instead of them.

The Mushood section of Wuzeeree is strong and mischievous. They inhabit the most southern of Wuzeeree hills. It is the section which occupy both sides of the Goleeree Pass. Even they are hardly strong enough to attack the caravans of hardy well-armed traders from central Asia. But they plunder any travellers they can, and they perpetually carry off the herds of camels chiefly belonging to merchants that graze near the foot of the hills.

Valley of Dour.—Surrounded by the Wuzeeree hills, and adjoining the western border of Bunnoo, is the small valley of Dour, inhabited by a distinct race, and containing about 8,000 inhabitants. This valley originally belonged to the Dooranee kingdom. It was, together with other outlying tracts, formally ceded to Runjeet Singh by the tripartite treaty of 1838; but afterwards, in 1847, the British relinquished all claim to it on behalf of the Sikhs. The people of Dour more than once expressed a wish to come under British jurisdiction, but the offer was not accepted. During the treaty negotiations of 1855, the ameer's representative urged that the valley once formed an integral portion of the Dooranee empire, and that His Highness now wished to take it provided that the British did not claim any title. The government replied that the British did not desire to assert any claim, nor to interfere with the ameer, if he chose to re-annex it to his kingdom. The ameer was thus left free to occupy Dour.

Sheoranee.—Below the Wuzeeree limits, a little south of the Goomul river, are the Sheoranee hills, stretching from the latitude of Dehra Ismael Khan downwards to nearly the latitude of Dehra Futteh Khan, a distance of fifty miles. In these hills is the lofty square-shaped mountain called "Solomon's Throne," the Tukht-i-Suliman, which gives its name to the Suleemanee range, running parallel for 300 miles to the Indus and forming the British western frontier. At the base of this mountain runs the important Zerkunnee Pass, the high road for caravans to and from Kandahar. The Sheoranee are of Pathan lineage, of inferior stature to the Wuzeeree; they are warlike and predatory, and quite independent. The number of their fighting men has been set down at 10,000; but this is found to be high. They can muster 1,000 men within a day's notice; in the course of three or four days they will muster 3,000 more. They adjoin the British tracts of Tak (partially) in the north, then Kolachee then Durrabund and lastly Choudwan—all in the Dehra Ishmael Khan district, and forming the border plains of the Upper Derajat. With all the above tracts the Sheoranee have been at feud. They would be the aggressors, attacking town, burning villages, carrying off prisoners and cattle. The people of the plain would make reprisals and retaliation, and thus the feud would be inflamed. The Sheoranee, however, were so much feared, that the arable lands skirting the base of the hills were all left untilled and the neighbouring villages in the plains paid them regularly one-fourth of their produce to buy off depredation: such was the state of things up to annexation, the Sikh government being unable to restrain them.

Oshterance.—South of the Sheoranee hills, on the conterminous of the Dehra Ismael Khan and Dehra Ghazee Khan districts, there dwell the small Puthan tribe of Oshteranee mustering about 1,000 fighting men. They are brave and pugnacious, but not predatory. They dwell chiefly in the hills, and are so far independent; but many of them possess and cultivate lands in the plains at the foot of the hills, and consequently within British territory. Before annexation they used to be quite as violent as their neighbours, especially during the continuance of a deadly feud with the Kusranee. The quarrel was, however, composed by Major Edwardes before annexation, subsequently they evinced a good and friendly disposition.

Vooch or Korah pass, on the border of the Oshteranee hills, and nearly opposite to Dehra

Futteh Khan, is the Vooch or Korah Pass, faced by the British outposts of Doulalwalla and Vehoa. This point is of some topographical importance, as constituting the boundary line between the Pathan and Belooch tribes.

The Belooch tribes extend along the lower half of the Derajat frontier, they are less warlike and interesting, but even more predatory. The Pathans are almost entirely independent; very few of these people are British subjects. The head quarters of Belooch tribes and the majority of the clansmen will generally be in the independent hills, beyond the British territory, the boundary line of which runs along the base; but a large number of each tribe also hold lands in the plain and are British subjects. Some of the chiefs will also be found residing there. The Beluch of the plains, for the most part since annexation, behaved as well-disposed subjects, but the Belooch of the hills continued their old habits of plundering. All the tribes are at feud with each other; they not only fight in the hills, but they carry their contests in the plains; they attack all villages in the plains, except those belonging to their own tribe. The men of the plains usually resist the attacks with spirit at the time, but they are not allowed to retaliate afterwards, as they used to do under the Sikh rule, and as they would do still, were they not prevented by the British Government To guard our villages and people from their constant aggression a strong cordon of military posts has been fixed along the base of the Suleemanee range. Raids and forays are not, however, entirely repressed, and even the posts are sometimes attacked. The marauding parties are 50, 100, 200, 300, occasionally even 500, strong. They are often mounted and will fly if hotly pursued for 15, 20, and even 30 miles. Many of the villages and much of the cultivation is close to the hills and in front of the posts, so that the plunderers can in the shortest time, carry off their booty to the hills before the detachment comes up.

Kusranee tribe.—Their hills extend from the Korah pass downwards for a distance of about fifty miles; about half the tribe own lands and villages in the plain, a portion lead a wandering life in the front range of hills nearest the plain and the half desert tract at its base, and the remainder live in the hills. The hill Kusranee can muster some 1,200 fighting-men, of whom 50 are horsemen. They are very thievish, and were in the habit of proceeding through the land of their brethren in the plain to plunder in the villages near Dehra Ishmael Khan. The country round Dehra Futteh Khan was also harassed by them.

Murwut, an agricultural and pastoral race of frontier Affghans within the British territories, stout active men.

Sherani, a tribe who occupy the Takht-i-Suliman, with hard features, grey eyes and high cheek bones. They marry late and receive a dowry with the bride. They are engaged in agriculture.

Baraich Afghans.—Seistan lies on the rivers Helmund and Furh-rud. Shorabak, lies due east of Seistan, on the banks of the Lora, and is occupied by the Baraich Afghans, great camel breeders and acknowledging the supremacy of the amir of Kabul.

Terin.—The *Tor* or black Terin tribe occupy Pishin.

The Spin or White Terin tribe reside in the valley of Zawura, and in the open plains of Tull and Chutialli. They stretch into Cutch Gundava and nearly touch the British frontier.

Gukkár or Kahkar, or Ghakar, a warlike tribe in the time of Mahmud of Ghazni, inhabiting the Salt Range or Johd mountains between the Indus and the Behut (Hydaspes.) They are the ancestors of the modern Jat. The Gukker, Gugger, and other aborigines of Hazara have most of them been mastered by Pathan invaders from beyond the Indus. The Mogul, and subsequently the Durani, failed to master them, but the Sikh ruler having been frequently foiled, at last nominally accomplished their subjugation by stirring up internal faction and the perpetration of acts of cruelty and treachery. (See Kahkar. Khyber.) These seem identical with the Ghikar, a Scythic race inhabiting the banks of the Indus; at an early period of history they were given to infanticide. It was a custom, says Ferishta, "as soon as a female child was born, to carry her to the market place and there proclaim aloud, holding the child in one hand, and a knife in the other that any one wanting a wife might have her; otherwise she was immolated." By this means they had more men than women which occasioned the custom of several husbands to one wife. When any one husband visited her, she set up a mark at the door which being observed by the others, they withdrew till the signal was removed. They are supposed to be the descendants of the mountaineers whose chief Ambisaces sent ambassadors with presents to Alexander. Baber writes the name Guker, but it is also written Ghuka and Khaka.—*Tod's Rajasthan*, Vol. I. p. 636. (See Afghan; Kabul; Khetri; Jelam.)

The *Gukkur*, are not distinguishable from the Awan, in personal appearance, both being very large fine men, but not exceedingly fair, inhabiting as they do, a dry, bare, rather low country, hot in summer.—*Campbell*, *p.* 96.

Kaker.—The country of this tribe is in the head waters of the Lora, wild and inaccessible. It forms a square of about 180 miles between the Achtickzye country, the Spin Terin, the Suliman range and Beluchistan. But Kakers named Casia occupy in part the valley of Shal. The Punni clan, in Sewi and Sewistan is Kaker. Their manners and habits vary.

Nasiri, a nomade race who occupy the Tohki and Hotuki countries in summer, and the Daman or skirts of the Suliman range in winter. In their migrations, they appoint the Chehlwasti or Captains of Forty, and a Khan or Director General.

Pashai, a race mentioned repeatedly by Leech as one of the most numerous tribes in the Panjshir valley and adjoining passes. These are supposed to be mahomedans, but as the name is mentioned also by Elphinstone as that of one of the Kafir tribes part of them in the mountains may have retained their heathenism and independence.

Purmuli or *Fermuli*, or *Hurmuli*, a brave and warlike race, about 8,000 in number, resi ling south of the Kabul river near Orglum in the Kharaoti country, and to the west of Kabul. They carry on an unceasing hostility with the Kharaoti tribes around them. Some are soldiers in the Amir's army, and some engage in trade.—(*Latham.*)

Bimba, a race who occupied the rugged mountains along with the Kukha. They were under the Sikh rule, but are shiah mahomedens.

Mean Kheil tribe, on the Punjab frontier is partly Afghan, partly Bakhtiari.

Sirdehi, a small tribe, at Sirdeh, South east of Ghizni.

Biluchi are more or less migrant and predatory, particularly in the west. In habits they resemble the Iliyat and Kurd. They have dark skins; they live in mud houses, in forts, and in their black felt tents called gedaun, which is stretched over a tamarisk frame work; an assemblage of gedaun, forms a tuman or village, inhabited by a kheil, and a tribe consists of a certain number of kheil. The khan of Khelat is the chief Biluch.

Storiani, a frontier tribe whose winter station is in Baluchistan and summer station in the high country belonging to the Musakheil.—(*Latham's Descriptive Ethnology.*)

Kohistan.—The Kohistan region commences from Kaghan, which is a narrow glen stretching upwards from the northernmost point of the Huzara district for a distance of nearly 90 miles, and separating the maharajah of Kashmir's territory from the independent mountaineers. Adjoining Kaghan and reaching the Hussunzye country, separating the Huzara border from the Indus, and adjoining the Agrore fiefship in Huzara, is the country of some Hill Tribes named Kohistani and Swati, who originally came from the Swat valley.

The *Kohistani* of Kabul, occupy partially the valleys of Ghoribund, Punjir, Nijron, Tagow, Alishang, Alighur and the lower Kuner.

Hussunzye.—Between the extreme northern frontier of the Huzara district and the Indus is a somewhat narrow strip of rugged and mountainous territory—inhabited by the Hussunzye, who therefore dwell in Cis-Indus, that is, on the left bank of the river. They could number, perhaps, 2,000 fighting-men. The principal hill is known as the "Black mountain" from its dark and gloomy aspect. In the adjoining tract, within the Huzara border, lies Western Turnoulee, the fief of a chief politically dependent on the British.

Judoon of Muhabun,—inhabit a tract below the Hussunzye country and on the right bank of the Indus opposite the British town of Torbeila, and thence stretching westward. In this tract the most notable place is Mount Muhabun, of classical celebrity. The Judoon have been suposed to be Rajputs, but they are Pathans who speak Pushtoo.—*Campbell, p.* 87.

Sitana.—Near the base of Muhabun, and on the bank of the Indus, is the fanatic colony of Sitana. The Syuds of this place are the remnant of the followers of that extraordinary adventurer, Syud Ahmed, who, gathering a handful of "Ghazi," (warlike devotees,) from various parts of India, raised a formidable rebellion in Peshawur. After winning and losing Peshawur and Eusufzye, the Syud was eventually slain at the mouth of the Kaghan glen by Sheer Sing, the son of maharajah Runjeet Sing. Most of his adherents, chiefly foreigners to the Punjab, dispersed, and the remainder settled at Sitana. These Sitana people are evil-intentioned and ill-conditioned. They endeavour to rouse the bigotry of the surrounding mahomedan tribes, and especially of the Swati. They endeavour to intrigue with Wahabees and such like fanatic religionists among the mahomedan population in various parts of India. The ferry over the Indus close to Sitana has been frequently harassed by the fanatics.

Booner or Bunoor, is beyond the Judoon country on the north-west. It is a rugged country, extending from the lower range of the Hindoo Koosh downwards to hills which command the Chumla valley and the central plain of Eusufzye. On its western frontier again, lies the Swat territory. The Booner people are strong; they could muster a force of some thousands. Their neighbours are the Swati.

Bunair are the elder branch of the Eusufzye Afghan.

The Eusufzye are democratic and agricultural, lying in warm sheltered fertile valleys, touching the Indus on one side and Panjkhora

on the other, extending on the south to Kabul, occupying the northern part of the plain of Peshawar, Bunir, Swat, Panjkhora and the Eusufzye part of the valley. About the year 1865, they opposed the British army in an attempt to move up the Umbeylah pass towards the Mahaban, but they suffered severely and afterwards lent their aid against Mulkah, situated on one of the spurs of the Mahabun mountain where fanatics from Hindustan had assembled. Of the *Swat* Raneezye and Lower Osman-kheyl tribes, the two latter are subordinate to the former.

Chumla.—A valley near the Bunere or Bunnoor country in Afghanistan. The valley and the central plain of the Eusufzye are commanded by hills that descend from the Hindoo koosh.

Swati, a pre-hindu people driven out of Swat by the Euzufzye, but seemingly of the blood which supplied the earlier Indians.—(*Campbell, p* 96)

The Swat country consists of a long fertile, valley, running downwards generally in a south-westerly direction, but turning half round from east to west as it nears the British frontier, from which it is separated by a lofty range. It is difficult of access to a force moving from British territory. The Lundye or Swat river flows right through and fertilizes the valley, and then debouching through a gorge in the hills, enters the Peshawur valley and joins the Cabul river near Charsudda. The Swat valley contains 300 villages and upwards; and its inhabitants may number 1,00,000 souls, of whom 20,000 might be fighting men. As soldiers, the Swati rank below several of the most martial tribes. Politically, the Swati consist of various clans, united under a loose federal government, at the head of which is an elective chief, styled padshah or king. In 1855, the king was a Syud, named Akbur, from the fanatic colony of Sitana. The High priest is called the "Akoond" (equivalent to the term doctor or reader) and is held in great veneration. Up to 1856 the king and the priest were sometimes said to be well-disposed persons, but they had never restrained their people from mischief.

Raneezye and Osmankheyl.—Towards the lower extremity of the Swat valley, a formidable range of hills bounding the valley runs for many miles from east to west, nearly parallel to the British frontiers; and at the eastern extremity of this range stands the Mora mountain. Between this range and the frontier, however, intervene two tracts, named Raneezye and lower Osmankheyl, both *quasi* dependencies of Swat. The best of the passes leading into Swat is one named Mullakund, which opens from Raneezye. A little further to the eastward of Raneezye also there are some passes, leading into the Loondkhore valley, which belongs to British Eusufzye. These latter passes are not available for passage from Swat to British territory, because leading into Loondkhor, they can be stopped by any party holding that valley. The passes *via* Raneezye and Osmankheyl, *if the people of those tracts accord a passage*, lead straight on to the British plains of Hushtnuggur. Above the Loondkhor valley, just beyond the British frontier, is the strong village of *Pullee*.

The sub-divisions of the Peshawur district, adjoining the tribes above described, are Loondkhor or north-west corner of Eusufzye, and then Hushtnuggur.

The Upper or Hill Momund, occupy the hill range between the Punjakora and the Kuner rivers, and possess the Kurrapa pass. Two of their kheils are nomadic and in summer move to the waters of the Helmund. The country extends from the south-western Swat border to a little beyond the Cabul river. Both banks of this river are in their possession, and their capital, Lalpoora, where the head of their tribe resides, is situated near the left bank. They own allegiance to the Cabul government, though subject to an almost nominal control; and at the treaty, with the ameer Dost Mahomed Khan he undertook to restrain them from hostilities against British subjects. Their militia can muster about 12,000 fighting-men. There are tolerably good soldiers, though not equal to the men of the most martial tribes. Their hills overhang the fertile strip of British territory, enclosed between the Swat and Cabul rivers near their confluence, known as Doaba, and this portion of the border is not more than 25 miles distant from Peshawur.

The three sections of the tribe that have come in contact with the British are the Pindee Alee Momund, the Alumzye Momund, and the Michnee Momund.

The Michnee Momund, after annexation, were allowed to hold from the British Government, a fief or jagheer in Doaba, the fertile triangle near the junction of the Swat and Cabul rivers, of which they collected the revenue. A portion of the lands they cultivated themselves, the remainder they farmed out to other tribes of the plains as tenants. Many of their clansmen dwelt in the plains of Michnee and some in the neighbouring hills. They traded in the Peshawur valley. *The Alumzye Momund*, whose head-quarters are at Gundao, in the hills, also had a fief of Punjpao in British Doaba, chiefly cultivated by tenants. A few of their men lived in the plains and the majority in the hills. These also traded in the valley. *The Pindee Alee Momund*, at a former period, had held a similar jagheer in Doaba;

but not since British rule. These have few relations either with the Government or the people of the Peshawur valley. They inhabit a very strong locality in the Hills. The fiefs were originally granted by preceding Governments to the Momunds as black mail to buy off depredation.

The Afridi come after the Momund and is the most important tribe of all on the Punjab frontiers. Their territory, commencing in the hills between the Cabul river and the Khyber pass, forms the western boundary of the Peshawur valley ; then it stretches round the south-western corner and skirts a portion of the southern boundary of the Peshawur district till it approaches the Kuttuk lands. It thus projects abruptly into the British frontier, separates the Peshawur district from that of Kohat, and forms the northern boundary of the latter district. The Afridi hills, intervening between the Kohat and Peshawur districts, are crossed by two principal passes communicating from one district to the other, the best of which is the well-known Kohat pass or Gullee and the other the Jewakee pass. The frontage of the Afreedee hills towards British jurisdiction extends over a total length of 80 miles, and this territory stretches far back in a westerly direction towards Cabul. Thus the Afreedee hold a large geographical area and have a long border conterminous with the British. The Afreedee are entirely independent. Their hills are lofty, steep and rugged, most arduous for military operations. The villages are strongly posted and difficult of access. The Afreedee are fierce by nature. They are not destitute of rude virtues, but they are notoriously faithless to public engagements. They are split up into factions. The sub-divisions of this tribe are numerous. They can muster 15,000 or 20,000 fighting men. As soldiers, they are among the best on the frontier. They are good shots. Their tactics resemble those of the other tribes. They retreat before the foe as he advances and press upon him as he retires. From the size of their country, and their numbers, the Afreedee are powerful.

Buzoti.—The Sepah and Buzoti are small, but very brave Afghan tribes, numbering the Buzoti 500, and the Sepah 300 fighting-men. They live in tolerably close connexion with their more powerful neighbours the Afreedee, and manage to hold their own. After the British acquisition of the Punjab they generally behaved well towards the British.

Ghilji.—An Afghan tribe which with the Abdali, form the bulk of the Afghanistan population, but chiefly dwelling in Kandahar and Kabul. The Ghilji tribe occupy the principal portion of the country between Kandahar and Ghazni, and are the most numerous of the Afghan tribes. These people are also found between Farrah and Herat, and again between Kabul and Jalalabad, but, in either position, being under due control, they are little heard of. The Ghilji between Kandahar and Ghazni comprise the great families of the Ohtak, the Thoki, the Tereki and the Andari with their sub-divisions. Of these, the three first are independent, and the last, residing at Mokar, are subject to the government of Ghazni. The Ohtak are acknowledged the principal of the Ghilji families, and furnished the chief, or padshah, in the period of their supremacy. The Ghilji are both an agricultural and a pastoral people and dwell in villages and castles as well as in tents. They are a remarkably tall fine race of men, with marked features, the Ohtak and Thoki peasantry being probably unsurpassed, in the mass, by any other Afghan tribe, for commanding stature and strength. They are brave and warlike, but the generality of them, have a sternness of disposition amounting to ferocity and their brutal manners are not discountenanced by their chiefs. Some of the inferior Ghilji are so violent in their intercourse with strangers that they can scarcely be considered in the light of human beings, while no language can describe the terrors of a transit through their county, or the indignities which are to be endured. The Ghilji although considered, and calling themselves Afghan, and, moreover, employing the Pashtu, or Afghan dialect, are undoubtedly a mixed race. The name is evidently a modification or corruption of Khalji or Khilaji, that of a great Turki tribe, mentioned by Sherif-ud-din in his history of Timur. The testimony of Ferishta, while clearly distinguishing the Ghilji tribes from the Afghan, also establishes the fact of their early conversion to mahomedanism, still there is a tradition that they were, at some time, christians of the Armenian and Georgian churches. This tradition is known to the Armenians of Kabul ; and they instance, as corroborating it, the practice observed by the Ghilji of embroidering the front parts of the gowns or robes, of their women and children, with figures of the cross, and the custom of their house-wives, who, previous to forming their dough into cakes, cross their arms over their breasts, and make the sign of the cross on their foreheads after their own manner.

East of Ghazni, in the province of Zurmat, are the Suliman Kheil Ghilji, exceedingly numerous, and notorious for their habits of violence and rapine. These have no positive connexion with the Thoki or other tribes, neither have they one acknowledged head, but are governed by their respective malek, who are independent of each other. Dost Mahomed

khan reduced them to the condition of tributaries, after having destroyed a multitude of their castles.

The Ghilji women cannot boast of beauty, which they strive to supply by ornament. The girls, from the age of eight to twenty, are not much veiled, but they twist their hair, and tie it like a cake, which hangs over their forehead and a little below their eyebrows. The centre of the lock (or hairy cake) is adorned by a gold or silver coin, which, in black hair, shines prettily. This is the sign of virginity amongst the Ghilji. The women allow their twisted locks to hang upon their ears, and even as far as their arms.

Moorcroft met with a part of wandering Ghilji; their tents were nothing more than flimsy black blankets, stretched over forked sticks about four feet high; within, they had some more blankets, sacks, and packsaddles, and without, a few loads of mats, ropes, and netting, for the formation of their packages: both men and women were robust, with strongly marked features.—(*Moorcroft's Travels, Vol. II. p.* 360. *Masson's Journeys, Vol. II. p.* 198 *to* 212. *Pottinger's Travels in Beloochistan and Sind, p.* 200. *Mohun Lal's Travels, p.* 323. See Abdali; Kaffir; Kalmuk; Kandahar.)

Hazarah.—This tribe of Afghans live principally in houses. They are said to lend their wives to their guests; their numbers are given at 1,56,000 souls. Monsr. Ferrier, mentions (Caravan Journeys, pp. 194, 237.) that he fell among the Ei-mak Hazara on the Murgab river, and other tribes about Dev-Hissar, more to the north and east. Their women take part in every war, manage the horse, the sword, and the firelock. Their courage amounts to rashness, and they are more dreaded than the men for cruelty and fierceness. He himself saw them under fire in the foremost rank. It is, and so far as they know, has always been a national custom. Here we have an intelligible explanation of the Amazons of Alexander, and the "female hosts" of Namuchi.—(*Cal. Review, No.* 64, *p.* 433.) The Hazarah of the hill country near Ghazni and Kandahar, are Turanian in a marked degree and are without doubt of Mongolian blood. They seem to be in many ways like the Brahui, and at one time they possessed the country on the Kelat side of Candahar, and were then nearer to the Brahui than they now are. The Hazarah from beyond Kabul and Ghazni come to Peshawar and the Panjab as labourers and they are industrious and independent. They speak Persian, and are shiahs in religion but have decidedly Mongol features. People of a Turk race dwell north of Ghilghit.—*Mr. Campbell. pp.* 54, 157.

The Hazara, or Hazarajat, are so called from the innumerable Taifah, or tribes, into which they are divided—Hazar signifying in Persian a thousand. They occupy the whole range of the Parapamisus, or the mountains extending between the Hindu Kush, or Caucasus, and the city of Herat, to within a few days march of Kandahar. In appearance, they very much resemble the Ghurka; they have the same high cheek-bones, the same small eyes, very little beard, and no doubt are of Tartar origin. The Ghurka, however, follow hinduism, mahomedanism, whilst the Hazara are shiah mahommedans.—(*Vigne's Personal Narrative, p.* 167, 169.)

Kazzilbash, a term applied in Kabul and Herat to a Turk race, principally of the tribe of Jawanshir, who were fixed in the country by Nadir shah. Under the kings of Kabul they served as body guards and still retain their own language. Their history has been often written. When Nadir shah marched towards Delhi, he had twelve thousand fighting Kazzelbash with him. When he quitted that city, on his return, he left behind him three hundred of these, who with other troops, were directed to bring away his treasure, and follow him. They passed through Kabul; but when, within two days' march of Kandahar, they heard of his death, and, a few days afterwards, Ahmed shah, Nadir's lieutenant, arrived himself, attended by five or six hundred Durani,—he seized the treasure, and took the Kuzzelbash into his services; and his kind treatment of them induced others to come from the neighbourhood of Tabriz, Mushid, Kerman and Shiraz, in Persia, where the true Kuzzelbash exercise the profession of horse-breeders, shepherds, and cultivators. There are perhaps about ten thousand Kuzzelbash in the city of Kabul, who are ever ready to draw their swords as mercenaries. Their leaders are by far the most wealthy, the most intelligent, and the most influential men at Kabul.

General Ferrier tells us that the Persians inhabiting Kabul are known by the name of Kuzzilbash, and formed part of one or more of the seven Turkish tribes that embraced the party of shah Ismail, the founder of the tribe of Saffavi. This sovereign, to distinguish them from the others, gave them a kind of red cap; hence their name of "Red head," Kuzzelbash. These seven tribes were Oustajalu, Chamloo, Nikaloo, Baharloo, Zoolkadder, Kajar, and Afchar.—*Ferrier's His. of Afghans, p.* 70. *Mohun Lal's Travels, p.* 265.

The *Tajik* are the aborigines of the country, and are not Afghans. Alexander probably found them there, as fire-worshippers, speaking Sanscrit or Pelhevi.

Kohat.—Hangu is a dependency of the province of Kohat. The inhabitants of the villages in the valley leading from Hangu to Kohat are principally shiah, as are all the tribes of the Turi, their neighbours, although not so bigoted as these; or, being under control, they are compelled to conceal their fervour. The Turi, when they see a stranger, ask him if he be straight or crooked, putting at the same time the fore-finger to their foreheads, and holding it first in a perpendicular position, and then in a contorted one. If desirous to be civilly received, the stranger had better reply that he is straight by which they understand he is a shiah. The plain of Kohat appears on all sides surrounded with hills; on the summit of one of which, to the north, is seen a watch-tower, by which the road to Peshawar leads.—(*Masson's Journeys, Vol. I. p.* 114 *to* 117.)

Kufelzye, more generally, known as the Popolzye, an Afghan tribe, numbering 20,000 families, an offshoot of the Abdali, one of the branches of which, the Suddozye, gave sovereigns to the Afghans in the 17th and 18th centuries.

Wazeeri are divided into three great divisions, as follows:—The Ootmanziye, or Ootman kheyl; the Ahmedzye; the Mahsood.

The Wazeeri country extends from the south of the Kohat district down to Touk, opposite Dera Ismail Khan: towards the north they are bounded by the Afreedi country and towards the south by the tribe of Baorani. Bunnoo frontier is the *habitat* of the Ahmedzye. These are divided into six sections, which again are sub-divided into numerous smaller clans. One of these sections is called Sperkye; it has two divisions, the smaller of which goes by the name of Mahomed kheyl, and numbers about 250 fighting-men; they live in the hills on both sides of the river Koorum, and since A. D. 1830 a number of them settled in British territory. They till their lands in the cold season, and during the summer months the greater portion of them retire to the hills, leaving a few to look after their fields. The other sections of the Ahmedzye are located in British territory, on the Thul between Bunnoo and Luttumur: they generally go by the name of Thul Wazeeri. Captain Mecham was murdered some years ago, close to Luttumur, and the Government retaliated by marching a force against the Kabul kheyls. Since that expedition the Wazeeri on the Bunnoo frontier have been very quiet.

Bungush.—In the Kohat district, the principal tribe are the Bungush Pathans. They can muster 15,000 fighting men, and are fairly good soldiers. They highly appreciated the British light money assessments, after what had been long termed the "robber rule" of sooltan Mahomed, Barukzye. Up to 1848, he held Kohat as a fief from the Cabul government. It was then taken possession of by the British on account of hostility evinced during the second Sikh war. The khan of Hungoo, in the Bungush country, was in the British service as Revenue Collector, when he was murdered by one of his own relatives. The khanship descended to his son. The Bungush tribe have suffered much from the raids of their hill neighbours Wuzeeree, Orukzye, Tooree and Cabul-kheyl. The inhabitants of the Meeranzye valley are also Bungush. This valley belonged to the fief of sooltan Mahomed, but being an outlying locality was overlooked when Kohat was taken possession of. The Cabul government then lost no time in arranging for the occupation of Meeranzye, which appeared to have been vacated; so sirdar Azim Khan, the governor of the Koorum province, in 1851, summoned the Meeranzye to surrender; but they petitioned the British to include them in Kohat. Under the circumstances this request was acceded to. They were in their hearts hostile to the British government, as indeed they were to any government whatever. They offered to guard the Kothul, and asserted that they had an hereditary claim, stronger than that of the Afreedee, to occupy the ridge. The Kothul was then made over to them, and as the Afreedee refused to open the pass, it was resolved to establish a blockade and the Afreedee were debarred from entering the Kohat and Peshawur valleys. While these arrangements were progressing the Gullee Afreedee suddenly attacked the Bungush people on the Kothul, and seized that post. Several Bungush chiefs were killed in the encounter, and Major Coke who was present, was slightly wounded. Upon this check, the Bungush people obtained the alliance of two small, though warlike, tribes, named Buzotee and Sepah. These were independent and dwelt in the hills near the pass. The Southern section of the Jewakee Afreedee also joined the league.

Central Asia is a term used differently by geographers, ethnologists, and politicians, but is usually applied to the region intervening between Russia in Asia, and British India, and lying to the west of Chinese Tartary. Its western boundary is the Caspian Sea and the river Ural. On the east, is the lofty table-land of the Bolor, (the mountains which form the western boundary of Chinese Turkestan and Dzungaria), and the river Irtisch; the northern boundary is western Siberia, and it has Afghanistan on the south east. The northern half of Central Asia consists of the Kirghiz desert, which is mountainous and rugged on the east, and full of saline steppes on the west. In the midst of the southern half lies the sea

of Aral, on the western side of which, up to the Caspian Sea on the west, there stretches a broad tract of desert. But, on the eastern side of Central Asia, is a fertile tract, watered by the great rivers the Jaxartes and the Oxus, and it is in this fertile tract that the conquests of Russia were made between 1864 and 1868, absorbing the kingdom of Central Asia. In their operations, the Russians used only 2,000 and 3,000 men, and never had more than 15,000 in all Turkistan. The whole country of Central Asia between India and Tartary is one broad mountain range, the Himalaya forming the southern crest, and the Kuen luen the northern. The interior has some lovely valleys like Kashmir, but it is more usually broken into rocky ravines, through which the affluents of the Indus force their way towards the plains; or else stretches away in those vast treeless uplands, which are one of the chief characteristics of the range through its whole extent.

Central Asia has a hardy peasantry, dwelling in the mountain region with its vast upland downs, well suited for summer pasture, partly descendants of the original inhabitants, and in part of the many migratory races who have swept through the country. At the foot of the mountains, in the tracts of surpassing fertility, Turk, Bokhariot, Kalmuck, Kirghiz, Ouigur, Manchu, Chinese, Armenian and Indians dwell in the well watered plains. Beyond these, in every direction, is the pathless desert, which has been tenanted by pastoral nomades ever since the earth was peopled. From the Vendidad opening chapters there seems in ancient times to have been a great kingdom in Central Asia; an eastern branch, with its primæval seats on the Oxus: The Iranian people, who were settled between the Oxus and the Jaxartes, as early as the times of the Judges of Israel, still hold their ground in the country, under the names of Tat, Tajik, Sert; Galsha and Parsiwan; a primitive and not impure Iranian population might still be found in almost every district from the Indus to the Jaxartes, and throughout the valleys of the Oxus.

The Paropamisan chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is a maze of mountains, and though it affords a habitation to the Eimak and Hazarah it is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained.

Uigur. According to Professor A. Vambery, the Uigur are the most ancient of the Turkish tribes, and formerly inhabited a part of Chinese Tartary, which is now occupied by a mixed population of Turk, Mongol and Kalmuck. They were the first who reduced the Turkish language to writing, borrowing the characters from the Nestorian christians, who came to their country as early as the fourth century of our era. The manuscripts of this language, written in the characters mentioned, afford, therefore, the most ancient and valuable data in investigating the history of Central Asia—nay, of the whole Turkish race. But these monuments are of great scarcity; he believes he has collected all that has been discovered of the Uigur language, though the Uigur had a literature, and were very fond of books at a time when the Western world was involved in ignorance and barbarism. The most valuable manuscript he obtained bears date 1069, and was written in Kashgar; it treats of ethics and political subjects, and forms a kind of manual of advice to kings how to govern with justice and success. It reveals the social condition of this people, and forms the basis of the later regulations by which all Turks are governed. He believes that the Tartars of ancient time were not such barbarians as they now are.

Turko-Tartars.—Its people are from two distinct sources, viz. the settled races, descendants of Semitic and Iranian conquerors from the south, and the races, who have been occupying the country from pre-historic times. This latter part of the inhabitants have been styled Turko Tartars. The people are in their habits the same as they were 2,000 years ago. The Turko-Tartaric race stretches from the Polar sea to the Hindu Kush and from the interior of China to the shores of the Danube. Vambery divides the Turks who, from East to West, occupy this extent into

Burut, black or pure Kirghis;	Karakalpak;
Kirghis properly Kazak;	Turkoman;
	Uzbek;

Burut, pure or black Kirghis, dwell on the eastern boundary of Turkistan, viz., the valley of the Thian Shan chain of mountains, and they inhabit also several points on the shores of the Issik Kol, close upon the frontier chain of mountains. They are powerful, thick set, strong boned figures, but remarkably agile and have acquired much warlike renown. Their face is less flat than the Mongolian and Kalmuk and less fleshy, their foreheads somewhat higher and their eyes are less almond shaped than the Kalmuk, few of them have red or fair hair or a white complexion. The Burut are in contact with Kalmuk and Mongolians, and in consequence their language has many Mongolian words and now and then they profess themselves more or less mahomedans but shamanism largely prevails.

The *Kipchak*, who have settled down in and around Khokand, are supposed by Vam-

bery to be a division of the Burut. Their social relations are with mahomedans and the people of Turkestan.

Kirghis or Kasak, are known in Europe as the Kirghis, but this people only style themselves Kasak. They are extended through the northern desert lands of Central Asia. Like all the Turkoman, they have many subdivisions with branches, families and lines, but the European classification into Great, Little and Middle hordes is unknown to them. Love of travel and war have often brought together the most distant branches, and whether on the shores of the Emba, or of the sea of Aral, whether in the environs of the Balkash and Alatan, there is little difference to be found in the dialects spoken by them, though shades of differences are perceptible amongst them, scattered as they are so extensively through the northern desert lands of Central Asia. In manner of life and language, the Kasak is hardly to be distinguished from the Burut. In colour the Kasak women and young men have a white, almost a European complexion, which darkens by exposure. The Kasak have the short neck of the Turanian race, so different from the long necked Iranians, and they have thick-set, powerful frames, with large bones; head not very large, crown round, and more pointed than flat: eyes less almond shaped but awry and sparkling; prominent cheek bones, pug noses, a broad flat forehead, and a larger chin than the Burut. Beard on chin thin, only hairs on both ends of upper lip. They deem a Kalmuk woman more beautiful than their own. The men in summer wear the Kalpak head dress, and in winter the Tumak cap of fur, covered with cloth and flaps. They are almost all mahomedans, but like all nomade tribes are lax in their observances, for they retain much of the shamanist belief which they held prior to their conversion some centuries before: Cheiromancy, astrology, casting out devils, are common to all mahomedans, but the Kasak draw omens from the burnt sacrifice of the shoulder blade and the twisting of the entrails.

Kara Kalpak moved from the mouth of the Jaxartes, into the khanat of Khiva, in the beginning of the 19th century and are only met with there. In appearance and dress they are intermediate between the Kirghis, Kasak and Kalmuk. They are tall vigorous men, with more powerful frames than any of the Central Asian tribes but clumsy and with coarse features. They have large head, flat full face, large eyes, flat nose, slightly projecting cheek bones, a coarse and slightly pointed chin.

The Turkoman is the fourth gradation of the Mongolian Turkish race and in many respects they resemble the Kasak and Kara Kalpak. The pure Turkoman type is met with in the Tekke and Chador tribe in the centre of the desert, is of middling stature, small oblong head, not high cheek bones, somewhat snub noses; with the bright, sparkling fiery eyes, of the desert races, but more particularly the Turkoman, longish chins, feet turned in. The blond colour is common, indeed the Kelte race amongst the Gorgen Yomuts are generally half blood. The Goklen and other tribes near Persia evidence an intermixture with the Iranian Persian. The Turkoman is slender and agile, and they are hardy and enduring under privations. They early separated themselves from other Turko-Tartarian nations, moving from the Mangishlak east to the north west and thence to the south. In their present country, the Salor and Sarik are the oldest tribes; after them the Yomut, who at one time roamed from north to south along the shores of the Caspian. The Tekke were transferred by Taimur to Akhal. The Ersari, at the close of the 18th century, moved from Mangishlak to the shores of the Oxus, and recently many of the Chadar moved to the other bank of the Oxus. The chief avocation of the Turkoman is pillage. The men wear long locks till the close of the first year of their marriage. The women are handsome, and perfect beauties are to be seen, not inferior to the Georgians in growth and regularity of features. The young girls of all nomade tribes are good riders but Turkoman women excel all the others.

The Uzbek are the resident civilized inhabitants of Central Asia, but in their physical form have become considerably changed from being intermixed with ancient Iranians and with many slaves from Persian Iran. The typical Uzbek in Khiva has a broad full face, low flat forehead, large mouth, while those of Buchara are less marked. In the neighbourhood of Kashgar and Aksu the colour is from yellowish brown to blackish; in Khokand brown, and in Khiva white. *Uzbek* men have pretty thick but never long beards. The women long retain their white complexion, and with their large eyes, full face, and black hair they are not displeasing. In Central Asia, they are highly renowned for their beauty. Timur was an Uzbek Tartar, but Uzbek power rose on the ruins of the Timur dynasty. They have 32 chief divisions, all known by names, many of them similar to those amongst the Kazak, and from this Vambery supposes the Uzbek to be a colonizing tribe. The Uzbek are pious mahomedans. In Khiva and some parts of Chinese Tartary they are brave and warlike, and in this respect they are distinguished from all the other Central Asiatics. Settled, they retain nomade customs, building houses for stables and granaries but preferring the raised tent to dwell in

Uzbek women go unveiled. Though settled in Central Asia for centuries past, the Uzbek meditates robbery and war, and if no foreign enemy be found, they attack each other in bloody internal strife.

The name by which Vambery designates these races is Turko-Tartars: from amongst whom came the warrior nations known in the west as the Hun, the Avar, the Utigur, the Kutrigur and Khazar. But the manner of living, the customs and physical conditions, as then described, of the Tartar tribes whose arms reached from the Jaxartes to the heart of Rome and Gaul, have much resemblance to those of the present inhabitants of Turkestan, and the people of Central Asia, particularly the nomade tribes, are in their social habits the same as they were two thousand years ago. In the tent of many a nomade chief a similar life is observable as that described by Priscus as prevailing at the court of the king of the Huns. Attila, Chengiz khan and Timur, in historical characters resemble each other, and Vambery is of opinion that energy and good fortune could now almost produce on the banks of the Oxus and Jaxartes one of those warriors whose soldiers like an avalanche carrying everything before it would increase to hundreds of thousands, and would appear as a new example of God's scourge, if the powerful barriers of European civilization, which has a great influence in the East, did not stop the way.

The Turk, wherever met with, is ever heavy and lethargic in his mind and body, but in his resolves, firm and steadfast, not from principle but from apathy and aversion to change, and it is from these characteristics that his appearance is earnest and solemn, a profound seriousness, a marked cold expression of countenance, with a great inclination to pomp and magnificence. An *Uzbeg* or *Turkoman* has a proud bearing as if possessed with a self-consciousness of greatness and power. The *Osmanli* Turks' love of independence is boundless. He considers himself born to rule; and that hunting and war alone are worthy of him and husbandry is considered ignominious. In Central Asia, agriculture is exclusively in the hands of the Persian slaves, commerce and business with the tajiks Hindu and Jew. The Turk is intellectually the inferior of the Iranian and Semitic nations. This defect is noticed by other nations who apply the terms Turkluk, (Turkdom) Kabalik (coarseness), and Yugunluk (thickness) Sadeluk (simpleness) and with these qualities, as the Osmanli is easily taken in by the Armenian, Greek and Arab, the Turk is as easily so by the Tajik and Hindu. In transactions the Turk are regarded as possessing more honesty, frankness and confidence, plainness, simplicity and uprightness. Compared with the Persians, the Turk is a faithful servant, attached soldier and upright man. They are more brave, persevering and love more to rule than any other Asiatic people. They are unpolished, wild and uncultivated, but seldom cruel out of malice. They crave riches, but only to expend them. They exact much labour from their subordinates but protect and deal liberally with them. The Turk is innately a nomade and like other nomades is distinguished for hospitality. The Burut is the wildest and most savage and most superstitious of them, but less malicious than the Kirghis and Turkoman. The Burut has not wholly abandoned shamanism, and knows little of Islam.

The *Kasak Kirghis* are less brave and warlike, though readily engaging in a pillaging expedition. They form the bulk of the Turkish nomades and are for the most part devoted to a wandering life: in very few instances have they settled.

The Kara-kalpak are considered dull and foolish. They are even less warlike than the Kirghis, they have seldom appeared as conquerors and are even less employed as mercenaries. They are largely occupied as cattle breeders and they are active, benevolent and faithful.

Many of the *Turkoman* dwell in a half settled state along the left bank of the Oxus as far Char Jui and in Khiva. They are notorious amongst all the races of Central Asia as the most restless adventurers. Throughout the whole globe it would be difficult to find a second nation with such a restless spirit and untameable licentiousness as these children of the desert. To rob, to plunder, to make slaves is to the Turkoman honorable, they are always poor, and are dirty and avaricious. Their country is the wildest and most savage where even keeping a few cattle gives only a scanty income.

The Uzbeg are honest, upright and have much Turkish open heartedness, and are proud of their education and represent all the best side of the national character of the Turks.—*Vambery's Sketches of Central Asia, pp.* 283 to 312.

Iranian races have always been known for their refinement, and high civilization, from which Europe borrowed through the Bazantine and Greek culture, and the Persians have long and faithfully retained the features of its national characteristics. Though overrun by the Semitic and Turanian races, the Iranian has borrowed little or nothing from them but has exerted over them powerful influence. According to Khanikoff ("*Sur l' Ethnographie de la Perse*") the Iranian of Persia, came from the East of modern Persia, about Segestan and Khorassan, and moved to the west in prehistoric ages, and though altered by the attacks of the

Turko Tartar tribes from the north, or were in contact on the west and south with Turanian and Semitic element, the Mede is everywhere recognisable as the same as described by Herodotus and later Greek writers. The arrow headed writing at Persepolis enumerates the Iranian people of that day. The form of the Iranian is spare, but elegant, even noble, but there have always been differences between the Eastern and Western Iranians,

The East Iranians are (a) the Segistani or Khafi;—(b) Char Aimah:—(c) Tajik and Sart, each of which counts many sub-divisions

The principal number of the Segistan people occupy Khaf and its neighbourhood, Ruy Tebbes, and Birjan.

The people of Khorassan are greatly intermixed with Turko-Tartar elements. The language of modern Iran is laden with Arabic and Turkish words: but in the East, the language is much like that in which Ferdusi wrote his poem free from words of Arabic origin.

The Char Aimak, and consist of four peoples the Timuri, Teimeni, Feroz Kohi and Jamshidi, all of them of Iranian origin and all speaking Persian.

The Aimak who graze their flocks in the Parapamisus, are brave and relentless, and Afghans when travelling, whether proceeding from Balkh, Kabul, Kandahar or Herat, never enter into the mountain districts of these intrepid nomade tribes.

The *Timuri* dwell at Gorian and Kuh'sun on the western boundary of Herat, and in the villages and towns situated east of Iran, from Tarbat Shaikh Jam as far as Khaf. About a thousand of their families dwell near Herat.

The *Teimeni* dwell in the Jolgha-i-Herat, from Kerrukh to Sabzwar; the few who have extended to Farrah being styled by the Afghans, Parsivan. Each member of the Char Aimak knows no greater enemy than the Afghan and all attempts to form Afghan colonies amongst them have failed. The Teimeni are of a wild, warlike nature, though agricultural.

The *Feroz Kohi*, a small number of people, about 8,000, dwell on the steep hill N. E. of Kale No and from their inaccessible position afflict their whole neighbourhood with their robbing and plundering. Kale No on the summit of the mountain and the fortified places of Darzi Kutch and Chaksaran are considered similar to the whole nests of the Bakhtiari and Luri in the environs of Ispahan. They have a resemblance to the Hazarah, but their forehead, chin, complexion and figure are less Turanian. They are decidedly Iranian. They take their name the Feroz Kohi from Teheran. Timur settled them by force in Mazenderan, but they soon returned to their own country. They have a few cattle and they sow a little, and plunder the caravans travelling on the Maimani road or make inroads on the scattered tents of the Jamshidi.

Jamshidi are the only tribe of Eastern Iranians who are exclusively nomades. They derive their descent from Jamshid, and moved out of Segistan to the shores of the Murghab, which they have occupied from pre-historic times. They live in the neighbourhood of the Salor and Sarik Turkoman and they use the round conical tent of the Tartars, surrounding it with felt and a reed matting, and their clothing and food are Turkoman, as also, their occupation, for, they are as great manstealers. They excel the other Aimak as horsemen and, for a chapao, band themselves with men of Herat or with the tribes of Turkomans. It was this cause that led Allah Kuli Khan to transport them from Khiva to the banks of the Oxus, after he had conquered them with the allied Sarik. After a residence of 12 years, they fled and returned to the town of Murghab. The Jamshidi is polite in word and manner. They still retain parts of the Zoroastrian faith, reverence fire, and pitch their tent door to the east.

The *Tajik* is Iranian. He is met with in largest number in the Khanat of Bokhara and in Badakhshan, but many have settled in the towns of Kokand, Khiva, Chinese Tartary and Afghanistan. The Tajik is of a good middle height, has broad powerful frame of bones, and especially wide shoulder bones, but they diverge from the Iranian, they have the Turanian wider forehead, thick cheeks, thick nose and large mouth. The Tajik originally came from the sources of the Oxus in the steppe of Pamir. The term is from Taj, a crown, the fire worshippers head dress. But the Tajik does not so style himself, but regards the term as derogatory. The Turks style the Tajik, Sart. The Tajik is covetous, unwarlike, and given to agriculture and trade, but fond of literary pursuits and polished and it is owing to their preponderance in Bokhara that that city has been raised to the position of the Head Quarters of Central Asiatic civilization, for, there, from pre-Islamic times, they have continued their previous exertions in mental culture and notwithstanding the oppressions which they have sustained from a foreign power, have civilized their conquerors. Most of the celebrities in the field of religious knowledge and *belle lettres*, have been Tajiks, and at the present day, the most conspicuous of the mullah and Ishan are Tajiks and the chief men of the Bokhara and Khiva court are Tajik, or, as the Turks style the race, Sart. Vamberry considers the Tajik and Sart identical, but he recognizes that in their physiognomic

peculiarities, the Sart differs greatly from the Tajik, being more slender, with a larger face, and a higher forehead: but these changes he attributes to frequent intermarriages between Sart men and Persian slaves.

In Central Asia, the warrior, the shepherd, the priest and the laymen, youth and old age, equally affect poetry and reciting of tales. The literature of the mahomedans or settled nations, brought from the south, is filled with exotic metaphor and illustration. In the three Khanats, the mullah and ishan, have written much on religious subjects, but its mystical allusions are beyond the reach of the people. The Uzbeg, the Turkoman and Kirghis esteem music as their highest pleasure and often break out in song, singing soft minor airs. The Uzbeg poetry on religious subjects is exotic, derived from Persian or Arabic sources. The Tartar compositions are tales and relate to heroic deeds, similar to the romances of Europe.—*Vamberry's Sketches of Central Asia, p.* 338.

Kunduz, a small town of 500 souls in a marshy valley, about 40 miles south of the Oxus. It is surrounded on all sides by hills, and is so very insalubrious that the proverb runs if you wish to die go to Kunduz. The chief of Kunduz, Murad Beg, ill-treated Moorcroft and robbed him of money and effects to the extent of 23,000 rupees. In 1830, he had occupied all the valley of the Oxus and ruled all the countries immediately north of the Hindu Kush. It lies in a valley among the hills running from E. to W. about 30 miles and from N. to S. about 40 miles and the great mountain the Hindu Kush is visible and Khulam, Heibah, Gori, and Inderab are subject to it.

Bokhara is an isolated kingdom in Turkistan of small extent surrounded by a desert. It lies between the parallel of 36° and 45° N. and 61° and 67 E. lat. It is an open champagne country of unequal fertility, and intersected by the Oxus on its southern border. Its rivers on the Amu or Oxus, the Sir or Jaxartes, the Kohik or Zarafshan and the river of Kurshi and Balkh. It is ruled over by an amir whose sway may be comprised between the 37° and 43° north lat., and between the 60° and 68° of east long. *The Uzbek* are undoubtedly the preponderating race in Bokhara, not so much from their number, as by the ties which bind them together. They are divided into stems and sections, like the Kirghiz, and have their elders, or beys, who enjoy a certain consideration among them, the Uzbek branches, with some of their subdivisions, are enumerated in the work called "Nassed Mameti Uzbekia."

The rulers of Eastern Turkestan have always been mahomedan from the time of Taghalak Timur, who was, we are told, the first mahomedan sovereign of Kashgar of the lineage of Chinghiz. Buddhism indeed was found still prevalent in the cities of Turfan and Kamil at the time of the embassy of Shah Rukh in 1419, and probably did not become extinct much before the end of the century. But, in the western states mahomedanism seems to have been universal from an earlier date and maintained with fanatical zeal. Saintly teachers and workers of miracles, claiming descent from Mahomed, and known as Khwaja or Hojah, acquired great influence and the sectaries attached to the chief of these divided the people into rival factions, whose mutual hostility eventually led to the subjugation of the whole country. For late in the seventeenth century Hojah Appak, the leader of one of those parties called the White Mountain, (having been expelled from Kashgar by Ismail Khan the chief of that state who a was zealous supporter of the opposite party or Black Mountain,) sought the aid of Galdan Khan, sovereign of the Eleuth or Kalmuk of Dzungaria. Taking the occasion so afforded, that chief in 1678 invaded the states south of the Thian Shan, carried off the khan of Kashgar and his family, and established the Khwajah of the White Mountain over the country in authority subordinate to his own. Great discords for many years succeeded, sometimes one, sometimes another being uppermost, but some supremacy always continuing to be exercised by the khans of Dzungaria. In 1757 the latter country was conquered by the Chinese, who in the following year making a tool of the White party which was then in opposition, succeeded in bringing the states of Turkestan also under their rule.—*Yule Cathay,* II. P. 547.

Chinese Tartary, also known as Bocharia, Little Bokharia, also as Eastern Turkestan, is a great depressed valley shut in by mountains of great height on three sides and on the east are barren sands which merge imperceptibly into the great desert of Gobi. The Tian-shan range separate it from Dzungaria. The Bolor range from Transoxiana, and the Kara Koram and Kuen Lun from India and Thibet on the south. The land is clayey near the front of the mountains base but sandy in the central tracts. Rain is rare, and the air is of exceeding dryness, but the climate is temperate and healthy. It is well watered from the mountains, the waters converging towards the Ergol or Taryon.

The country has gold, copper, salt, sulphur and the Jade stone. The southern line of the caravan route passes through it from Khamil to Aksu and Kashgar. From Aksu to Kokand, is 800 miles. It was subject to China from the beginning of the christian era, to the time of Changiz Khan, and after the middle of the 18th century, the Chinese regained possession of it.

Alti-shahr, or the six cities, forms the western district, comprising Yarkand, Kashgar, Khotan, Aksu, Yanghisar and Oosh-Turfan, with territories subordinate to each. Eastern Turkistan is eminently mahomedan.

Chinese Turkestan includes the provinces of Yarkund, Kashgar and Khoten. Yarkund is the entrepot of trade between China and Bokhara, Khotan, from the time of Ctesias, has been celebrated for its mineral products, its jade and emeralds, its shawl-wool and flax, it was at one time the entrepot of a vast trade with Hindustan, and now imports largely furs, broad cloth leather, and sugar. Perhaps the term Eastern Turkestan should be retained solely. The inhabitants of the country, call themselves Turks, speak the Turkish language, and profess the mahomedan religion.

Turkestan.—The people of Asia, who inhabit the countries which extend northwards to the Russian frontiers, westwards to the Caspian Sea, and Southwards to Afghanistan, for the greater part are descendants of Turks and it would be more proper to give to all these countries, the general name of Turkestan dividing it in the following manner :

1st, Northern or Russian Turkestan, comprehending in it the three hordes of the Kirghis nation ;

2ndly, Southern Turkestan, inhabited by the Khivan, Turkoman and Karakalpak and including also Great Bucharia, Kokand, and Tashkend ;

3rdly, Eastern Turkestan, comprising Little Bucharia, which is subject to China.

The Chinese and Mantchoo call by the name of " hoei hoei," all the mahomedan tribes who live under their dominion. This word, therefore, has ceased to designate a nation. As the Ouigour Hoei Hoei, called simply Hoei hoei under the Mongol dynasty of Yuan, were mahomedans, this name is applied by the Chinese to all those of the same religion, in the same manner as the Russians are often called Greeks, because they are of the Greek church. The inhabitants of the towns of Little Bucharia, are in part descendants of the ancient Ouigour or Hoei hoei, and consequently Turks ; in part Sarti, or Bucharians who are scattered as merchants all over central Asia, and who are Persians. There are many of them at Peking Hang tcheou fou, Canton, and other commercial cities of China. Their mother tongue is Persian but they also speak the oriental Turki, which is the general language of Turkistan, and the most diffused in Little Bucharia. The Ouigour writing character was the original source of those still used by the Mongol, and Manchu, and was itself almost certainly derived from the old Syriac character through the Nestorians. The modern Tartar characters are written (and, it is presumed, read) in vertical lines from top to bottom of the page, the lines succeeding each other from left to right. What Ouigour meant with Mongol authors is doubtful, but the people and language so called by the Western Asiatics were Turkish. Captain Valikhanoff speaks of the language now in use at Kashgar as being Uigur, but it is not clear whether he means that this term is known to the natives.—(*Russians in Cent. Asia, p.* 67. *Yule Cathay, I. p.* 206. *Timkowski's Journey to Peking, Vol. I. pp.* 6, 378-79.)

The Kafir race occupy the most inaccessible portions of the Indian Caucasus between the Kashgar river and Bamian. The race is called Siahposh Kafir and occupy the mountainous region of northern Afghanistan with Bujur and Kuner on the south. Kaffiristan, according to Vigne, commences from the mountains beyond the valley of Nijran, to the north of Kabul, and extends behind those of Taghan and Laughman to the frontiers of Bajawur. To the north it is bounded by Badakshan ; and it forms the greater part of one side of the valley of Chitral, or Little Kashghar.—(*Vigne's Personal Narrative, p.* 235.)

Another authority describes Kaffiristan as bounded on the west by the Belut Tagh, on the east it touches Chinese Turkistan and Little Tibet, to the south lies Afghanistan, and to the North Kokun or Ferghana where the population is Chaghtai Turk. The Kafer have idols of stone and wood, male and female, also a stone Imrtan representing God. They are independent, have defied all attempts at reduction, and their enmity to mahomedans is inveterate and unceasing and they give no quarter. Three large rivers flow through Kaffiristan from north to south, and augment with their waters the river of Kabul and Jelalabad, which ultimately falls into the Indus. The two westerly ones unite at Tirgari of Laghman, and the joint stream, after a short course of eight or ten miles, falls into the Kabul river at Kergah, in the same district, about a mile to the east of Mandarawar. The easterly river, known as that of Kameh, falls into the Kabul river east of Jelalabad, and at a distance of about twenty-five miles from Kergah. The Kameh flows through Chitral, and its source is more remote. On the east it may be considered the boundary of the Siaposh territory, as the river of Nadjil and Alishang forms the boundary on the west. The sources of the Nadjil river are said to be not very distant, and it is the smallest of the three rivers—(*Masson's Journeys, Vol,* I. *p.* 207.) According to Mohun Lal a Kafir race, the Perancheh are found over a large tract of country besides the few families at Panjshir who pre-

serve their ancient dialect. They are found in Kabul, Kameh, Makkeid and Attok. The Kafir race are tall with fair skins, Grecian features, arched eyebrows and ruddy complexions, handsome and extremely intelligent. They possess great ability and activity. They have idols, sacrifice to a chief deity Doghan and know Siva and Mahadeo by name. They all eat beef. They are fond of honey, wine and vinegar, music and dancing, the sexes dancing apart. They have no written character and are said to speak a language resembling Pushye. They wear a lock of hair on the right side of their heads. They dispose of their dead on hills, without interment.—(*Burne's Kabul*)

They are called Siah Posh from wearing black goat skin dresses. They are persecuted by all the surrounding nations who seek to capture them as slaves. Their women do all the out-door work and follow the plough. The Siaposh place their corpses in deal boxes, without interring them, expose them on the summits of hills, like the people of Tibet, but it is not explained whether this is a final disposition. The semi-exposure adopted by the Siaposh, has contributed, probably, to their being suspected to be remnant of the Gebers, or followers of the reformer Zertusht, but in no account of them is the least mention of fire worship amongst them. There is the certainty that within the three last centuries there were people called Geber in the Kabul countries, particularly in Lughman and Bajor, also that in the days of Baber there was a dialect called Geberi. We are also told that one of the divisions of Kafristan was named Gebrek. But it does not follow that the people called Geber then professed the worship of fire. That in former times, fire-worship existed to a certain, if limited, extent in Afghanistan, is evidenced by the pyrethræ, or altars still crowning the crests of hills at Gard-dez, at Bamian, at Seghan, and at other places. Near Bamian is also a cavern, containing enormous quantities of human bones, apparently a common receptacle of the remains of Geber corpses. At Murki Khel, in the valley of Jelalabad, and under the Safed Koh, human bones are so abundant in the soil that walls are made of them. There is every reason to suppose it a sepulchral locality of the ancient Geber; and coins are found in some number there. Amongst the Siaposh, the women are separated from the community, and located in a house set apart for them, during the periods of childbirth and menstruation. In the former event, a seclusion of forty days is considered necessary. It is generally supposed that chastity is not an accomplishment of the Siaposh ladies, or that a deviation from it is lightly regarded and easily compensated. It is, moreover, affirmed that the marriage ceremonies are extremely simple, consisting merely of procuring two twigs, or rods, of the respective height of the bride and bridegroom, and tying them together. They are then presented to the couple, who preserve them with much care, so long as they find it agreeable or convenient to live together. If desirous to separate, the twigs are broken and the marriage is dissolved. The Siaposh build their houses of wood, of several stories in height; and much embellished with carving. These accounts are trustworthy, as we witness that the Safi of Kaziabad in the hills west of Lughman, and who have been converted, actually reside in such dwellings. Amongst the singularities imputed by the mahomedans to the Siaposh, is their objection to sit on the ground, or to take their repasts on it, and the custom they have of using chairs or stools. The arms of the Siaposh are bows and arrows, the latter thought to be poisoned, with long knives and daggers.

Safi.—Mr. Masson tells us that the Safi people are widely spread, occupying Dara Nur, Dara Mazar, Dara Pech, and the valleys opening on the Khonar river and in a district called Surkh Khambar south of Bajor. It has been noticed that they inhabit Taghow. They now speak the Afghan dialect, but also Pasha. In Baber's time, they were Kafirs. They were expelled by the Ghilji from the lands to the south of Taghow, and between Kabul and Jelalabad, and in the time of Nader Shah, who cultivated a friendship with them. They speak a dialect called Kohistani.

Yeghani.—South of the Safi, at Bahi, the first march from Goshter, on the Jelalabad river towards Bajor, are a people called Yeghani who consider themselves Afghans, but are probably converted Kafir, for they speak a dialect which no Afghan can understand.

The fair complexion and regular features of the Siahposh Kafir, the variously coloured eye, and shaded hair, indicate them to belong to the European family of nations, and disconnect them from the Tajik, the Hazara, the Uzbek or the Kirghis. It merits consideration that the region now inhabited by the Siah posh is surrounded by the countries in which the Greek dynasties ruled and is encircled by the colonies, posts and garrisons which they are known to have established. And, by the fact of the establishment of military colonies of Macedonians at Alexandria ad Caucasum, Arigæum and Bazira and of the garrisons of Ny, Ora, Massaga, Peuceleotis and Aornis, those who suppose that the Siah posh Kafir are descendants of the Greeks, have their speculations strengthened by the fact, that many petty princes and chiefs, some of whom are now mahomedans but originally Siaposh, claim descent from the Macedonian

hero, and have preserved vague accounts referrible either to their reputed ancestor's marriage with the fair Rozana, or to his amour with the captive queen of Massaga.—(*Masson's Journey, Vol. I. p. 195 to 230.*)

Mohan Lall, seems to quote from other authors, when he says that the corpse is attended by young men, who sing, skip, dance, and play on drums: unwashed, it is carried upon the shoulders of men, in a large box, to the top of a high mountain, and laid open in the sun. The women, who possess great beauty, manage all the out-door business, while their stout and handsome husbands remain in the house, feeding the children in their arms. If any stranger is found guilty of adultery with anybody's wife or daughter, the Siah Posh never sentence him to death, like the mahomedans, but exact from him a small sum of money, amounting to twelve or thirteen rupees. The Siah Posh Kafir (according to the Mufti), in lieu of feeling jealously or anger at such acts, commend the liberality of their females towards every man, who is the best of God's creatures in the world.

The Kafir are captured and reduced to slavery by their neighbours. In Kabul the highest price of a slave is 200 rupees, and the lowest fifty. The whole of Afghanistan is full of Siah Posh and Hazara slaves; but the former are sold at a higher price. Vigne says that the mahomedans regard the Kafir, according to the name they give them, as infidels, the Kafir, on the other hand, detest the mahomedan. The feuds between them are constant, and there are persons killed every year in Lughman. The houses in which the Kaffir dwell are some of them three or four stories high.—*Masson's Journey, Vol. I. pp. 194 to 230. Elphinstone's Kabul. Campbell, p. 145. Mohun Lal's Travels, Burnes' Cabul. Vigne's Personal Narrative, p. 235.*

Mahomedans.—The numbers in the East Indies of this class of religionists is not known: out of the 164½ millions who inhabit British non-feudatory India, 25 millions are of the mahomedan religion. Of this number the greater part have been born in India, and the ancestors of many of them have been converted to mahomedanism, from amongst the Aryan hindu, the Jat, the Rajput and some mercantile classes. It is only the descendants of the Moghul from Central Asia, those of the Pathan from Afghanistan, and the Arab mahomedans that retain the characteristics of their respective races. Nearly all the mahomedans entered British India through Afghanistan, for the invading races following mahomedanism have been the Moghul from Central Asia, the Persian from Persia, and the Afghan from Afghanistan, but the Persian and the Moghul brought many Afghans with them, and though they have mixed much by intermarriage, their descendants known as Pathans, continue to follow arms and are a bold, self-reliant race. Captain Raverty says that a considerable body of Afghans who occupy Rohilcund, continue to speak Pushtu. The Pathans are not a literary race. The routes followed by the mahomedan invaders are marked by the numbers of mahomedans, and while in all British India, mahomedans are one-sixth of the inhabitants, out of 17 millions of people in the Punjab, upwards of 9 millions are mahomedans. In the N. W. Provinces, the tribes are

Syud... ...	170,248	Pathan ...	515,526
Moghul ...	41,748	Others	2,207,576
Shaikh ...	114,208		
		Total...	4,105,206

In all the Madras presidency, on the other hand, which mahomedan invaders only reached by land from Hindustan through Central India, there are only 1½ millions of mahomedans in a population of 26 millions, and there is now only one mahomedan dynasty in the Dekhan. Of the invading mahomedans, though dwelling in India, few are landholders and still fewer are cultivators. In addition to these invaders, there has been a considerable immigration of Arab mahomedans into the south of India, and into the islands of the Archipelago, all of them engaged in commerce. Their descendants hold lands on the Malabar Coast, and are known as Moplah. Another body, in the S. Eastern part of the Peninsula the Labbi are tall robust men and are active merchants, shop-keepers and pedlars. A smaller body known in the Peninsula as the Nao-Ait, new comers, are chiefly engaged in civil avocations. There are small bodies bodies of pure negro mahomedans, in Janjirah near Bombay and in Dandilli in N. Canara. The Pathan styles himself and is styled "khan," one of the honorific titles granted by native sovereigns, thus Kader would be Kader Khan. The Moghul assumes the suffix of "beg" and his name would be Mahomed Beg. The Syud or lord has also the honorary title of "mir." The Moghul are few in number and are generally comparatively fair people of a larger and more bulky frame and with unassuming manners. Mahomedans are, all of them, essentially peoples not belonging to the present time. Except in entering the disciplined armies of Britain, as private soldiers, few of them have accommodated themselves to the changes which British supremacy has introduced, but, dwelling on the past and looking forward to the future, they wait for further changes. The religious amongst them meditate on the transgressions which have brought upon them the great reverses they have sustained from the British arms and, perhaps without exception the descendants of the invad-

ing mahomedans are looking forward to and awaiting the time when it shall be God's will again to give them dominion.

The mahomedans have never sought to colonise or by taking possession of or purchasing the land, to identify themselves with the country held. While this is the case their honorary titles of khan, beg, syud or mir, and the multitude of terms Kirmani, Koreshi, suffixed to their names, hourly indicate the tribe or town or country from which they came and keep up their associations with their former conditions and with foreign lands, and they are ready to take advantage of any movement which may seem likely to re establish them in power. Around Agra, though the seat of mahomedan Governments for the past eight-hundred years, hardly any instance occurs of a mahomedan claiming hereditary property in the soil, while many hindoos can show that their ancestors occupied the villages for twenty centuries. The mahomedan foreign population is gradually wearing out in all the cities of hindustan. There is no longer the tide of Tartar or Persian emigration to seek fortune in India and recruit their numbers.

The languages in use by educated mahomedans, are Hindustani or Urdu, as a colloquial tongue, and Persian for conversation, but their Koran is still mostly in Arabic. Hindi, is one of the tongues of India, it abounds in Sanscrit words, and has many dialects. Speaking generally the tongues spoken in the whole of upper India, including the Punjab, from the Himalayan to the Vindhyan range, may be said to be Hindi. Also, the languages of Kamaon, and Gurhwal, all along the Sub-Himmalayan range as far as the Gogra river; the impure dialect of the Gorkha; the Brij-bhasha (or Baka as it pronounced on the Ganges,) the Punjabi, Multani, Sindi, Jataki, Haruti, Marwari and, it is said, Konkani. The Bengali is a form of Hindi but so highly polished as to be classed as a distinct tongue.—*Tr. of Hind. Vol. i. p.* 431.

Kashmir, is a province in the N. W. frontier of India, with a capital in Latitude 34° 4′ 28″ N. in a valley which has ever been a favorite resort of those conquerors of India who came from the North-west. Kashmir long belonged to the Kabul kingdom, but it never was in any degree colonized by Afghans, and it is singularly free from any modern intermixture of foreign races. It never belonged to the Afghan nation, but was always a crown appanage of the kings who were very jealous of admitting into it subjects whom they might be unable to dispossess. Vigne estimated the population of the city at 80,000 and of the whole valley at 120,000. The revenue in Akbar's time was £330,000 and Jubbar Khan, brother of Dost Mahomed, collected £400,000. The author of the Ayin-i-Akbari dwells with rapture on the beauties of Kashmir: whence we may conclude that it was a favorite subject with his master Akbar, who had visited it three times before Abul Fazil wrote. Other emperors of Hindoostan also visited it and seemed to forget the cares of government, during their residence in the happy valley.—The lake or Dal of Kashmir lies to the north of the town, stretching from the base of two hills to the more lofty mountain range which bounds the valley on the north. It is nearly circular and four or five miles in diameter, but is only open in its northern half, the end nearest the town being occupied by large islands, with narrow channels between them, in some of which there is a good deal of current. Its waters are discharged into the Jhelum by a considerable stream, which, flowing from its south-east corner, runs to the westward in a course nearly parallel to the southern margin of the lake for nearly a mile, when it turns abruptly south to enter the Jelam in the middle of the capital of Kashmir. The only Sanscrit composition yet discovered, to which the title of history can with any propriety be applied, is the Raja Tarangini, a history of Kashmir. It commences with the statement, that the beautiful valley forming that kingdom was originally a vast lake, called Satisaras. The draining of the water from the valley is ascribed to the saint Kasyapa, the son of Marichi, the son of Brahma, the Cashef or Kasheb, of the mahommedan historians, according to some of whom, he was not the hindu seer, but a deo or geni, the servant of Suliman, by whose orders he effected the desiccation of Kashmir. The method of doing this was opening a passage through the mountain at Baramouleh, by which the water passed off. Its king Sagara drove the M'lechha foreigners and Sakæ, into Nepal, Assam and Bhutan and endeavoured to re-institute brahmanism. *(Chron of Kash.)* Probably owing to the circumstance that the valley has so often been the resort of pleasure-seekers, the morals of the people are not at a high standard. A satirical Persian couplet runs—

"Dar jahan ast do taifah be pir
"Sunni-i-Balkh, Shiah-i-Kashmir"

which may be rendered that there is not an honest man among the sunni of Balkh or the shiah of Kashmir. In this small district Kashmiri is spoken and has decided affinities with the Dard tongue. In one hundred words of this language, according to Vigne, 25 are of Sanscrit origin, 40 Persian, 15 Hindi, and 10 Arabic. The temples of this province are of the Arian order of architecture. Its language, for the common affairs of life, contains Paropa-

misan and Hindi elements. Its religion is shiah and sunni mahomedan. The people are stout of limb and prolific, but tame of spirit and loose in morals: they have much mechanical skill but are very poor. They speak a hindi dialect known as Kashmiri. Amongst them also are several wandering tribes who seem distinct from the settled population. From all times the valley has been the retreat from the heats of India, for the conquering races, and it is not improbable that bands of their followers may have preferred to remain in the valley. The passes from Kashmir to Tibet, are the Baramula; Punch or Pakli: Gul Murg, Tosi Maidan: Sang-i-Safed or Chanz; Pir Panjal; Nundan Sar; Sedan; Kuri; Kol narawa or Kuligam; Banihal; Sir-i Bul; Mir Bul; Na-bug-nyah; Pahalgam or Umur Nath; Duras or Hemb Bafs or Bab; Koh-i-Hamon, Bandrpur Lolab, Kurnawur. The ridge which separates Kashmir from Great Thibet, and Kashgar from Little Thibet (the true Imaus, or Himmaleh), appears to incline, in its northern course, towards the continuation of Hindoo Koh, and even to join it. The term Hindoo Koh, or Hindoo Kush, is not applied to this ridge, throughout its whole extent; but seems confined to that part of it, which forms the N. W. boundary of Cabul: and this is the Indian Caucasus of Alexander.—*Campbell, p* 58. *Rennell's Memoir, pp.* 143,150. *Dr. Thomson's Travels in Western Himalaya and Tibet, p.* 281. *Asiatic Researches, Vol. XV, pp.* 1, 9. *Chronicles of Kashmir. Wilson. Vigne.*

Wattal.—In Kashmir, is a gypsy tribe which supplies dancing girls and prostitutes. The women are among the handsomest of the valley.—*Campbell, p.* 121.

Chibh.—A tribe lying south of Kashmir, but little reclaimed from barbarism either by hindu or mahomedan conquerors.

Nim chah.—A half breed race, on the southern slope of the Indian Caucasus, between the Afghans and the higher peaks. They speak a language related to the Indian tongues, but possessing some curious affinity to Latin. In the lower country, the people near the debouchure of the Kashgar river, speak a mixed tongue called Lughmani. The people in Kashgar submit quietly to their rulers.

Arians Swat: is now under Pathan rule, with a subject race of Arian aborigines.—North of Swat in the valleys of the Ghilghit river running into the Indus from the west, is an Arian people speaking a language of their own which is cognate to the tongue of the tribes east of the Indus in and about the country called Chilas. The Dard seem to be amongst these tribes, some of them are independent and scarcely known, but most of the country and also Ghilghit is now subject to the maharajah of kashmir. The Ghilghit people are the farthest Arians of the country whence the Indus flows.—*Campbell, p.* 146-7.

Of the tribes of the *Indian Caucasus*, some have been conquered by the Afghans and by the maharajah of Kashmir. Those in contact with British India are quiet. They seem to use wine freely.—*Campbell, pp.* 146-7.

The Bhot of Gurwhal, Gurwhal is a non-regulation district under the N. W. Provinces of India. It is a country of very great extent, though of small comparative value. Many of the larger rivers of Upper India, and all those which form the origin of the Ganges, have their rise in its mountains, and hold their course through its territory. Sreenuggur, the chief town is on the south bank of the Alacnanda, about twenty miles above its junction with the Bhagiruttee at Deo Prague, where a strip of level ground stretches along for three or four miles, forming the valley known by the same name as the town. The people of Gurhwal are Bhot, dwelling in the passes and their neighbourhoods at heights above 6,000 feet. The pass-men state that ridges which within the memory of man were covered with forest and pasture lands are now covered with snow, showing the extension of the snow zone. The *Bhot*, here, as elsewhere, is an agriculturist, and is assisted by slaves who live under the roofs of their masters. The people in the Mana, Niti, Juwar and Byanse passes are supposed to be immigrants from Tibet who drove out an earlier body of hindus, and many of the chief families trace their origin to a Tibetan locality. The inhabitants of the Darma pass are said to be a body of Mongol left in Kumaon by Timur, and, if so, they are not true Bhot. The Darma inter their dead for a time, and in the month Kirtik exhume and burn them, but the other pass-men burn their dead on their demise. The Darma practice divination, taking their omens from the warm livers of sheep sacrificed for the purpose. The women of the Darma and Byanse pass dress alike, and these two clans eat the Yak and would eat the cow, while those of Mana, Niti and Juwar abstain from beef of all kinds and look down, as on an inferior caste, on the Darma and Byanse. The Juwar nearest India, have the largest trade, and resort to an annual fair in September at Gaitogh, the residence of the Lahsa viceroy. These passes are the roads from India to Nari or Guari, Tibetan provinces of the Chinese empire. The Gurhwal people have a passionate love of country and home.—*Fraser's Himalaya Mountains*, p. 369. *Cunningham's Ladak. Latham's Ethnology. Aitcheson's Treaties*, p. 58, *Mr. J. H. Batten on British Gurwhal in* 1842.

The Dom, is a helot race in the hinduized lowlands of northern India, they are corpse-bearers: they are supposed to be the same as

Dom, a helot race in the hinduized lowlands of northern India, they are corpse-bearers : they are supposed to be the same as the Dom of the Santal Hills, and the Dumi, still a well defined tribe in Sub-Himalayan Nepal.

In the north-west provinces, there are wandering and wild tribes, named Bur, Damak, Kanjar, Pasi, Kumboh, Nat Saussee, Gond and the Tharoo in the Terai—the Pasi, also occurring in Oudh.

The Chinese frontier and Thibet, have the Gyami ; Gyaruug ; Takpa ; Manyak ; Thochu ; Sokpa ; Horpa ; Tibetan.

Nepal, (*West to East*) has the Serpa ; Sunwar ; Gurung ; Murmi ; Magar ; Thaksya ; Pakhya ; Newar ; Limbu.

Kiranti Group, East Nepal, have the Kiranti ; Rodong ; Rungchenbung ; Chingtangya ; Nachhereng ; Waling ; Yakha ; Chourasya ; Kulungya ; Thulungya ; Bahingya ; Lohorong ; Limbichhong ; Balali ; Sang-pang ; Dumi ; Khaling ; Dungmali.

The broken Tribes of Nepal, are the Darhi ; Denwar ; Pahri ; Chepang ; Bhramu ; Vayu ; Kuswar ; Kusunda ; Tharu.

Lepcha of Sikkim.

Lhopa of Bhutani.

In N. E. Bengal, are the Bodo ; Dhimal ; Kocch ; Garo ; Kachari.

In the Eastern frontier of Bengal, are the Munipuri ; Mithan Naga ; Tablung Naga ; Khari Naga ; Angami Naga ; Namsang Naga ; Nowgong Naga ; Tengsa Naga ; Abor Miri ; Sibsagor Miri ; Deoria Chutia ; Singhpo.

No one of the nations or races who are descendants from the people that were occupying India and South Eastern Asia, prior to the mahomedan invasions, retain any strictly historical record of the routes by which they reached their present localities or of the dates of their advents. Researches into the families of language to which the spoken dialects belong, and the existing physical peculiarities of the several races permit, however, the belief that India and some of the island parts of South Eastern Asia were peopled long prior to historic times, that a succession of races, or of branches of the same human family, have entered India and in some instances become amalgamated with or been dispersed amongst the prior occupants, or have pushed them further on into less peopled or less fertile districts, or amid forest and mountain tracts. In India proper from the Himalaya to Cape Comorin, even yet, every village and every hamlet, have small bodies of predial slaves, who, though possessing certain minor agricultural rights are not allowed to purchase lands ; are compelled to reside outside the village walls, and are prevented quitting the locality, for they furnish the only free labour, available for the work of the field. The total number of the non-Aryan aborigines and outcastes in British non-feudatory India, is estimated at 12,250,000 people. On this point, Chevalier Bunsen mentions (*Report Brit. Association*, 1847) that throughout Asia, the two great nations who once centred the one in the Altai and the pasture land towards the Himalaya, the other having its centre in the Ural mountains, appear in Asia as the subdued or primary element, as the subdued substratum of Iranian civilization, and that the aboriginal languages of India which attained their full development in the Dekhan dialects belong to that stock.

In the Himalaya, according to Mr. Aitcheson, the various dialects are mixed together in great confusion ; on the northern Assam frontier are found, in the following order from east to west, the Aka, Abor, Doffla, Miri, and Mishmi.

Next to these is Bootea, which carries us as far east as the Teesta.

Sikkim, or the country between the Teesta and the Singhaleela range, contains the Lepcha and Limbu dialects. The Sikkim Terai gives us the Dhimal, Bodo or Mechi and Koch which latter also occupy the plains of Koch Bahar, and the northern parts of Runjpoor, Dinajpoor and Purneah.

In Nepal, according to Mr. Hodgson and Dr. Campbell's researches, we find a perfect maze of dialects. Beginning from the Singhaleela range we find Limbu or Kiranta which goes west as far as the Dudkoosi River, in longitude 86° 44'. Sherwill found the Gurung in the higher parts of Singhaleela, closely connected with whom are the Murmi. Along the lower hills are the Magar, who extend to the west as far as Palpa. Somewhere about here we should apparently place the Brahmu, Chepang, Hayu or Vayu, and Kusumbha. In Central Nepal are the Newar, Pahri, and Bhramo, a dialect of Magar, also the Darahi or Dorbi, Danwar and Paksya. The Tharu live in the Terai, between Chumparum and the Khatmandoo valley, as far west as the river Gandak. These last four are classed among Indo-Germanic languages. The rest are Turanian, with more or less infusion of Hindi. The Parbattia or Paharia, a dialect of Hindi, is spoken all over Nepal and is the court language.

West of this again comes the Palpa, then the Thaksya, Sunwar, and Sarpa, the dialects of Kumaon and Gurhwal, which carry us on to the Milchan of Kunawar, the Hundisi, and Tibarskad north of it.

West of this come the Dogra dialects of the Punjab hills.

On the Southern Assam frontier we have the numerous Naga and Singpo dialects, the Mikir and Angami, the languages of the Khassia and Jaintia hillmen, the Boro in Cachar, and the Garo in the hills of that name.

The Kooki occupy parts of Tipperah and Chittagong, and the Mug race are in Arrakan and Chittagong.

The Bhot race.—From Simla, for several hundred miles to the east all the passes through the snowy range are occupied by the Bhoti. They have a monopoly of the trade across the Himalaya, are carriers, loading the goods on the backs of sheep.

From Kashmir, eastwards, all the easily accessible portions of the Himalaya are occupied by Arian Hindu as far as the eastern border of Kumaon and the Kali river separating Kumaon from Nepal—the Tibetans being here confined to the valleys about and beyond the snow. People of Tibetan blood have migrated into Nepaul, throughout its whole length, and have formed mixed tribes whose appearance and language is more Tibetan than Indian, but whose religion and manners are hindu. East of Nepaul, in Sikkim and Bhutan the hindu element almost disappears, and the Thibetans are altogether dominant.—(*Ann. Ind. Adm. Vol. XII. p.* 63, 78. *Campbell, p.* 147-8, 168.)

Nepal, in the west, has the Gurong and Magar tribes, small, with features of an extreme Mongolian type, full of martial ardour and energy. They are known as the Goorkha soldiers. They have considerable intellectual ability.

The Newar of the valley of Nepaul are the cultivating peasantry, have Thibetan features with a fair and ruddy complexion. The language of the Magar, Gurong and Newar is chiefly Thibetan. Further east are the Kerani, Murmi and others.

The Sutlej people are amiable and gentle, free of low cunning, having the appearance of a mixed race between the Tartar and the common hill men. They are fair, well made and strong, but are filthy and indigent. The women have a toga fastened round the waist.

Beas.—Polyandry prevails in the Beas valley, but the general immorality is ascribed to the large numbers of Yarkundi traders.

The Kangra people are sturdy, honest and independent.

Most of the traders of the snow valleys have some members of their families residing at Daba or Gyani on the Nuna-khar lake. The great body of the hill men are Rajputs, there are a few villages of brahmins, their residences are respectable, and occupy the more elevated portion of the village site, the huts of the Dom or Hali being on a low range. The Dom are hereditary bondsmen to the Rajputs, *Basgi* also dwell there, and are, both men and women, singers at the temples. The men of all castes in the hills are short and of poor physique; they look worn and get deep lined on the face at a comparatively early age. The young women are often extremely pretty, those living in the higher and colder villages, having, at 15 or 16, a complexion as fair as many Spaniards or Italians, and with very regular features. But they grow darker as they advance in years, and become very plain.

Maryul or Lowlands, from mar, Tibetan, low, and yul, land, are the non-Chinese portions of the Bhot territories—arranged by Strachey as that of Bulti, which is the mahomedan name, and includes Hasora, Rongdo or Rongyul; Shigar, Skardo or Bulti Proper, Parkuta, Tolti, Khartaksho, Kiris, Khaypalu and Chorbat: and the buddhist Ladak in which we have Spiti, Zangskar, Purik, Suru, Hembaks (Dras;) Ladak Proper or Le, Nubra, Jankstee Rong, Rupshu and Hanle. In this list Lahul, Hungrung and Kunawar are omitted as Indian; whilst Hasora is treated as Bhot.

Sub-Himalayan, is a term originated by Mr. B. Hodgson, to distinguish all the mountains and their inhabitants below the snowy range. But the term is inappropriate, as it includes precipitous mountains, 8,000 and 10,000 feet high, and people dwelling in them, higher than the highest mountaineers of Europe.—*Campbell, p.* 46.

Bhot, according to Latham, is a word traceable under the appellations of *Bult* in Bultistan: *But* in Butan; *Bet* in Thibet, or in such words as the Bhooteya or Bhotiya; and, in ethnology comprises the Little Tibetans, the natives of Ladak, the Tibetans of Tibet Proper, and the closely allied tribes of Butan. Balti, or Baltiyul is called Palolo or Balor by the Dard and Nang Kod by the Tibetans. It is preserved in Ptolemy in Byltæ. The Bhot country is frequently called Skardo or Iskardo from the name of its well known fort and capital. Balti proper is a small table land, and with that of Deotsu, is about 60 miles long and 36 broad,—the mean height of its villages above the sea is about 7,000 feet. The Balti, the people of Little Thibet, the Byltæ of Ptolemy, though Tibetan in language and appearance, are all mahomedans, and differ from the more eastern Tibetans of Le (who call themselves Bhotia or inhabitants of Bhot,) by being taller and less stoutly made. Their language differs considerably from that of Le, but only as one dialect differs from another. The Bhot of Ladak is strong, hardy, short and square with a decidedly Mongol physiognomy—by which is meant a flat face, broad cheek, depressed nose, very large ears, oblique and narrow eye curtailed at the corners, black hair and low stature,

their average height being 5 feet 6·1 inches: the skulls are less Mongolian, having a capacity of 72 cubic inches, 80 cubic inches being a fair capacity for a European.

The grand Lama is a Bhot. The ordinary monk or priest in Tibet is the Gylong:—above whom are the Lamas or presidents, and below whom are the Tohba and Tuppa. The Tuppa is a probationer who is admitted into the establishment to which he would attach himself at the age of 8 or 10, and receives instruction accordingly. At 15, he becomes a Tohba, and at 24 a Gylong, provided his acquirements be satisfactory. There are two sects, the Gyllupka, who dress in yellow, and the Shammar in red, the Shammar Gylong being allowed to marry. The Bhot of the Tibetans have been extending westward. As a general rule, the Himalaya divide Hindustan from Bhotland, but there are Bhot in several parts south of the crest of those mighty mountains in Garhwal and Kemaon. The people of Le, the eastern Tibetans call themselves Bhotiah, or inhabitants of Bhot. They are not so tall and are stouter made than the Tibetans of Balti or little Tibet, who though Tibetan in language and appearance are all mahomedans.—(*Dr. Thomson's Travels in Western Himalaya and Tibet, p.* 247. *Latham's Ethnology. A. Cunningham* See Balti; Byltæ; Dard; Gangri Range; Kailas; Kara-koram; Ladak; Tibet.)

Little Tibet is occupied by the Bhot race. Tibet, in the language of Ladak is pronounced Bod, and in Tibetan Bod-Pa, whence the word Butan of the plains applied to Tibet. Tibet is called Se-Tsangiby the Chinese. Tibet is divided into Upper, Middle and Little Tibet, and extends from Lhassa to Gilghit, a distance of 1,200 English miles. Little Tibet contains about 12,000 square miles, is about 170 miles long, and lies between 74° and 76° 35′ E. Little Tibet or Bultistan is called by the Kashmiri Sri Butan. Tibetan districts are Khapolor, Chorbad, and Keris, on the *Shayok* river. Khartakshe, Totte and Parguta on the *Sing ge chu; Shigar* on the *Shigar* river, and Balti and Rongdo on the Indus.

Tibet is mentioned by Abu Zaid ul Hasan in A. D. 915, by Ibn Haukal in A. D. 950, by Abu Rahan in 1030, and by Edrisi in A. D. 1154. Some suppose that Marco Polo entered Tibet, but the wonderful stories which he tells of its people indicate that he wrote from hearsay. Marco Polo sojourned in the hills of Badakshan for the sake of his health, and he describes the countries of Wakhan, Pamer, Bolor, and Kashmir.—And, notwithstanding the wide-spread fame of Prester John, the first Europeans seem to have visited this country in the middle of the seventeenth century. Yul-Sung or L'hassa, the residence of the grand Lama, is the capital of Butan or *Northern* or Upper Tibet. Leh or Ladak is the chief town of that part of Butan called Middle Tibet; and Iskardo is the principal place in Little Tibet. The Bulti or natives of Little Tibet say that Ladak, Iskardo, Khopalu, Purik, Nagyr, Gilghit and Astor, are distinct Tibets. The people of Ladak are budhists; those of Little Tibet are shiah mahomedans. In their marriages the bride comes to the house of the groom. Cultivation in Little Tibet is carried on entirely by irrigation. The language of Tibet has thirty simple letters, out of which fifteen different sets are formed, which may be used with a prefix of some other letter. Thumi Sambhuta was the first who taught the Tibetans the use of the Kashmirian characters, which remain unchanged to this day. More rain falls in Tibet than in Ladak, approaching even to a rainy season. Slavery is a Tibetan institution. Polyandry is common. The gravel of its steppes yields gold, but the value of the crude borax of its lakes is far greater than its precious metal. The tea trade of Tibet is carried on in the form of blocks, weighing about 8 lbs. and which sell at from 12 to 48 shillings each. According to Dr. Scott, in Vol. XV of Asiatic Researches, "when the Boti of Upper Tibet fight with a Deb Rajah or Governor, or with Pilos, if any one be killed, both parties rush to obtain the body, and the successful party take out the liver and eat it with butter and sugar. They also mix the fat and blood with turpentine, and make candles which they burn before their idols. The bones of persons killed in war, are used for musical pipes. They make beads from the skulls or set them in silver as water cups to be used in their religious ceremonials.—(*Cunningham's Ladak. Latham's Ethnology. Thompson's Travels.*)

M'hon is the name given in Tibet to all the hill people between the plains of India and Tibet.—*Mason.*

The Tibetan and Nepalese are Mongols, the Tibetan stout, fair, lank-haired.—*Campbell, p.* 48.

In Tibet, the sovereign Lamas are deposited entire in shrines prepared for their remains which are ever afterwards regarded as sacred, and visited with religious awe. The bodies of the inferior Lamas are usually burnt, and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony—some are carried to lofty eminences where they are left to be devoured by ravens, kites, and other carniverous animals. But they also have places surrounded by walls where the dead are placed.

The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones, paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the Lamas. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road.—(*Timkowski's Journey to Peking, Vol. II. p.* 312.)

In Spiti, in the N. W. Himalaya, when a person dies, the body is sometimes buried, or burnt or thrown into the river, or cut into small pieces and burnt, admonitions are made over the body to the departed spirit, such as do not trouble yourself, you cannot enter it (meaning the dead body,) in summer it quickly becomes corrupt, in winter it freezes and is too cold for you.

Chaprung, in Long. 79° 33′ E., and Lat. 31° 27′ N. is described as a large populous place. When any man of property dies, they bruise the body to pieces, bones and all, and form it into balls, which they give to a large species of kite, which devour them. These birds are sacred, kept by the Lamas, and fed by them, or by people appointed for that purpose, who alone approach them: others dare not go near them, perhaps from superstitious motives, for they are held in great fear. This ceremony is very productive to the priesthood; an expenditure of very large sums (many thousand rupees, said our informants), being made on the decease of any great man, and the Lamas receiving presents of very fine and expensive caps. Poorer people are sometimes buried, and at others thrown into the river.—*Fraser's Himalaya Mountains, p.* 338.

Chak or Jag and the Drok or Brog are Bhot occupants of the central part of northern Tibet. Mr. Hodgson supposes them a mixed race joined together for predatory purposes.

The Hor or Hor-Pa. are termed *Kao-tse* by the *Chinese*, but this race call themselves Ighur. They seem to be Bhot. They dwell on the north western frontier of Tibet, on the confines of the Turk districts of little Bokhara. Some of them are mahomedans, and Mr. Hodgson considers them to be Turks.—(*Latham's Ethnology.*)

Kohistan, literally hill country, is a term commonly applied to mountain tracts on the N. W. frontier of British India.

In the *Kohistan of Cabul* the people occupy partially the valleys of Ghoribund, Punjir, Nijrou, Tagow, Alishang, Alighur and the lower Kuner. To the south-east, the Kohistan extends to the hills of Tagow, and further away to Lughman, the Lamghan of Baber, and so called, according to him, because the tomb of Lamech, the father of Nuh or Noah is to be seen there. From Charikar to Jelalabad the road is open, and it is supposed that Alexander, whether he re-crossed the mountains at Bamian or at Beghram marched by this route towards India. On a detached and comparatively low hill, a whitish streak is observed, extending from the summit to the foot of it. This is the Reg-rawan, or running sand mentioned by Baber, The natives say that it runs up again, and that it is never diminished; and that there is a cave at its foot where noises are heard. It has been described by Burnes, Vigne and other travellers.

The *Kohistan of Jullandhur* is interesting ethnologically. The revenue of the rajah of Mundi is reckoned at four lacs of rupees a year, nearly the whole of which is derived from salt and iron mines, and the half is paid to the British Government. (*See Moorcroft's Travels in Journal of the As. Society, p,* 387.) The hamlets in Kooloo, near the Tiri pass, in the Jullandhur Kohistan seldom contain more than from fifteen to twenty houses, but generally not so many. Single houses are numerous, and, from their being scattered amongst the fields, give an agreeable variety to the bold landscape. This distribution of houses arises from the lands available for cultivation being usually of small extent and widely separated, and consequently unable to support large communities. It is also imperatively necessary for the husbandman not to place a ravine or any other impediment between his hut and his fields, as all communication with them would probably be cut off during the greater part of the rains, an important season of the year in India.

The natives of Sookeyt, Mundee, and Kulu, in the Kohistan of the Jullundhur, have sallow complexions and appear to be of the same race as the inhabitants of Busahir. In fact many of the coolies employed as carriers between Simla and Kalka are men from these states, who are attracted there by the wages, which average one anna a day in their own districts, but from four to six annas on the left bank of the Sutlej. The men are generally tall and strong, but few of them are handsome. Many of the young women are pretty, but at the age of 20 or 25 become coarse and stout. The dress of both sexes is nearly the same. It consists of a drab-colored woollen frock, trowsers of the same, or of leather, and a flat skull cap, generally black, with sandals made of coarse grass. The woollen cloth called puttoo is manufactured by themselves and resem-

bles thick course blanketing. It is sold in pieces of 10 inches in width and about 21 feet in length at 2 Rs. 8 As., or 3 Rs. a piece according to the quality. Both sexes wear a girdle around the waist, and the men generally go bare-legged during the hot weather. They seldom if ever, wear shoes, the richer classes however, wear worsted stockings and shoes when they go out. The women, instead of the cap, sometimes have a colored piece of cloth tied round their head and occasionally twist their hair into one long plait, the end of which is ornamented with slips of coloured cloth or shreds of worsted.

The women of Kulu and the adjoining states are inordinately fond of ornaments. Both men and women suspend round the neck several amulets of mother of pearl engraved with mystical figures. Polygamy is common.

The Chamba-gaddee race, of the Chumba range, claim to be Rajputs, and style themselves all of the Guddee-jat. They may always be known by their peculiar comical caps, with lappets to turn over the ears.

The Lahuli people are a race distinct from the people of Kulu or of the Chumba range. The Lahuli men are short, but sturdy, very ugly and very dirty. Their women are decidedly plain. The dress of both sexes is a black woollen frock with drawers, and a woollen plaid, with black circular caps of felt. The women let their hair fall from the back of the head in long plaits.

Marri, a range of hills on the right bank of the Jhelum, overhanging the platform of Rawulpindi. It is a narrow ridge separating two deep river valleys, whose vegetation is quite tropical.—*H. f. et T.* 213.

Kashmir valley is the upper part of the basin of the Jhelum. It is bounded on the N. by the axis of the Himalaya averaging 14,000 feet, over which a remarkable depression, the Zoji pass, elevated 11,300 feet, leads into the Tibetan valley of Dras. To the south, the Pir Panjal, averaging 12,000 feet, and Banihal ranges separate Kashmir from Rajaori and Jamu, and on the east, it is separated from Kishtwar by the Wardwan range. The trade between Kashmir and Jamu is estimated at £384,850. Between Kashmir and the Panjab several practical routes exist, but the most frequented is by mount Jammu and Banihal, over 10,000 feet. Kashmir imports yearly £184,000 worth of the produce and manufactures of India and Europe.—*Sir R. Montgomery's Report.*

Eastward of Kashmir, are the Bhot race in Bulti and Ladak. Bhot means Tibet: Bhotan, the end of Tibet.

Bulti includes Hasora, Rongdo, Rong-yul, Shagar, Skardo, Bulti, Parkuta, Tolti, Khartaksho, Kiris, Khaybalu and Chorbat.

Ladak or the Bot-Pa, includes Spiti, Zangskar, Purik, Suru, Hembako (Dras) Ladak proper or Le, Nubra, Rong, Rupshu and Hanle.

The language of the Bhotiah of Tibet, the Bhutiah or Tibetan, is also that of Bhutan and is a connecting link between the polysyllabic and monosyllabic languages.—*Latham. Garhwol* is to a large extent Bhot.

Dras, adjoins Kashmir, the inter-communication being by the Zoji pass, a remarkable depression of 11,300 feet, through which flow the moist winds of Kashmir, and Dras is the most humid and fertile province of Tibet.

Balti extends from the confines of Ladak, westward to the great bend of the Indus. It has Dras and Hasora on its south, and the Kouen lun or Mustagh on the North. The bed of the Indus at Tolti is 7,500 feet; at Iskardo the capital, 7,000; at Rondu 6,200, and at the great bend about 5,000.

Skardo, or Iskardo Little Tibet, is thus called by the people. It was conquered in 1840, for the raja Gholab Singh, by his general Zorawar Singh, with his Dogra troops. The people grow corn, irrigating the land, and using manure. They are fond of out-of-door manly games. Skardo, or Iskardo, or Little Tibet, is a Bhot tract, but the people are mahomedans. Skardo, is also designated Balti, Baltiyul, Balor, Palolo, and Nang Koa. The people are strong and hardy, they grow corn and cut water-courses like the people of Rongdo. Skardo is called by the Lamas of Ladak, *Skarma-m Do*, meaning the enclosed place or the starry place.

Iskardo is a mahommedan corruption of the Tibetan name Skardo, or Kardo as it is very commonly pronounced. The mahomedans of Asia, as a rule being unable to pronounce two consonants together, but prefix a vowel, as Mr i-Smith: Mr. i-Stewart. The mountains which surround the Iskardo plain rise at once with great abruptness, and are very steep and bare. The houses of Iskardo are very much scattered over a large extent of surface, so that there is no appearance of a town.

rGylfo, the title of the ruler of Iskardo, or little Tibet is derived from two Balti words rGyl, powerful, and Fo, a man. The queen is styled rGgyl-mo. Mr. Vigne points to this as the original of the title of Guelph belonging to the royal family of Great Britain, and of the term Gylfe-koniger, still used to designate the old kings of Denmark.

Occupying Little Tibet are the Byltæ of Ptolemy. They have on the east the Khor country which is inhabited by a people supposed to be the Chaurancei-Scythæ of Ptolemy.

The Balti of Iskardo also dwell in the valley of the Indus, above the junction with the Ghil-

ghit river. They are a stout race, their features indicate a Tibetan origin, and their language is decidedly so. They are shiah mahomedans, a quiet people, and the Kashmir ruler has enlisted many of them.—*A. Cunningham. Campbell, pp.* 146-7. *Hooker, f. et Thomson, p.* 224-225. *Latham's Descriptive Ethnology. Dr. Thomson's Travels in Western Himalaya and Tibet, p.* 219.

Kulu.—This province consists of the mountain basin of the Beas, and the west bank of the Sutlej. Sultanpoor its capital is elevated 4,584 feet. The chain bounding the Sutlej on the west, is considerably higher than that on its east bank, and is crossed into Suket, by the Jalauri pass, elevated 12,000 feet. The province of Chamba bounds it on the west and the physical features of Kulu and Chamba are similar. The poorer Kulu people wear only a blanket, wound around the waist and one end flung across the shoulders and pinned across the chest, men and women often dress alike, but the long hair of the women is plaited in one tress.—*H. f. et Th. p.* 203.

Spiti Kanawar.—In the upper valleys of the Sutlej, in Spiti, and Kanawar are mixed races exhibiting much Tibetan blood, and in religion, apparently, more buddhist than hindu. The Tibetan colony at Mohasoo just above Simla, are powerful ruddy looking people entirely unlike Indians, their women are industrious but very unattractive.—*Campbell, p.* 146.

Jamu, in the valley of the Chenab is 1,500 feet above the sea, and the bed of the Chenab is a little above 1,000 feet. The boundary mountains of Jamu rise 12,000 to 14,000 feet.

Kishtwar occupies the middle part of the Chenab valley between Lahul and Jamu. The elevation of the Chenab about the middle of the province is from 6,000 to 7,000 feet. Kishtwar is separated on the North from the Tibetan valleys of Zanskar and Dras by the axis of the Himalaya which is crossed by the Umasi pass into Zanskar, elevated 18,000 feet, and by other passes from Wardwan into Dras. The Wardwan district is to the west and to the south Kishtwar is separated from Chamba by a range of 10,000 to 14,000 feet of elevation.

Zanskar occupies the north slope of the main Himalayan chain parallel with Kishtwar on the south. Padum the capital is 12,000 feet above the sea.

Ladak lies between Nari-Khorsum on the S. E. and Balti on the N. W. a distance of 230 miles, lying to the N. of Dras, Zanskar and Parang. In its E. and W. course, the Indus descends from 14,000 feet at Dem Chok to 10,500 feet below Le and at 8,500 feet enters Balti.

Ladak. is occupied by the Bhot race. It is a province of Kashmir. Between the British territory and Ladak and the countries beyond, a trade exists in Shawl wool, and Charas which are taken in exchange for opium the produce of the Kulu Hills, otter skins, cotton piece goods, spices and drugs. In the Ladak frontiers of the western Himalaya, the Bhots salute by raising the back of both hands to a height even with the forehead and then repeatedly describing a circle in the air with them, by dropping the fingers downwards and turning the palm inwards. This is similar to the mahomedan practice of Billaen-lena, where a woman is supposed to take upon herself all the evils which would befal the person whom she addresses.

The Ladak country is called La tag in Tibetan. Ka-chan-pa, or Snowland, Mar yul or Redland, or Lowland. It is bounded on the north by the Kara-koram mountains, which separate it from the Chinese district of Kotan ; on the East and South-East, are the Chinese districts of Rudok and Chumurti ; and to the South are the districts of Lahul and Spiti now attached to British India, and formerly belonging to Ladak. To the West lie Kashmir and Balti. Its greatest length is 290 miles and breadth 240 miles, and its whole extent is 30,000 square miles. Ladak is politically divided between the rajah of Kashmir and the British. Ladak, anciently was called Kie-cha, by the Chinese, it is still called Kha-pa chan or Kha-chan, abounding in snow or snow-land, and the people as Kha-pa-chan-pa or Kha-chan-pa, men of the snowy land. The A-khassa regio, of Ptolemy is no doubt Kha-chan-yul, Snow land or Ladak. It is one of the most elevated regions of the earth, and the joint effect of elevation and isolation, amidst snowy mountains, produce perhaps the most singular climate in the world. The plains between 16,000 and 17,000 feet are covered with wild horses and hares and immense flocks of domestic sheep and goats, while the slopes of the hills up to 19,000 feet abound with marmots and alpine hares. Both meats and fruits are cured by mere exposure to the air, a sure indication of its intense dryness. It seldom snows and scarcely ever rains. Its mountain ranges stretch in parallel lines from South-East to North-West, determine the course of the rivers and form the natural boundaries of the country. The general aspect of Ladak is extreme barrenness, but many fertile tracts occur along the rivers, covered with luxurious crops. The yellow plains along the Indus, are covered with flocks of the shawl-wool goat, and all the principal thoroughfares of the country are dotted with numerous flocks of sheep laden with the merchandise of China and of India. Burning heat by day is succeeded

by piercing cold at night and everything is parched up by the excessive dryness of the air. During the short summer, barley ripens at 15,000 feet, although the temperature falls below the freezing point, every night. Ladak, is in general of the buddhist faith. The valley of Le or Ladak Proper, Zanskar, Dras, Suru and Purik, are all buddhist, and cultivation goes on in Zanskar on the Indian side of the Indus and at Nubra Nira 12,000 feet, on the North side of the Indus, Yul-chung 13,000 feet, and 14,000 and 15,000 feet at Phutaksha. Ladak is agricultural but enjoys a transit trade, and much labour has been expended in constructing roads through Kashmir, Jummu, Kullu, Lahul—leading to the Punjab, Kabul, Lhasa, Chinese Tartary, Khoten, Yarkend, Little Tibet and Balti. All these follow the lines of rivers, cross passes 18,000 feet high and lead over rivers by ferries, by enflated skins, and suspension bridges. Three varieties of the sheep and three of the goat are domesticated in Ladak, and the Yak, domesticated, is used for carrying loads. The Dso, a hybrid between the yak and cow, is a beast of burden. Rain fell ten times during the two years that Moorcroft remained at Leh. Its population amounts to 433 persons in the square mile. In Ladak, the nuns and monks bear a large proportion to the population. It was subject to L'hasa, until A. D. 1834, when it was seized by Zorawur Sing, general of the raja of Jammu. Ladak is inhabited by a peculiar race who call themselves *Bot-pa* who speak a peculiar language called Thibetan and who profess the religion of Buddha, under a hierarchy of monks called Lamas. The term Thibet is unknown to the people as also to the Indians who call them Bhotiya and their country Bhutan. Ladak belongs partly to the Jammu Rajah and partly to the English, and is Bhut along the banks of the Chandra and Bhaga, but Hindu after their junction. To the North of the Ladak country, the people of Yarkand and Kotan speak Turki. To the west, beyond Balti, the people of Astor, Giljit and Hunza Nager, speak different dialects of Dardu, while the Kashmiri have their own peculiar language. To the south, the people of Chamba, Kullu, and Bisahar, speak a dialect of Hindi, and to the East and South-east, the people of Rudok, Chang Thang, and Ngari speak Tibetan only. Moorcroft lived for two whole years in Ladak, from September 1820 to September 1822. In Ladak proper, is the valley of Le, the main stream of the Indus. *Dr. Latham's Descriptive Ethnology.—Sir R. Montgomery. H. f. et. T. p.* 209, 224-225.

Khor, a territory S. E. of Ladak and eastward of the Bylteæ. Its people are supposed to be the Chauranœi Scythæ of Ptolemy.—*A Cunningham.*

Nubra, Pangong and *Rodok* districts, in the basin of the Shayuk river and its affluents, lie on the S. flank of the Kouenlun from Balti to Nari, and have Ladak as their southern boundary. With the exception of Nari, this is the most lofty and most sterile part of Tibet, the axis of the Kouenlun being probably upwards of 18,500 feet, the valleys 16—17,000 feet and numerous peaks rise 20—23,000 feet. The Karakoram pass is 18,300 the salt Pangong lakes 13,400 feet.

Changpa, are a semi nomade tribe near the Pangong Tso pass. They dwell, in their grazing grounds under huts (galkol) made of the yake hair. The people there call themselves Bot.

Chamba, consists of the mountain basin of the Ravi, about 5,000 feet. It has Kulu on its east; in the N. W. it is separated from Jamu by a chain of mountains, through which the Padri pass, elevated 11,000 feet, leads from Jamu to Chamba feet. The Sach pass, elevated 14,000 feet leads over the range in the north, dividing Chamba from Kishtwar.—*H. f. et. T. p.* 22,204.

The Chumba-Guddee race dwell in the Chumba hills, in the Himalaya. They say they are Rajputs and of the guddee-jat. They are somewhat short, but strong, and cleanly in their habits. They are sharp and able to impose on their less knowing neighbours. Most of the witch finders are of the Chumba-guddee race, and the race may always be known by their peculiar conical caps with lappets to turn down over their ears like an English travelling cap. When Europeans made their first appearance in the Kangra valley, these men had very slight notions of caste, and would eat or drink anything the Europeans gave them, but since their contact with the natives of the plains they have become as bigoted as any hindu. The Gaddee are hill shepherds about Kangra and elsewhere.

Lahul is a British province in the valleys of the Head Waters of the Chenab, the bed of which is nowhere below 8,500 feet of elevation. It is everywhere surrounded by lofty mountains, except towards its north where it is coterminous with Kishtwar. To the south it is bounded by the mountains north of Kulu where it is crossed by the Rotang pass, elevated 13,200 feet, an exceptional depression, the rest of the chain being very lofty. To the west, a portion of the Himalayan axis divides it from the Tibetan province of Piti and is crossed by the Kulzum pass elevated 14,850 feet, and to the north a continuation of the same axis separates it from the Tibetan province of Zanskar and is crossed by the Baralacha pass, elevated 16,500 feet.

Parang and *Sanzkar*, *Piti* and *Guge* are Tibetan districts, all east of Piti is Tibetan.

Kangra fort is a short way within the outer ranges of the Himalaya. Kangra is situated in latitude 31° 57'; Longitude 76° 4'. It is a British station and the hills around it are extensively planted with tea.—*H. f. et. Thom. pp.* 190, 203, 208.

Gaddi, A hill shepherd race about Kangra and elsewhere.

The following are the heights of passes.

Noorpoor...	1,665*ft.*	Nari Ghaut.....	2,009*ft.*

Kangra.....	2,647	Sekunder ditto	5,430
Joala Mukhi,	1,805	Jaintri ditto	5,632
Tira.....	2,470	Gogar pass.....	4,900
Mundi	2,637	Tiri ditto.....	6,484
Sultanpoor..	4,584		

Journal of the Asiatic Society of Bengal, p. 408. *No. CCII, April* 1849.

Simla is on the main (Cis-Sutlej) chain, and has an elevation of 7,000—8,000 feet; a little further north it rises at Nagkunda to 9,300 and to 10,700 at the Peak of Hattu. The Chor mountain, one of the most remarkable isolated peaks in the Himalaya is 12,100 feet. It is situated on a branch of the main (Cis-Sutlej) chain and is only thirty miles from the plains, the bed of the Sutlej is everywhere very low, being at Belaspur 1,500 and at Rampur 3,300 feet. The plains at the foot of the Simla hills attain 1,000 feet elevation and the outer ranges are lower than those of Gurhwal and Kumaon. Rupar, close to the Sutlej amongst the outer hills, is under 1,000 feet: Subathu, a little further in, is 4,200 and Kassowlee 6,500 feet. —*H. f. et. T. p.* 202.

Koli, is the name given to the lower class of cultivators in the Simla hills.

Kanait, an agricultural race in the Simla hills and east of the Sutlej. They are a local tribe holding most of the land on the Simla hills. They are inferior in position to Rajputs, more perhaps of the level of the Kurmi and Lodhi, but they are often educated, and are generally ministers to the Rajput chiefs. Their women are very nice looking, and all the tribe who are not (in the upper hills) in contact with Tartars are quite Arian, though not very large. In certain places is a partial and local practice of polyandry among them, but it is not the general custom of the tribe.—*Campbell, p.* 88, 97, 123.

Garhwal, is bound on the west by Tons, on the North by the continuation of the Cis Sutlej chain, elevated about 15,000 or 16,000 feet. The level of the plains at the foot of the hills is 1,000 feet, both at Hardwar and Saharunpore, and of the Dehra Dhun, within the first range of hills, 2,300 at the village of Dehra: Masuri is 7,000 feet: Kedarnath is 11,800, Bhagiratti valley at Tirhi 2,300. Khalso at the junction of the Tons and Jumna, is only 1,700 feet.—*H. T.* 201.

Guge or *Hundes*, 120 miles long and 15 to 60 broad is commonly known as the plain of Tibet. It is comprised between the Himalaya and its Cis Sutlej branch, it extends from the lakes of Mansarowar and Rakastal, down the course of the Sutlej to Kunawar. It is wholly under Chinese influence. Its undulating surface is covered with an alluvial deposit, declining from 15,200 feet, the level of the lakes, to 10,000 feet at the confines of Kunawar. The Sutlej and its feeders traverse it, flowing in deep narrow ravines 1,000 to 3,000 feet below its mean level.—*H. f. et. T. p.* 223.

M'nah-ris or *Nari*, is the Tibetan name for the north western part of Tibet. It is also written *Gnari*: it is a Tibetan Chinese province, connected with British India, by the five Bhot passes in Garhwal and Kumaon. The Chinese viceroys are Tibetans with 200 Mongol or Turk troops or perhaps Mantshu Tartars, as they are said to use horseflesh, which no Tibetan and no Chinese would do. *Nari*, is also called Nari-Khorsum, is enormously lofty, utterly barren, and almost uninhabited, except on the lowest part of the ravine of the Indus. It is wholly under Chinese influence. It was entered by Moorcroft.—*H. f. et. p.* 201, 223, 225.

Chango, are a tribe of Hungrung Tartars occupying 378 square miles.

Changpa, are a semi-nomade tribe near the Pangong Tsi pass. They dwell in their grazing grounds under huts (galkol) made of the yak's hair. The people there call themselves Bot.

Chang-Thang, dwell on the northern plains, to the north of Ladak, supposed to be the Chatæ Scythæ of Ptolemy.—*A. Cunningham.*

The *Rawat* of Kamaon, lead a wandering and uncivilized life in the forests on the eastern borders of the district.—*Wils. Gloss.*

Kamaon is a British province, situated in the tract of hills lying between the western branch of the Gogra, known as the Kali-Naddi, and the river Ram Ganga. For some time the town of Almorah was recognised as the capital, but formerly Champawtee enjoyed that distinction. The face of the country is similar in character to that of the neighbourhood, but it is less savage and rough than Garhwal. The hills are less lofty, and the valleys more susceptibe of cultivation, and better cultivated. The people are said also to differ from the inhabitants of Garhwal and the states to the westward, they are of a softer and more effeminate nature, inclined to indolence, and are meek and enduring. It is further stated that the men are more engaged in domestic occupations while the agricultural labours are conducted by the women; an unnatural divison of duties, which is said to have induced polygamy in a very prevailing

degree, every one being anxious to secure for himself as many field laborers as possible. In general they seem to have made much farther progress towards refinement, than their neighbours in their manners and customs; even in their dress they approach more to the people of the low countries than those of the neighbouring hills. They generally wear cotton garments, and on their head a cotton cap instead of the low country turban; but those in the low parts seldom wear any of the woollen or hempen manufactures of the country. Kamaon and all the provinces to the west were ceded to the British on the 15th May 1815, by a capitulation signed by Umr Singh by which the Sikhs retired to the east of the Kali-Naddi or Gogra.

In the hills of Kamaon in the forests from Sabna on the Sarda, to Chandpur on the Ganges, is a tribe called Bhuksa. They claim to be descendants of the Powar rajput, to have been expelled from Dhar and taken refuge first in Oudh and then in their present location.

The Rajivaru of Kamaon, speak Telugu. They practice medicine.

The tongue spoken as the hill dialect of Kumaon is in the main Hindi, but has affinities to the Bengali, in some of the popular terminations, in the verb to be and in some other particulars. The Hindi language spoken in the high country immediately south of Behar, has peculiarities of this kind.

Kumaon, as at present limited is bounded on the east by the Kali, separating it from Nepaul, its western boundary is the Alaknanda branch of the Ganges and its western feeder the Mandakni; on the north it is bounded by the axis of the Cis Sutlej Himalaya, and on the south by the upper Gangetic plain. Almorah the capital of the province is elevated 5,500 feet. The Terai at its base varies from 600 to 1,000 feet. The mountains on the outer ranges rise in many places to 7,000 feet and in the interior attain 10,000, while still further north, many rise above 20,000 and a few above 24,000 feet. The loftiest are never on the axis of the Himalaya, which is still further north, and whose great mean elevation may be judged of from that of the passes over it, viz.

Lankpya pass	18,000	Niti pass	16,800
Lakhur ,,	18,400	Mana ,,	18,760
Balch ,,	17,700		

Naini Tal lake is 6,500 and Bhim Tal 4,000; Binsar mountain is 7,500.

In the tropical zone of Kamaon, a dense forest skirts the base of the mountains.—*Fraser's Himalaya Mountains, p.* 537. *Wilson's Gloss, Campbell, p.* 68. *Hooker and Thomson.*

Kunawer is usually divided into Upper and Lower Kunawer and includes the upper part of the Sutlej basin to the borders of Piti and Guge in Tibet. Its general direction is N. E. and S. W. It has two parallel bounding mountains. On the S. E it is bounded by the Cis-Sutlej mountains and to the N. W. by the mountains of Piti. The mountains which descend from the two parallel bounding chains of Kunawer are very lofty. They are crossed in the usual route into Tibet by the Werang pass 13,200; by the Runang pass 14,500; the Kuibrang in the North across the Cis-Sutlej is 18,300. The Shatul pass across the Cis-Sutlej leading to Simla is 15,560 and the Hangrang into Piti is 14,800. The passes to Upper Piti are more lofty. The bed of the Sutlej from 8,000 to 9,000 feet at the upper part of Kunawer, descends to 4,000 feet in Lower Kunawer.

In Lower Kunawer, the preponderating language is Hindi and is called Milchan, but the Bhut preponderates in Upper Kunawer, The Lubrung or Kanam and the Lidung or Lippa are varieties of the Milchan. In Sungnum, the word Theburskud is used to designate all variations from the regular form of speech. In Kunawer, budd'hism decreases in the central districts and disappears in the southern, where brahminism in an impure form occurs with local gods and irregular priests, every hill having its deota or genius, Polyandry is general in Kunawer from the higher classes and lowest chamars, one family having one wife, the elder brother being the more special husband. It is called Koorpa.

The tract of country belonging to Busehur, lies on both banks of the Sutlej, from lat. 31° 15′ to 32° 4,′ and from long. 77° 50′ to 78° 5′. It runs in a N. E. and S. W. direction, and the habitable part seldom exceeds eight miles in breadth. The mean number of inhabitants to a house in various parts of Kunawer is six. Polyandry, or a plurality of husbands, prevails, also, in Chinese Tartary and in the hilly tracts towards the plains. Besides this drawback on the increase of the population, there is another peculiar to Chinese Tartary and the adjoining countries; that is, celibacy, which is professed by numbers of the inhabitants; and in some villages the monks or lamas and nuns form almost half the population. A tribe of Hungrung Tartars occupy 378 square miles.

Bootunte is a name given to the Tartars by the people of Lower Kunawer. They also call the Tartars Zhad, also Bhotiah, and their country is called Bhot and Bootunt. These Tartars differ greatly in appearance from the people of Lower Kunawer.—*H. f. et. T. p.* 191, 190, 206.

Dard.—A race lying along the Indus, to the westward of Ladak, who speak three distinct dialects and they use the Persian character in writing Dardu, the three dialects of

which are called Shina, Khajunah and Arniya. The Shina dialect is spoken by the peoples of Astor, Gilgit, and lower down in Chelas, Darel, Kohli and Palas on both banks of the Indus. The Khajuna, by the people of Hunza and Nager and the Arniya in Yasan and Chitral. Astor has an area of 1,600 square miles, on the left bank of the Indus. Gilgit, in Thibetan, Gyilgyid, has an area of 2,500 square miles on the right bank of the Indus. The Dard or Durd are supposed by Vigne to be the Dadicæ (Δαδιχαι) of Herodotus, and the people who now occupy the country called Dardu.

Hun or Hoon.—Amongst the Scythic tribes who have secured for themselves a niche with the thirty-six races of India, is the Hun. At what period this race so well known by its ravages and settlement in Europe, invaded India, we know not. D'Anville, quoting Cosmas, the traveller, informs us, that the white Huns occupied the north of India; and it is most probable a colony of these found their way into Saurashtra and Mewar.

It is, however, on the eastern bank of the Chumbal, at the ancient Barolli, that tradition assigns a residence to the Hoon; and one of the celebrated temples at that place, called the Sengar Chaori, is the marriage hall of the Hoon prince, who is also declared to have been possessed of a lordship on the opposite bank, occupying the site of the present town of Bhynsror. In the twelfth century the Hun must have possessed consequence, to occupy the place he holds in the chronicle of the princes of Guzerat. The race is not extinct. One of the most intelligent of the living bards of India pointed out the residence of some in a village on the estuary of the Myhie, though degraded and mixed with other classes.—*Tod's Rajasthan, Vol. I. p.* 109; 110.

Bisahar.—This range of mountains, an offshoot of the Western Himalayas, extends for almost sixty miles from the lofty cluster of Jumnotri peaks to the Sutlej below Shatul. The Bisahur peaks range in heights from 16,982 to 20,916 feet, the highest being the peaks of Jumnotri. Its passes are from 14,891, to 16,035 feet in height. The great mass of this range is granite. The people speak a Hindi dialect. The natives of Busahir, Sookeytmundee and Kulu, in the Kohistan of Jhullundhur, have all sallow complexions and seem all of the same race.

Chilas.—This country is bounded on the north by the Indus river, on the south by the watershed of the ridge over Looloosur Lake, on the east by the watershed of the same ridge as above Looloosur Lake culminating in the lofty peak of Munga Parbut; the Astor boundary marches with Chilas here, on the west to a point beyond the village of *Sareen*, where the Indus takes a turn to the south-west. Chilas affords good pasturage but lies under snow for a considerable portion of the year. The Sheen claiming an Arab descent are the proprietary and governing class. Crime is rare, women have more liberty and power than among mahomedan tribes, and breaches of chastity are punished by death. They were visited in 1866 by Dr. Leitner at the request of the Bengal Asiatic Society. Their language seems distinct from Pushtoo, Persian and Hindi and is not understood by their neighbours the Syndrace, who inhabit Durreil and Tankeer to the west of Gilgit. According to their own traditions, the inhabitants of Chilas were conquered about the middle of the 18th century, and converted to the mahomedan faith. Up to about 1840, the Kahghan Syuds received quantities of gold dust as religious dues from the people of Chilas, but when the Syuds, aided by the Sikhs, failed in an attack on Chilas, the dues were abandoned. A second attack by the Sikh nation was successful and a small annual tribute of 3 tolahs of gold dust and 100 goats is paid to the Cashmere durbar.

Gilgit.—A territory in lat. 35° N., and long. 74° E. The Indus river runs through it from N. E. to S. W. It is on the southern declivity of the Hindu Kush, between Chitral on the west, and Baltistan (Little Tibet) on the east. In the Bunnu valley there are races intermixed, of whom may be noticed the Durdu of Gilgit and Chelas. According to Burnes, the mir of Badakhshan, the chief of Darwaz in the valley of the Oxus, and the chiefs eastward of Darwaz who occupy the provinces of Kulub-Shughnan and Wakkan, north of the Oxus, also the hill states of Chitral, Giljit and Iskardo are all held by chiefs who claim a Grecian descent. The whole of the princes who claim descent from Alexander are Tajik who inhabited the country before it was overrun by Turki or Tartar tribes. To the west beyond Balti the people of Astor, Gilgit and Hunza Nager speak different dialects of Dardu, while the Kashmir people have their own peculiar language. The Bulti people of Little Tibet, say that Ladak, Iskardo, Khopalu, Purik Nagyr, Gilgit and Astor are distinct Tibets. *Burnes, Bokhara.* See Kabul, Kush, Ladak, Sikh, Tibet.

Bolar Mountains.—The mountains of Balti extend for 300 miles, from the sources of the Gilgit and Yasan rivers, in 73° to the 77° E. L., the source of the Nubra river. Bolor produces much gold. The higher mountain range abounds in rock-crystal, which is consequently called the Bilor-stone or rock crystal.

See Badakshan Himalaya, India Kara-koram Mountains. Tibet.

Rongdo, meaning the district of defiles is an elevated district on the bend of the Indus, and on the frontier of the Gilgit and Hasora countries. It is to the westward of Balti and has an area of 1,440 square miles. It is about 8,000 feet above the sea, the mean of its villages being 6,200 feet. The people are of Tibetan habits.

Piti and Hungrang are two valleys. That of the Piti river is entered from Kunawer by the Hungrang pass, elevated 14,800 feet: the Parang pass is 18,500 and leads over the range dividing the Parang from the Piti rivers.—*H. j. et. T* 223.

British India, on the north, runs on the Chinese frontiers with Butan : further west, is separated by Nepal and Sikkim and still further Ladak runs with the British provinces of Spiti and Lahul and the Sikh Provinces.

The Therai, is a forest or jungle tract at the foot of the Himalaya. No two climates and locations can be more dissimilar than those of the hills and Terai, and no races are more distinct in their habits, manners and aptitudes than the people of the hills and those of this jungle belt below. There is little or no Terai or forest belt northwest of the Saharunpur district and the Dehra Dhoon, but, thence eastwards, this belt stretches along the foot of the hills through Rohilcund, Oudh and the Bengal frontier up to Assam, and a great part of the Oudh Terai was transferred to the Nepalese. Dr. Campbell describes the people of the Nepal Terai, as a vast assemblage of bastard hindus. —*Campbell, pp.* 47, 50.

Tharu, is a very important forest tribe, who occupy all the Terai from eastern Rohilcund all along the frontiers of Oudh into Gorukpur, keeping exclusively to the Terai and forest and living where no one else can live. In physical appearance and manners they are extremely like the Boksa, but are a larger, more settled and less savage tribe. They are not particularly dark, but in addition to the ordinary breadth and flatness of face have the eye like the Chinese form. They are shy and timid, but frank and truthful, and are good cultivators, with simple implements. Mr. Campbell is doubtful whether they belong to the Negrito or an Indo-Chinese stock. The Tharu all speak Hindi, their general style suggests a resemblance to the Sontal, and to the tribes of the Central Hills, they have the same simple ways and the same belief in Bhuts and familiar spirits and there are many names of places in the hill country of Bhagulpur similar to those of the Tharu country. The Boksa and Tharu are separated from the Tibetan tribes by a great tract of very difficult country, occupied by Arian races, and their locality in the Dehra Dhoon is many hundred miles from the lowlands of the Brahmaputra, which are occupied by Indo-Chinese races.

Nepal, a kingdom in the Central Himalaya, extends for 500 miles along the Himalaya, from the western extremity of Sikkim to the eastern border of Kumaon, from which it is separated by the river Kali. Its capital, Kathmandhu, is 4,000 feet above the sea, and about thirty miles from the plains of India. The position of the axis of the Himalaya at this part of the range, has not been traced; but two giant masses project from the axis towards the Indian plain, the culminating peaks of which form a conspicuous feature from Kathmandu and even from the Gangetic plain so that their elevation has been correctly determined,—that of Dhawalgiri being 27,600 feet and that of Gossainthan 24,700 feet. By these masses, the whole of Nepaul is divided into three great river basins that of the Karnali or Gogra to the westward, that of the Gandak in the centre and that of the Kosi or Aran to the eastward. Sheopore on the water-shed between the Gandak and the Kasi, is upwards of 10,000 feet. *Nepal* lies betwixt the 27th and 37th parallels of latitude, separated from Tibet by the Himalaya mountains and bounded on the south by the British territory. The mythological history of Nepal like that of Kashmir, commences with the desiccation of the valley, for ages full of water, by a muni, called Nai muni, (whence the name of the country Naipala,) whose descendants swayed the country 500 years.

The first authentic history is B. C. 844 (?) years.

Then the Kerrat tribe of eastern mountaineers B. C. 646.

Then the Surya vansa race of rulers B. C. 178.

The Ahir, or original sovereigns began in A. D. 43.

The Neverit dynasty was restored in A. D. 470. It was one of this dynasty, Raghoba deva, who in A. D. 880, introduced the use of the Samvat era into Nepal. In the Newar year 731, A. D. 1,600, Jaya Eksha Mall (or Jye Kush Mull) divided Patan, Khatmandu, Banepa and Bhatgaon between his daughter and three sons, and one of the Bhatgaon race, in A. D. 1721, Ranjet Malla, formed an alliance with the Gurkha race which ended in his own subversion and finally in that of all Nepal.

The Gurkheli dynasty, descended from the Udayapur Rajpoots, occupied Kemaon and Noa kot for six or eight centuries prior to their conquest of Nepal in A. D. 1768. The valley of Nepal intervenes between the snowy range and the valley of the Ganges. It is occupied by several races, of whom the Newar were the prior holders. Its divisions

are Jumla, Gurkha, Nepal, Makwarpur and Morung. Khatmandu, the capital, is called by the Newar, Yi-daise, whilst the Parbattiah or mountaineers call it Kultipur. The lands of Nepaul proper are cultivated almost without exception by the Newar who arrange themselves into several castes and orders, and their peasantry into first, second, third and fourth classes. The Parbattiah tribe, called Dherwar. cultivate the western lands at Nurkale, &c, Amongst the Nepaulese, the hindu distinction prevails of brahman and khetri with their various sub-divisions, viz. of Newar confined almost to the valley of Nepal; the Dherwar and Margi, the husbandmen and fishermen of the western districts; and the Bhotiah who occupy generally Kachar, though some families are planted in the lower lands. The Bhama are said to be separatists from the Newar, who shave their heads like the Bhotiah. To the eastward of Nepaul, some districts are occupied by the Limbu, the Nagganko and others. The great aboriginal stock of the inhabitants of the mountains east of the river Kali, as in Nepaul, is Mongol: the martial classes of Nepaul are the Khas, Magor and Gurung, each comprising a very numerous clan or race variously subdivided. The Elthariah who speak the Khas language, are descendants more or less pure of Rajputs and other Khetria. The Chepang, Haigu and Kusundu are three tribes residing amongst the other inhabitants of the valley.

The better known Nepaul tribes are the

Newar.	Nagganko.	Magor.
Parbuttiah	Haigu or Haiyu	Murung.
Dherwara	Bhotiah.	Elthariah.
Margi,	Bhamah.	Kusundu.
Chepang, or	Khas.	L'hopa.
Chetang	Ghorka.	Lepcha.
Limbu.		

The people of Nepaul, amongst themselves recognize the following distinct races:—

Gooroong, principally rear sheep.
Gallia, rear buffaloes chiefly.
Kami, blacksmiths.
Sarki, tanners.
Newar, shop-keepers.
Domai, tailors (Dome).

Moormi, *Yakha*, *Mungar*, *Brahman*, *Khumboo*, *Nimboo*, chiefly cultivators.

Katmandu is situated at the junction of the Bhagmutty and Bishmutty, and contains a population of 50,000 inhabitants. A tradition is current in Nepal that the valley of Katmandu was at some former period a lake, and it is difficult to say in which character it would have appeared the most beautiful. The valley of Nepal is almost unrivalled in its fertility, supporting, as it does in comfort and plenty, a population of 400,000 inhabitants, being 300 persons to the square m. Throughout its whole length and breadth not a stone is to be found: it is well watered; its temperature is delightful, the thermometer in the hottest month seldom reaches 75°, in the coldest never falls below 30°.

In phonology the Nepaul languages have a strong resemblance to each other and to the Abor. The Lepcha is more Tibetan in its terminals than the others, having about 70 per cent. of consonants, *m* forming no less than 14.

So-Khain, "anything," becomes *tham*. The Serpa resembles the Tibetan (spoken), having about 84 per cent. of nearly the same consonants. The other languages are more vocalic. All possess a considerable portion of nasals, with the exception of Sunwar and Magar. In Sunwar, Gurung, and Newar, *m* is absent or rare. Newari is the most vocalic of the whole, *ng* and *n* being almost the only consonantal terminals.

In thus possessing labial finals, the Nepal group is more consonantal than the east Gangetic languages, including Abor. In their phonetic elements Serpa and Lepcha resemble Tibetan (spoken).

Khas, a dominant race in Nepal, according to Manu, outcaste military tribes.

The Gurkha is the ruling tribe in Nepaul, They are mostly of Arian origin and claim to be Rajputs but Mr. Hodgson says they are bastard brahmans, descendants of brahman immigrants and women of the hills.

The Ghorka, said to be of mixed origin by the Chinese called Ku-ruKa-li, are a brave and fierce race, there can be no doubt of the warlike character of the Ghorka. Not only are they brave and skilful soldiers, but, for a barbarous nation, they are wonderfully advanced in the art of fabricating the implements of war: they cast their own ordnance, manufacture their own muskets, shot, powder, and cartridge-boxes; in fact, every instrument or weapon used in civilized warfare is manufactured in Nepaul, often clumsily enough, but the mere fact of their being capable of being used, and used with effect, is highly creditable to the ingenuity of the Ghurka. The Ghurka are the conquerors of Nepaul, and now compose the army; they have grants of land called jaghires, on which they live when not actually on service. They are a handsome and independent race, priding themselves upon not being able to do anything but fight; and have a free and sometimes noble carriage like the Tyrolese. The Ghurka, and Bhutani, on the East and the Lahuli and Kanawari on the west, dwelling amongst the valleys of the Himalaya, are, according to Cunningham, mixed races, between the Bhot family of Tibet and the hindu race of the south. In feature and figure,

the true Gurkha are always singular and remarkable, from their broad Chinese or Tartar-like physiognomy, the small eyes, flat nose, and meagre whiskers, as well as the stout square make and sturdy limbs. The Gurkha in every description of costume, and in all degree of raggedness, are to be seen mingled with inhabitants of Kumaon, Sirmore, and Gurwhal. In 1792, the Goorkha race mastered the whole of the valley of Nepal, and the hill country from Sikhim to the Gogra and a party of them crossed the Himalaya, and appeared suddenly before Teeshoo Loomboo. The Llama and priests hastily evacuated their convents, and fled to Lhassa, and the place was plundered by the Goorkha, who retired immediately with their booty. The Tibetans applied to China for aid, and an army was collected for the punishment of this act of unprovoked outrage. The Goorkha submitted unconditionally to the Chinese commander, who imposed a tribute and triennial mission to Pekin, besides restitution of all the booty taken at Teeshoo Loomboo, and he took hostages for the performance of these stipulations. The rajah of Sikhim was at the same time taken under Chinese protection. Checked towards the east by these events, the Goorkha extended their dominion westward, subjugating Kumaon, Sirinugur, and all the hill country to the Sutlej. When Lord Hastings commenced his administration, their dominion extended as far as the river Teesta to the East, and westward to the Sutlej, thus occupying the whole of the strong country in the mountainous tract which stretches on the northern borders of India, between that and the highlands of Tartary. They had acquired these territories during the preceding 50 years, from many disunited hill chiefs whom they dispossessed, exterminating the families as each raja fell before them.

The Haigu, *the Chepang*, and *the Kusundu* are three uncivilized Bhot tribes who dwell amid the dense forests of the central region of Nepal, to the westward of the great valley; they dwell in scanty numbers and nearly in a state of nature. They have no apparent affinity with the civilized races of that country, but live in huts, made of the branches of trees, on wild fruits and the produce of the chase. The Chepang are slight, but not actually deformed though with large bellies. Mr. Hodgson says they are of Mongol descent. Their language is akin to that of the Lhopa. The Chepang, Haiyu, and Kusunda seem to belong to the Rawat group of frontier populations. They are named by Mr. Hodgson as Durre, Denwar and Bramho, which Mr. Latham believes to be the same as Tharu, Dhangur, and possibly Brahman. They occupy the districts where the soil is moist, the air hot and the effluvia miasmatic.

Gyami, a Chinese military tribe, a population, whose language Mr. Hodgson treats as Sifan.

Gyarung or *Gyarung-bo*, a powerful nation consisting of eighteen banners, at present acknowledging the supremacy of China. Each tribe has its special denomination. The name seems the same as that of the Gurung, a population in Nepal.

The Gurung, a pastoral tribe living West of the Magar race on the slopes of the mountains in Nepal. They breed sheep, which they use for carriage. Their language is peculiar, but little known, and used by the buddhist priests to propagate their religion. They eat beef, but do not use milk. Their paganism is not yet extinguished, they form a tribe or clan or race in Nepaul, and along with the Krat and Magar, also of Nepaul, form the principal part of the Nepaul army. These three tribes are said to differ only in their religion, according as it combines a greater or less degree of the hindu opinions with those of buddhism.

The Jarya are a tribe of Nepal, south of the Gurung, with whom they intermarry. They are hindu in creed and manners. They may pertain to the Gurung, Magar or Newar tribes. The Newar were, however, the prior holders of Nepaul and the divisions are the Gurkha, Makwarpur and Morung.

Magar, a Bhot race occupying in Nepaul, the lower levels on the banks of the Kali, they use a monosyllabic language, like the Tibetans, Chinese, Burmese and Siamese. The alphabet is of Indian origin; they abstain from beef: drink to excess, have an Indian priesthood. They are divided into twelve *thum*, supposed to be descendants of 12 different male ancestors. They do not marry in their own *thum*. This practice occurs in Australia, North and South America, Africa and Europe. They reside in the valleys.

Kirata, aboriginal tribes in Nepaul.

H. T. Prinsep, Egerton's Journal of a Winter's Tour in India, Vol, I, p. 177. *Prinsep's Tibet, Tartary and Mongolia, p.* 18. *Fraser's Himalaya Mountains, p.* 223. *Oliphant's Journey, p.* 85 to 87. *Journal of the Indian Archipelago, Nos. IV and V. April and May* 1853, *p.* 193. *W. W. Hunter. Cunningham. Campbell, p.* 148. *Oliphant. Thomas Prinsep, p.* 270. *Sir John Shore in Lond. As. Trans. Vol. ii.* 30.—*Dr. Buist.*—*Hook. f. et. Th. p.* 183-186.

Limbu, called by the Lepcha, Chung, a partly budd'hist partly brahminical border race between Nepal and Sikkim. A hardy hardworking tribe. They engage in the cultivation of grain and feed cows, pigs and poultry, their huts are made of split bamboo, and the roofs of leaves of the wild ginger and cardamum, guyed down with rattans. They drink to excess. According

to Dr. Campbell the *Limboo* is more pleasing to the ear than the *Lepcha*, being labial and palatal. The Limboo, Sunwar and Chepang possess a small Mongolian type, strongest in the Limboo, and their language is referable to either the Tibetan or Indian standard.—*Latham's Ethnology.*

The Rong, the Khampa or *Kamba* and *the Limbu* are people from different parts of Tibet. All these people have powerful frames, but are idle.—*Campbell, p.* 148.

Sikkim consists of the valley of the Teesta river, which with its tributaries drain the whole territory. Its great tributary is the Ranjit river which, at first separated by a mountain range, joins it from the west, flowing for a short distance parallel to the plains, through a deep ravine not 1,000 feet above the sea, to the north of a transverse range elevated 78,000 feet. Being opposite to the gangetic valley, it is open to the full force of the monsoon, its rains therefore are heavy almost uninterrupted and are accompanied by a dense fog and a saturated atmosphere. The rainy winds sweep almost without interruption up to the base of Kanchinjanga, (28,178 feet) the loftiest mountain and most enormous mass of snow in the world. The snow level is here 16,000 feet. The two principal sources of the Teesta river are the Lachen and the Lachung, these run in two valleys which are separated by a lofty snowy range projected to the south west, the valleys are somewhat sheltered and the perpetual snow line rises to above 18,000 feet. From the level of the sea to an elevation of 12,000 feet, Sikkim is covered with dense forest of tall umbrageous trees. At 10,000 feet on the summit of Tanglo, yew appears. There are in Sikkim about 2,770 species of flowering plants and 150 ferns. In the Darjeling district, in addition to the Europeans, hindus and mahomedans from the plains, the population consists of Nepalese; of the Bhoteah from Bhutan, Tibet and Sikkim; of the Lepcha and Mechi who are considered the prior occupants of Sikkim. The Raj-bungshi of Sikkim are the Koch or Kooch race, of the same descent as the rajah of Cooch Bahar, on which account they call themselves Rajbungsi. In the plains of Sikhim, the Rajbungsi and Bengali are in equal numbers. The Mechi inhabit that portion of the Terai, which lies under the hills. They are a migratory race who live by cultivating the virgin soil. They have no caste distinctions.

The country of Sikkim and Darjeling is the land of the Lepcha, a Bhot race who are hemmed in between the Newar and other Nepal tribes and the L'hopa of Bhutan, on the East, the Lepcha area being barely 60 miles in breadth. His physiognomy is markedly Mongolian, stature short, from 4 feet 5 inches to 5 feet; face, broad and flat, nose depressed, eye oblique, chin beardless, skin sallow and olive, with a little moustaches on the lips: broad chest and strong armed but small boned with small wrists, hands and feet. The Lepcha is honest, timid and peaceful with mild and frank features. The Lepcha are a dirty, good natured people, resembling in character the Mongol beyond the Chinese wall. The Lepcha throws over him loosely a cotton cloak striped with blue, white and red, and uses an upper garment with sleeves in the cold weather: a broad umbrella shaped hat of leaves and a pent house of leaves in the rains. The women dress in silk skirt and petticoat, with a sleeveless woollen cloak. The Lepcha man carries a long, heavy and straight knife serving for all purposes to which a knife can be applied. They drink the Murwa, the fermented juice of the Eleusine coracana. This Murwa grain gives a drink, acidulous, refreshing and slightly intoxicating, and not unlike hock or sauterne in its flavour. Their songs and the music of their bambu flute is monotonous. They marry before maturity, the brides being purchased by money or service. The Lepcha, like the Borneo Dyak, kindle a fire by the friction of sticks. The Lepcha burn or bury their dead. In their food they use mountain spinach, fern tops, fungi and nettles. Their ailments are small pox, goitre, remittent fevers and rheumatism.—*Dr. Latham's Descriptive Ethnology.*

Darjeling has a mixed population of the Sikkim, Nepaul and Dharma Bhoteah also Lepcha and Pahari. Dr A. Campbell tells us that a gradual increase of population has taken place under British rule; from a few scattered tribes in 1853 to upwards of 60,000 in 1870, Brahmins and Rajpoots, few in number, with a sanskritic tongue, and an Indo-European physiognomy, confined to Nepal. The Rhu, Majar and Goorong a mixture of hindoos and Mongolians, with features of a type belonging to the latter, comparatively free from caste prejudices and speaking the Parbutta dialect. They are short and squat highlanders, and make good soldiers. The Bhoteah, Lepcha, and Moormi are buddhist and speak the Tibetan language. They are strong and active and incline strongly to the Mongolian race. The Limboo, Sunwar and Chepang possess a small Mongolian type, strongest in the Limboo, and their language is referable to either the Tibetan or Indian standard. The Mechi, Dhimal and Gharo are lowland tribes with a Mongolian physiognomy, but are neither hindoos, buddhists nor mahomedans. The Tharoo and Dhunwar are buddhists or mahomedans with fair and barely Mongolian features. The Bahir, Kebant, Amatti, Maralia, Dhanook and Dom are not Mongolian, but a dark race speaking Hindi or Bengalee. The Koch or Rajbungsi are a race

of dark hindoos inhabiting the Terai of Nepal and Sikkim, but who have spread into British territory. Firing the forest is so easy in the drier months of the year, that a good deal of cultivation is met with on the spurs, at and below 5,000 feet, the level most affected by the Lepcha, Limbo and Sikkim Bhotea. The term Sikkim Bhotea is applied to the more recent immigrants from Thibet, who have settled in Sikkim, and are an industrious, well conducted people. The Bhotea, again, of Bhotan, to the eastward, bear the worst reputation (and most deservedly) of any of the numerous people who flock to Darjiling. These should not be confounded with any other Bhotean tribes of Thibet, Sikkim or Nepal. The mountain slopes are so steep, that the spurs, or little shelves, are the only sites for habitations between the very rare flats on the river banks, and the mountain ridges, above 6,000 feet, beyond which elevation, cultivation is rarely if ever carried by the natives of Sikkim. The varieties of grain are different, but as many as eight or ten kinds are grown without irrigation by the Lepcha, and the produce is described as eighty fold. Much of this success is due to the great dampness of the climate; were it not for this, the culture of the grain would probably be abandoned by the Lepcha, who never remain for more than three seasons on one spot. The average rain fall at Naini Tal is 88 inches, Naini Tal is elevated 6,500 feet on the last spurs of the Gogar, overhanging the plains of Rohilkhund. Almorah is 15 miles further than Naini Tal from the plains and it is 5,500 feet, but only 34 inches of rain fall. The fall at Darjiling is 165 inches, Oak trees, maple and other mountain trees throw out great knots, in the places to which the Balanophora attach themselves. These knots are hollowed out into the wooden cups by the Lepcha of Thibet. Some of the Lepcha cups are supposed to be antidotes to poison ; they are of a peculiar pale coloured wood and cost a great sum, but common cups cost only 4*d*. or 6*d*. They are all imported into Thibet from the Himalaya. The Lepcha have no caste distinctions, but they speak of themselves as belonging to one or other of the following sections :—

Burphoong Phoocho,	Tungyeld.
Udding Phoocho.	Lucksom,
Thurjokh Phoocho.	Therim.
Sundyang.	Songme.
Sugoot.	

Captain J. D. Herbert when writing of the Lepcha race describes them as the same people whom he had met with at Nailang, at Jahnabbi, at Shipchi on the Sutlej, in Hangarang, and at Lari in Ladak. They are, he says, in fact the people who have been erroneously called Chinese Tartars and are in reality of the same race as the Tibetans, being a family of the great division of Eleuth Tartars or Kalmuks." (Gleanings of Science, p. 939.)

Bhotan on the N. E. of British India is situated between L. 26° 30′ and 28° N. and L. 88° 45′ to 92° 25′ E. and occupies from the southern declivities of the great central ridge of the Himalaya mountains to the level ground in front of that portion of their inferior chain which constitutes the northern boundary of the Assam valley, eastwards from Sikhim to where the Brahmaputra passes through the mountains. Bhotan is one of the long narrow states lying upon the southern slopes of the Himalayas ; and consists of a number of rough transverse chains of hills at right angles to the parent range which forms the backbone of Asia. Between the ridges are precipitous valleys, at the bottom of each of which runs a mountain stream.

Butan, is also written Bhotan, Bhutan and Botan. The capital of it is Tassisudon. The country is broken up with valleys and glens with overlooking mountains covered with snow in June and July. The people are styled Lhopa, they are agricultural and industrious, employing artificial irrigation on their patches of soil in the valleys. The Lhopa are tall, many being more than 6 feet high, and fairer than the people of the south of Europe. Hair black ; eye small, black, with pointed corners, as if artificially stretched. Eyebrow slightly shaded. Eye lashes scarce ; below the eyes, the face is broadest, and rather flat, but narrow from the cheekbones to the chin ; this character of the countenance being more developed in the characteristic Chinese further east, to whose features this is the first approach. The Lhopa is a paper maker, distiller. Lhopan in dialect differs from the true Tibetan, in being more Hindu. Notwithstanding this, the real ethnological differences between the Lhopa and the true Tibetans are small. The language is the same from the frontier of Kafiristan to that of Asam. The religion is the same from Asam to Bultistan.

The people are also styled Bhooteah and are a colonial branch of the Tibetans, who have acquired independence. Bhotan is bounded on the north by Tibet ; on the west by Sikkim ; on the east by the country of the Towang rajah, and on the south by the British territory ; it is occupied by the Lhopa or Bhotanese, who from their unscrupulous marauding habits, are on bad terms with every one of their neighbours. Though nominally subject to Tibet, were the annual tribute withheld, it would not be enquired after, so anxious are the Tibetans to have no dealings with the Bhoteah who used to make the transmission of the yearly fee of subjection (a few pieces of cloth, silk, and

some rice) the excuse for a series of robberies and outrages on the journey to Lhassa. For the last few years, however, all Bhoteahs entering Tibet are disarmed at the frontier, beyond which the tribute-bearers are now permitted to proceed. The British annexed the Dooars of Bhotan from the Lhopa in 1865, and it is hoped there may spring a large and important trade between British India, Tibet, and the Western and Central Provinces of the Chinese empire. The Sikkimese have less than the Tibetians, to do with the Bhoteah, whom they look upon as unscrupulous robbers, while to the East the Towang rajah has to keep up a frontier force for the especial purposes of preventing Bhoteah raids. Captain Gerard says that Bhot, Bootunt, or Tibet, is often confounded with Bhootan, or the hilly country south of the Himalaya, forming the Deb rajah's country, which lies between Teshoo Loomboo and Lhassa and the plains. The lower hil's are not called Bhotan, west of the Tons. Turner says (*Embassy, p.* 84-5) the Bhoteeah have invariably black hair, which it is their fashion to cut, close to the head. The eye is small, black, with long pointed corners, as though stretched and extended by artificial means. Their eyelashes are so thin, as to be scarcely perceptible, and the eyebrow is but slightly shaded. Below the eyes, is the broadest part of the face, which is rather flat, and narrows from the cheekbones to the chin, a character of countenance appearing first to take its rise among Tartar tribes, but is by far more strongly marked in the Chinese. Their skins are remarkably smooth, and most of them arrive at a very advanced age, before they can boast even the earliest rudiments of a beard: they cultivate whiskers, but the best they produce are of a scanty straggling growth. Many of these mountaineers are more than six feet high, and their complexion is not so dark by several shades as that of the European Portuguese.

The Lhopa race are quarrelsome and cruel but not brave.

The Changlo, are a Tibetan race, a branch of the Lhopa of Bootan. The Changlo dialect has a considerable amount of glossarial peculiarity with Tibetan, but in other respects it is entire- by Tibetan, softened and slightly changed in phonology. The Changlo dialect is spoken along that portion of the northern frontier of the valley which extends from the Binji Doar to the confines of the Kuriapera Doar, or from about 90° to the 92° of East Long. Neither its northern limit nor the numbers speaking it have been ascertained. The inhabitants of this tract occupy lesser the elevation of the southern Himalaya range, and are generally speaking agricultural. Their physical appearance exhibits a few shades of distinction noticeable between them and the tribes of the sub-Himalaya. They are smaller, less muscular and the hue of their skin possesses a deep isabelline tint. From the latter circumstance, probably, they derive their appellation, the term Changlo meaning black.

In western Bhotan, the mountain ranges are lofty and rugged and the river courses very deep and generally narrow. At Panaka, the Pachu is only 3,700 feet above the sea. The mountain mass which descends from the axis of the Himalaya, to separate the Monas from the Subansiri, attains an elevation of at least 24,000 feet as far south as latitude 28°. Three peaks upon this are visible from the Khasia mountains, and spurs descending from it were ascended to an elevation of nearly 12,000 feet by Mr. Booth in 1849, in a district N. of Bishnath, in upper Assam, which is inhabited by a race called Duphla.—*Hooker f. et. T. p* 176.—*Fraser's Himalaya Mountains, pages* 335, 336. *Capt. Gerard's Account of Konawur, p.* 100. *Turner's Embassy, p* 8-45. *Journal of the Indian Archipelago, Nos. IV and V., April and May*, 1853, *p.* 192. See India, p. 338.

Dom, in the great belt of forest land intervening between the mountains and the plains are tribes whose characters are scarcely yet known. One of these the black curly haired Doms of the North west provinces are generally regarded as a remnant of the original stock which the intruding Arians displaced.

The Dhimal of the eastern portion of the Turai, are estimated at about 15,000 souls. They are intermixed with the Bodo and lie between the Kuki and Dhonla.

The Takponi a Bhot race, lie between the Lhopa and Jorhat in Assam.

North Eastern India. Assam. India has both land and sea communication with the Tibeto Indianesian region, viz., by the passes of the Himalaya, the valley of Assam and the Brahmaputra, and by the ocean, coasts and winds of the Bay of Bengal. Assam is bounded by the Himalaya and Mishmi mountains on the north and by the Khasia and Naga hills on the south. It is a tropical valley continuous at its western extremity with the plains of Bengal, and gradually contracting to the eastward, till the mountains at last approach so close together that no level country remains between them. The width of the lower valley is about thirty miles; It is in general level, but low ranges of hills project occasionally from both sides almost to the Brahmaputra, and isolated hillocks occur scattered here and there over the surface. The atmosphere is very humid, and dense fogs are frequent in winter. In upper Assam there is but little cultivation and much forest, which is often almost impervious from rank under-wood. The passes through Assam are

along the Dihong called the Dihong route; with Tibet, the northern banks of the Lohit, and though the Mishmi hills into Tibet called the Mishmi route. The Phangan pass which leads to Man-chi in China occupies a little more than a month on its journey and leads over mountains 6000 to 18,000 feet high.

The Patkoy pass to Bamo and China, was the route followed by the Burmans in their invasions of Assam and is the means of communication between the Singpho tribes on the north and south of the Patkoy mountains.

Cachar and *Silhet* are in the valley, or rather marshy plain, of the river Surma, which lies to the south of the Khasiah mountains, and very much resembles the Assam valley in its general features. It is an open plain, scarcely raised above the level of the sea, which is three hundred miles distant and presenting here and there a few scattered hills: below, it expands into the jheels of eastern Bengal, and, contracts in its upper part as the spurs of the Tippera and Naga hills encroach upon it separating fertile plains by narrow ridges covered with dense forest. The valley of the Surma is separated from that of Munipur by a meridional range of moderate elevation, which is continued to the southward, and separates Tippera, Chittagong and Aracan from the kingdom of Ava. Blue Mountain, which lies nearly due west of Chittagong, is said to attain the considerable elevation of 8,000 feet, and a peak on the same range forty miles to the south-west, in lat. 22, is elevated, according to Wilcox's map, 3,100 feet. Sitakund, thirty miles north of Chittagong, has an elevation of 1,140 feet. The provinces of Tippera and Chittagong are throughout hilly. The rain-fall during the monsoon is about the same as in Bengal, at least on the sea-coast and in its immediate vicinity, averaging 86 inches annually at Chittagong; on the higher ranges in the interior it is probably much more considerable.

Naga and Khasia Hills.—The mountain range which bounds Assam on the south is known by a great diversity of names in different parts of its course, according to the different tribes by whom it is inhabited.

The *Khasia* hills rise abruptly on the south from the plains of Silhet to the height of about 4,000 feet and thence more gradually to 6,000 feet. The culminating point is Chillong hill, the elevation of which is about 6,600 feet.

To the westward of the Khasia hills lie the Garo hills which are lower, the maximum elevation being probably nowhere more than three or four thousand feet. To the east, beyond Jyntea or Jaintia, which is similar in general character to Khasia, there appears to be a considerable depression in the range, a large river with an open valley penetrating far to the north. To the east of Cachar again there are lofty hills, inhabited by Naga tribes and also quite unexplored, except in one place, where they were crossed by Griffith in travelling from upper Assam to the Hukum valley, on a tributary of the Irawadi.

The *Burak and Surma* rivers run in valleys of the Assam chain. The Naga, Mikir, Kachari, Garo and Khasia, are the five races in whose possession, chiefly, are the broad highlands of that chain extending from the N. E. near the head of the Kynduayn and Namrup on one side along the valley of the Brahmaputra to its southern bend round the western extremity of the chain, and on the other side S. westerly along the valley of the Burak and Surma.

Races of the Sub-Himalayas.—Mr. Hodgson inclines to the opinion that the aborigines of the sub-Himalayas, as far east as to the Dhansri of Assam, belong to the Thibetan stock and east of that river to the Chinese stock, except the Garo and other tribes occupying that portion of the hills between Assam and Silhet; and that the aborigines of the tarai and forest skirting the entire sub-Himalayas, inclusive of the greater part of the marginal circuit of the Assam valley, belong to the Tamulian stock of aborigines of the plains of India generally.

Assam Slaves.—There are many kinds of slaves in Assam distinguished by distinct appellations. The Moorukea is a kind of Chapunea, neither servant, slave, nor equal, but partaking of all. The master provides the Moorukea with a pair of bullocks and a plough, and he tills his master's land for two days. On the third day the Moorukea may plough his own ground with his master's bullocks and plough. The valley of Assam possesses gold, tea, caoutchouc, lac and ivory.—(*Butler's Travels, Assam, p.* 228-29).

Languages of Assam.—Mr. Robinson tells us (*in Ben. A. Soc. Journal No. cci. March*, 1869) that in the Assam valley and its mountain confines, are three classes of languages: one of Sanscrit origin and the others of two great classes, viz., those connected with the Tibetan and those deriving their origin from the Tai or Shyan stock. Of the Assamese proper, that is, the language of the valley, eight-tenths of the language is identical with Bengali, and nearly four-fifths of the words in common use, are derivations from the Sanscrit. The country from time immemorial had been governed by rulers of Shan origin, and the very small number of Tai words that can be traced to Tai origin is remarkable. The Thibetan and the Tai or Shyan languages, all approximate towards the Chinese colloquial system and more or less possess the characteristics of being originally monosyllabic and all intonated. The

Tai or Shyan class are also destitute of inflections.

The borders of the valley are remarkable for the numbers of its populations. Many of them are of that great Bhot family which we find extending from the west of Chinese Tartary eastwards. All the native populations here are more or less akin to the peoples of the Burmese empire, and seem to be remnants of Bhot tribes left behind in the pressure of the larger bodies to the south.

Dr. W. W. Hunter, thus names the languages in and near the Assam valley and south to the Archipelago.

In N. E. Bengal, are the Bodo ; Dhimal ; Kocch ; Garo ; Kachari.

In the Eastern Frontier of Bengal, are the Munipuri ; Mithan Naga ; Tablung Naga ; Khari Naga ; Angami Naga ; Namsaug Naga ; Nowgong Naga ; Tengsa Naga ; Abor Miri ; Sibsagor Miri ; Deoria Chutia ; Singhpo.

Arakan and Burmah.—Burman written and spoken ; Khyeng or Shou ; Kami ; Mru or Toung ; Sak.

Siam and Tenasserim.—Talain or Mon ; Sgau Karen ; Pwo-Karen ; Tounghthu ; Shan ; Annamitic ; Siamese ; Ahom ; Khamti ; Laos.

Dr. Latham is of opinion *Desc. Ethn.*, that the nations on the borders of British India, in the north-west, the north-east and east, form an ethnological group which contains the Tibetans, the Nepal tribes, several populations of the Sub-Himalayan range, the Burmese, the Siamese, the Natives of Pegu, the Cambojians, the Cochin Chinese and the Chinese, in populations which cover perhaps one-fifth of Asia. Their countries are mostly inland, and mountainous, but contain the watersheds of mighty rivers, the Indus, the Brahmaputra, the Irawadi and the Yellow River. The complexion and features of these peoples is that to which the term Mongolian has been applied. Though wild paganism and mahomedanism exist, the majority are of the buddhist religion, but all speak a language the least developed of all the forms of human speech, being generally monosyllabic and with little power of grammatical inflexions. These people are arranged under four great political powers, the British, the Burmese, the Siamese and Chinese. Ethnologically they are capable of being classed in three considerable sub-groups.

The first of these is the Bhot or Bot, which is used in compound words as Bult in Bultistan,—But in Butan, Bet in Tibet, and in the tribes known as Bhutia and Bootia, and comprises the Little Tibetans, the natives of Ladak, the Tibetans of Tibet Proper and the closely allied tribes of Butan. The Bhot area is bounded on the South by India and Cashmir, on the North by Chinese Tartary, and on the West by Little Bokhara and Kafiristan. Amongst the Bhot populations may be mentioned the mahomedan Bhot of Bultistan or Little Tibet, of Rongdo, Skardo, Parkuta, and Khartakshi, of Shigar, Chorbad, &c., the buddhist Bot of Ladak, Hungrung and Kunawar, the Bhot of the Chinese Empire ; the Tibetans of Rudok, Garo, Goga, &c. of Lhasa and Tishu Lumbu, the Sifan, the Lhopa of Butan, the Tak, the Bhot of Garwal, Kumaon and Nepal, the Chepang and probably the Rhondur, the Chak and Drok, the Hor and the Kolo.

Further East are the Kocch, the Dhimal and Bodo, arranged into the Western Bodo of Sikkim and the Butan frontier, and the Eastern Bodo or Borro of Assam and Cachar,—the Garo, the Kasia, the Mikir.

On the South are the hill tribes of Assam, the Aka, Dofla, Abor, Miri and Bor Abor tribes, the Mishmi, Muttuck, Singhpo and Jili, with the Naga in Assam. The colors of the Bhot and buddist populations are of various shades of white, yellow and brown ; while that of the pagan races is various hues of black.

Leaving the Bhoteah tribe and proceeding eastwards, the following are the races on the north of the Brahmaputra river :—

Cachari ; Akha ; Koppa-chor ; Mechoo ; Dofla ; Miri ; Abor ; Bor-Abor ; Khamti and Mishmi.

The races south of the Brahmaputra, are

Garo ; Mikir ; Khassya ; Jynteeh ; Kuki of N. Kachar, Kutcha, Angamee and Aroong Naga ; Munnipuri, Singpo ; Muttuk, Bor Khamti, Khunung and Shan.

Akha ; Koppa-Chor.—Of those on the north, the *Akha* and *Koppa Chor*, occupy the slopes of the Himalaya to the north of the Durring and Luckimpur districts, and more to the eastward in the same range, are the Dofla.

Miri, Eastwards from the Dofla dwell the *Miri* who live on lower land all along the north bank of the Brahmaputra river, eastwards from the Dofla up to the banks of the Soobun Seeree river.

The *Abor* and *Bor Abor* occupy the hills between the Soobun-Seeree and the Dihong rivers. They are powerful tribes, and it is unknown how far to the north they extend.

The *Khamti* and the *Mishmi* and the *Midhi* or *Chulkatta Mishmi* dwell to the east of the Dihong river on the north of the Lohit or Brahmaputra river between the north and east branches. They are divided into several tribes, one of whom is the "Chulkatta" or "Crop Haired." With them are mixed up Abor tribes and some Khamti tribes.

The Garo, the Khassya and the Jynteeah hills are on the south of the Assam valley.

The *Mikir* inhabit the lower part of the Khassya and Jynteeah hills.

Naga is a term applied by Europeans to forty or fifty tribes who occupy the space be-

tween the Khassya hills on the west, the Singpho on the east, Assam on the north and Munipur on the south. They do not call themselves Naga, but each tribe is split up into numerous clans and each is called after its village.

The *Bor Khamti* occupy the land about the sources of the Irawadi.

The *Singpho* and *Muttuk*, on the north are bounded by the Brahmaputra or Lohit; on the west by the Naga tribes; and on the south by the Patkoi range, on the southern side of which, are other Singpho in Burmese territory.

Khy-oung-tha. Amongst the people speaking the Yuma dialects, according to Mr. Logan, are the Khy-oung-tha, of Arakan, a rude tribe, speaking the Rakhoing dialect of Burman.

The *Kumi*, *Khumi* or *Khumwi*, are of the same race, but their language has some peculiarities. It has been partially examined by Captain Latter, who says it is evidently cognate to the Rakhoing form of the Burman. The majority of its words, however, are non-Burman. The Kumi are fair, with small features.

The *Ky-au* or *Kyo*, and the *Khy-eng*, as Mr. Logan remarks, appear to be similar to the Kumi. They have numerous common words, and each has words common to Khumi, to Khumi and Burman, or to Burman only. All the ancient or pre-Burman dialects of Arakan, from the Khy-eng to the Kuki, retain one of the characteristics of the Mon Kambojan alliance and of Tibetan, the use of definite prefixes ha, a, ma, &c. While the adjacent highlanders have a Tartar like physiognomy, the Kyau, in features, dress and appearance, can scarcely be distinguished from the lower class of the Bengali peasantry of Chittagong. They are dark with large features, while the Kumi are fair with small features.

The *Bongzu* or *Bonzu* are said to resemble the Burman, but to be less strongly built and not so well made. The Khy-eng, Kumi, Ky-au, Bonzu and Kuki vocabularies, show that all are dialects of one language.

The *Kuki* are described as short, muscular and active, with massive limbs, and darker in complexion than the Chumiah.

The *Chumiah* are located in the lower hills between the Kuki and the plains, to the north and east of Chittagong. Both tribes are described as having flat noses, small eyes and broad round faces, and to differ from the Naga race in their appearance and in their customs.

The *Lung-khe Shindu* dialects belong to this group and have special affinities with the Kyau, Khy-eng and Kumi.

The *Kun* language also pertains to this group.

The *Mrung* dwell in the upper basin of the Mayu and also, it is said, amongst the hills on the eastern border of the Chittagong district. They say they are the descendants of captives carried away from Tipperah by the kings of Arakan. Their vocabulary has affinities with the Garo and Bodo. There is a striking confirmation of the history of Aracan, wich relates the conquest of the portion of eastern Bengal by the Rakhoing. According to Captain Phayre, Dacca is the northern limit of their possessions, but a deportation of the Garo and Bodo races, or of a mixed tribe on the confines of the pure Garo, shows that their conquests extended much further in that direction.

The *Singpho*, from their great extension over the upper basin of the Irawadi and their comparative barbarity, it may be inferred, are in fact descended from the stock from which the Burmans were immediately derived. It is probable that the Burman tribes spread into Arakan and were modified by the influence of the gangetic race, before they re-entered the lower basin of the Irawadi and successfully contested its dominion with the Mon race.

The *Manipuri* native tribes lie on the south of the valley of Assam. They are the Manipuri, Ka-pwi, Maram, and Songpu, Koreng, Champhung Luhuppu.

They are bounded on the east by the Shan race of the Kynduayn, and on the N., S., and W., by Naga and Heuma races. Indeed it may be doubted whether there is any marked transition from the Manipuri tribes and dialects to those of the southern Naga, on the one side, and those of the Yuma range and the Blue Mountains on the other.

The Naga, Mikir, Kachari, Garo and Khassia are the five races, in whose possession chiefly are the broad highlands of the Asam chain extending from the N. E., near the head of the Kynduayn and Namrup, on one side, along the valley of the Brahmaputra to its southern bend round the western extremity of the chain, and on the other side, south-westerly, along the valley of the Burak and Surma. These highlands are thus embraced by the valleys of the Brahmaputra and its affluents on all sides but the S. E., where they slope to the Kynduayn. The Naga dialects are

Namsang,	Tablong,	Angami
Muthun,	Tengsa,	and
Joboka,	Nogaung,	Mozame An-
Mulung	Khari,	gami.

On the west, the Naga march and intermix with the Rang-tsa, a branch of the Kachari or Bodo.

The Khassia is distinguished from all the surrounding languages, Indian, Ultra-Indian, or Tibetan. It is a fragment of the Mon Kambojan formation of languages, and is a remnant

of an older formation which preceeded the Burma-Tribetan in Northern Ultra-India.

Tipperah properly Tripura is a district on the north east of Calcutta. Its ancient name is Jajnagr or Yajnagr. A portion of it is under the Government of a hindu rajah, the people being called the Tipperah hill-men, and the wild tribes on the eastern frontier of whom the Kuki are most numerous. The languages of the hill men bears some resemblance to the Sanscrit. The language of Tipperah is Bengali with a large infusion of Urdu words. The mahomedans of the population are very numerous.—(*Mr. Logan in Jour. In. Ar.*) Amongst the wild tribes human sacrifices are still offered up, and it is said that in Munnipore, Cachar and Assam the offering of human sacrifices is still continued. By the records of the Sudder Nizamat Adalut of Chittagong for 1852, some men of the Toonia Joom mahals were tried for murder by sacrificing. This is a forest tract in the hills and inhabited by the Mug, Chukma, Reang, Tipperah races, and others all more or less nomadic. The place of sacrifice was a cleared spot in the jungle and staked round with bamboos about six feet high. The sacrificial pole the *Phula bans* or bamboo, scraped and stripped at the edges, the hanging strips giving a rude notion of ornament. These sacrifices generally occur once a year. During its celebration at Agartollah a gun is fired every evening at sunset, when every person hurries to his home. The Kuki and all the hill tribes worship local deities, said to be fourteen in number.—(*Cal. Rev. No.* CXX. *Decr.* 1860.)

Cooch Bahar, is a native state ruled by a rajah subject to the supervision of a British Resident. It is situated between Bengal and Assam, on the N. E. frontier of British India, and is separated from the highlands of Bhotan by the Dooars. Fallacotta is the most central town, for the Jungsta, Chamoorchee, Bala, Bunna, and Beygoo passes into Tibet and Bhootan. The abolition of slavery in Cooch Behar has recently been formally proclaimed. Up till this proclamation, if a ryot, or peasant, owed a sum of money, and was unable to satisfy his creditor, he was compelled to give up his wife as a pledge, and possession of her was kept until the debt was discharged. It sometimes happened that the wife of a debtor was not redeemed for the space of one, two or three years; and if, during her residence with the creditor, a family should have been the consequence, half of it was considered as the property of the person with whom she lived, and half that of her real husband. The country has a most wretched appearance, and its inhabitants are a miserable and puny race. Up to a comparatively recent date, the lower ranks without scruple disposed of their children for slaves, to any purchaser, and for a very trifling consideration; nor was the agency of a third person ever employed. Nothing was more common than to see a mother dress up her child, and bring it to market, with no other hope, no other view, than to enhance the price she might procure for it. The Cocch or Kocch are partially converted to mahomedanism. The pagan portion live in the woods and cultivate the soil with the hoe; they are well fed and clothed. They abstain from beef. They sacrifice to the god Pushi and his wife Jago, also to the sun, moon and stars; to the deities of the rivers, hills and woods, and to their deceased parents. The Deoshi, their sacrificing priest, marries and works, and the office is not hereditary. The blood of the sacrifice goes to the deity, the flesh to the worshippers. Polygamy, polyandria, concubinage and adultery, are punished by fines. The husband resides with his mother-in-law, is the property of the wife, and after her to her daughters. They keep the dead two days and then burn them at the river side. Their name is written Cooch, Kocch, Koktsh, Koksh, or Kuksh. In the Yogini Tantra, they are named Kavach and are there styled Mhlechas. When the mahomedan power was established in Bengal the Koch (Kocch or Kavach) kingdom extended from 88° to 93° E. L. and from 26° to 27° N. L. from the south eastern extremity of Nepaul along the southern extremity of Sikkim and Butan into Assam, with Kooch Bahar as its capital and the people consisted of the present Kooch, Dhimal and Bodo. They dwell in the Sal forests with impunity. The Kooch, are called Hasa by the Assamese Bodo, and the Dhimal style them Kamul. The northern parts of Rungpur, Purnea, Dinajpur, and Mymunsing are the chief Koch localities. The Koch and Bodo serve a fixed period for their brides.—*Turner's Embassy, p.* 11, *Treaties, Engagements, and Sunnuds, Vol. VII. p.* 367. *Latham's Descrip. Ethn.*; *Hodgson.* See Aborigines. India.

Bodo, Kachari or *Borro*, as they call themselves, are most numerous along the northern and southern borders of the Assam valley, but are found in almost all parts of the valley. Chatgari, a frontier district situated between Desh Darrang and the Bhotan hills seems to be their chief locality, and here their numbers are said to amount to about 30,000 which is about half the Kachari population in the valley. They have not written characters, but a large portion of their vocables are identical with those of the Garo tribe and almost all the rest may be traced to some dialect of the Tibetan, while the idiom of the language and the peculiarities of its grammar show abundant traces of descent from a common origin. The *Bodo* population extends from Bahar and Bengal on the west, to the Sikkim and Butan frontiers. The western branch of this

tribe belongs to Bahar and Bengal, and to the Sikkim and Butan frontiers; the eastern branch occupies Assam and Cooch. They build their huts of grass and bamboo and reside in villages of from ten to fifty huts. They do not use leather in their arts or trades, and do not use wool as clothing, the latter being made of cotton and silk materials. They use utensils of brass, ropes of grass and baskets of bamboo. Jo, or barley, fermented rice or millet, is used by them as a slightly intoxicating beverage, and resembles the "ajimana" of the Newar of Nepal. They till the soil, but do not occupy a locality permanently, clearing and cropping and moving again to clear and crop another spot. The head of the village is called Gra. A Bodo and Dhimal will only touch flesh which has been offered to the gods by a priest. The bridegroom purchases his bride either by money or labour. Poligamy is rare. There are professed exorcists among them. The eastern Bodo in Cachar are called Borro and are divided into the Cachary of the hill country and those of the plains. They are partly hindu and partly pagan. Those in the plains in Assam are called Hazai, Hojai or Hajong, they are of the hindu creed, and speak a hindu dialect. The hill Cachari is stouter, hardier and more turbulent, and lives in villages of from 20 to 100 houses. Like the Naga, their young men of a certain age, leave their parents' dwellings and reside together in a large building. Of the three separate people the Koch, the Bodo and the Dhimal, the faintly yet distinctly marked type of the Mongolian family is similar in all three, but best expressed in the Bodo features and form.

The *Bodo, Dhimal* and other tribes inhabiting the mountains and forests between Kumaon and Assam, are styled Tamulian by Mr. Hodgson. He has done so on the view that all the aborigines of India, as distinguished from the Aryans, belong to one and the same stock, of which he considers the Tamulians of Southern India the best representatives. And he has founded this supposition on certain general grammatical similarities which, as he believes, are common to the entire Scythian group of languages.

But Mr. Campbell, (*pp.* 48, 49) observes that in appearance the Bodo and Dhimal are as different as can be, and as to their connection, so far as their languages show, there is not the slightest evidence. Mr. Robertson was of opinion (*B. As. Soc. Jour. No.* 201 *for March* 1849) that the border tribes of Assam, the Bodo and the Garo amongst others, were affined to the people of Tibet. But Mr. Hodgson considered (*on the Aborigines of North Eastern India,*) that Mr. Robertson in arriving at that conclusion had overlooked the physical and psychical evidence, which, in a question of ethnic affinity are in his opinion each of them as important as the glottological.

Closely connected with the Kachari, among the inhabitants of the plains, are the Hojai Kachari,—the Kochi which include the Modai Kochi, the Phulguriya and Hermia, the Mech, the Dhimal and the Rabha. Each of these speaks a separate dialect, between which and the Kachari, Mr. Robinson says, the differences are rather nominal than real.—*Latham's Descriptive Ethnology. Mr. Hodgson.*

The *Dhimal*, is a race of 15,000 souls in the Sal Forest of the Terai who about the beginning of the 19th Century migrated to the north and east of the Kooch from Nepal. The Dhimal dwell between the Konki and Dhonla, between the open plains and the higher levels of the mountains, and their villages, though distinct, the people not intermarrying, are intermixed with the Bodo. The Dhimal differ from the Bodo, in their language and their pantheon. Mr. Latham considers the terms Dhimal, Kamul and Tamil to be the same. The deities Data and Bidata preside over marriage, the feast of which is prolonged through three days, and costs from 30 to 40 rupees. They bury their dead.—*Latham's Descriptive Ethnology.*

Changlo means black, and is the name of a race who use a dialect of the Bhotia or Thibetan which is spoken along that portion of the northern frontier of the valley extending from the Binji Doar, to the confines of the Kuriapera Doar or from about the 91° to the 92° of E. long. Neither its northern limit nor the numbers speaking it have been ascertained. The inhabitants of this tract occupy the lesser elevations of the southern Himalaya range and are generally speaking agricultural. Their physical appearance exhibits a few shades of distinction noticeable between them and the tribes of the Sub-Himalayas. They are smaller, less muscular, and the hue of their skin possesses a deep isabelline tint. From the latter circumstance, probably, they derive their appellation, the term Changlo meaning black.

Takponi or Takpo, the country of the Tak, is marked as Towang or Raj Towang, in the ordinary maps, and lies in a line between Lhassa and Jorhat in Assam. Little is known of its occupants, but they may be Shammar Tibetans of nomade habits.—*Latham.*

Sokpa, is a colony of pure Mongols.

Ak'ha tribes occupy the western extremity of the hills which form the northern boundary of Assam. The *Akha* dialects appear to belong the Abor group, 35 words in Mr. Brown's list of 60 being common to Akha and Abor and prefixes occurring as in Abor.—*Journal of the Indian Archipelago, Nos. IV and V. April and May,* 1853, *p.* 191.

Mechi or Meche of the N. E. frontier are supposed by Mr. Campbell to be the same as the Bodo of Mr. B. Hodgson. They are Indo-Chinese of the Lohitic or Burmese branch of the Turanian family. Their features bear out this opinion. They are of good size, fair but of a yellow colour, good natured and tolerably industrious, but erratic and indifferent farmers.—(*Campbell*, 149.) The *Dhimal* tribe are smaller than the Mechi, but somewhat similar in appearance with a language that in some degree differs. The Kachari, Naga, Abor, and some other tribes bordering on Assam are supposed to be of the same race as the Mechi. The Mechi form the chief population of the forests and N. E. Doars at the foot of the Sikkim and Bhutan hills, and a few have recently settled on the extreme eastern portion of the Nepal Terai. They are supposed to be the same as the Bodo, whom Mr. B. Hodgson described. Their features are described as Mongolian or Indo Chinese ; they are fairer than the hindus around them and of a yellow tinge : they are taller and larger than the Nepalese cultivators, are addicted to spirits and to smoking opium. They are proof against malaria, and make small temporary clearances in the forest, they are inferior to the Tharu in industrial habits.

Thawa, a lowland tribe mentioned by Dr. Campbell as inhabiting similar tracts to their neighbours the Mechi.—*Campbell, pp.* 50, 149.

Dofla are in that portion of the southern face of the sub-Himalayas which extends from 32° 50' to about 34° north latitude, and forming the northern boundary of the valley of Assam, from the Kuriapara Douar, to where the Subonsiri debouches into the plains. This tribe of mountaineers, are usually known to the people of the valley, under the appellation of the Dophla or Dofla. This term, whatever may be its origin, is not recognized by the people to whom it is applied, except in their intercourse with the inhabitants of the plains. Bangni, the term in their language to signify *a man*, is the only designation they give themselves. During the latter days of the Ahom suzerainty when internal dissensions and the growing imbecility of the government furnished opportunities for the bordering tribes to indulge in acts of rapine and lawless aggressions on their lowland neighbours, the Dofla were not slow in exacting their share of the general spoil. Several attempts were made to check their atrocities and on one occasion, rajah Gourinath Sing, is said to have marched an army into their hills for the express purpose of chastising them ; and as native historians tell us, several thousand Dofla were taken prisoners and brought down to the plains. The rajah, unwilling that they should pine in indolence, obliged them to dig a canal with the view of draining off the large and unwholesome morasses that still exist in mahal Kollongpur. But, owing to the bad treatment to which the prisoners were subjected and unhealthiness of the season, the greater portion of them are said to have perished, and the task assigned to them remained unaccompiished. In one of their districts, that of the Char Douar or Four Marches, no less than 180 petty chiefs are said to hold authority in the Dofla villages.—*Beng. Ass. Soc. Jour. No.* 2051. *Latham.*

Miri, a hill tribe on the Eastern frontier of the Abor area. They all wear some woollen article of dress. They use the bow and poisoned arrow. The Miri are allied to Abor, Dofla or Aka, rather than to the Mishmi. The Miri have their chief seat in the low hills north of Banskotta and Lukimpur, but the exactions and cruel ravages of their formidable neighbours the Abor, have compelled them to emigrate in large numbers into the plains of Upper Assam. Mr. Robinson remarks that a partial comparison of the dialects spoken by these tribes furnishes abundant evidence of their original consanguinity, while the coincidence between their vocables and the terms in common use by the Thibetan tribes, is frequent and unequivocal.

Abor, is a hill tribe in Assam on the southern face of the Himalayas and on the west or left bank of the Dihong on the borders of Tibet and China, in an extensive range of mountainous country along the southern exposure of the great Himalayan chain, to the north of the Brahmaputra river in about Lat. 27°12′ N. extending from the 94° to 97° of east longitude and bordering, it is said, on Thibet and China. Padam is the term by which the races designate themselves, whom the Assamese name the Bor and Bor Abor. The Bor dwell to the south of the Bor-Abor and their chief town is Membu : Bor is said to mean great, also, however, tribute.

Bor Abor are higher up than are the Bor. Their capital is Semong, of about 300 houses, they occupy the mountains on the north of the Brahmaputra River in Lat. 28° N. and Long. 95° E. to the west of the Dihong river ; they are polyandrous, it being not uncommon for an Abor woman to have two husbands, brothers, living under one roof. They do not eat beef, but hunt and eat the flesh of the buffalo. They are more powerful than the Bor. Their bachelors live in the Morang, a large building in the centre of the village for the reception of strangers, and in this custom they resemble the Naga to the south of Assam and some of the Archipelago races. They sacrifice to deities of the woods and hills. Numbers of these people are also found on the shores of the two great northern branches of the Brahmaputra river. When

first known they made periodical descents on the plains. Bor and Abor are Assamese names for the people who call themselves Padam. The meaning of "Bor" is not clearly ascertained. According to one authority, Bor means tribute, hence Abor free from tribute, and the Padam race are so arranged, into the payers of, and non-payers of tribute. They carry bows and arrows some of which are poisoned. Their dress is made of the bark of the Udhal tree. Bor is also said to mean "*great*," and we find the term of Bor Khampti employed. The Bor Abor is the more distant, the more independent and stronger portion. The Bor Abor lie on the higher hills and the similarity of their language to the Abor is not known. Considerable numbers of these people are also found on the shores of the two great northern branches of the Brahmaputra river. The British Government make money payments to the Bor Abor, Dofla, Miri and Aka to abstain from levying black mail in Assam.

In the end of 1861 the Meyong Abor attacked and plundered a village in British territory, but the tribe expressed a desire to renew friendly relations, and begged that their offences might be overlooked. On the 5th November 1862, an agreement was made with them binding them to respect British territory and the same engagement was subscribed on 16th January 1863 by the Kelong Abor. On 8th November 1862 a similar engagement was concluded with the Abor of the Dihong-Dibang Doars.

The Abor Miri language belongs to the old Assam alliance, but it has been greatly modified by Tibetan. It has a strong ideologic resemblance to the Dhimal, Bodo, Garo, and Naga.—*Journal of the Indian Archipelago, Nos. IV and V. April and May* 1853, *p.* 190. (*Aitcheson, Treaties, Engagements and Sunnuds, Vol. VII, p.* 343.) *Indian Annals, Latham's Descriptive Ethnology.*

The *Bibor*, *Jubar*, and *Kulta* or *Kolita*, are populations to the north and east of the Abor and Mishmi localities, on the drainage of the Brahmaputra.

Khampti, a people of Assam, who are skilful workers in metal; the Khamti of the distant hills of Assam are Siamese.—*Campbell*, 149.

Mishmi.—In the country to the east of Assam, between India and China, the Mishmi mountains which occupy the most northerly part, are the southern and western slopes of a mass of snowy mountains which sweep round the N. W. of Assam from the east bank of the river Dihong to the sources of the Dihong. The people of the Mishmi hills, have their frontier touching that of the Abor or Padam, on the drainage of the Dihong and Dibong, in small villages, the Mishmi and Padam acknowledge a common origin and eat together. They use the bow and cross-bow and poisoned arrows and are often at war on the surrounding tribes. Their chiefs dress in Chinese and Tibetan clothes and ornaments. Polygamy is allowed. The Mishmi sacrifice fowls and pigs to the rural deities. They engage in trade: forge iron and build suspension bridges. The Bubhajia, Taying and Mijhu are Mishmi tribes.—*Latham's Ethnology.*

The *Garo* race occupy the Garo or Garrow mountains to the south of the valley of Assam in a triangular extent of mountainous country lying between the left bank of the Brahmaputra and the Khassia hills. From its apex to its base, this triangle lies between the 25° and the 26° of N. Lat. and the base itself extends from the 90° to the 91° of E. long. Their physical appearance, modes and customs, are different from those of the Bhotia, and this, with their remote situation, appears to militate against the supposition that they are in any way connected with the Cis-Himalayan tribes. But though they have no traditionary legends and no written character to serve to enlighten on this subject, there is a striking affinity between the Garo language and the several dialects spoken by the Bhotia tribes. Though these present several modifications, they may nevertheless be traced to the same radicals, so as to prove that an essential affinity existed in their primitive structure; thus affording historical evidence of such a nature as it is impossible for either accident or design to have falsified. They are about 40 miles south from Goalpara, and to the north of Mymensing. They are a race of hillmen but differ in many respects from other hill tribes. Their chief location is the hill country just within the bend of the Brahmaputra as it sweeps round from Assam into Bengal, in the extreme western portion of the range, which separates Silhet from Assam. More to the east are the Cossya hills, Dr. Campbell (p. 51) says, the Garo race are small and dark, savage and troublesome, and are said to be distinct and dissimilar from the other tribes in their neighbourhood and more to resemble the Kol and Bhil, but their direct distance from the Sontal and Rajmahali is 150 miles. The Garo are called by the villagers and upper hill people, Coonch Garo; though they themselves, if asked of what race they are, will answer, "Garo," and not give themselves other tribal appellation, though there are many tribes of the Garo. A Garo is usually described as a stout, well-shaped man; hardy, and able to do much work; of a surly look; flat, kafir-like nose; small eyes, generally blue or brown; forehead wrinkled, and over-hanging eye-brow; with

large mouth, thick lips, and face round and short; their colour is of a light or deep brown. The women are short and squat, with masculine expression of face; in the features they differ little from the men. The dress of these people corresponds with their persons. They eat all manner of food, even dogs, frogs, snakes, and the blood of all animals. The last is baked over a slow fire, in hollow green bamboos, till it becomes of a nasty dirty green colour. They are fond of drinking to excess. Liquor is put into the mouths of infants almost as soon as they are able to swallow. Their religion is a mixed hinduism and shamanism, they worship Mahadeva; and at Baunjaur, a pass in the hills, they worship the sun and moon. To ascertain which of the two they are to worship upon any particular occasion, their priest takes a cup of water, and some wheat: first calling the name of the sun, he drops a grain into the water, if it sink, they are then to worship the sun; but should it not sink, they then would drop another grain in the name of the moon, and and so on till one of the grains sink. All religious ceremonies are preceded by a sacrifice to their god, of a bull, goat, hog, cock, or dog. Except milk they use everything. They live in houses raised from the ground on piles. The youngest daughter inherits. A widow marries the brother of her deceased husband; if he die, the next: if all, the father. The dead are kept four days, then burnt amidst feasting and drinking and the ashes buried on the spot. A small dish of bell metal with embossed figures, called a Deo-Kora is hung up as a household god and worshipped and sacrificed to: and the Garo believe that when the household are asleep, the Deo or figure of the Kora issues in search of food and returns to its Kora to rest. The Garo are under British control. They are classed as Che-anna (6 Annas) and Das Anna (10 Annas) but they consider themselves one and the same people. They use sharp bambu panji or stakes, four inches long, as a means of opposing invasion. In a treaty in 1848, they consented to abstain from hanging human skulls in their houses. They build their houses on piles. The Marquis of Hastings, says they are divided into many independent communities, or rather clans, acting together from a principal of common origin, but without any ostensible head of their league. With them all property and authority descends wholly in the female line. On the death of the mother, the bulk of the family possessions must go to the favourite daughter (if there be more than one), who is designated as such, without regard to primogeniture, during the life-time of her parent. The widower has a stipend secured to him at the time of marriage. A moderate portion is given to each of the other sisters. A son receives nothing whatever, it being held among the Garo that a man can always maintain himself by labour. The woman acknowledged as chief in each of the clans is called Muhar. Her husband is termed Muharree. He is her representative in all concerns, but obtains no right in her property. The clan will interfere if they see the possessions of the Muhar in course of dissipation. If a daughter be the issue of the marriage, a son of the issue of the Muhar's father is sought in preference to become her husband; and in default of such a person, the son of the nearest female relation of the Muhar (he being of due age) would stand next for selection. The husbands to the sisters of a Muhar are called Lushkur, and it is a denomination to which a notion of rank is attached. The Garo were in the constant habit of making predatory incursions upon British frontier villages in the plains, decapitating their victims, and carrying off their heads as funeral offerings to their departed chiefs. It has repeatedly been found necessary to punish these outrages by sending a military expedition into the country, and by closing the markets in the plains frequented by the Garo. A party of them, in May 1860, murdered sixteen natives of the plains in the North of the Mymensingh district, and afterwards mutilated the bodies. They confessed the crime and three were executed in their own villages before their own people. Their accomplices, in number some twenty men, were condemned to transportation for various periods. Their object was not so much plunder, as human heads to offer to their spirit of the mountains. The rajah of Nustung one of the Khassyah states subsequently undertook to aid in repressing these raids. The Garo hills are a confused assemblage from 1,000 to 6,000 feet in height, estimated area, 4,347 square miles. The rock formation is supposed to be chiefly of gneiss, or stratified granite.—*Coleman Myth. Hind. p.* 320. *Hasting's Private Journal; Vol.* II., page 132-316. See Khassya; Mikir; Kuki; Singhpo India, 31-73, 2-73, 38, 339.

The rajah of Nustung, is well nigh independent and is the most powerful and influential of all the hill chiefs, not alone from his position but from his unusual popularity, He had conferred upon him, about the year 1868, the titles of Rajah Bahadoor in consideration of his uniform loyalty to the British, notwithstanding the strenuous efforts made to enlist him in the revolts of the hill tribes. The Nustung territory forms the South West portion of the Cossyah district, and borders on the Garo country; and the rajah entered into a convention with the British that, should it be at any time requisite to the latter power to move troops in the Garo hills from the Eastward, they should have a free passage

through his territory. His turbulent and refractory neighbours are the Jynteah, Cossyah, Garo, Bhootanese, Naga, and Abor. Dr. Buchanan Hamilton says, the under bark of the Celtis orientalis tree, like that of the West India Celtis, consists of numerous reticulated fibres, and forms a kind of natural cloth, used by the Garo ('Lin. Trans.,' xvii, p. 209). He also describes it in his report on Assam, as a kind of rug worn by the Garo in the cold weather, and serving them as blanket by night. Captain Reynolds sent a specimen of it to the Agri-Hortic. Society; the Garo make several such cloths of different colours from various barks. The Garo who come to the plains, generally buy some small ends of cloths from the Bengalees, to attend the *hauts* (fairs) in, not as clothing to protect them from wind and weather.—*Royle Fib. Pl.* 317.

The *Mikir* tribe are partly hillmen and partly lowlanders, occupying a considerable area in the Assam district of Nowgong and in Northern Cachar whose numbers are computed at 26,000. They flit from place to place every four or five years to cultivate cotton and rice. They build houses on platforms, drink spirits, eat opium and are either unbelievers or imperfect converts to hinduism: delight in festivals and in their attendant drunkenness, they eat beef and pork, and fowls are sacrificed to the sun, moon, and invisible deities attached to trees, their physiognomy and dress is that of the people of the Khasia Hills, to whom the Mikir seems to be allied, and perhaps the Naga, the Garo, the Khasia, Jaintia and Mikir are all affined. The Mikir of North Cachar are mild and little courageous though they carry the dhao and spear.—*Latham's Descriptive Ethnology.*

The *Cossyah* or *Khassia* country, on the North East frontier has iron of great purity, smelted at Pundua; Cassia lignea is one of its principal articles of export, and a variety of parti-coloured cloths, generally known by the name of Sylhet cloths. Some of them are dyed of rich colours and being of a strong durable texture, are well adapted for table covers, to which purpose they are usually applied in the Eastern part of Bengal. The *Cossyah* and *Jyntia* hill territory is administered by an Assistant attached to the Assam Commission. The value of the export and import trade of the country is about rupees 30,000 a year with Assam, and with the Bengal plains about 10½ lakhs, the exports being 7 lakhs. The total revenue from lands and taxes in 1857 amounted to rupees 23,023. The first treaty with Jyntia was concluded in 1824. The rajah Ram Sing rendered no assistance during the Burmese war, but he agreed to acknowledge allegiance to the British and his country was taken under protection. The population of the Jyntia hills is about 40,000 souls, and of the Cossiah hills about 82,400. The Cossiah states are twenty-five in number, of which five, viz. Cherra Poonjee; Khyrim, Nustung, Sungree and Nuspoong, are commonly called the "Semi-independent States." The chiefs exercise civil and criminal jurisdiction over their own people in all matters pertaining exclusively to them. The minor states, known as the "Dependent States," are twenty in number, the chief of which are

Nungklow,	MowdunPoonjee,	Mowyang,
Moleem,	Mahram.	Nobo Sopho,
Murriow,	Mullai Chummut,	Jeerung,
Ramrye	Bhawul,	Syung,
Mowlie,	Seenai Poonjee,	Moflong Poonjee,
Cheyla,	Lengkhan Poonjee,	Mowlong do.
Dowarrah Notoormen,		Lyksom do.
Mowseuram,		

Moleem was conquered in 1829, and the rajah of Khyrim ceded to the British, the territory to the S. E. of the Oomean or Booga Pane river. In 1861, its rajah was deposed and Malay Singh, a new chief installed. No engagements have ever been made with Nobo, Sopho, Syung, Moflung Poonjee, and Lyksom Poonjee, but agreements were entered into with Mowyang in 1829, Dowarrah Notoorman in 1837, Soopar Poonjee in 1829, and in 1860, with Bhawal.

The estimated area of the *Cossya Hills* is 7,290 sq. miles, About 16 m. on the Sylhet side, and about the same on that of Assam, it consists of low land interspersed with small hills. In the interior, about 50 m. in extent, is an undulating hilly table land, from 1,500 to 2,500 feet high. Coal is said to abound in the hills of Jynteah. The localities admitting of cultivation are the plateau of the Cossyah and Jynteah hills, the lower ranges on the Assam border, and the slopes towards the Sylhet plains. The area of the three plateau is about 3,500 square miles and their heights vary from 3,000 to 6,000 feet above the sea level. The soil is a ferruginous red clay, with a subsoil of shingle little suited for profitable cultivation. In the hollows, however, a fine black mould is found extending often over many acres. On the plateaux, miles upon miles of land are as level as the most highly cultivated portions of Kent and the Lothians. On the middle plateau the temperature averages that of the English summer; rising to 72° during the hottest months. The cold weather is less severe than an English winter. The cultivated land in those hills is very little. A late survey gave 12,221 acres or less than 10 square miles as the total in the Jynteah hills; while within an area of 4,450 square miles among the

Cossyah hills only 30 square miles have been brought under crops. The Cossyah hills have a small isolated body of people of the Taic or Siamese race. The Ahom who once ruled Assam, were also of the Siamese race.—*C.* 149. The Khassya race inter their dead on the undulatory eminences of the country. The tribe habitually erect dolmens, menhirs, cysts and cromlechs, almost as gigantic in their proportions, and very similar in appearance and construction to the so-called Druidical remains of Western Europe. These were described and figured by Col. Yule, on the Bengal Asiatic Journal for 1844. They keep cattle but drink no milk, estimate distances traversed by the mouthfuls of betel-leaf chewed *en route*, and among them the marriage tie is so loose that the son commonly forgets his father when the sister's son inherits property and rank. The undulatory eminences of the country, some 4,000 feet to 6,000 feet above the level of the sea, are dotted with groups of huge unpolished squared pillars and tabular slabs, supported on three or four rude piers. In one spot, buried in a sand grove, were found a nearly complete circle of menhir, the tallest of which was 30 feet out of the ground, 6 feet broad, and 2 feet 8 inches thick; and in front of each was a dolmen or cromlech, of proportionately gigantic pieces of rock, while the largest slab measured is 32 feet high, 15 feet broad, and 2 feet thick. Several that were seen had been very recently erected. The method of removing the blocks is by cutting grooves, along which fires are lighted, and into which, when heated, cold water is run, which causes the rock to fissure along the groove; the lever and rope are the only mechanical aids used in transporting and erecting the blocks. The objects of their erection are various—sepulture, marking spots where public events had occurred, &c. It is a curious fact that the Khasian word for a stone, "man," as commonly occurs in the names of their villages and places as that of man, maen, and men does in those of Brittany, Wales, Cornwall, &c.; thus Mansmai signifies in Khasia the stone of oath, Mamloo, the stone of salt, Manflong, the grassy stone, &c., just as in Wales Penmaen Mawr signifies the hill of the big stone, and in Brittany a menhir, is a standing, and a dolmen a tablestone, &c. The resemblance of the burrows and their contents (with the cromlechs, &c.) to the Druidical remains which are discovered in the ancient seats of the Celtic race in Europe, is too exact and remarkable to be accounted for on any other supposition than that of their derivation from the same origin. Hence the people who introduced Druidical rites into India must have brought them with them from Central Asia, and they must have entered India at a period as early as the introduction of Druidical rites into Europe. The *Kasia* are the ablest bodied of the borderers of Assam. Their tribe or race differs very little from that of the Garo. They are arranged in petty rajahships, in the Kasia hills. Nat worship seems the culture of the Kasia. They dread snakes. They build their houses on piles. They trap fish, like the people in Java, Borneo and Sumatra. They distil and drink intoxicating liquors, and between Ringhot and Cherra, and in other places are bridges of the fibres of the India rubber tree, described by Captain Yule. The Khassia hills present in general the aspect of a well defined plateau with comparatively small, isolated, elevations. The plateau is terminated to the north by the valley of the Brahmaputra, to the south by that of the Surma, (*Schlagintweit's General Hypsometry of India, Vol. II. pp.* 95,98). These hills lie between the two British Provinces of Assam and Cachar, and the north-Western portion of the territory of Burmah.

Munipoor.—In this great mountain tract one or two valleys occur. The largest, that of *Munipoor* is, from its connection with the British Government, and from the tribes around it all admitting its supremacy, the most important. Lying between latitude 23° 50′ and 25° 30′ north, and longitude 93° 10′ and 94° 30′ east, the mountain tract in question is bounded on the north and west by the British Provinces of Assam and Cachar, and on the east by the Kubbo valley now subject to Burmah. To the north-east and south, the boundary is not well defined, and would much depend upon the extent to which the Munnipore government might spread its influence amongst the hill tribes in those directions, but in the north-east it may be denoted by a line drawn north from the north-western corner of the Kubbo valley until it strikes the Assam boundary, and in the south by one drawn west from the source of the Numsailung river, the fixed south-east boundary, till its junction with the Tooyai river.

Of the space comprised in these bounds, the valley of Munnipore occupies nearly the centre. It is called by the Munniporee people "Meitheileipak." The Burmese call it Ka-the, the Bengalees Moglai, and Assamese Mekle. The area of the whole territory is about 7,000 square miles, and that of the central valley about 650. Much of the valley is at all seasons, covered with water. It seems indeed at one time to have formed a large lake, and the piece of water in the south called the Logtak, appears to be the unfilled but rapidly filling, remnant of it. From the most credible traditions, the valley appears originally to have been occupied by several tribes, the principal of which were

named Koomul, Looang, Moirang and Meithei, all of whom came from different directions. For a time, the Koomul appears to have been the most powerful, and after its declension, the Moirang tribe.

Of the population, composed of different classes, the principal is the Meithei, next the Phoongnai, after whom the Teng kul, the Ayokpa, the Kei, the Loee and Mussulman. The Meithei population is divided into four parts called "Punnahs," which are designated in the order of their seniority "Kaphum," "Lai phum," "Ahulloop" and "Niharoop."

The *Loee* population consists of people who pay tribute, and is considered so inferior that the name Meithei is not given to it.

The marshes of the south in the vicinity of the Logtak afford a retreat to serpents of a formidable size, and the whole valley of Munnipore is much infested by the serpent tribe. Some of them are exceedingly active and bold as the Tanglei. It is fond of ascending bamboos, along the branches of which it move with great velocity, and if enraged, throws itself from an extraordinary height upon the object of its anger. Its bite is said to be mortal. This, added to its great activity and fierceness makes the Tanglei an object of much dread.

The inhabitants of the hills around the valley of Munnipore, in the west, are known under the general appellation of Naga and Kooki. In Munnipore they are all embraced in the term Hau, but Koupooee, Quoireng, Khongjai, Kamsol, Anal-Namfau, Aimole, Kom, Koireng, Cheeroo, Chote, Pooroom, Muntuk, Karum, Murring, Tangkool, Loohoopa, Mou, Muram, Miyang-khang, Gnamei are the names in use amongst Munniporees to distinguish the principal tribes, and though each of these tribes has a distinctive name of its own, of ten quite different from the Muniporee one.—*McCulloch's Records, Government of India, Foreign Department, pp.* 10, 34, 41.—*Latham's Descriptive Ethnology.*

Singpho.—Leaving out of view the intruding and partially interspread Shan or Lau tribes, the Burmans march on the north with rude tribes of their own family, collectively termed Singpho, (properly Sing Phol) who occupy the upper Irawadi. On the extreme north the linguistic boundaries of the Singpho are unknown. It is possible that they march with the Khampa or ruder Tibetans of the S. E., unless the snowy mountains which there form the watershed between the Irawadi and the Tsang-po, cut them off, as is more probable, from all intercourse with their northern neighbours. A wild tribe only known under the generic Lau, termed Kha-nung, occupy the mountains to the North East of the Kham-ti, apparently in the upper part of the Mi-li or Nam-Kiu. They are interspersed between the Kham-ti and the Mung-fan, the later appearing to belong to the Tibetan family (Si-fan or Kham-pa.) The Kha-nung may form a link between the Kham-pa and the Singpho or Burman families.

The Singpho march on the N. W., with the Mish-mi who occupy the eastern mountainous extremity of the basin of the Brahmaputra, and on the W. and S. W. with the Naga and Munnipuri tribes. In the interior of Arakan and between it and the Kynduayn river, several tribes are scattered over the highlands to the south of the Kuki, Naga and Manipuri tribes.

Some of these, such as the Khy-oung-tha and Khu-mi or Ku-mwi (properly Ku-mi), of the middle basin of the Koladyn, belong to the Burman family.

The more eastern tribes, such as the Lung-kha (perhaps the Lunkta a branch of the Kuki) of the upper Koladan, and the Heuma or Shindu, and the Khon or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Kuki, Kumi, &c. The Lung-kha are said to be composed of an offshoot of the Heuma of the Shindu (Shentu, Tseindu or Shiamdu) and two tribes called Lung-Khe and Bowng-jwe which it subdued. Captain Tickell says that the feeders of the Mi-Khyoung, the principal eastern affluent of the Koladyn, descend from masses of high hills about Lat. 21° 50' N. inhabited by the Kun.

Mru or Tung Mru, a tribe on the Koladan river, are supposed by Dr. Latham to be the same as the Mrung who allege their origin to be from Tipperah. The number of the Mru in Arracan is about 2,800. At one time a Mru chief was chosen king of Arrakan, and the country was Mru when the Rukheng conqueror invaded the country. The word Mru is supposed also to be the same as Miri.—*Dr. Latham's Ethnology.*

The *Chumiah* are a race to the North and East of Chittagong, dwelling between the Kuki and the plains. The Chumiah and the Kuki are described as having flat noses, small eyes, and broad round faces, and differ from the Naga race, both in appearance and customs.

Sak or Thak a small tribe on the river Nauf near the Koladyn river in Arrakan.—*Latham.*

The *Heuma or Shendu* tribe inhabit the hills north of Arrakan. They occupy the Yeoma-toung hills, on the watershed between the Meeyk-young and the drainage of the Munnipur rivers. Their chiefs are called Aben, and their villages have from fifty to 400 houses. They use the trap-bow for shooting the elephant, but fire-arms are superseding the ruder

weapons. They regard the sun and moon as deities. The *Heuma* are placed by Captain Tickell in the higher hills to the N. and N. E. of the Kun tribes, between 21° and 22° N. Lat and 93° and 94° E. Lon. They do not appear to differ from the other rude tribes of the Burman family, and are probably closely allied to the Manipuri tribes.—*Latham.*

Ka-mi or Ku-mi are tribe on the Koladyn river who assert that they once dwelt on the hills now held by the Khyen. Their name seems the same as that of the Khumia of Chittagong.

Khyen, is a name given to several populations,—one tribe who tattoo their skins, dwell on the Koladyn river, in Arrakan. Another on the Yuma mountains south of the Koladyn river; the Mru are sometimes called Khyen. Khyen, indeed, as also Kha, are, probably, names given to most of the rude tribes of the Arrakan and Burmese mountains. Those of the Khyen to the south of the Koladyn river, are Burmese subjects, pay taxes, serve as soldiers, and live a quiet life. But the Khyen on the hills are independent. They say that they fled thither from the plains of the Irawadi. They are ruled by their village chiefs. Their religious chief is the Papin, whose office is hereditary, and is that of prophet, soothsayer and priest. They believe in the metempsychosis. They worship the Subri tree, a thick bushy tree, bearing a small berry; they also worship the thunderbolt. The Khyen grow and spin cotton into cloth, which they dye black and wear. The women tattoo their faces. The true and typical Khyen is the independent mountaineer of the central districts. The *Khyeng* or *Khyen* residing to the south of the Koladan, in the Yu-ma range as far as the north border of Pegu, but chiefly in the upper basin of the Lem-yo, have a tradition that they once possessed the plains of Pegu and Ava. The name seems to be the soft Burman pronunciation of Karen, and they may be a remnant of an old horde from the north, pressed in to the mountains or restricted to them by the Karen as the other Yuma tribes probably were. Linguistically, the Khyen are connected with the Yuma tribes to the north-ward. Physically, they are of the earlier and purer of the Mongolian race of the Irawadi family, like the Nicobarian, Kumi and Kuki. Their faces are flatter and less regular than the Burman and consequently than the Karens. Captain Phayre says their manners and appearance are similar to those of the Kumi. They make iron and cloth and have the usual weapons of the tribes of the upper Irawadi.—*Latham.*

The Bom-zu or Bun-zu or Bom-du of the Rakhoing, dwell north of the Koladyn, inhabiting chiefly the upper basin of the Kurmfuli or eastern branch of the Chittagong river.

Lungkta, Kungye, Kuki.—To the north of the Bom-zu or Bun-zu (Bomdu) are closely allied tribes termed collectively Lungkta, Kungye, or Kuki, who occupy the highlands of Tipperah and extend S E. towards the head of the Koladyn. Both the Bun-zu and Kuki appear, like the Kumi, to belong to the Burman family. The Kuki represent its most archaic and barbarous condition. The tribes that have been exposed on the sea board of Arrakan or in the basin of the Irawadi, to the influence of the Chinese, Shan, Mon, Bengali and more distant commercial nations, have attained a comparatively high civilization. The Singpho although much behind the Burmans, are greatly in advance of the Kuki, and the Burmese seem at a very ancient period, when their condition was similar to that of the Kuki and perhaps, in many respects more barbarous, to have spread themselves from the upper Irawadi to the south and west as far as the highlands of Tipperah on the one side, and Pegu on the other. Whereever the stock from which they have been derived was originally located, they probably first appeared on the Ultra Indian ethnic stage as a barbarous Himalayan tribe, immediately to the eastward of the Mishmi, if indeed they were not identical with the Mishmi, of that era. The upper Irawadi was probably then occupied by the ruder and inland tribes of the Mon-Anam alliance.

The *Koupooee* comprise two tribes, the *Songboo* and *Pooeer-on*. The Koupooee occupy the hills between Cachar and the valley of Munnipore in their whole breadth, a direct distance of about forty miles; and from 25° North latitude, they formerly extended over nearly an equal distance to the South. The whole of this tract was formerly thickly studded with villages, some of them of considerable size, and Songboo tradition gives, as the place of their origin, the mountain towards the South of the valley named Thungching. They and all the other races of hill people congregate in communities, composed usually of families connected with one another by blood-ties. The superior elevations being the most healthy; their villages are usually to be found on them. Before the subjugation of the Songboo tribe to Munnipore, almost every village was at war with its neighbour. On their subjugation this warfare was put a stop to, but the remembrance of their feuds remains and they would break out afresh to-morrow were the restraining hand of Munnipore withdrawn. Munnipore has, however, been able to exert so much influence amongst the Koupooee as to prevent feuds being openly carried on, but a state of active feud appears to be the one natural to all the tribes from Cape Negrais to as far north as we have any knowledge. The

Koupooee are much attached to their villages, which are permanent. The village and its immediate precincts form their grave-yard, and when, for a time, from whatever cause, they have been obliged to desert their village, they more often express their wish to return to it as being the grave of their ancestors, than to it as being their own birth place. Their attachment then to their village is created quite as much by its holding the tombs of their ancestors as by its being the place of their birth. The mountain-land around the Koupooee village, within certain fixed bonds, is usually the property of the village. This they cultivate with rice in elevations suited to it, and with other crops in situations unfitted for that species of grain. The spot cultivated this year, is not again cultivated for the next ten years; it having been found that that interval of time is required for the formation of a cultivable soil by the decay of the vegetable matter that again springs upon it. Every village has three hereditary officers, namely Kool-lak-pa, Loop-lak-pa and Lum-poo, and officers, besides these, are elected. If the hereditary chief or Kool-lak-pa be a man of wealth, he will be also a man of influence. The Koupooee are sub-divided into families Koomul, Looang, Angom and Ningthanja. A member of any of these families may marry a member of any other, but intermarriage of members of the same family is strictly prohibited. Though not attended to with the same strictness, this prohibition, in regard to marriage, and this distinction of families under the same designations, exists amongst the Munniporee race. All the hill-people are dirty, but amongst them the Koupooee is comparatively clean, he frequently bathes, though he does not devote much time to the purification of his skin. He is omniverous, and of course without prejudices of caste, but one species of food he never touches milk to him is an abomination. In appearance, manners and customs there is no essential difference between the two divisions of the Koupooee, the Songboo and Pooeeron, but though so much alike in these respects, between their languages there is so great a difference, that when they wish to communicate with one another they have to resort to the language of Munnipore. The Pooeer-on do not appear at any time to have been numerous, and they are at present confined to a few villages situated in the North Eastern corner of the space before indicated as the region of the Koupooee tribe.

The *Quoireng* tribe, have a language distinct from those of the Songboo and Pooeeron but with a great similarity in all other respects. They inhabit all the hills north of the Koupooee, between the high range that skirts the valley of Munnipore and the Burak, as far as the Angamee tribe, from whose aggression they have suffered much. From these aggressions and their own feuds, they have much decreased in number, but are still a very considerable tribe, possessed of much energy which developes itself in trade with the Angamee and the British frontier District. The Khongjai or Ku-ki, until lately, occupied the hills to the South of the Koupooee whilst in this position, little or nothing of them was known, but they caused fear from their vicinity. South of them lay the Poi, Soote, Taute, Loosei, and other tribes, better armed than they were, and of the same genus as themselves, but at feud with them. By these they were driven from their native hills, the task being rendered easier by the internal animosities of the Khongjai themselves, and the Khong jai are now scattered around the valley of Munnipore, and thence through the hills to North and South Cachar. Thus they broke into distinct tribes. Although occupants of the hills to the south of the valley of Munnipore their traditions do not give the southern hills as the place of their origin, but rather lead them to the belief that it was in the North. The salique law rigorously prevails amongst the Khonjai, but the influence of woman is great amongst them.—*McCulloch's Records. G. I. F. D. pp.* 42, 59.

The *Kuki* country lies to the south of the Garo, Kasia, and Mikir areas, or the hill ranges of Garo, Jaintia and Cachar in Sylhet, Tipperah and Chittagong—among the mountains to the north-east of the Chittagong province. There are new Kuki who came from the ruder parts of Tipperah and Chittagong, and their form of speech is not always intelligible to an old Kuki. The Manipur dialects and the new Kuki are mutually intelligible. In 1848-49, four Kuki tribes,—the Thadon, the Shingshion, the Chungsen and the Lumgum, were driven into north and south Cachar and into Manipur, from their locations by the Lushai people who speak a Kuki dialect but dwell further south. They were driven back by Colonel Lister and his Sylhet light Infantry. He entertained the new Kuki as soldiers, and they are found to form good out-post soldiers on the frontiers of both the Lushai and the Angami countries. Puthen is their chief deity, he is benevolent: and Ghumvishve is a malignant deity. The Kuki likewise worship the moon. They have no professed minister of religion. The Thempu, their priest and diviner, is not hereditary and his office is not coveted from fear of the initiatory rites. The Kuki occupy Sylhet, Tipperah and Chittagong, with an offset in Cachar who are called the old Kuki. Those in Cachar are skilful in the cultivation and weaving of

cotton. The Cachar old Kuki are under 4,000 and are arranged into three divisions the Rhangkul, the Khelma and the Betch. The Kuki are also called Lungkta. They are little civilized, are of an active, muscular make, but not tall. The tradition of the Kuki respecting their origin is, that they and the Mug, are the offspring of the same progenitor, who had two sons by different mothers. The Mug, they say, are the descendants of the elder, and the Kuki of the younger son. The mother of the younger having died during his infancy, he was neglected by his step-mother, who, while she clothed her own son allowed him to go naked. According to Coleman, p. 234 the Kuki are divided into a number of distinct tribes, totally independent of each other. The rajahships, he says, are hereditary, and the rajahs by way of distinction, wear a small slip of black cloth round their loins; and, as a farther mark of superior rank, they have their hair brought forward and tied in a bunch, so as to overshade the forehead, while the rest of the Kuki leave their's hanging loose over the shoulders. The Kuki arm with bows and arrows, spears, clubs, and dah, a hand hatchet, resembling the knife of the Nair on the Malabar Coast, and a most destructive weapon in close combat. They also wear round their necks large strings of a particular kind of shell found in their hills: about their loins, and on their thighs, immediately above the knee, they tie large bunches of long goat's hair of a red colour, and on their arms they have broad rings of ivory, in order to make them appear the more terrific to their enemies. The Kuki are vindictive; blood must always be shed for blood. They have but one wife but they may, however, keep as many concubines as they please. Adultery may be punished with instant death by either of the injured parties, if the guilty be caught by them in the fact. The *Kuki* on the Eastern frontier are an entirely different race from the *Kooki* of the *Chittagong* jungles. The name by which they are commonly known is "*Tipperah.*" In physiognomy some of them are like the *Munipooree*, but the greater part bear more resemblance to the *Khasia* tribes having strongly marked *kalmuk*, or Mongolian features, with flat faces and thick lips, not in general shorter in stature than *Bengali*, but far more muscular and strongly made. Many of them, with complexions scarcely darker than a swarthy European. The villages contain perhaps from 100 to 200 inhabitants each, and each house is raised on bamboo piles 4 or 5 feet from the ground. The Kuki race of Assam were much addicted to make inroads on the plains, not for plunder, but to procure heads, and they have been known to carry off fifty heads in a night. On the death of a chief, the body is smoke dried and kept for two months with the family. If a rajah fall in battle, they immediately proceed on a head hunting expedition and bring in the heads of those they kill, hold feastings and dancings and, after cutting the head into pieces, send a portion to each village. This is considered in the light of a sacrifice to the manes of the deceased. In the spring of 1871, they made several inroads into Assam, for the purpose, as was alleged, of obtaining heads for the manes of a chief's daughter.—*J. H. Reynold's Embassy, Vol. of* 1864 *of B. A. S. J.*

The *Looshai* dwell on the southern frontier of Cachar. In 1848-49, they drove up the Kuki, from the south, into Cachar. In their turn, they are being pressed up into Cachar, by the Poi, a tribe who are advancing from the south-east. The Looshai inhabit the hilly tract lying between Cachar and Chittagong, and claim and hold all the tract of country to the south of the parallel of the latitude of Chatter Choora hill, and east of hill Tipperah to the Tepai river, is Burmese frontier.—*Aitcheson.*

Khumia and Kuki.—Khum, means a village, Khumia, a villager. The Khumia and Kuki tribes occupy the hills of Sylhet, Tipperah and Chittagong, the Khumia on the skirts and the Kuki on the tops of the hills. The Kuki are the ruder or more pagan, though also tinctured with hinduism. They term their supreme being, Khojein Putiang, to whom they sacrifice a gyal and an inferior deity is named Shem Saq, to whom they offer a goat. Shem Saq, is put up in every quarter of a village, in the form of a rude block of wood. Before this they place the heads of the slain, whether of men in war, or of animals of the chase.—*Latham* ?

If a *Kuki* man die at night his body is burned in the morning, vegetables and rice are placed on the spot where the body was burned, and the relatives of the deceased address the ashes of the consumed corpse thus, "We bid you farewell to-day; whatever money and rice you have acquired, leave with us." On the following day friends resort to the deceased man's house, and offer up a sacrifice of a fowl to the gods Tevae and Sangron. Liquor is freely partaken of, the good qualities of the deceased are recited, and much lamentation is made. When a married man dies, all his friends assemble and bewail their loss. Vegetables and rice are cooked, and placed on the left side of the corpse with a gourd or bottle of liquor. Amongst the Beli clan of Kuki soon after death the corpse is washed with warm water, and covered up with a cloth. The

Tevae and Sangron, are the principal deities worshipped; to them fowls, pigs, and spirituous liquor, are offered, in sacrifice, on all occasions of sickness, famine, or other affliction which they conceive is the surest method of averting evil and bringing their wishes and undertakings to a successful termination. The Kuki have no images or temples of any kind. The object of the Kooki inroads on the plains is not plunder, for which they have never been known to show any desire, but they kill and carry away the heads of as many human beings as they can seize, and have been known, in one night, to carry off fifty. These are used in certain ceremonies performed at the funerals of their chiefs, and it is always after the death of one of their rajahs that their incursions occur. The Kooki have been accused of cannibalism, and in one instance the charge seemed substantiated, but they disclaim the imputation with much vehemence. Nothing comes amiss to a Kooki—the elephant, rhinoceros, and beef, being equal delicacies. The new Kooki clans are presided over by rajahs and muntrees, who decide all matters of dispute brought before them; and in such respect do they hold their rajahs that their word is law. One, among all the rajahs of each class, is chosen to be the Prudham or chief rajah of that clan. The dignity is not hereditary, as is the case with the minor rajahship, but is enjoyed by each rajah of the clan in rotation. The Kuki smoke dry the dead bodies of the rajahs. After the death of a rajah his body is kept in this state for two months before burial, in order that his family and clan may still have have the satisfaction of having him before them. Should a rajah fall in battle by any chance, they immediately proceed on a war expedition, kill and bring in the head of some individual, hold feasting and dancings, and then, after cutting the head into pieces, send a portion to each village of the clan. This was done on the murder of the Kooki rajah by the Nimzae Nagarace. This is considered in the light of sacrifice to appease the manes of the deceased chief.

The Kooki cultivate rice and cotton, but in a manner quite opposed to the system pursued by the Cacharee and Naga, the former of whom raise three crops of rice from the same land, and the latter four. The crop is not cut till November, whereas that of the other hill tribes is cut in August and September; their cotton is also very fine. Besides this they grow tobacco, and all the usual vegetables met with in the hills.

The men are powerful and hardy but turbulently inclined. Having been accustomed to war in their own country, they are exceedingly well suited for soldiers, and those that have been enrolled in the Kooki levy at Silchar have turned out well. They are also particularly modest and decent, each man living with his family in a separate house. The widows also live in houses of their own (in this respect like the Naga and Cacharee), built for them by the villagers. The men wear a large cloth, sometimes two, wrapped loosely round the body, and hanging from the shoulder to the knee. Underneath this they wear nothing, the whole body being bare, in which they consider there exists no want of modesty, as such has been their custom from time immemorial. The women wear a short striped petticoat, reaching from the upper part of the stomach half way down to the knee. Married women have their breasts bare, but all virgins are covered, wearing a similar cloth to the petticoat wound round the bosom underneath the armpits. They wear their hair prettily plaited at the back, the two ends being brought round in front and tied just above the forehead in the form of a coronet. Like all hill people, the Koo-ki are most dirty in their habits, very seldom washing their bodies. The sites of the Kooki villages are well chosen on the broadest parts of the highest ridges, with water near at hand, generally a small hill stream. Some of the chief villages contain as many as 200 houses, commodiously built on platforms raised between three and four feet from the ground. Every part of the house is formed of bamboo, there being but few trees of any kind.—*Butlers Travels and Adventures in Assam, pp.* 85, 99.

Naga, is a word supposed derived from the Hindi, *Nanga*, naked, and is the name applied to a population composed of several tribes on the hills which bound Assam. The Naga lie north of Munipur and its dependencies. They use little clothing, manufactured and dyed by their women. They come in contact with the Mikir, Kuki and Cachar. The Naga villages of from 20 to 100 houses are fixed, and they crop and leave their lands fallow. They inter their dead at the threshhold of their doors. The Naga is simple, social, and peaceful, unless when blood has to be avenged and then he is treacherous and cruel. Semeo is the name of their god of riches, Rupiaba is a malignant deity, with one eye in the centre of his forehead, and Kangaba, is a blind, malicious deity.—*Latham.*

Angame is a rude pagan tribe on the range of hills in upper Assam, on the eastern frontier of the Mikir and Cachari. They speak one of the Naga dialects.

The *Kakhyen* are divided into sects, each of which is headed by a Tsaubwa who is inde-

pendent, except in so far as a dread of the Burman king can influence his conduct. The next in rank to the Tsaubwa is called the Pawmyne. Both offices are hereditary. The Tsaubwa of Ponlyne, a village to the north-east of Bhamo, was the first chief whom Major Sladen met. Before the Burman officials he maintained a dogged silence about the route. In a private interview, after a little haggling, he was glad to accept Major Sladen's terms. The greatest difficulty in treating with these chiefs was to find an honest interpreter. One after another exaggerated the dangers of the road, and perverted the statement of the Tsaubwa, trusting that their secret orders from Mandalay would bear them out against the penalties with which the King *publicly* threatened those who obstructed the expedition. An old Muniporee woman, who acted at one time as interpreter, was beaten in the streets, Shikaries were forbidden to show game to the Englishman. Another difficulty was the change of British Indian rupees into the currency of the Shan and Kakhyen. This could not be effected ; and Major Sladen started with a determination to melt his silver if the coins were not accepted. The issue showed how they were appreciated. Ponlyne, one of the first stages after Bhamo, will give us the picture of a Kakhyen village. The houses are elongated bamboo sheds, with a portico devoted to the cattle and poultry. Half the house is set apart as sleeping cells for the family ; the other, forming an open hall running along the whole length of the house, is a public lounge. Here the stranger is admitted to Kakhyen hospitality. Kakhyen beer—a very good substitute for the English original, is put before the guests and the natives help themselves liberally. The chiefs are very fond of liquor. The Tsaubwa of Ponlyne several times gave the party annoyance, after leaving Bhamo, by his habits of intoxication. The beer is drunk, when fresh brewed, in plantain-leaf cups. The women wear a picturesque jacket ornamented with lines of silver plates, chased and enamelled. The lower garment is a single cloth ornamented according to the taste and ability of the wearer. In the evening the villagers assemble and dance to an accompaniment of sticks, stepping off the side "crab-fashion." When a villager dies, his friends dance round the body to propitiate the spirits called *Nat* and to *drive* away the soul from its former habitation. The *Nat* had to be propitiated before the British travellers could proceed on their journey. The *Meetway* or priest wrought himself into a devotional mood by tearing his hair, groaning, kicking and stroking his head and face. Fifteen rupees were laid on a cloth and offered to the priest, through whom the *Nat* spirits intimate their acceptance or the contrary. The money was spurned. Other five rupees brought the spirits to reason, and blessings and good omens followed the travellers. When unpossessed, the Kakhyen *Meetway* is an ordinary layman. As an initiatory rite, to show his fitness for the priestly office, the novice must climb a ladder with sword blades, sharp-edge uppermost, for steps, and seat himself upon a platform thickly studded with the sharpest pikes. Major Sladen found the *Nat* spirits very amenable to presents, and the *Meetway* generally interpreted the oracles in his favour. In vain, during long delay at Ponseé, was a bullock offered to the gods to turn them away from the cause of the British officers. Rupees were better than burnt-sacrifice. The domestic intercourse of the Kakhyen is very loosely regulated. Like the Non-Aryan tribes on the Eastern frontier of Bengal, there is no restriction on intercourse until marriage, but after that unchastity of the female is punished by death. The mirrors, beads and trinkets with which Major Sladen's Expedition had been provided, attracted crowds of females to the camp, each with a little present in return for which she hoped to carry away some finery.

The *Singhpo or Sintipho* people who inhabit the eastern districts of Assam according to their own traditions "descended from heaven ; but it is known that about four or five centuries ago they migrated from a mountainous region on the borders of China, gradually advanced to the mountains skirting Assam, and towards the close of the 18th century established themselves on the low lands which they at present occupy."—*Cole. Myth. Hind. p.* 326. The peoples called Muttuk, Singpho proper, and Jili, form three divisions of the Singpho group. The country of the *Muttuk* lies at a short distance from where the Brahmapootra river enter the Assam valley, dwelling close to the banks and principally on the southern side. The people are called Muttuk, Moran, and Moamerria or Mowameria, and are subjects of the Bursenapati, a vassal of the rajah of Assam ; they are vaishnava hindus. They are in tribes, as the Khaphok, Khanung, Khalang, and Nognum, and their language is said to contain seven dialects, so different as to render them almost unintelligible to one another. The *Singpho proper* are a powerful intrusive population residing partly in Assam and Munnipur, and partly in the unexplored east. They are of a mixed buddhist and pagan creed, and live in separate villages under chiefs called Gam. There are four tribes known—the Thengai, Mayang, Lubrang and Mirip (Miri Mru, &c). They have a domestic slavery, such bondsmen being called Gum-lao. They practise polygamy. Property is divided between the

eldest and youngest brother, the intermediate remaining with these two as clansmen.

The *Jili* are conterminous with the Singpho proper. Their language being ⅔ Singpho and ⅓ Garo.

The *Kaku* religion is more or less buddhist, and the chief object of their worship is Gautama. But they likewise worship the elements and their gods, amongst whom are Megh Duta, and Ning Shi, to the latter of whom they dedicate skulls of buffaloes and the skulls of their enemies whom they kill in battle. Dr. Latham (*Descriptive Ethnology*) considers the words Kaku, Kuki, Kakui and Kakhyen to be identical.

The *Muttuk* is a branch of the Singpho group. The principal tribes on the frontier of Upper Assam are the Muttuk, the Khamti, and the Singpho. The Bur Senaputtee or chief of the Muttuk branch of the Singpho entered into an engagement in May 1826, whereby he acknowledged the supremacy of the British, and bound himself to supply 300 soldiers in time of war. The management of the country was left in his own hands, except as regards capital offences. In January 1835 the obligation to supply troops was commuted to a money payment of Rupees 1,800 a year. In 1826, similar agreements had been made with the Khamtee chief of Suddeya, but in 1839 they attacked the town of Suddeya, and many persons, as also Colonel White, the Political Agent, was slain. Agreements were also made in May 1836 with the *Singpho*. These tribes were implicated in the *Khamtee* rising in 1839, but they were allowed to surrender under conditions. Many of the Singpho clans have become extinct, and the main body have left Asam for Hookong, in Upper Burmah.—(*Aitchison's Treaties, &c., page* 127.)

Chittagong, also called Islamabad, in latitude 22° 20′ 5. N., lon. 91° 44′ 1 E. is a town 7 miles from the north of the river of the same name. Flag staff hill is 151 feet above the sea. It is a large town of mahomedans and of the Mug, a tribe, who, as some writers suppose, inhabit many parts of the Malay peninsula, and the coast to the northward of it. The town stands on the north shore of an extensive delta, formed by rivers which issue from the lofty mountains separating this district from Burmah, rising 4,000 to 8,000 feet; they are clothed with forests and inhabited by turbulent races, conterminous with the Kuki, of the Cachar and Tipperah forest, if indeed they be not the same people.

The hill tribes of Chittagong have been pushed up from Arakan. They call themselves by two names of pure Arakan origin—the Kyoung-tha, or sons of the river, and the Toung-tha, or sons of the hills. The latter, to which the Looshai belong, are the more savage and independent as their name would lead us to believe. The former have a written language and even possess several copies of the *Rajah-wong*, or History of the Kings of Arakan. All are Mongolian in physique, and are probably of Burmese origin. They have an honest bright look, with a frank and merry smile; and their look is a faithful index of their mental characteristics. They live in bamboo houses raised above the malaria of the ground. They practice *joom* (*Cheena or Kumari*) cultivation, burning down the jungle to prepare the soil for mixed seed scattered broad-cast, and moving off to a new site next season. And they have a mild form of debtor slavery, which Captain Lewin thinks we have too suddenly interfered with, so that the hillmen fall victims to the usurer. Among the independent tribes beyond the British border, prisoners of war are sold like cattle. Their wives are procured, while raids are also caused by the usage of "wehrgeld," which they call "goung hpo" or the price of a head. When a villager dies, his friends charge the village which he may have last visited with his death, and demand a price for his life. Polyandry, however, does not seem to exist among these tribes, though the women are so overworked and thus rendered so liable to disease that it might have been expected. Raids for women seem to keep up the necessary supply. Captain Lewin, in his Report, draws many a charming picture of rural courtship. As among almost all the Tibeto-Burman tribes, chastity is enforced only after marriage. All the unmarried lads sleep in one house in the village under the care of a "goung" or head man. The merry-makings and customs which are connected with this "bachelor's hall," as Colonel Dalton calls it, are the same as in the Kol and Gond countries. In the hills marriages are unions of affection, not of convenience or interest. Girls marry at 16, lads at 19. The most favourite offering to a sweet-heart is a flower, and the lover will often climb the hills before dawn to procure the white or orange blossom of some rare orchid for the loved one's hair. It may be mentioned, in passing, that the hair, being neither cut nor washed, but increased by a *chignon*, is indescribably filthy, and that one of the most curious legends of the people relates to the introduction of the louse by Bengalees. The girls know how to make modest advances. One of Captain Lewin's police sought a week's leave of absence on this ground—"A young maiden of such a village has sent me flowers and *birnee* rice twice, as a token, and if I wait any longer they will say I am no man." The language of flowers is well known among the Kyoung-tha. A leaf of pawn or betel leaf, with betel nut and sweet spices

inside, accompanied by a certain flower, means "I love you." If much spice is put inside the leaf, and one corner turned in a peculiar way, it signifies "come." The leaf being touched with turmeric means "I cannot come." A small piece of charcoal inside the leaf is "Go, I have done with you." The love songs are as pure as they are pretty, and no improper ditties are allowed in the hearing of the village maidens. As the lads and lasses work in a crowd, at harvest times, they respond in chorus, or when the leader has finished, the whole party break out into the *hoia* or hill call, like the "jodel" of Switzerland, and the cry is taken up from hill to hill till it die away in the distant valleys. In their mode of kissing, instead of pressing lip to lip, they apply the mouth and nose to the cheek, and give a strong inhalation. They do not say, "Give me a kiss;" but, "Smell me." The religion of these tribes is a mixture of buddhism and nature-worship. Captain Lewin describes a festival at the Mahamunnee temple in Arakan. The bamboo is adored by some as the impersonation of the spirit of the forest. But wherever, as in the case of the Chuk-ma, the tribes come into contact with the Bengalee, they show a tendency to gravitate towards hindooism, the caste of which would soon kill the joyousness and check the freedom of their life.

The Khumia and *Kuki* tribes occupy the hills of Sylhet, Tipperah, and Chittagong; the Kuki at the tops of the hills and the Khumia on the skirts. The Kuki are the ruder or more pagan race, though also tinctured with hinduism. They term their chief deity Khojeia Putiang, to whom they sacrifice a Gyal and an inferior deity, named Shem Saq, a rude block of wood, is put up in every quarter of a village: to him, a goat is offered, and they place before it the heads of the slain in battle, or the heads of animals killed in the chase. The Kuki say that they and the Mug are the offspring of the same progenitor.

The *Chukma*, are a race occupying the Toonia Joom mahals, a forest tract in the hills of the Chittagong district, along with Mug, Reang and Tipperah races, all more or less nomadic. Some one of these races, till lately performed human sacrifices annually, and in the year 1852, several of them were tried for murder by sacrificing. The place of sacrifice was a cleared district in the jungle and staked round with bamboos about six feet high. The sacrificial pole was a "Phula bans," a bamboo scraped and stripped at the edges, the hanging strips giving a rude notion of ornament. During the celebration of these sacrifices at Agartollah, a gun is fired every evening at sunset, when every person hurries to his home.

Arracan province is a narrow belt of land 290 miles long, hemmed in between the sea and the Aeng or Youmadong range of mountains, which lies very near the coast. It is traversed from north to south by a large river, the Koladyn, navigable for a considerable distance into the interior; and by numerous smaller rivers, all of which have tidal channels and form a sort of delta along the coast which is skirted by many islands. From the proximity of the mountains to the coast, and their considerable elevation, the rain-fall is very great amounting to 160 and 180 inches annually. The races dwelling in the valley of the Koladyn and its affluents are the Kuki, the Mru, the Sak, the Niru Sak, the Ka-mi, the Ku-mi, the Ra-Khyen the Kin-ni, Shendu, and the Prou-ka nij, tribes professing a creed partially buddhist and partially pagan.

Mugh is a term which the British have given to the Arakanese but that people restrict it to the descendants of Arakanese by Bengali mothers. The *Mug or Mugh* race form six-tenths of the native population of Arrakan, one-tenth being Burmese and the remainder Hindu. In Arakan and in the basin of the Irawadi, are several tribes of the same stock with the Burman, and their languages are in their present form so much akin to it that they may be almost considered as forming, with Burman, dialects of one tongue.

Burmah, politically, is partly under British, partly under a Native rule. There had been embassies and commercial intercourse from the 16th century, but the first war between the two powers occurred in 1824-5-6 when much of the Amherst and Tenasserim provinces became occupied by the British. Rangoon fell to a combined Naval and Military Force on the 14th April 1852 and when peace was declared all Pegu and Arakan were retained by the British. Burmah is ruled by a king and by the Atwen-woon, or Burmese Privy Councillors, of whom there are four. They are inferior in rank to the Woon-gyi, but between them and the Woon-dook precedence is disputed. The Burmans proper occupy the valley of the Irawaddy, mixed with Karen, from L. 18° N. to the delta. They are buddhists. Their language, the Burmese, is spoken in Arakan, in the valleys of the Irawaddy and Sitang, and in Tenasserim to the south of Tavoy. The Aracanese and Burmese are called Myamma and are of the same race. There are numerous Shan states far to the north-east, but they generally owe fealty to the Burmese monarch. The Burmans are lively, inquisitive, active, irascible and impatient. The Burman woman's lower garment is a narrow cloth of various colors, of a pleasing contrast, which descends generally from the waist or from below the arm to the feet. It is made to overlap

and is tucked in in front, at the waist, but it is so narrow that most of the inner thigh is shown at each step. The young people are little restricted in their intercourse and the marriage ceremony and that of divorce are simple, the women are naturally affectionate, very intelligent, engage largely in market and shopping business and even undertake extensive mercantile transactions. The ruling races are the British and the Myama, which other nations pronounce Burma, but the tribes and natives under their sway are numerous. Burmese history says that anterior to the advent of Gaudama, a nation dwelling between Nepaul and the Ganges was attacked and conquered by the king of Oudh, from the west, and the people fled east until they reached the valley of the Irawady where they settled and built a city which they called Tagoung, 100 miles north of Ava. This event may have occurred whilst the Ariyan races were occupying the Punjab, and the face of the Burman supports that history as it has a Tartar origin stereotyped on it in characters that cannot be mistaken.

A greater variety of nations and diversity of languages are found in further India, than in any other region of equal area, yet no one of them appears to be indigenous. The Indu-European races have crossed the Brahmaputra and established themselves and their language in Assam. The Tartars have poured in from Tibet in the north and many tribes give indubitable evidence of Tibetan origin. On the east the Tonquinese and Cochin Chinese are known from their tongues to be offshoots from the Chinese, while the Malay tribes have come from the south up to 10° N. and spread their language into the Mergui Archipelago,

The Andaman people are not of the northern races but are a negro race similar to those in the interior of the great Nicobar.

The Nicobar people, probably migrated from Sumatra, but the interior of great Nicobar Island is occupied by a negro race.

Burmah has the Tai or Shan on the east: the Malay on the south, the Kaffir and Hindu on the west and the Tartar and Chinese on the north, within these boundaries are many tribes with several synonyms, but nearly all may be referred to four great families, the Talaing, the Burman, the Karen and the Shan.

The ancient capital of the Talaing was called Thadung, Thatung or Satung. Its ruins are still to be seen between the mouths of the Sitang and Salween rivers and the colonists seem to have been of hindu origin, possibly arriving several centuries before the Christian era. They seem to have extended their empire to Pegu and Arakan, in the early centuries of the Christian era, and to have held sway for sixteen centuries.

The Arakanese call themselves Ra-kaing: they are a branch of the Burmese who separated themselves from the main stock at a very early period. The people of India call them Mug, a name of unknown origin and unknown to the Ra-kaing themselves.

Mien, according to Colonel Burney and Lan Meen, according to Buchanan, are the Chinese names of Burmah, and Da-ma, spelled Mran-ma or Myamma is that portion of the Burmese who occupy the country above Prome.

The Burmans, and still more the people of Aracan, Cassay, and Assam, who, no doubt, have intermixed more or less with the hindoos, have more beard, more prominent features, and a darker complexion than their neighbours to the south; and this in proportion as they are respectively nearer to, or more distant from, the country of the Hindoos.

Every male Burman is tattooed in his boyhood from the waist to the knees: in fact he has a pair of breeches tattooed on him: the pattern is a fanciful medley of animals and arabesques, but it is scarcely distinguishable save as a general tent, excepting on a rather fair skin. Erskine in his course in the Pacific, mentions that the natives of the Samaon or Navigator's Islands, have exactly the same fashion.

The *Pun-gyi*, or *Poon-gyee*, meaning Great Exemplar or Great Glory, is the name by which the members of the monastic rule of buddhism are commonly known in Burmah.

The Bilu, in the Burmese buddhist myths, are the equivalents of the hindu Rakshasa. They are generally, however, described as engaged in some humorous mischief.

Burmese funerals are conducted with tumultuous rejoicing. On the occasion, in 1870, of burning the remains of the queen mother, the troops, with the numerous elephants gaudily trapped placed here and there, made the scene barbarously splendid. Following or proceeding the bier were the princes and princesses, the queens with the Pakan Meng, the late king. He and the first queen whose mother the deceased was, walked in front of the bier. About a quarter to eleven the great inner gates were again thrown open for the exit of the king and retinue. H. M. was seated in a large gilded palanquin, borne on the shoulders of some 40 or 50 men, and was accompanied by four of his daughters and one son, all young. He, like all the others, was dressed entirely in white. Advancing up to about ten yards from the front of the enclosure, the palanquin was halted, the retinue and guards filing off right and left and forming a large hollow square. Prayers were said by several Phongye, the king gave directions as to the exact minute at which the cremation was to commence, the bearers turned round, the procession was reformed, and moved inside the great

gates which were again partially closed, while drums, tom-toms and cymbals were beaten, and trumpets sounded, amidst a tumultuous noise. The queen, princes, Pakan Meng, &c., returned to the palace shortly after the cremation was completed in the same order as they came out. The coffin was overlaid with gold to the extent of 7½ viss which was afterwards distributed among the Phoongye or to be applied to the building of a pagoda. Charcoal was employed at the burning of the body and was kept at a red heat by numerous bellows placed all round. The whole of the body with the exception of a small part of the back of the skull was reduced to ashes or at least consumed on the fire. This small piece, little bigger than a rupee, was placed in a gold cup closed by a lid studded with rubies, while the remains of the charcoal and ashes were placed in earthern-ware vessels to be carried to the river. The gold cup was confided to an official who took his place in the hearse. Having arrived at the river bank, those deputed for the purpose entered two gilded boats lashed together, but a little apart, which were rowed out into the centre of the stream. Here a halt was made, the bearer of the gold cup with it rolled up in his putzoe jumped into the water and while he was underneath let it go. At the same time the jars of ashes had their contents poured into the stream, the man was picked up and there was an end of the whole.

The Tibetan and Burmese idiom in a sentence is the reverse of the English, and Csoma de Koros says that the words "In a book seen by me," would be translated into Tibetan "me by seen book a in." Many of the roots of these two tongues are of common origin, thus further indicating that they are cognate languages. Until recently human sacrifices were made. When the gates of the new city of Tavoy were erected about A. D. 1780, Dr. Mason was told by a witness that a criminal was put into the hole for each door post and the post thrown in so that the blood gushed up at the sides,—the object being that the slaughtered man's spirit might become a nat and hover about and haunt the spot and protect the gate.

Talieng or *Mon*, is the name of the natives of Pegu. The Burmese call them Talieng. The Siamese appellation is Ming-mon. Part of this population dwell on the Delta of the Irawadi, Mon being the name used by themselves, for the native populations of Pegu, Moulmein, Amherst and Martaban; but their neighbours call them Talieng, and the same names Mon or Talieng are given to the vernacular language of Pegu. The alphabet, like that of the T'hay and Burmese, is of Indian origin, being essentially that of the Pali form of speech, and like all alphabets of this kind, it embodies a buddhist literature. The Mon language is quite unintelligible to a Burmese or Siamese.

The Talaing language has the intonations characteristic of the Chinese family, but to a much less extent than the Chinese itself, the Tai or the Karen. The roots are principally monosyllabic; but this language is remarkable for its numerous compound consonants. Like all other Indu-Chinese languages, grammatical distinctions are made by particles prefixed or suffixed. In its vocables, it is the most isolated language in further India, but it has a radical affinity with the language of the Ho or Kol, The Talaing people call themselves Mon, which has this bearing on their origin that a Ho or Kol tribe are called Moondah and Mon.

The Eastern portion of the Burmah district from the Yomadoung to the Lemroo river is mountainous and hilly. The hill men living on the eastern frontier are Khyen, Mroo-khyen, and Koo. The *Khyen* differ from the Burmese in dress, language and habits: they occupy both banks of the Lemroo river from the Wah Kheong to the Khee Kheong and the low hills west of the Jegaendong range visible from the plains, to the valley of the Tarooe Kheong and the low hills and plains within the Tandan, Ganacharain, Prwanrhay and Dainboong circles. They are a quiet, inoffensive people, and number 3,304 souls who pay land revenue and capitation tax to the amount of Rs. 3,883.

Mroo Khyen—The most northern village occupied by the Mroo Khyen, paying revenue, is Sikcharoa, situated 14 miles north of the junction of the Saeng Kheong with the Lemroo river. The Mroo Khyen occupy the valleys of the Wah Kheong, Saeng Kheong, Mau Kheong and that part of the valley of the Lemroo between Peng Kheong and Saeing Kheong. They number 4,020 souls of whom 37 cultivators pay an annual revenue of Rs. 111.

The *Koo* occupy the mountainous country near the sources of the Lemroo river and its principal feeder the Peng Kheong, within the 22nd parallel of north latitude, westward of the Yomadoung range; they have never paid any revenue and it is only after entering the hills for 8 or 10 days, that the first villages of these wild people are met with. The approximate number of houses is 2,897, and allowing 5 persons for each house, the number of inhabitants may be estimated at about 14,485. Those living on the Peng Kheong have intercourse with the neighbouring Ku-mi of the Koladyn circle, from whom they differ but little in their habits.—*J. H. Donel, Esq., in Vol. 32 of 1864 of B. A. S. Jour.*

The races of Burmah are as under:

Talaing, Peguan, or Mon.

A. BURMESE TRIBES WHO SPEAK BURMESE.

Burmese proper or Mrnma.

Arakanese.
Mug.
Kanyan.
Toongooer.

Tavoyer, a branch of an Arakanese colony of Burmans.

Yaur, *Yau*, or *Yo*, or *Jo*, or *Quoi*, is a small Burmese tribe dwelling in the valley of the Yau river, great traders and the chief carriers and pedlars of northern Burmah.

Zebeing or *Yebain*, Burman Karen, a very dirty people, in the valley of the Setang above Tounghoo. They rear the silk worm and weave silk.

Pyu, the Burmese who occupied Prome, distinct from the Burmese proper.

Kado, a Burmese tribe now scattered over the interior of the Monyeen district and that of Pyeenzala, west of the Irawaddy.

Danu or *D'hanoe* or *D'hanu* or *D'hanao*, a rude Burmese tribe near M'we-yen.

B. SHAN OR TAI TRIBES.

The *Shan or Tai*, are a part of the Tai who encircle Burmah on the east and north from the gulf of Siam to Assam and the Brahmaputra. The powerful Siamese, on the extreme South East are the youngest, but the most powerful member of the Shan family: and exceping the Siamese, the whole Tai race are now tributary to surrounding nations. They trace their origin to an offshoot from the Laos, whom they formerly denominated Great Tai, while they called themselves Little Tai. They were originally tributary to Cambodia, but became independent A. D. 1350.

The *Ahom*, on the extreme North West, came into Assam about the beginning of the 12th century, about the same time that the Siamese went south.

Before the 13th century, then, the Tai formed a compact body on the East and perhaps north of Burmah probably pressed on by the Moghuls in China, Kublai Khan having fixed himself in Assam in the time of the first Ahom chief.

The exact position of the Great Tai, the Laos of geographers, is unknown.

Lao or *Lau* or *Lawa* or *Wa*, is a wild tribe on the mountains between the Irawaddy and the Meenan north of the latitude of Ava. There is a small settlement in Amherst. The term Lau or Lawa is applied by the Chinese to all the chief nations on the S. W. frontier of Yunan. One writer calls the feudatory tribes in Yunan by the term Lolo or Lao, called Shyans by the Burmese. Some writers regard the Lao as a distinct tribe of Shan.

Paloung or *Paloa*, a Shan tribe north and east of Bamo.

Phwon or *Mwoon*, a Shan tribe on the Irawaddy above Bamo.

Karen, are divided into the Sgau, Bghai, Pwo nd Shan Karen and have nine distinct dialects.

Karen, is a Burmese word applied to most of the mountaineers in Pegu and southern Burmah. Some of them are known as the white, red and black Karen, from the colours of their clothes; also Burmese Karen and Talaing Karen, as dwelling amongst these nations. They are not a prior race in Burmah. The Shan call them Yang, pronounced in the different parts of Burmah as Yen, Yein, Yen-ban and Yen-seik. The red clothed Karen call themselves Ka-Ya and some of the B'ghai clans, Kay-ay. They describe themselves as having come from the north, and crossed the great sand desert that separates China from Tibet. They believe that formerly they had books. The name Karen embraces several distinct tribes, speaking widely different dialects of one language. But all the Karen family between the mouths of the Tenasserim and sources of the Sitang arrange themselves into the Sgau tribes, the Pwo tribes and the B'ghai tribes.

(*a.*) SGAU TRIBES.

Speak the Sgau dialect As the seaboard is approached the Sgau and the Pwo are found mingled together from Bassein to Mergui. They are, however, found from Mergui in Lat. 12 N. to Prome and Tounghoo in Lat. 19 N. a few have passed westerly into Arakan, and on the East they have wandered to the east of Zimmay over the watershed that separates the Meinam from the Salween. They are the most numerous of all the Karen tribes. They wear a white tunic, with a few horizontal bands of a red colour near the bottom, and from this, they are called White Karen. Where the population is sparse they cultivate the most favorable spots, first, before hewing down the trees abjuring the departure of all evil, and then dibbling in the rice seed, which they do not sow broad cast like the Burmese, planting also cotton, capsicum, Indian corn, and Job's tears between the rows They also fish largely, for they eat all creatures, lizards, snakes, deer, wild hog, elephant, rhinoceros, wild ox, buffalo; they gather the wild cardamum, or wash for tin. They have no mechanical art, but some of the women weave and embroider. Their betrothals are in infancy and the married couple early associate, but there are frequent separations. All the Sgau and the Pwo burn their dead, but a bone is taken from the ashes and in the dry-season is buried with a festival, with music and dancing. The bone is placed in a booth and around it the articles belonging to the deceased are hung with a torch at the head and another at the foot to represent the morning and evening stars.

The *Sgau Maunepgha* occupy the hills between the Youk-tha-wa and Meet-gnan creeks their dialect is different from the Sgau.

The *Paku* dwell south of the Mopgha tribe of the Pwo east of the Mau-ne-pgha in the watershed

between the Sitang and Salween. They wear a white tunic without stripes.

The *Wewa* dwell on the eastern side of the watershed between the Sitang and Salween. They are in the lowest stage of the civilization, and wear the cast off clothes of their neighbours.

(*b.*) BGHAI TRIBES.

Occupy all the country from the Sitang to the Salween rivers and from the mouth of Thouk-Ye-khat creek to near the British boundary and the Shan state of Mobhya. They speak two distinct dialects, the B'ghai and the red Karen, both of which are more nearly related to the Sgau than the Pwo, there being no final consonants in either. They dwell south of the Ka. They are more savage than the other Karen tribes and little is known of them except that they make forays and kidnap their neighbours. Each village has a single raised and palisaded and fenced house with a walk down the centre and a hearth for each family, and one with 75 hearths has been seen. A stranger can only approach with a guide. On his arrival a place is pointed out for him to sit, and if he move, he is speared as an enemy. A ladder during the day time leads to a trap door. They are known as the Bghai, by the Paku and Sgau. They bury their dead in coffins like those of the chinese, made of a single log of wood, with a hollow place for the corpse. They are subdivided into the Bghai-ka-ten, or B'ghai who wear a tunic with perpendicular red bands on a white ground, and are named by the Burmese according to their localities *leik bya-gie and leik-bya gnay*, or great and little butterflies. The other division wear short white trowsers, and are again subdivided into the B'ghai-mu-htai, the Eastern B'ghai or red Karen, who dwell beyond the eastern mountains in the valley of the Salween; and the Bghai-ko-hta or upper B'ghai, because they reside on the rivers above them, but to these, the Burmese give the name of Ka-yen, Ayiang or wild Karen. They rear the silk worm. They eat dog's flesh without salt, and rice without vegetables. They are wretched barbarians. —*Mason's Burmah, pp.* 11-88.

Lay May? or Black Necks are a small Bghai tribe N. E. of Tounghoo whom the Bghai call Pray.

Manu Manau called by the Red Karen, "Pray," dwell between the Sgau and Red Karen.

Bghai-mu htay, or Karen-ni, the Red-Karen call themselves Ka-ya, their term for a man. The Shan call them Yang-laing which also signifies Red Karen. The men wear short white, trowsers with perpendicular black or white stripes, or black ground with red or white stripes. The women have a red or black turban, with a square cloth, tied by the two corners over the right shoulder like a Roman-toga. They also have a petticoat. The men go armed and each has a pony: every Red Karen has his back tatooed with radiating lines. They dwell on a table-land several thousand feet high, undulating, with good soil and many springs. Their country is the finest in southern Burmah, and their villages amount to about two hundred with from one hundred to four hundred houses in each. They are skilled in the arts, are vigorous, hoe their land, and use cattle with panniers. They take spirituous liquors largely. Many of the population are slaves. The Karen-ni are civil, good tempered and intelligent; but they evince great ferocity in their forays.

Lway-lohug, a Karen tribe met by Mr. Tracey dwelling south of the Ka khyen, on the edge of the Table-land west of lake Nyoung Ywe, two degrees north of Tounghoo. They dress like and are doubtless a branch of the Red Karen.—*Mason, Burmah*, 641.

Ying-ban, a tribe supposed to belong to the Red Karen, whose dress and language they use, they dwell about 100 miles north of Tounghoo.

(*c.*) PWO TRIBES.

Are eight in number and speak the Pwo dialect. The Pwo and the Sgau as we approach the sea-board, are found mingled more or less together from Bassein and the Sitang to Mergui living in the same villages, but apart from, though more numerous than the Sgau. The Sgau call them Pwo, but their own name is Sho, and the Burmese call them Meet-khyen, or in some sections Talaing Karen. They are muscular and prefer the plains. All the Pwo burn their dead.

Shoung, dwell on the Shoung, a tributary of the Sitang, on the northern boundary of Tounghoo, they call themselves Shoung-khi-pho, or sons of the head waters of Shoung.—*Mason Burmah, p.* 92.

Kay or Ka, dwell east and north of the Shoung, calling themselves Ka, but Kay by the Bghai, the Red Karen calling them Pa-htoung and the Burmese Gay-kho. They are a pugnacious race. They rear the silk-worm and make and wear silk. When a chief or owner of slaves dies, provisions and one slave is said to be buried with him, to be his attendant in the next world. They dwell on both sides of the boundary at Tounghoo, separating British Burmah from the Ava territory. They speak a dialect of Pwo.

Taru dwell north and east of the Ka and west of the Red Karen. The Burmese call them Belu, but they style themselves Khu-h'ta, They shave the head, leaving two side locks. *The Taru or Khu-hta*, are the most northern of the tribes of Burmah with whose language any acquaintance has been made. They speak a dialect of Pwo.—*Mason Burmah, pp.* 89, 91, 92, 642-3.

Mop-gha, occupy the range of hills between Thouk-ye-khat and Kannie creeks, skirting the Bghai on the west.

Hashu or Hashwi, occupy the water shed between the Thouk-ye khat and Poung-loung.

Thoungthu, or southern mountaineers, are scattered through Cambodia, Burmah proper and the Shan states and are seen at Mergui and Tavoy.

Khyen or Kayn or Chin, a considerable tribe on the Yoma mountains that stretch from Arakan to the Naga hills and scattered in small settlements on the north of Pegu as far as Tounghoo. Dr. Mason regards them as Karen, Yule thought them Kooki, and Phayre regarded them as Burmese. They tattoo the faces of their women, to mar their beauty. They call themselves Shyou or Shyu—Sho, and the Burmese style them Pwo-meet-khyen, river Khyen.

(*d.*) SHAN KAREN.

The Shan word for Karen is Yang, softened into the Burmese Yen, hence several Karen tribes, with Yen as an affix.

Yen or Yein, a tribe mixed with the Shan, east of Ava, tolerably civilized.

Yen-seik inhabit the Shan states east of Ava, civilized.

Ying-bau, reside north of the Red Karen.

Pandung.

Toung-yo-tha, sons of the mountain range, a barbarous race in the interior, east of Ava.

Black Karen dwell in the Shan country, north of Mobya and wear a black dress.

(*e.*) MISCELLANEOUS TRIBES.

Ka-Khyen or Ka-Koo dwell east of Bamoo Mr. Kincaid identifies the tribe with the Siamese term Singh-pho, which the Burmese pronounce Thing bau, and is a term applied by the Shan and Burman to all the tribes dwelling north of Mo-goung. Captain Hannuy describes them as perfect savages in appearance, with long faces and straight noses. They are nominally tributary to the king of Ava. They bear a strong resemblance to the Karen. They yield a nominal tribute to the king of Burmah; but have never been subdued. They dwell to the east of Bamau and the people of all that region live in great dread of them on account of their savage ferocity in kidnapping and selling into slavery the neighbouring tribes with whom they are constantly at war. They are said to be addicted to the use of ardent spirits. The Karen regard them as a tribe of B'ghai, They are of a handsome figure but dark and slender. The women wear a long frock like the white Karen, but of a dark red colour.

Ka-mi, Kumi, Kimi, Kum-wi, or *Khumi, Kami* signifying man, are a Burmese tribe in Aracan.

Kyan, a small tribe in Arakan, whose language is affined to Burmese.

Koon or *Khon,* a tribe of the head waters of the Kola dan river, beyond the Arakan boundary.

Sak or Thoek, called Chatu by the Bengali, are a small tribe, who inhabit the eastern branch of the Nauf-river in Arakan.

Mru, a tribe in Arakan, occupy the hills between Arakan and Chittagong; they seem of the same lineage as the Myamma.

Shendoo, call themselves Heuma, and dwell in the mountains north of Arakan.

Selung or *Salon,* a tribe who occupy the islands of the Mergui Archipelago, to the south of Tavoy. They are fishers, for the sea-slug. They reside in their boats, which are good: are decently clad and intelligent: and are inclined to settle in villages and cultivate. They dig up the slug at the low water of spring tides during the N. E. monsoon.

Pulong, a tribe lying around Bamo on the Ka-Khyen river.

Yau.—A tribe who inhabit the skirts of the Arakan mountains westward of Pagan, and who speak a peculiar dialect of Burmese.—*Latham.*

The Karen dialects of the lower Irawadi and Tenasserim, are more closely assimilated with the Yuma languages than with the Burman. Karen has been more assimilated to the Burman phonology, but it has remarkable affinities with the Mon Anam, or Mon Lau alliance. Glossarially it is mainly Tibeto-Ultra Indian of the earlier form or that which characterises the Yuma and Naga Manipuri languages. Mr. Logan (*J. I. A. February and March* 1853) observes that no information had then been obtained respecting the languages of the Karen-ni or Red Karens, the Ka-Kui, the Kua, the Ka du the P'hwon, the Pa-long, the Ka-Khyen, the Lawa and the Khunung of the Irawadi and the Salwin basins. Ka-ren is said to mean wild man. They are found in small communities scattered over twelve degrees of latitude and ten of longitude, from the table land of Tibet, to the banks of the Menam, and from the province of Yunau in China to the bay of Bengal. Their whole number has been estimated at five millions. Dr. MacGown includes amongst them, the Ka-Khyien, Khyien, Kemmi Karen-ni or Red Karen, the Pwo and Sgau Karen, who possess characteristics so much in common as to justify them in being regarded as divisions or fragments of one nation. They possess a Caucasian class of features with long faces and straight noses, They are remarkable as free from idolatry. A few have become buddhists, and atheists are met with. They have no priesthood. They have nevertheless a religion of extraordinary purity. They are addicted to a considerable extent to Nat worship, demonolatry or pneumatolatry. To propitiate these spi-

rits in the rivers, hills, plains and trees, they sacrifice buffaloes, swine and fowls. A portion of them worship their ancestors and make offerings to their manes. They commonly burn their dead. Those under the Burmese sway are less favorably circumstanced than the Siamese. They are guilty of drunkenness and are filthy. But they are truthful, continent, hospitable, kind and religious. Their traditions of the deity, creation and sin, are those of the Old Testament and they anticipate great temporal prosperity under a new coming king. Their traditions point to an Israelitish origin and they are by some supposed to be an Israelite band, though they do not practice circumcision. The first convert to christianity was Ko Thah Byu who was baptised at Tavoy in 1828,—but before his death in 1841, there were 1,300 native disciples. The missionaries amongst them have been Mr. Boardman, Miss Macombe and Messrs. Mason, Wade, Bennet, and Abbot, and in 1851 the converts were estimated at 20,000. Several of their dialects have been reduced to writing, some in Roman, some in Burman character, and the scriptures translated.—*Jour. Arch. June* 1851.—Dr. Moore, (*on the Lost Tribes,*) mentions that they call themselves also P'lai (Pali ?) On the river Salwen, they maintain a degree of independence but in all other parts of Burmah are in a depressed condition. Karens are high in domestic condition. Their women are on an equality. They regard polygamy as a sin. Their morality is superior. But they are intemperate in honor of visitors and at festivals. Their hospitality to strangers of every class is extremely generous. They have reception, cooking, and sleeping apartments. They raise large produce from the soil. Their personal appearance and dress are Jewish. They wear the beard, which the Burmese pluck from the roots. The men and women wear a tunic, that of the men embroidered in the loom, that of the women by the needle. Their clothing is wholly dissimilar from that of the Burmese. A fourth of their words are Burmese the rest like Singpho and Pli. Their words terminate in a vowel. This connects them with the Pali, and also with the Bhotani and Ahom, whose language is likewise so distinguished. Their word for the deity is Yuwah. Javo is the word in Tibet and Bhotan for the Supreme Being. But the Lamas of Bhotan also use Ow-ah-n-'chu. They propitiate evil spirits. There are two sets, one sacrificing hogs and fowls to evil spirits, but the other called *Purai*, will not sacrifice to evil spirits and regard hogs with detestation. They say that formerly they sacrificed oxen.

Karens employ wizards to curse their enemies. They have a knowledge of the creation, of the introduction of sin and death, and of eating the fruit of the tree of death similar to the Jewish. They look for a Saviour. Their moral code forbids idolatry. They are remarkably prepared for evangelization. They bury their dead, but a bone is taken to represent the person, and at a convenient season it is carried to some stream and the assembly sing a dirge around it. A bangle is suspended from a string and omens are drawn. The Karens paint the two posts of their doorways, the one red the other white. Karens walk round the dead to make a smooth path like the Bhotani in procession round the shrines of Buddha and like Jews who walk seven times round the coffins of their friends. The Jewish priests in offering oblations *Ps.* xxvi, 6, walked round the altar seven times. The Assam hill tribes like Karens consider the touch of the dead pollution, as in Numbers xix, 13, "whosoever toucheth the dead body of a man and purifieth not himself, defileth the tabernacle of the Lord, because the water of separation was not sprinkled upon him he shall be unclean." Karens are smaller than the Burmans but are said to differ in separate localities. They are said to be handsomer as a race, than the Mon, according to the European standard. The white *Miaou-tse*, who occupy the hill country of central China, present many points of resemblance to the Karens. They are brave, independent, and at certain intervals sacrifice an ox without blemish to the great Father. It is amongst the Miaou tse that the old Testament is said to have existed from time immemorial, which they say came to them from heaven 2,000 years ago.

The Toungthu dwell between the Sitang and the Salwin and in Amherst Province, and are in their dialect more closely connected with the Yuma languages than with the Burman. The Toung thu has a large glossarial agreement with Karen, but it has special affinities with the Kumi and othar Yumi dialects and particularly with the Khy-eng. The Toungthu are Islamized Chinese and are said to resemble the Anamese, but as their dress resembles that of the Anamese this may create deception. They occupy a portion of province Amherst, and are the only people there who understand the plough. This has a metal blade. They are esteemed good cultivators.

Kala, in Burmah, is a term applied to a native of India but, more extensively, to any western foreigner, such as an Arab or a European. Major Phayre supposes it to have been derived from a name given to the aborigiral races of India, which is still traceable in the scattered tribes of Kol, Kuli, &c, &c.

Kling, is the Malay term for a native of India evidently derived from the ancient kingdom of Kalinga though Newbold supposes Kling a corruption from Teling or Telinga. The Chuliah and Kling comprehend the traders and settlers, both mussulmans and hindus, from the Coromandel coast. These names

have been given to them by the Malays from the earliest times of the ancient commercial intercourse subsisting between this part of Asia and India.—*Newbold's British Settlements, Vol. I, p.* 8.

Shuay Dagon pagoda of Rangoon, is in height 321 feet, above the platform and 487 feet above the ground level. The height of the great Shwe Madan at Pegu is 334 feet above the platform. The former sacred pile of the Burmese, the Shuay Dagon, lies about two miles north of Rangoon, and is built on ground that rises gradually from the river side to a height of seventy or eighty feet. The pagoda is a stupendous mass of solid masonry: and stands on two terraces which face the four cardinal points. The upper one is 900 feet long and 685 feet broad: the face of the building is octagonal with a circumference of 1,355 feet. The area on which it stands is 800 feet square. Its surface is one dazzling blaze of gold and forms a magnificent obj ct, as it rears its lofty height from clusters of beautiful mango, cocoanut and other eastern trees.—*Yule, p.* 283. *Winter's Burmah, p.* 8.

Bamau, is a frontier town of the Burman, kingdom, near which, in the Burmese traditions, their ancestors formerly dwelt.

Pagau, a Burmese town where Captain Yule found all the details of the architecture of Hindu origin; and it is known that Anoratha, or Anoratha Saumen, when he established budhism in Pagau, built all the pagodas and temples in Pagau after the exact models of those then existing in Thatung or Satung, of the same size, and in the same order. Such is the testimony of Talaing tradition, and he believes of Talaing history.—*Yule, p* 9.

Siam.—The people of this country, consist of the Siamese Proper, the Khamti, the Laos and the Shan, who form the T'hay or Siamese group. The Siamese are physically superior to the natives of the Indian Archipelago, if we except those of Bali; indeed the Balinese and Siamese bear a striking resemblance to each other. The natives of Siam often attain a height about the middle size, and are generally well made. The hue of their skin is a shade darker than that of the Chinese, but they have fairer complexions than the Malays and Javanese. The dress of both men and women consists of a piece of cloth wrapped round the waist, one end being brought between the legs and fastened behind, which gives this portion of their attire the appearance of a pair of trowsers. In addition to the above mentioned drapery, the women wear a piece of cloth wrapped round the body, under the arms, but the men content themselves with the nether garment before described, not even those belonging to the higher classes, cumbering the upper part of the body with a single particle of clothing except upon state occasions. Both men and women have the hair shaved from their heads, with the exception of a small round patch which is left between the crown and the forehead. This being brushed up, is made to stand on end, which gives them a scared appearance. The Talapoin or priests are enormously disproportioned to the rest of the inhabitants. In Bankok alone their numbers exceed thirty thousand. The Siamese Proper occupy the lower part of the Menam. Indeed the valley of the Menam throughout its whole course is exclusively T'hay, and the T'hay attain their highest civilization, on the alluvial delta of their river. The old capital Ayuthia, founded in 1351, was abandoned in 1751 for Bankok lower down the river. No dialect of the T'hay is intelligible to a Burmese. The alphabets also differ, but on the whole the essentials of their civilization is the same, the chief difference being in the language. The Laos alphabet slightly differs from that of the Siamese Proper, but practically speaking, the language is spoken with remarkable uniformity over the whole T'hay area, and the Siamese Proper, the Laos, the Shan dialects and the Khamti are one. Many foreigners, Chinese and Cochin-Chinese, reside in Siam, also Portuguese, French, British and Dutch. Pali is the sacred literature of the Siamese, and is called Pali, Bali, and Pasa Makata (Bhasha Magadha) the language of Magada. Gambling in every form, as with the Chinese and Malay, is common, in cock fighting, fish fighting, cricket fighting and lotteries. The Menam rises and falls like the Nile, the Indus, the Ganges, the Brahmaputra and the Irawadi.

The *Khamti,* are a Siamese population belonging to the same stock as the Siamese, their language containing nearly all the Siamese words, and their creed and alphabet being Siamese.

The *Laos* are a people of the Siamese or T'hay group, the most civilized of whom occupy the valley of the Menam and its feeders; those of the west are called Thaung-Khao or white bellies, because they do not tattoo themselves like the Thaung Dari or black bellies. The Phi-phrai and the Phi-lok are their wood demons. The Thevada are their tutelary deities. The Laos dwell in Zimmay, also spelt Changmai and Xieng-mai, on the Menam between 19° and 22° N. L. due north of Siam proper and due west of the Burmese frontier, with Laphun and Lakhon, two small territories attached: there are 20 waterfalls on the Menam between Zimmay and Bankok. The Laos are buddhist; their language is the same as that of the Siamese. Salt is the chief article of barter. The Laos alphabet more resembles that of Kambogia than that of Siam; they use rice and distil and use a liquor from it.

In Siam, the poor are buried or exposed to beasts of prey; if above the lowest class the deceased after the bowels have been extracted, is laid in a wooden coffin externally lacquered and gilt and this is placed for some days on a high table. In the meantime, the priests light up tapers, burn perfumes under the coffin, and chant funeral hymns at night. A procession of relatives and friends dressed in white and covered with white veils follow the corpse. Beside it, are borne figures of various animals or singularly shaped monsters carved out of bamboo and the accompanying talapoins exclaim "we must all die, we are all mortal." The mourners attest their sorrow by their tears and often hire women for the express purpose. The body is then taken from the coffin and placed naked on the pile which is set fire to and the remains are scorched. The body is then replaced in the coffin and deposited under one of the pyramids erected about the temple. Graves are held sacred among the Siamese and their violation is considered as a heinous offence. They refuse the honor of burning to persons killed by accident, by lightning, to the still-born, to those who die in child-birth, or from small-pox, and to suicides. The remains of such are either thrown into the water or exposed to the beasts of prey. —*Latham, Descriptive Ethn. Earl's Archipelago, p.* 168.

Kambogia is a small kingdom lying between Siam and Cochin-China, containing about 500,000 people of whom 4-5ths are the native Kho. It contains the four provinces, Potisat, Kampong Suak, Kampong and Kampot Son. Kambodia or Cambodia was anciently called Kamphucha, its modern name is Khmer. It was formerly an independent kingdom from 8½ to 20° of N. Lat., but for three centuries its influence has been on the decline, Cochin China on the one side, and Siam on the other having appropriated large portions and only four provinces, two landward and two maritime, now remain to it. Its commerce is in rice, ivory, silk and cardamoms. The whole of the coast from Kamas, in Kambodia, quite up to what is called by the Simese Lem Samme-san, the Cape Liant of Europeans, is an uninterrupted Archipelago of beautiful islands, Sovereignty over the kingdom of Cambodia, is claimed by Siam and Cochin China, and the Cambodian prince, unable to resist either of the sovereigns pays tribute to both. The chain of mountains, which divide Siam from Cambodia is little known, but where it has been seen or visited the elevations are found to be of a moderate height, and are clothed with vegetation. The Kambojans are no longer a distinct and independent nation, the eastern part of their territory having been subjugated by the Cochin Chinese and the western fully taken possession of by the Siamese and the latter, with the co-operation of the Kambojans under their rule, have retaken Pen-nom-pen, on the great river called Mé Kong. From this place north to the sources of the river, it is believed, the Cochin-Chinese have no possessions on the west side of the river. It is known that the river has numerous outlets to the sea, whether these are all in possession of the Cochin-Chinese is doubtful, but it may be stated that the Mé Kong is the western boundary of Cochin-China and consequently the eastern boundary of Siam. The only part of the continent of Asia, the Malay peninsula excepted, in which the Malays have settled and to which their language has extended, is Kambodia, correctly Kamboja, which appears to be a Malayan word. In that country, they seem to have established a little independent principality called Champa, well known both in Malay and Javanese story. Both the Malays of the peninsula and the Javanese appear to have carried on a commercial intercourse with Champa, and the same commerce still goes on between Champa and the British settlement of Singapore. The Cambodians who are subjects of Siam occupy the southern districts of the Me-kong down to the frontiers of Cochin China. Up to the latitudes 12° to 13° N. tribute is said to be regularly paid especially by the fertile provinces Bataleang. The river of Kamboja is one of the largest in Asia. It is said to have its origin in a lake within the Chinese province of Yu-nan, and to be navigable for boats even before it enters the kingdom of Lao, between the twenty-second and twenty-third degrees of north latitude. It falls into the sea by three mouths, between the ninth and eleventh degrees. These three embouchures are known to European navigators by the names of the western or Basak river, the eastern or central branch, and the northern or Japanese river. The first of these is the largest, and the more suitable for navigation, and is said to have from fourteen to eighteen feet water on the bar at its mouth at high-water of spring tides. Besides the Annam, the inhabitants of the present dominions of Cochin China consist of several other races. The principal of these are the Kambojans, whose name in their own language, is Khmer or Kammer, but who are called by the Siamese, Kammen; by the Cochin Chinese, Komen; by the Chinese, Tang-po cha, and by the Malays Kamboja: which last is, no doubt, the word which has been borrowed by Europeans, and most frequently written Cambodia. The ancient territory of the Kambojans appears to have embraced all the country lying west and south of the river of Saigun extending on the Gulf of

Siam as far north as the twelfth degree of latitude and in the interior, at least to the fifteenth. The Kambojans speak a language distinct from those of all their neighbours; but in physical form, manners, laws, religion, and state of civilization, they bear a closer resemblance to the Siamese than to any other people. A few of its people have embraced christianity.

Dr. Mason (p. 134) draws the conclusion that while Siam and Cambodia received their religion and literature, from Ceylon the whole western coast of Further India was civilized by people direct from Hindustan, probably from the ancient kingdom of Kalinga.

In Cambodia, it is s ated by a writer in the Journal of the Indian Archipelago (No. XI Nov 1852, p. 606) that Buddha is there styled Sâmonacudŏm. He is not regarded by the Kambojians as the first cause, the Creator of all things, but there prevails amongst them a pantheism, in which all nature is deified, but above all they place Buddha, and worship him daily. The Să ra Trayphum and the Sa tra Pâpithŭn are mentioned as two of their religious books.—*Bowring's Siam, I. p.* 683, *Vol.* II. *p.* 464. *Crawfurd's Emb. p.* 459.

Chong, are a hill tribe on the side of the Mekong basin, but towards the sea, between L. 11° and 12° N. They preserve more of the Australo-Tamulian character than any of the neighbouring tribes. Their hair instead of being stiff or harsh as in the Mongolian, Tibetan, and prevalent ultra Indian and Malaya Polynesian race, is comparatively soft, the fea tures are much more prominent and the beard is fuller.

Kho, is a population of about 400,000 people occupying the Delta of the Mekhong, in Kambojia, between Siam and Cochin-China. The remaining 100,000 of the population being Chinese, Cochin-Chinese, Siamese, Malays, Portuguese and mixed races.

Cochin-China is the name given in Europe to a kingdom occupied by a people known as the Anam. The derivation of this European name is obscure, Kachao is the name given by the Anam people to the capital of Tonquin; and Cochin-China is known to the Malay navigators as Kutchi, but they give the same name to Cochin on the Malabar coast. Cochin-China has probably been so called from the alliteration or reduplication so common with easterns, aided by the proximity of China, and may be derived from Kachao, the capital of Tonquin and China, so that Cochin-China may mean the Kuchi near China. It has been supposed by D'Anville that the Sinhoa of Ptolemy, the geographer, is Cochin-China and that the Aureo-Chersonesus of Ptolemy is the Malay peninsula. According to Latham the natives on the borders of British India, in the N. W. the N. E., S. E. and East, form an ethnological group, which contains the Tibetans, the Nepal tribes, several populations of the Sub-Himalayan range, the Burmese, the Siamese, the natives of Pegu, the Cambogians, the Cochin-Chinese, and the Chinese, in populations which cover perhaps one-fifth of Asi. They have a general similarity, they are somewhat fair, in complexion, with what are called Mongolian features. There are, in their religious sects, mahomedans and shamanists, but the buddhist, Confucian, and Lao philosophies are used as religions, and almost all believe in the transmigration of souls towards a final absorption. One of these is the Anamese, or Anamitic group of peoples inhabiting Cochin-China and Tonkin, and they are a section of the division to which the Chinese belong. The Chinese form of Anam is Ngannam. The language is monosyllabic. The Tonkinese call the Cochin-Chinese Kuang and Kekuang, names probably the same as Khyen and Kakhyen The Cochin-Chinese, on the other hand, call the Tonkinese Kepak. The Cochin-Chinese, have a little more beard, and are fairer than their neighbours immediately to the west and south of them The Anam race, comprehending under this name both the Cochin-Chinese and Tonquinese, for there is very little difference between them, are fair, but are a short, squat, and ill-favoured people with long arms and short legs. They are probably lower in stature than any people of Central Asia. Their limbs are strong and well formed, and they are active and hardy. In point of features, they bear a nearer resemblance to the Malay than to any other people; their countenances exhibit an air of cheerfulness and good humour. The women well formed and graceful are, and to a remarkable degree, fairer and handsomer than the men, their hands, arms and feet, are well formed, and the carriage even of the lower orders is graceful. The dress of both sexes is becoming.—It is the old costume of China, before the Chinese were compelled, to adopt that of the Tartar conquerors. Both sexes dress nearly alike. For the lower part of the body, the covering consists of a pair of loose trowsers, secured at the waist by a sash. The main portion of dress consists of two or more loose frocks, reaching half-way down the thigh. This, for such matters, as among other Eastern people, is uniform and constant, overlaps to the right side, and is secured by five buttons and as many loops. Its sleeves are loose, and with persons not compelled to labour, they dangle a foot, or even a foot and a half, beyond the extremities of the fingers; but the labouring classes, from necessity, wear them short. With the women, the inner frock reaches below the knee, and the outer down to the ankles. When a Cochin-Chinese is in full dress, as when he

makes visits or is engaged in the performance of religious rites, he always wears over the frocks now mentioned a loose silk gown reaching to the ankles. The hair of the head is worn long and put up in a knot at the back of the head, as was practised by the Chinese before the present fashion was imposed upon them by the Tartars. Both sexes wear turbans, which are put on with much neatness and the form of this article of dress, which is always determinate, distinguishes the civil from the military order of public officers. The poorer people, except when dressed seldom wear these turbans. When abroad, both sexes wear varnished straw hats, little less than two feet in diameter, tied under the chin. These, which are sometimes in the form of an inverted basin, and at others resembling a sugar-loaf, afford, however grotesque in appearance, good protection against sun and rain. The materials of dress consist of silk or cotton, the first being of more frequent use than in any other country. The inner frock is cotton of domestic manufacture, always in Crawfurd's time unbleached, for, then, there was not a rag of white linen in the kingdom. The outer frocks and gown with the better ranks, are always of silk, or flowered gauze; and the latter is commonly of Chinese manufacture. The trowsers, with the same class, are either plain silk, or crape domestic fabric. The turban is crape, always black or blue, but most frequently the former, and this is also a home fabric. The lower orders are generally clad in cotton; but, even among them, silk is not unfrequently to be seen. Their cotton dress is very generally dyed of a dark brown colour, as if trimmed. This colour is given to it by a tuberous root. Ornaments of the precious metals, or gems do not appear to be very general. The women wear occasionally armlets and bracelets of gold. Where gems are worn, those of most frequent use are pearls and amber, brought from Yu-nan. The women wear ear-rings and secure the hair by a bodkin with an ornamented gold head. Men of all ranks, and women above the labouring class, always carry about them a pair of silken bags, or purses, strung together, and usually carried in the hand, or thrown over the shoulders. These are intended to carry betel, tobacco, and money. Women of the labouring class are forbidden to use them; and men of the same order, when they meet a person of condition, must, as a mark of respect, take them off their shoulders and conceal them. These purses are generally of blue satin, and with the better classes often richly embroidered. The shoes that are worn by the Cochin Chinese are slippers without heels. They are addicted, to an extraordinary degree, to the use of tobacco, which they chew and smoke. They are a mild and docile people. The lower orders are remarkable for their liveliness. They are always to be seen talking and laughing. The higher classes affect the grave and solemn demeanour of the Chinese. In their habits and persons, the Cochin Chinese are an uncleanly, dirty people, they perform frequent ablutions, but, notwithstanding this, their hair, their skins, their hands, including the long nails which they are so fond of wearing, are absolutely impure. Their linen, not bleached at first, seems never to be washed afterwards. At home, they wear their foul cotton shirts; and when they go abroad, without changing them, they clap over them their fine silk robes. This neglect of personal cleanliness they perhaps carry to a greater length than any of the nations of the further East. Their diet is indiscriminate. They eat vermin, and the flesh of the crocodile; hatched eggs with them are a delicacy; and their favourite sauce is a kind of soy, in part, at least, composed of the juices of putrid fish, and which, both from taste and odour, would be intolerable to any other people. Like the Siamese, they are nationally very vain, and consider themselves the first people in the world, being hardly disposed to yield the palm even to the Chinese, the only strangers whom they are disposed to consider respectable. They consider the Kambojans, barbarians, and scarcely think the Siamese much better. But their nationality, excessive as it as, is much less offensive than that of the Siamese; for with strangers they are sociable, good humoured, and obliging. Young women are not restrained to chastity, but are allowed freely to associate with men. But adultery in the married woman is punished with death. A Cochin-Chinese marries when he has the means, and among the poorer classes the age of the female is from 15 to 20. The wife is purchased, polygamy is habitual. Abortion is often had recourse to. In Cochin China divorce is completed by breaking a copper coin or a pair of chopsticks before witnesses. Cochin Chinese are ever gay and always talking, open and familiar, and entrust women with the chief concerns of the family and are quite as gay as the men. The Chinese always grave and affect to be thinking, close and reserved, never commit any affair of importance to a woman. The Chinese Code forbids a woman to talk unless by way of reply or to laugh beyond a smile, or to sing unless desired. In Cochin China all the labours of tillage devolve on the peasant women, and in towns the women in addition to their domestic duties, superintend all the details of commerce and even help in manufactures. The religion is buddhism, but Shaman superstitions also prevail. There are aborigines in Cochin China called Moy, they are the people which inhabit the chain of mountains which separate it from Cambodia. They were driven, to these strongholds when the pre-

sent possessors invaded the country. They are a strange race of people, very black, and resem ble in their features the Caffree. A tribe called "Mai," which may be the same people, is also mentioned in an Essay on the Indo-Chinese countries in Moor's "Notices of the Indian Archipelago," and which has been attributed to Mr. Crawfurd, the historian of the Indian Archipelago. The most numerous inhabitants of this province are the proper Kambojans. The Anam race are the masters. The original inhabitants of that portion of it lying to the eastward of the great river, and bordering upon Lao, are a tribe called Mai. The Anamese or Anamitic group of people who inhabit Cochin China and Tonkin, are a section of the division to which the Chinese belong. The Government of Cochin China is a pure despotism, the power of the king being absolute and without restriction. There are two classes of mandarins, the civil and military but for the administration of the affairs of the Government there are six departments or ministers who are termed Luc-bo, whose occupancy of power does not extend beyond three or four years. The laws and modes of punishment of the Cochin Chinese are nearly the same as those of China. Their language termed the "*Anamite*" is monosyllabic and evidently derived from that of China. Their written language indeed is merely borrowed in whole or in part from the Chinese, though the two languages have become so different that persons of the two nations cannot communicate either in reading or writing. Chinese however is the learned language of Cochin China with the pronunciation of the Cochin Chinese. The Anamite language from its monosyllabic character, presents but a small variety in the sound of the words, and a great number of significations, all indicated by the tone, are given to words spelled alike. The religion of the learned men is not well known, though they honour Confucius: that of the common people is the religion of Fo which they call Phat, but the people readily embrace Christianity and there were at least 440,000 Christians, when Dr. Le Fevre wrote in 1846 — *No.* 3 *Jour. Ind. Arch.—Latham, Desc. Ethn. Crawfurd's Dict. pp.* 321 *to* 488. *Earl's Archip. Tibeto-Burman races. General Observations.*

Mr. Logan remarks that perpetual aggressions, and frequent conquests, extirpations of villages and migrations, mark the modern history of nearly all the Tibeto-Burman tribes and of the different clans of the same tribe. In recent ages, the Lao have settled in the lands of the Sing-pho, the Bodo, the Burman, the Peguan, the Kambojan and the Malay and have originated communities having no connection with each other. The Singpho at a late period forced their way from Burmah into Assam. The Bodo have occupied the country of the Mikir, and the Arung Angami and Kuki have intruded on both. The same tribes also, separated into clans and villages, are permanently at war with each other, Kuki flees from Kuki, Sing-pho from Sing-pho, Abor from Abor. In the Irawadi and Mekong basins, there are remnants of tribes strongly distinguished from the predominant races and tending, with the evidence of language, to show that the ethnic history of Ultra-India is very ancient and has undergone repeated revolutions. One of the most remarkable is the Ka-Kyen. They are described as being in their appearance not Mongolian and totally different from the surrounding races of Shan, Burmese and Chinese. The Palong seems to resemble the Anamese, in some respects. A race of the same name (Panong), but to which the Siamese apply the generic name of Ka or Kha, inhabit the mountains of Laos, bordering on Kambojia. They are a coarse and debased variety of the Anam and the Kambojan type.

On the same side of the Mekong basin, but towards the sea, between 11° and 12° N. L. a hill tribe, called Chong, preserve more of the ancient Australo-Tamulian character than the surrounding tribes. In the Chong, the hair, insead of being stiff or harsh as in the Mongolian, Tibetan and prevalent Ultra-Indian and Malaya-polynesian race, is comparatively soft, the features are much more prominent and the beard is fuller.

The Moi or Ka-moi, who, on the opposite side of the Mekong, occupy the broad expansion of the Anam chain towards Kamboja, and appear to extend northwards along these mountains, marching with the Lau on the westward, are said to be black savages, with negro features. The Kambojans style them Kha-meu. They are the Kho-men of Leyden and the Kha-men of Gutzlaff.

The Muong or Muang who inhabit the same mountains further north or on the west of the Tonkinese province of Thank-Hoa-noi, and stretch into China, are evidently an extension of the aborginal or uncivilized Lau of Yunan. The name is the Lau term for town or village which is scattered over so large a portion of the Chinese maps of Yunnan, indicating the present limits of Lau in that province.

The-Mon-Anam or East Himalaic tribes, occupy the territory bounded on the north, by the left side of the valley of the Brahmaputra as far as the head of Assam, and a line drawn thence eastwards along the range in which the Irawadi has its sources, and across the converging meridional chains, beyond to the most eastern, the Mangli, which separates the Kiang from the M-Kong.

The first migrations from the northern side of the Himalaya is now represented by the

Anam, Kambojan, Mon and Lau tribes, who appear to have been at a later period gradually pressed by the Tibeto-Burman tribes, to the eastward and southward.

The Anam, Kambojan, Siamese, Mon, Burman and the other Ultra-Indian languages are all characterised by strong complex sounds. The Anam and Siamese abound in complex vowel sounds and the Burman family in complex consonantal sounds which are harsh in Singpho, less so in Rakhoing, and much softened in Burman.

The Anamese group, amongst whom are the Moy, are found in Cochin-China and Tonkin. They are a section of the division to which the Chinese belong. Two thousand years ago, or two centuries before Christ, the Chinese found the Anamese, in possession of the basin of Sang Koi. The Anamese, in size, form of the head, and person, expression and temperament, have a closer resemblance to some Indonesian tribes. The Javan group has a larger admixture of the Anam type than the Sumatran or Borneon. Anam heads are common in eastern Java and especially among the Bawians and Maduras. The Malayans and western Javans have frequently a more Siamese form. The Anamese want the large straight faces, flat occiput, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eye and grave expression of the Siamese: Anam is Cochin-China: Laos and Ahom belong to Anam.

Lau.—About six hundred years ago, or the 14th century of the Christian era, the Lau were a powerful and conquering people in the upper portion of the basin of the Irawadi, where their Capital was at Mo gaung (Muang-gaung or Mung Khong) and whence in A. D. 1224, they sent an expedition which subjugated Asam and established Ahom rule. Their native country was a portion of the basins of the Mekong and the Menam, including Yunnan. About the same time, they took possession of a higher portion of the upper basin of the Mili, where their chief seat was at Khamti, whence the name by which this branch is still known. At present, the Lau, under the names of Shan and Khamti, are found in Upper Assam, and scattered over a large portion of the northern half of the basin of the Irawadi, nearly to the confluence of the Khyen-dwen with the principal stream. Sporadic villages are even found in Arakan; on the eastern side they are scattered along the Sa-luen as far as 18°. The whole of the Menam basin is in their hands, with the exception of a small part of the right side near its head; and they also occupy a large portion of the basin of the Me-kong. The eastern tribes are known as Lo-Lo, Lau and Thai.

In the basin of the Irawadi, the Shan are intermixed with the Tibeto-Burman tribes amongst whom they have intruded, but in large portions of it, they are the principal population and in the N. E. corner of the empire, the Khamti may be considered as independent. It is probable that the Siamese, with the tribes of the upper Me-nam and of the Mekong, are directly connected with those of Yun-nan and are not offshoots form the colony of Muang-gaung. The Siamese have advanced more than half way down the Malay peninsula and but for the check given to them towards the close of last century, by the establishment of Penang, as a British settlement, their sway would now have embraced Perah, and probably have extended to the confines of Malacca. The northern clans almost everywhere retain their independence, although owning a nominal allegiance and in some instances paying tribute to Burmah, to China, or to Siam, those on the frontiers of Yun-nan propitiating both the Golden Foot and the son of Heaven, by an acknowledgment of fealty, and some sending a triennial offering to the latter.

On the south-east of Assam are numerous Shan tribes, many of them subject to the Burmese. These belong to the Siamese or T'hay group who are composed of the Siamese proper, the Khamti, the Lao and the Shan who each speak a dialect of their own, none of which are like the Burmese.

Shan and Shyan call themselves T'hi or Thai and occupy great part of Laos and Siam and bordering districts of Burmah. In personal appearance, customs and languages, the Shan and Karen are but offshoots of the same stock. The Lao, the Shan and the people called Ahom were originally the same and once held Assam and Bhotan under their dominion. The Shan or Shan race, swarm in countless tribes over the countries stretching from the valleys between China and Tibet on the North, to the Gulf of Siam in the South, and if united would form the most formidable state in Eastern Asia. They occupy all the territories between the Irawadi and the mountains of Anam. At Bhamo, to the north, east, and south east of which they are numerous, the language of the Shan corresponds with that of the Siamese. Their habits, mode of living, cultivation of the ground, correspond with those of the Khy-eng and Karen. People of the T'hay group have a superior physical development, and resemble the Balinese.

The Lau, on the borders of China, differ little from the Chinese of Yunnan, and their stock, was probably the same. Where they are in contact with the older races, they have considerably altered. In the valley of the Menam, their height is about 1½ inches less

than the average Chinese, but as the average stature of the French is the same (5 feet 3 inches) the Siamese may still be considered as of the middle size.

The Lau or Shan race speak a language which was primarily east Himalaic, like Mon, Kambojan, Anam and Pa-long. Like them, it was carried at some remote period, into the Brahmaputra-Gangetic province, and received some Dravidian roots Subsequently it shared in the great eastern movement of the Himalaic dialects from the basin of the Ganges into that of the Irawadi, where it was intimately connected with some of the intrusive west Himalaic or Tibeto-Burman dialects. It was then pressed further into the east, into the basin of the upper Mekhong and Tong-King, and became the language of Yun-nan. During the Han dynasty, Chinese colonies began to occupy the valleys of Yun-nan, and from that time, Lau was exposed to the influence of Chinese and began to receive the modified form it possessed when the pressure of that great race on the older tribes of Yun-nan caused the Lau to swarm to the westward and southward. When they re-entered the basin of the Irawady, they had acquired from their partially Chinese civilization, a superiority over the Tibeto-Burman tribes of northern Ultra India, which made the Lau clans predominant along the central belt of Ultra-India from the Himalaya to the mouth of the Menam.

Thai is the native name of the Siamese and their chief division are the Lao, Shyan (or Ahom) and Khamti. Their general complexion is light brown, their hair black and abundant, nose not flattened. The names of the original conquerors, their alphabet and language, were Ahom ; Ahom or Ẹhom was the designation of the races mixed with the royalty of Arracan, and opposed to the pretensions of the king of Ava at a very early period of Burmese history.

The Siamese may be considered as a remarkable modification of the Burmah Chinese head, with a peculiar tendency to elongation and verticality. They have large straight faces, flat occiputs, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eye and a grave expression. Siamese appears by far the most widely spoken language of Ultra India. It was at one time the lingua franca of Kidah, almost as much as the Malay, and even that wandering negro tribe, the Simang, spoke it in some places. It was also current in Assam and Yunnan at the opposite extremities of Ultra-India. Cambodia, the Laos of the Lu country, Luang, Phra Bang and Nan are tributary to Siam.

Arakan.—The sea board and the lower portions of the valleys opening into it, form the country of the Ra-Khoung-tha or Arracan tribe, of whom the Burmans are a branch. Some are found residing on the banks of the mountain streams and are distinguished by the name of Khyoung-tha. Their language proves that they do not belong to the Yuma group, but they are intruders from the north ; and their own traditions recognise the Ku-mi as the tribe in possession of the sea board, when they entered Arakan.

The Mrung in the upper basin of the Mayu and towards the hill frontier of Chittagong, are a colony imported from the Bodo country by the kings of Arakan, at the period when their conquests extended far up eastern Bengal.

The Mug are a highly Bengalised class of Rakhoing. They call themselves Myama-gyi or great Myama.

On the south of Assam, is the prominent Burmese race, who profess buddhism, and south of them the British province of Pegu containing Burmese, Mon also called Talieng, Khe Karen, Karen-ni or Red Karen, the Khyan, whose women tattoo their faces ; the Yet Baing on the Yoma range, and the Shan who form separate communities.

The alphabets of the Thay or Siamese, of the Burmese and of the Mon of Pegu are of Indian origin.

The Burman, the predominant people of the basin of the Irawadi, occupy the lower part of the basin above Pegu, the southern parts of the upper basin and the valley of the river beyond, as far as Ba-mo. They are also found in the delta, but their progress there has been comparatively recent, and the prior inhabitants still form the greater majority. Their native name Na-ran-ma, M'ran-ma, whence their softened modern M'yan-ma, M'yama, is the origin of the European corruption of Burman. The principal seat of the Burman power appears to have been for the longest periods in the same part of the basin where it now is. In the era of their greatest stability and prosperity, their capital was at Pagan (probably the place of that name above Ava) from the second to the middle of the fourteenth century. Previous to this, on their first advance from Aracan, they appear to have conquered the northern part of the ancient kingdom of the Mon—for their capital was for 395 years at Prome. It was not till the middle of the sixteenth century that they succeeded in annexing Pegu. But in the middle of the eighteenth, the Mon threw off the yoke and in their turn subjugated all Burma for a short period.

The Burmans differ from the Anamese in being stouter and darker, and in the head being Daya-Polynesian or Turanian oval, and not obtusely ovoid. The head varies greatly and

the coarser forms show a tendency to the Binua contraction of the forehead, rendering the lateral expansion of the forehead, very marked. The normal, or non-Indianised Burman head, appears in many respects, to resemble the coarse Sumatran, Javan, Borneon and Polynesian. This softened Turanian type is decidedly allied to the oblong square and oval Chinese type and not to the ovoid and orbicular type of the Tibetan, some of the Himalayan, Gangetic, the Anam and the Celebesian tribes. The Burmans on the west more often resemble the handsome Asianesian tribes found in Borneo, some parts of East Indonesia, and Polynesia. Burmans and Malays are somewhat stouter than the Siamese, the average height being probably about 5 feet 2 inches.

As in buddhist countries women are more nearly the companions and not the slaves of the men, and the Tibeto-Burmans and the cognate Indonesian tribes, permit great license to both sexes, prior to marriage, when chastity is not required.

The Mon, called by the Burmans, Ta-lain, and Peguans or Peguers by Europeans, the race occupying Pegu, are an East Himalaic people, who long successfully contested with the Burmans the sway over the basin of the Irawadi. They were annexed to Burma, in the middle of the 16th century, but again threw off the yoke in the beginning of the eighteenth century, and subjugated all Burma. Their range embraces the delta of the Sa-luen, where Moutama or Martaban was their chief port. They long preceded the Siamese in the Tenasserim provinces, and the languages of the Si-mang and Binua of the Malay Peninsula, retain deep traces of their ancient influence to the south. A colony is also found in the basin of the Menam, Before the great southern movement of the Lau, the Mon appear to have occupied that basin also, and to have marched and intermixed with the closely allied Kambojans of the lower Mekong. Mr. O'Riley thinks that the Mon are only distinguishable from the Burmans by their less Mongolian and more Rakhoing aspect. They appear to have been considerably modified by the Indian element, which has always been very powerful at the head of the Bay of Bengal. They seem to have been at one time the chief traders eastward of the Bay of Bengal.

The Karen also preceded the Burmans in the delta of the Irawadi, and are the joint occupants with the Mon. They are also found in the lower plains of the Saluen, the deltas of the Se-tang and Irawadi, the middle basin of the Se-tang as far as Tongo, and in Tenasserim. In Martaban there is also a remnant of an allied tribe, the Toung-thu, Both the Karen and the Toung-thu, belong to the Yuma branch of the Tibeto-Burman family.

The long and narrow hill tract between the valley of the Irawadi and the Sa-luen as far north as 23°, is occupied by cognate tribes called Ka-ren-ni (Red Karen) who are said to speak a very ancient dialect of the Yuma family. This branch has a parallel range on the western side of the Irawadi, and in their traditions they assert that they preceded the Burmans as the dominant people of the basin and they seem from very ancient times to have occupied the whole of the valley southward from the valley of the Banak on the west to the borders of Yunnan

No trace of the Mon is left along the Yuma range,—tribes of the Karen family being the exclusive holders of its inner valleys. Some of the very imperfectly described tribes on the eastern side of the Irawadi, to the north of the Ka-ren-ni, viz. : the Za-baing Ka-Khyen, &c. may belong to the older immigration. But the Mon is the only remnant within the ancient Ka-ren province, and its earlier preservation is doubtless owing to the same causes, its arts, civilization and wealth, which have enabled it to hold its own against the Tibeto-Burman horde of the Irawadi.

The Nicobar Islanders appear to have been an early colony of the Mon race in its pure or more west Chinese and less Indian condition. They are flatter faced and more oblique eyed than the Rakhoing and Mon, in this resembling the more sequestered hill tribes of the Burman race. In some islands, they have been much mixed with Malay colonists. Nicobar phonology is allied to that of the Silong and Simang.

The *Pa-long*, Pa-on or Za-baing, are partially subject to, and located to the east of the Mo Meit (Mung Myit, Moung-m-ri) beyond the Ka-ren-ni, and along the Chinese frontier, as far as the latitude of Ba-mo (Mang-mo). They are civilized and remarkably industrious, being good carpenters, dyers and blacksmiths. Their *dha* or swords are exclusively used in and around Bamo. The Chinese who carry on the trade between Yun-nan and Burmah, by Bamo, describe the route, as passing across a range of hills inhabited by Ka-Khyeng and Palong, and then entering a Shan country the Ko-pyi doung of the Burmans. The Pa-long inhabit the valley south-east of Ba-mo, beyond the first mountain range. They approximate to the Shans of whom they are probably an offshoot, they wear the same dress and are buddhist, but they have affinities with the Kha-Khy-eng.

The Ka-du are scattered over the country between Kyun-dung and Moung-Khung, a space of nearly two degrees. They are said to be a race of people of different origin from the Burmans.

The Ph-won are found to the north of Bamo and describe themselves emigrants from a

country to the N. E. called Mo-toung, also Moo-long. Their language is said to be distinct.

The Ka-Khyen to the east of Koung-toung and Ba-mo, are described as perfect savages in appearance. They have long faces and straight noses, with a very disagreeable expression about the eyes, which is rendered still more so by their lanky black hair being brought over the forehead so as entirely to cover it and then cut straight across in a line with the eyebrows. They are found to the north of Bamo, as far apparently as the Shu-mai-kha, and amongst the Sing-pho hills between the Moung-Khung and the valley of Hu-Kong. They have predatory habits. They are probably prior to the Shan, Burman and Sing-pho.

In the Archipelago there seem to Mr. Crawfurd to be four races of man, the Malays proper; the Semang or dwarf Negro of the Malay peninsula; the Negrito or Aeta of the Philippines; the larger negro race or Papua of New Guinea and a race whom Crawfurd styles the Negro Malay, intermediate between the Papuan and Malay. The Malay are superior to all the others in intellect and civilization. They occupy the whole of the Malay peninsula, half of Sumatra, all the sea coast of Borneo. Their numbers are estimated at 1,500,000 in Borneo; 1,250,000 in the Malay peninsula; and 1,000,000 in Sumatra. He describes the Malay as short, squat, with round face, wide mouth, large high cheek bones; short small noses, black, small, deep seated eyes. Their hair is lank, black and harsh, and the men have little or no beard.

The Semang are a small Negro race.

The Negrito are short, but well made, active, soft frizzled hair, nose slightly flattened, features more regular and skin less dark than the African negro.

The Papua of New Guinea are true Negroes and have made some advances in civilization.

The Negro Malay are fairer than the Negro, darker than the Malay, intermediate between Malay and Papua.

Mr. Wallace, however, believes that the Archipelago is divisible into an Asiatic and an Australian portion, that the flora and fauna differ and that all the peoples of the various islands can be grouped either with the Malay or the Papuan, two radically distinct races who differ in every physical, mental and moral character, and he states his belief that under these two forms, as types, the whole of the peoples of the Malay Archipelago and Polynesia can be classed. He considers that a line can be drawn which shall so divide the islands as to indicate the one half which truly belong to Asia, while the other no less certainly is allied to Australia, and he designates these respectively the Indo-Malayan and the Austro-Malayan divisions of the Archipelago and he gives to Mr. Earl (*pp.* 12,13 and 36) the credit of having been the first to indicate the division of the Archipelago into an Australian and an Asiatic region.

He mentions that all the wide expense of sea which divides Java, Sumatra, and Borneo from each other, and from Malacca and Siam, rarely exceeds forty fathoms in depth, and the seas north to the Philippine islands and Bali, east of Java, are not a hundred fathoms deep; and he is of opinion that these islands have been separated from the continent and from each other by subsidence of the intervening tracts of land. In the islands of Sumatra and Borneo are the elephant and tapir, and the rhinoceros of Sumatra and the allied species of Java, the wild cattle of Borneo and the kind long supposed to be peculiar to Java all inhabit some part or other of southern Asia. Of the birds and insects, every family, and almost every genus of these groups found in any of the islands, occur also on the Asiatic continent and in a great number of cases the species are exactly identical. The resemblance in the natural productions of Java, Sumatra and Borneo with those of the adjacent parts of the continent, lead to the conclusion that at a very recent geological epoch the continent of Asia extended far beyond its present limits in a south easterly direction including the islands of Java, Sumatra and Borneo, and probably reaching as far as the present 100 fathom line of soundings. The Philippine islands agree in some respect with Asia and the other islands but present some anomalies which seem to indicate that they were separated at an earlier period and have since been subject to many revolutions in their physical geography.

But all the islands from Celebes and Limbok, eastward, exhibit almost as close a resemblance to Australia and New Guinea as the western islands do to Asia. Australia in its natural productions differs from Asia more than any of the four ancient quarters of the world differ from each other and all its striking peculiarities are found also in those islands which form the Austro-Malayan division of the Archipelago and the contrast between the Asiatic or Indo-Malayan forms and those of the Austro-Malayan are abruptly exhibited in passing from the island of Bola to that of Limbok, though the strait is only 15 miles wide, and in travelling from Java or Borneo to Celebes or the Molluccas the difference is still more striking, leaving the only inference that the whole of the islands eastwards beyond Java and Borneo do essentially form a part of a former Australian or Pacific continent although it may never have actually been joined to it, and it may have been broken up before the western islands were separated from Asia, and probably before the extreme south eastern part of Asia was raised above the waters of the ocean. The Aru, Mysol, Waigiou and Jobi islands are

all united to New Guinea by a shallow sea, and agree in their species of mammalia and birds.

On drawing a line to separate the Malay and Papuan races, it almost coincides with that which divides the zoological regions, but somewhat eastward of it, as the maritime enterprize and higher civilization of the Malays have enabled them to overrun from the west a portion of the adjacent region on the east, and to spread much of their language, their domestic animals and their customs far over the Pacific into islands where they have but slightly or not at all modified the physical or moral characteristics of the people.

Mr. Wallace believes that the Malay and the Papuan have no traceable affinity to each other; that the Asiatic races include the Malays and all have a continental origin; while the people of the Celebes and Pacific races in the islands on its east, are derived from lands which now exist or have recently existed in the Pacific Ocean.

He, however, allots the eastern Archipelago amongst three races, whose islands may be thus shown:

Indo Malayan regions.	Austro-Malayan regions.	Polynesian or Pacific regions. The Papuan group.
Sumatra	Lombok	Floris
Lingen	Sumbawa	Sumba or Handana
Banca	Celebes	Adenara
Biliton	Moena	Solor
Java	Bouton	Lombata
Madura	Sula-mangola	Rutar
Bali	Sula-basi	Ombay
Baweean	part of Bourou	Wetter
Borneo	part of Ternate	Timor
Sulu Archipelago		Rotte
Palawan		Seruatty
Philippines		Babbar
Samar		Timor
Mindanao		Timorlaut
		Larat
		Tenember
		part of Bourou
		part of Ternate
		Ke-Islands
		Ceram
		Banda
		Amboyna
		Batchian
		Oby
		Gilolo
		Morty
		Aru
		Vorkai
		New Guinea or Papua
		Australia
		Mafor
		Jobi
		Mysol
		Waigiou
		Salwatty
		Sook
		Biak

Mr. Wallace however, writing on the Archipelago however makes also a geographical, zoological and ethnological arrangement and divides it into five groups of islands, as follow:—

The Indo-Malay islands.	The Timor Group of Islands.	Celebes Group.	Moluccan Group of Islands	Papuan Group.
Malay Peninsula	Timor	Celebes	Moluccas	New Guinea
Singapore	Flores	Banka	Bourou	Aru Islands
Borneo	Sumbawa	Sula islands	Ceram	Mysol
Java	Lombok and smaller islands	Bouton	Batchian	Salwatty
Sumatra			Gilolo or Jilolo	Waigiou
			Morty	Ke Islands
			Ternate	Aiou
			Tidore	
			Makian	
			Kaoa	
			Amboyna	
			Banda	
			Goram	
			Matabello	

The Malayan family approximates closely to the ruder or more purely Mongolian type of Ultra-India, and the identity in person and character is accompanied by a close agreement in habits, customs, institutions and arts, so as to place beyond doubt that the lank haired populations of the Islands have been received from the Gangetic and Ultra-Indian races. The influx of this population closed the long era of Papuan predominance and gave rise to the new or modified forms of language which now prevail. It is generally supposed that when they entered on their career of conquest, the Malays spread from the Menangkabau district in Sumatra. The rude maritime tribes who frequent the coasts and islands of the Malayan peninsula, and amongst whom several distinct tribes are distinguishable by their physical characters, speak a language mainly Malay but with differences in pronunciation. In all the sea ports and courts of the Archipelago the Malays are a tall handsome class whose fine eyes and well shaped features betray the presence of Arab or Indian blood. The Malay of Pinang and province Wellesley, is described as short; five feet two or three inches being considered the average height of a man, and that of a woman is a few inches shorter. Their bones are large and clumsily put together, but strongly knit; arms and legs usually short compared with the length of the body, and the whole frame robust and capable of much labour. The head is round and elongated at the summit, broad at the back, and set on a stout thick neck. Eyes long and narrow, rather deep set, black or dark hazel in color and seldom clear about the white Nose long, wide at the nostrils and not very flat. Forehead broad and receding; cheek

bones very prominent and jaws wide and square ; teeth regular, large and white, unless discolored by lime and gambier. The facial angle seldom exceeds fifty degrees, while that of the European is seldom less and sometimes is nearly ninety or perpendicular, hair black and coarse. It is plentiful on the head, but other parts of the body are smooth. The mustaches alone are retained on the face, other hairs being removed by pincers,—mouth large with thin lips : ears large and ill-shaped. The body is fleshy and muscular, legs remarkably so, thighs so large as to be unwieldy. Habit of body lean, Malays seldom become obese. The women are pretty when young, but soon show signs of old age : they become wrinkled and haggard after bearing a few children and in old age are hideous.

Malays are frank, courteous and honest, brave, generous and sensitive to a fault, grave at times and anon overflowing with mirth in youth ; in advanced life sedate.

They are proud, and, if ill-treated, revengeful ; but under generous treatment are gentle, kind, humane, grateful, docile and faithful. Capable of the warmest attachments, and yet impelled to madness and the commission of the most revolting deeds by real or imaginary unkindness. They are dutiful children and kind parents. They treat their aged kinsmen with the greatest kindness and even feel it a duty to relieve the wants of an indigent relation. Old men and women are always regarded with respect. The Malays are frequently quite Burmans in appearance, but the normal and least mixed Malays are more Binua and also more Siamese than the western Burmans. The Malays of Johor when employed in gathering camphor, use a fictitious vocabulary, constructed in a similar manner to the deferential dialect of Javan, and used to propitiate the spirit of the camphor tree.—*Mr. Logan. Mr. Crawfurd.*

Negro races occupy the Andaman and Great Nicobar islands, and the Minkopi of the Andaman group have some peculiarities which indicate a difference from others of the Negro tribes. The Semang, a pagan tribe of the Malay peninsula, are said to be of Negro origin, as also, the Aheta, Ita or Negrito race of the Philippines. The Negros or Buglos Island from Lat. 9·4 to Lat. 9· 50 N. There are the Papuans or Alfoeren or Alfour or Arafura, the inland inhabitants of New Guinea, Ceram and all the larger islands in the south-eastern part of the Indian Archipelago, also the Mindanao Papuans and the Negritos of Mindoro. The Arruans of the Arru Islands have African features and bear a strong resemblance to the natives of Port Essington.

The Mincopi occupying the Andaman Islands and are the least civilized race perhaps in the world ; being nearer to a state of nature than any people we read of. Their colour is of the darkest hue, their stature in general small, and their aspect uncouth. Their limbs are ill-formed and slender, their bellies prominent ; and like the Africans, they have woolly heads, thick lips, and flat noses. They go quite naked, the women wearing only at times a kind of tassel, or fringe round the middle, which is intended merely as ornament, as they do not betray any signs of bashfulness when seen without it. The men are cunning, crafty, and revengeful ; and frequently express their aversion to strangers in a loud and threatening tone of voice, exhibiting various signs of defiance, and expressing their contempt by the most indecent gestures. At other times they appear quiet and docile, with the most insidious intent. They are skilful in shooting fish, manage their canoes well, and are fond of singing and dancing. They take little pains to cultivate the soil and are ignorant of the art of working in metals. They make their canoes by hollowing out the trunks of trees by means of fire. The Andamaner has the appearance of the small sized negro race about 5-2 inches high and would seem to be the descendants of the same wave from the West that has left its features in the South of the Peninsulas of India and Malacca, the Semang and the Negrito of New Guinea. The Andamans have a climate milder than that of the Tenasserim and Pegu coasts and more resembling that of Colombo or of the low lands of Penang. The negroes of the Andamans are in the very lowest and most abject state of human society, without fixed dwellings, unclad, and unacquainted with the meanest of the useful arts of life. In disposition they are shy, unsocial, and mischievous. They seem to have been isolated for the past two or three hundred years, and when the British last settled on their islands in 1858, they were found in the lowest condition to which human beings can fall. They are not cannibals as was long supposed, —but live on pork, fish, grains, roots, cocoanut and other fruits, and broil the flesh of their animals before eating it. They may be called hunters and fishermen, hunting game in their own wilds and jungles, using the bow and arrow, with which they are expert, and employing the bark of a tree for fishing lines. They have no clothing, but go entirely naked and seem unconscious of that feeling of shame which guides the other races in the world to cover their persons. They construct huts, but of the rudest character. They are intensely averse to the intrusion of strangers. They are small in stature, seldom rising in height over five feet. The head is smaller than that of the ordinary Asiatic, and depressions exist in the temporal region. The teeth

are nearly white, but often so irregular as to seem in double rows. They are muscular, and are deficient in the roundness and fullness which give such symmetry of form to other races. In youth, to beautify their persons, their bodies are scarified all over with broken glass, which gives the skin a bead-like appearance, the lines running longitudinally down the arms and bust. When pleased with any thing to which their attention is drawn, they gently bite with their teeth the lower edge of the palm of the right hand and then smartly strike the left shoulder. They also contract the lips as in kissing and make a hissing noise like that of grooms in cleaning horses. When they speak to one another their pronunciation is so indistinct as to resemble a chatter, but they are sharp in catching words and sounds. They are said to be passionately fond of music, though they have no musical instrument. In dancing, they hop on one foot, beating it down smartly in regular time, keeping both hands raised above the head. They change feet, keeping cadence with the song, work the head, bow the body and thus spring and jump till the dance is closed. The Andaman language is said to be disyllabic.

The Simang and *Bila.* In the northern portion of the Malayan peninsula, within the territories of the Malay provinces of Oveda, Perak, Pahang and Tringanu, is a negro race known to the Malays under the names of Simang and Bila. The complexion of these is black, or sooty, the hair woolly, the features approaching to the African, and the stature dwarfish. An adult Simang male, said to be of the mean height of this people, was found to be only 4 feet 9 inches high. Some of the Simang, or Bila, have fixed habitations, and practise a rude agriculture, but the majority lead an erratic life, gathering the rude products of the forest to exchange with the Malays for the necessaries of life, or subsisting by the chase. The Simang and Bila appear to have several tongues, and that of the Simang though containing Malay and Javanese words is considered by Mr. Crawfurd to be an original tongue. The Simang like the Philippine negroes are of diminutive stature. The average height of the Simang being under five feet.

In the remoter portions of Asianesia, some of the black tribes possess all the traits of the Guinea negro, but the Simang and Mincopi of the Andaman appear, like the greater number of the Asianesian negro tribes, to have been partially modified by mixture with other races. This is certainly the case with the Simang, some of whom are Australo-Tamulian in appearance, while others differ little save in their frizzled or spiral hair and dark complexion, from some of the adjacent Binua. The average height of the adults of a party of Simang Bukit on the Ijan, a feeder of the Krian, was four feet eight inches, the highest, four feet ten inches. Head small, ridged, that is, rising above the forehead in an obtuse wedge shape, the back rounded and markedly narrower than the zygomatic or middle zone; the face generally narrower and smaller than the Malay: eye-brows very prominent, standing out from the forehead and projecting over the ocular furrow which extends across the face, the root of the nose sinking into it and forming a deep angle with the base of the superciliary ridge. The nose short and somewhat sharp at the point, and often turned up, but the alæ spreading; eyes fine, middle-sized and straight: iris large, piercing, conjunctive membrane yellow, the upper eyelashes, owing to the deep ocular depression or prominent ridges are compressed or folded, the roots of the hair being hidden. The cheek bones generally broad, but in some cases not remarkably prominent, save with reference to the narrow forehead. Mouth large or wide but lips not thick or projecting; the lower part of the face oval or round but not square. The deep depression at the eyes and sinking in at the root of the nose give a very remarkable character to the head compared with the Malay. The projecting brow is in a vertical line with the nose, mouth and chin, and the upper jaw is not projecting or prognathous. The person is slender, the belly protuberant, owing to their animal life in the jungle and precarious food. This induces them to cram themselves whenever they can and the skin of the abdomen thus becomes flaccid and expansible like that of an ape. The skin generally is fine and soft, although often disfigured by scurf, and the colour is a dark brown but in some cases lighter and approaching to the Malay. The more exposed hordes are black The Simang of Tringanu are not of such a jet black, glossy, colour as the Kidah tribe. The hair is spiral not woolly and grows thickly on the head in tufts. They have thick mustaches, the growth being much stronger than in the Malay race. The head is neither Mongolian, nor negro of the Guinea type. It is Papua-Tamulian; the expression of the face is mild, simple and stupid. The voice is soft, low, nasal and hollow or cerebral; a line of tattooing extends from the forehead to the cheek-bones. The right ear is pierced, the orifice being large. The hair is cropped save a ring or fringe round the forehead. The Simang are found in all the rivers of Pera and are classed as the Simang Paya who frequent the low and marshy alluvium between the sea and the hill; the Simang Bukit who wander in the forests of the hills, and the Sakai who are confined to the mountains of the interior. There are said to be thousands of the Simang

in the interior of Patani, Tringanu, Kidah and Pera, wherever the country is covered with forest and there are few or no Malays. Simang tribes of Kidah and Pera have a language mainly dissyllabic like other Asianesian ones. An individual who, many years ago, was brought to Pinang, and who has hitherto represented the race in European ethnology, probably belonged to such a horde. His lips were thick, and Mr. Anderson says he exactly resembled two natives of the Andamans, who were brought to Pinang in 1819. Mr. Anderson adds that a Semang of Tringanu, who lived in Pinang was 'not of such a jet-black glossy appearance' as the Semang from Kidah whom he saw, and the two Andamani *Jour. Ind. Arch. Vol. iv. p.* 427.)

Semang, is a Malay word applied by the mahomedans of Kedah, Perak, Tringanu and Salangore, to the pagan tribes of the interior, though the Semang Paya reside on the plains or borders of the morasses, the Semang Bukit, are the occupants of hills, the Semang Bakow reside in the neighbourhood of the sea, in the creeks and districts where the mangrove grows, frequenting the sea-shore, and occasionally taking up their quarters in the mangrove jungles. The Semang Bila are those who have been somewhat reclaimed from their savage habits, and have had intercourse with the Malays. A mere remnant of tribes which, according to native tradition, occupied a consi. derable portion of the interior of the Peninsula at a comparatively recent period. At the present time the race is only known to exist on the mountain Jerei, in the Kedah territory, a little to the north of Penang ; in the neighbourhood of the mountain range which lies immediately opposite to the latter settlement ; and in the uplands of Tringanu, on the east coast of the peninsula ; but it seems probable that scattered remnants are to be found in several other spots, which have not yet been visited by Europeans. *The Sakai and Allas* tribes of Perak, which have hitherto been classed with the Semang, or woolly-haired race of the neighbourhood of Pinang, have curly but not woolly hair; and although they retain the Papuan custom of boring the septum of the nose, and also mark their skins with cicatrices they cannot be considered as Papuans; indeed their language and leading characteristics show them to be wild tribes of the Malayan race. The Semang, however, who are identical in every particular with the Pangan of the interior of Tringanu, are Papuans in all their purity, with woolly and tufted hair in every respect similar to other unmixed tribes of the race. Of the origin of the Semang, the Malays possess no tradition. Certain it is, however, that the tribes of them which inhabited various parts on both sides of the peninsula, were much more numerous, before many of the present Malayan colonies were founded by emigrants from Sumatra. They are at present most numerous in the interior of Jan, a small river to the north of the Mirbow, near the lofty mountain Jerei, in the Kedah territory. There are small parties also in the mountains, inland of Juru and Krian, opposite Pinang. Their huts or temporary dwellings, (for they have no fixed habitations, but rove about like the beasts of the forest), consist of two posts stuck into the ground, with a small cross-piece, and a few leaves or branches of trees laid over to secure them from the weather. Some of them, indeed, in the thicker parts of the forest, where the elephants, tigers, and other wild animals are most abundant make their temporary dwellings upon the cliffs and branches of large trees. The Semang subsist on the birds and beasts of the forest, and roots. They eat the elephant, rhinoceros, monkeys, and rats, and with the exception of the scanty supplies they obtain from the Malays, they have no rice or salt. They are very expert with the sumpit, a blow-pipe for projecting small darts, and poison the darts with ipoh, procured from the juice of various trees, which is deadly poison. They handle the bow and the spear with wonderful dexterity, and destroy the largest and most powerful animals by ingenious contrivances. It is seldom they suffer by beasts of prey, as they are extremely sharpsighted, and as agile in ascending the trees as the monkeys. Their mode of destroying elephants, in order to procure the ivory, or their flesh, is most ingenious. They lie in wait in small parties of two or three, when they perceive any elephants ascend a hill, and as they descend again, which they usually do at a slow pace, plucking the branches as they move along, while the hind legs are lifted up, the Semang cautiously approaching behind, drives a sharp-pointed bamboo, or a piece of neebong which has been previously well hardened in the fire, and touched with poison, into the sole of the elephant's foot with all his force, which effectually lames the animal, and most commonly causes him to fall, when the whole party rushes upon him with spears and sharp-pointed sticks, and soon despatch him. The rhinoceros they obtain with even less difficulty. This animal, which is of solitary habits, is found frequently in marshy places, with its whole body immersed in the mud, and part of the head only visible. The Malays call the animal "Badak Tapa," or the recluse rhinoceros. Towards the close of the rainy season, they are said to bury themselves in this manner in different places, and upon the dry weather setting in, and from the powerful effects of a vertical sun, the mud becomes hard and crusted, and the rhinoceros

cannot effect its escape without considerable difficulty and exertion. The wild buffaloes of North Australia are often found in a similar predicament, and are sometimes shot by the hunters before they can extricate themselves—The Semang furnish themselves with large quantities of combustible materials, with which they quietly approach the animal, who is aroused from his reverie by an immense fire over him, which being kept well supplied by the Semang with fresh fuel, soon completes his destruction, and renders him in a fit state to make a meal of. The projecting horn on the snout is carefully preserved, being supposed to be possessed of medicinal properties, and highly prized by the Malays, to whom they barter it for their tobacco, &c. The hair of the Semang is spiral, not woolly, and grows thickly on the head in tufts. They have thick moustaches, the growth being much stronger than in the Malay race. The head is neither Mongolian nor Negro of the Guinea type. It is Papua Tamulian. The expression of the face is mild, simple, and stupid. The voice is soft, low, nasal, and hollow, or cerebral. A line of tatooing extends from the forehead to the cheek-bones. The adjacent Binua also tatoo. The practice is Indian, among the Konds, higher Abor tribes, &c., also ultra-Indian and Asianesian. The right ear is pierced, the orifice being large, but they do not pierce the septum of the nose like one of the adjacent Binua tribes of Perak, and many of the Asianesian Papuas. The hair is cropped save a ring or fringe round the forehead.—*Mr. Earl's Indian Archipelago.*

Bila. The Semang occupy the southern part of the Malay peninsula, along with the Simang, in the provinces of Quedah, Perak, Pahang and Tringanu.

The people of Kidah more often approximate to the easternNegro type than in southernMalaya and Mr. Logan was particularly struck with the repeated occurrence of the deep nasal depression of the Simang, the Australians and Papuans. Small heads, with all the features as it were contracted or compressed, were common.

In the Binua, the cheek bones are broad in all directions and prominent, giving to the face below the base of the forehead a marked lateral dévelopement, beyond it or to the forehead an appearance of being compressed. The lower jaw is massive, spreads out and does not rise rapidly, thus producing an obtuse chin and the anterior maxillary projection considerable.

The ruder Binua dialects of the peninsula are rapidly disappearing. The Binua or Sakai tongue of Pera appears to resemble in its phonetic character, the ruder dialects of the Burman group. This character is intermediate between that of the Simang on the one side and that of the ruder Sumatran, Javan and Borneon on the other. The Johor Binua, is more guttural: aspirate and harsh, remarkably broad and slow,

Kedah or Quedah, is called in Siamese Muang Sai or the Sai kingdom. It occupies from the 5th to the 7th degrees of north latitude and has the Straits of Malacca on the west. Mr. Crawfurd mentions that the purest Malay is written and spoken in this state, being often in the Archipelago, influenced by mixture with other tongues. It extends from the Trang river in 7° 20' N. to the Krian, in 5° 10' N., which separates it from Perak. The Trang formerly divided it from Siam. Interiorly, is a chain of mountains, running down the middle of the peninsula. The water on the Quedah coast is very shallow and ships must keep a considerable offing. The highest detached hill on the Quedah main is Gunong Gerai, or Quedah Peak, a mass of granite, whose summit is estimated at 5,000 feet above the level of the sea. According to Dr. Ward, north of Quedah Peak is an immense plain, almost level with the sea, covered near the coast with rising mangroves. Kedah is interesting to ethnologists from the several tribes within its limits. Of these, the Semang and Udai are found in the forests of the north; the Rayet Utan, the Jakun, Sakkye, Hala, Belanda and Besisik in others to the south; while the Akkye or Rayet Laut, lit. subjects of the sea, dwell upon the shores and islets of the peninsula. Wherever scattered, they live totally apart from the Malays, and differ from them widely in person, habits and religion; in short, are of a much lower grade in the scale of civilization. The Malays themselves sometimes class the various tribes under one general and expressive appellation, that of Orang Benua—men of the soil. They denominate the four original chiefs of the Binua "Nenek" or our ancestors: many of their own chiefs derive their descent from them, and bear a Binua title. The elders of the Binua exercise considerable influence over the elections of Malayan Panghulu. The Panghulu of Rumbowe is chosen alternately from a Jakun tribe (the Bodoanda Jakun) and a Malay tribe: the names of inland places are chiefly Benua terms. *Mutatis mutandis,* there is a striking resemblance in feature, between the Benua and the Malay, and scarcely less in their respective languages. Opinions in favour of the affirmative hypothesis are entertained by many of the Benua and Malay themselves. But from what branch of the great family of mankind the Benua spring, tradition is almost silent. Their general physical appearance, their lineaments, their impatience of control, their nomadic habits, a few similarities in customs, all point to a Tartar extraction.

The *Udai tribe* is little known—many Malays believe they are a class of Jakuns; while

others affirm that they are a colony from some foreign country: the Tuanku Puteh of Rumbowe informed Newbold that the Udai are a race of savages, thinly scattered over the states of Jellabu, Pahang, Tringanu and Quedah, and resemble in feature, the darker variety of Jakuns. Their size is represented as smaller, and their habits more savage. According to Sir S. Raffles and Mr. Anderson, the Semang of Quedah has the woolly hair, protuberant belly, thick lips, black skin, flat nose, and receding forehead of the Papuan: the natives, affirm they differ but little, from the Jakun.

The *Semang* of Perak, resemblies those of Quedah in personal appearance, but speak a different dialect. They possess, the same curling black hair, are a little darker in colour, and have not the thick lips of an African: they subsist by hunting, and make huts of the branches, and cloths of the bark of trees shunning the haunts of more refined beings. They are numerous in Quedah, and reside generally on or near mountains, such as those of Jerrei and Juru, and are found in Trmganu Perak, and Salangore. They live in rude huts, easily removed from place to place, constructed of leaves and branches. Their clothing is a scanty covering made of the bark of trees: sometimes a cloth obtained from the Malays; Birds and beasts of the forest, wild roots and yams, constitute their food: they worship the sun. The Malays have an idea, that, when a Semang dies, the body is eaten, and nothing but the head interred; a custom, which, if it exists, reminds us of one prevalent among the Issedones, a tribe of ancient Scythians, who after feasting on the body of the deceased, preserved the head, carefully removing the hair. The Semang women like those of the ancient Massagetæ, and the more modern Tartar Kie-Kia-sse tribes, are said to be in common like their other property. They have chiefs, or elders, who rule the different tribes.—*Newbold's British Settlement, Vol.* II. *p* 369 *to* 379.

Jakun.—The wild tribes inhabiting the Malayan Peninsula, Sumatra and a few of the neighbouring Islands are divided into three principal classes, which are subdivided into many others. The first of these divisions includes the Batta, who inhabit the interior of Sumatra and a few neighbouring Islands. The second is that of the Semang, who are found in the forests of Kedah, Tringanu, Perak and Salangor. Under the third head, the Jakun, are comprised many tribes. They inhabit the south part of the Peninsula from about Salangor on the west coast, and Kemaman on the coast, and extend nearly as far as Singapore. All these various wild tribes are ordinarily classed under the general and expressive appellation of Orang Binua. The Orang Binua are not mahomedans; it is stated by the Binua, and admitted by the Malays, that before the Malay Peninsula had the name of Malacca, it was inhabited by the Orang Binua. In course of time, the early Arab trading vessels brought over priests from Arabia, who made a number of converts to Islam: those of the Orang Binua that declined to abjure the customs of their forefathers, in consequence of the persecutions to which they were exposed, fled to the fastnesses of the interior where they have since continued in a savage state. Their general physical appearance, their lineaments, their nomadic habits and a few similarities in customs, point to a Tartar extraction. The principal habitations of the Jakun are found at the upper extremity of the rivers of Johore, Banut, Batu Pahat and Muar.

There is a remarkable difference in the physical appearance of the several classes of Jakun. Those of Malacca are generally as tall as the common run of Europeans; they are more dark than any other of the wild tribes; and in which respect there is not much difference between them and the more dark of the Indo-Portuguese of Malacca. The Jakun of Johore are a fine race of men: many of them are taller than those of Malacca; the face also is expressive and well characterized, and the expression of the eyes in many of them is a little severe. Their nose does not recede at the upper part, neither is it so flat or so broad at its base as this organ is in the Chinese, Cochin-Chinese and pure Malay. Several of them have aquiline noses. Some children and young men are beautiful. The women are plump but not overstout. The third class of Jakun those of the Menangkabau states, are very short, their physiognomy is low, and seems to announce great simplicity; many of them are ugly and badly made. The constitution of the Jakun is generally strong, and their bodies are very muscular. The hair of the Jakun is black, ordinarily frizzled, but very different from the crisp hair of the Caffree. Some of them leave the whole to grow on the head, as the Cochin-Chinese; others, as many of those of Malacca, cut theirs entirely; others chiefly of the Menangkabau states and of Johore, shave the head, leaving it only at the crown above three inches in diameter where they never cut it, the same as the Chinese; and to prevent this head of hair from being hooked by the branches of tree in their silvan habitations, they tie it up in the form of a top knot. They have scarcely any beard, and many of them have none at all. The women leave their hair to grow, and then tie it up in the same way as the Malay women; but they are not very particular in this respect. It has been stated that in the forests of Pahang are numerous tribes of the Jakun, who are as white as Europeans: that they are small, but very good looking; and the Malays form a party and beat the forest in order to catch these poor

brought back to the house, where a fire is kindled, incense of kamunian wood thrown upon it, and the child then passed over it several times. The practice of passing children over fire was in all times much practised among ancient heathen nations; and it is even now practised in China and other places. With the dead, the corpse is washed, wrapped in some cloth and interred by relations and neighbours, in a grave about four or five cubits deep. The sumpitan, quiver of arrows, knife, &c., of the deceased are buried with him, along with some rice, water, and tobacco. Jakuns consider white as a sacred colour; and it is a peculiar subject of comfort, when, in their last sickness, they can procure themselves some white cloth, in which to be buried. They are candid and honest, extremely proud, and will not submit for any length of time to servile offices or to much control. Each tribe is under an elder termed the Batin who directs its movements, and settles disputes. The Jakuns hate the Malays, and the Malays despise the Jakuns. There is a natural and uncontrollable antipathy between these two people; but they stand in need of each other and their mutual intercourse is necessary.—*J. I. A. p.* 272. *January to May* 1848.

Johore, formerly the chief city of the empire of that name and residence of the sultan, is situated about 20 miles up the river so called. The town was founded in 1511 or 1512 A. D. by sultan Mahomed Shah II of Malacca who, after his expulsion from that place by the Portuguese, fled to the river of Johore. From that time the town of Johore has been the capital of the empire which took the name of the empire of Johore instead of that of Malacca. Johore is the residence of a Panghulu who is appointed both by the sultan of Johore and by the Tumungong of Singapore. It is now the generally received opinion that Johore derived its population from Menangkabau. The Johore Archipelago was probably inhabited from a very remote period, anterior even to the existence of any race in Sumatra, by a maritime branch of the same people, radically Malayan, who are now found in the interior of the Peninsula and of the southern half of Sumatra. Several tribes in various stages of civilization, still possess the Johore islands. Though little known to Europeans they can never have been without Malay or Hindu-Malay visitors for it was by the great rivers of Plembang, Jambi, Indragiri and Kampar, before whose embouchures these islands lie, that the natives of Ceylon and southern India must have gradually carried civilization into the interior of southern Sumatra.

Sakai, is a pagan population in the Malay peninsula divided into the Sakai Jinà and Sakai Bukit, the latter being hillmen and mountaineers—the former more settled and civilized. They are strict worshippers of the elements. Sakai is the Pahang word for an aboriginal.

Hala, a branch of the Sakai population of the Malay peninsula. They tattoo their face and breast, pierce their ears and nose and insert porcupine quills.

Negroes in the Malay Peninsula, and in the islands of the Eastern Archipelago are two great races. In addition to the men of brown or copper complexion, and lank hair, who are the most advanced inhabitants of the Malayan Archipelago, the Philippines, and the islands of the Pacific, there is another race, or races, widely differing from them. These, from their resemblance to the Africans, have been called Negroes also Negrito. The Malays apply to those best known to them, the people of New Guinea, the epithet of Puwa-puwa, or Pa-puwa, which, is an adjective meaning "frizzly," or "crisping" and is equally applied by them to any object partaking of this quality. The term Negro, from the Latin niger, is that usually employed to designate the black skinned races of whom mention is now made. Their numbers in Africa are vaguely estimated at twenty millions, including the Hottentot and Kafir off-shoots from the great family. The race on the American continent number about five millions. Their numbers on the Asiatic continent, on the shores of the Red sea and Persian gulf, and on the Malay peninsula, may not exceed half a million, but from the Andaman islands eastward to the races in the Pacific, of the people generally classed as Negroes, there are at least twelve varieties, differing from each other in physical appearance, some being pigmies under five feet and others large and powerful men of near six feet. Excepting in the Andamans, in all the Negro languages of which Mr. Crawfurd had seen specimens, Malayan words are to be found. Mr. Logan long resided at Penang and his opportunities of examining the various races of the south of Asia were great. He is of opinion that the various races in south Eastern Asia, reached their present positions along the great rivers and by traversing the seas, and he indicates the original seats as sea basins and districts, defining the former term as the seas with the marginal basins of their affluent rivers. Researches have established the affinity of the languages of Southern India, and Mr. Logan points to the prolonged intercourse between the western and eastern parts of the Indian Ocean extending from the Arabian Sea, Persian Gulf and Red Sea to the Mozambic channel on the west and to the Indo-Australian seas, on the east. He believes that the shores of the Indian Ocean were occupied by races in an advanced stage, before the seeds of a higher civilization germinated in the basins of the Nile and Euphrates, amongst whom were navigating

tribes who spread themselves over every habitable island of the Eastern Ocean from Madagascar to the Fiji group. Amongst all the foreign influences, he adds, of which the presence can be clearly traced, two are of the widest extent and greatest importance. The first, entirely African and Indo-African in its character, embraced the whole Indian Archipelago, Australia and Papuanesia, and certainly included a portion of Micronesia, though whether it extended to Polynesia he is doubtful. The races to which this influence must be referred, prevailed along the shore and islands of the Indian Ocean, from Africa to Polynesia, their sole limits being those of the monsoons, and he infers that when they thus spread themselves over Africa, India and the Indian Archipelago, there could have been no civilized Semitic, Iranian, Burmese or Siamese races, on that sea to hinder them. The language of their population belonged to a state intermediate between the monotonic and the inflectional, and had strong and direct affinities to the other families of language of this stage,—the Ugro Tartarian, Japanese, old Indian and African, and to a certain extent, too, the American, which last may be considered as constituting a peculiar family. Amongst the best preserved examples of these languages are the Formosa, Philippine and the Australian, and he thinks it probable that some of the eastern Milanesian languages will be found to be equally characteristic. There seems, he says, to be no doubt that Southern Asia has always been occupied as at present with several races, tribes and languages, and that S. W. Asia and Asianesia has been contemporaneously occupied by 1st, Archaic Indo-Australian. 2. Papuan, 3. Tibeto-Chinese or Ultra-Indian, 4. Dravidian, 5. Scythic, 6, Iranian. 7. Semitic races. And the spiral haired Negro race seems to have preceded the lank haired brown race; but whether Negro tribes and dialects did not in a still more ancient era, occupy Ultra India and India, before any of the present non-negro races moved into their regions, he says, is a question deserving investigation. At present, a Negrito race of small stature, is found in several parts of Asianesia and traces of the Negro race are also found in Formosa and Japan. The peculiarities in the variably physical character of the Dravidian physical types, when compared with the Scythic, are African and Africo-Semitic. The very exaggerated occipital and maxillary protuberances are not characteristic of the typical African head, but of a debasement of it confined to certain localities. Several east and mid African nations have the so-called African traits much softened, and differ little from the Dravidian. Even woolly or spiral hair is not a universal feature in Africa, some tribes having fine silky hair. The Dravidian pyramidal nose, the sharp depression at its root, the slight maxillary and occipital projection, the turgid lips, the oval contour and the broad nose, are all African. He thinks there is reason to believe that the strong Africanism of some of the lower South Indian castes is really the remnant of an archaic formation of a more decided African character. From the position of India between two great Negro provinces, that on the west being still mainly Negro, even in most of its improved races, and that on the east preserving the ancient Negro basis in points so near India as the Andamans and Kidah, it is, therefore, highly probable that the African element in the population of the peninsula of India, has been transmitted from an archaic period, before the Semitic, Turanian and Iranian races entered India, and when the Indian ocean had Negro tribes along its northern as well as its eastern and western shores.

If we compare the dark-colored nations of Africa with the tribes of the South-Indian Archipelago, and of the islands of Western Australia, with the Papua and Affoura (Horafores, Endemenes), we fined the black colour of the skin, the curly hair and characteristic features of the negro, are not united in the same individual. Figures in the temples of Elephanta and Adjunta, have thick lips and peculiar negro features, with curled hair: the tribes on the Kodagherry Hills have flattened noses, dark complexion and large white teeth filed into the form of a saw, giving them an African appearance. The general physical type of all the purest aborigines, of India, is that known as Negrito, with limp, black, tangled, hair.—*Campbell, pp.* 23 *to* 48. *Jour. Ind. Arch. Vol. IV, Nos.* 5 *and* 6, *May and June* 1858, *p.* 310.

The Papuans occupy New Guinea and several of the adjacent islands. The Papuan face is compressed and projecting brow protuberant and overhanging, mouth large and prominent, the nose is very large, the apex elongated downwards, the ridge thick and the nostrils large,—the nose is an obtrusive feature, the beard is twisted and the hair of the head is frizzly.—*Wallace, ii.* 104.

The Malays consist of (A) four great tribes and a few minor semi-civilized tribes; and (B) a number of others who may be termed savages. The four great tribes are:—

I. *The True Malay* races, the Malay proper, who inhabit the Malay Peninsula, and almost all the coast regions of Sumatra and Borneo. They all speak the Malay language or dialects of it; they use the Arabic characters in writing and they are all mahomedans in religion.

II. *The Javanese*, who inhabit Java, part of Sumatra, Madura, Bali, and part of Lombok. They speak the Javanese and Kawi languages which they write in a native character. They are of the mahomedan religion in Java, but Bali and Lombok is brahminical.

III. The *Bugis* are the inhabitants of the greater part of Celebes and there seems to be an allied people in Sambawa. They speak the Bugis and Macassar languages with dialects, and write these in two different native characters. They are all mahomedans.

IV. *The Tagala* of the Philippine islands are the fourth great Malay race, many of them profess christianity, their native language is Tagala, but they speak Spanish.

V. *Moluccan Malays*, who inhabit chiefly Ternate, Tidore, Batchian, and Amboyna, may be held a fifth division. They are mahomedans but they speak a variety of curious languages, which seem compounded of Bugis and Javanese, with the languages of the savage tribes of the Moluccas.

(B) *The savage Malays* are the Battak and other wild tribes of Sumatra; the Dyak of Borneo; the Jakun of the Malay peninsula; the aborigines of Northern Celebes; of the Sulu Island and of part of Bouru.

The colour of all the Malay tribes is a light reddish brown, with more or less of an olive tinge, not varying in any important degree over an extent of country as large as all southern Europe. The hair is equally constant, being invariably black and straight, and of a rather coarse texture, so that any lighter tint or any wave or curl in it, is an almost certain proof of the admixture of some foreign blood. The face is nearly destitute of beard, and the breast and limbs are free from hair. The stature is tolerably equal and is always considerably below that of the average European. The body is robust; the breast well developed, the feet small, thick and short, the hands small and rather delicate. The face is a little broad and inclined to be flat; the forehead is rather rounded, the brows low, the eyes black and very slightly oblique The nose is rather small, not prominent but straight and well shaped, the apex a little rounded, the nostrils broad and slightly exposed; the cheek bones are rather prominent, the mouth large, the lips broad and well cut, but not protruding, the chin formed. The Malays, when mature, are certainly not handsome, but in youth up to 15 years of age, both boys and girls have pleasing countenances and in their way almost perfect. In character, the Malay is impassive. He exhibits a reserve, diffidence and even bashfulness which is in some degree attractive, and leads the observer to think that the ferocious, blood thirsty, character imputed to the race, must be grossly exaggerated. He is not demonstrative. His feelings of surprise, admiration or fear are never openly manifested and are probably not strongly felt. He is slow and deliberate in speech and circuitous in introducing the subject he has come expressly to discuss. Children and women are timid and run at the sight of a European. In the company of men they are silent and are generally quiet and obedient. When alone the Malay is taciturn, he neither talks nor sings to himself. When several are paddling in a canoe, they occasionally chaunt a monotonous and plaintive song. He is cautious of giving offence to his equals, he does not quarrel easily about money matters, and practical joking is utterly repugnant to his nature. The higher class of Malay are exceedingly polite, but this is compatible with reckless cruelty and contempt of human life, which is the dark side of their character. In intellect, the Malay race are rather deficient, they are incapable of any thing beyond the simplest combinations of ideas and have little taste or energy for the acquirement of knowledge. He is kind and gentle to his children. The Malay is of short stature, brown skinned, straight haired, beardless and smooth bodied, broad faced, has a small nose, and flat eyebrows, is quiet, bashful, cold and undemonstrative, grave, seldom laughs, and conceals his emotions. The Malayan race as a whole very closely resembles the east Asian populations from Siam to Manchuria. The Malay face is of the Mongolian type, broad and somewhat flat. The brow depressed, mouth wide but not projecting and the nose small and well formed, but for the great dilatation of the nostrils. The face is smooth and rarely develops the trace of a beard, the hair black, coarse and perfectly straight. The Malays rub noses, in lieu of the kissing of Europe. Most of the advanced nations of the Asiatic islands are gamblers, and the little fighting fish of Siam and cock-fighting are largely betted on. In the Archipelago, in Bali, Lombok, Celebes and the Philippines, cock-fighting is quite a passion. The only material exception are the Javanese. The passion for cock-fighting is indeed impressed in the very language of the Malays, which has a specific name for cock-fighting, one for the natural spur of the cock, and another for the artificial spur, two names for the comb; three for the crow of the cock; two for a cock pit; and one for a professional cock fighter. The passion is no where carried further than in the Spanish dominions of the Philippines. There, it is licensed by the Government, which derives from it a yearly revenue of about 40,000

dollars or about £10,000.—*Crawfurd Dict. p.* 11. *Wallace ii.* 104.

Orang Slectar, originally with the Biduanda Kallang, are joint occupants of Singapore. The speak a Malay dialect with a guttural accent.

Orang Rawa, a people of Rawa, Raw or Ara, in Sumatra, immediately to the north of Menangkabau and penetrated by the large but scarcely navigable river, Rakan. Menangkabau province is on the plateau in the interior of Sumatra, north of the present town of Padang.

The Achinese of Sumatra are supposed to be a mixture of the Batta and Malay with the Chuliah, as they designate the natives of the west of India, and differ much in personal appearance from other Sumatrans being, in general, shorter and of a darker complexion. They are mahomedans, and many perform the pilgrimage. They are active and industrious, but unscrupulous in their commercial transactions. Mahomedanism first began to make way in Achin in 1204, from which it spread slowly eastward to Java, Celebes and the Moluccas, and northward to the Philippines where it was gaining footing as the Spaniards arrived who supplanted it with christianity. Bali has not accepted it.

Bhatta, Batta or Battak, a Malay race, addicted to eating human beings. They have long been known to be given to this unusual practice. They occupy the valley of Mandeling and to the west, and the easterly portion are under the dominion of the Dutch. The language they use is said to be different from Malay and to have several dialects, but it has an alphabet invented by themselves, and in this matter they are perhaps the only human beings who advanced to a knowledge of letters but continued to eat each other. Marsden in his History of Sumatra notices them, and the writings of Marco Polo show that so long ago as A. D. 1290, they were known to indulge in this propensity, and Sir Stamford Raffles, in 1820, after visiting Tampanuli bay, mentioned that for a person convicted of adultery, of midnight robbery, prisoners of war, a person intermarrying with another tribe, a person treacherously attacking a village, a house, or another person, the punishment was to be cut up and eaten alive. The most recent traveller from the west, Professor Bikmore, from America, who was in Sumatra in 1866 mentions that they are an inland people, the Malays from Menangkabau having spread and occupied all the coasts. They believe in evil spirits and omens. On the Dutch acquiring the possession of the plain of the Mandeling valley, the Batta dwelling there were compelled to abandon their cannibalism; but all beyond Dutch territory, the race still continue to pursue their old customs. He had not however, been able to verify that part of Sir Stamford Raffles' information which includes marrying into another tribe as incurring the penalty. The rajah of Sipirok assured the Dutch governor at Pedang that he had eaten human flesh at least forty times and that he relished it above every thing that he had ever tasted. The Batta of Sumatra, wear the kallasan, a slightly curved sword and the jono; also knives called tombak lada, and terjing: for drums the Batta use gongs, and in action set up a kind of war-whoop.

The Buqis tribes inhabiting Celebes, are celebrated for the temper they give to steel, and for their arms in general; in addition to those of the Malays on the Peninsula, they use defensively the baju ranti (chain jacket), and both a long and a round sort of shield. They swear by their krises, for which they have a great veneration, and on going into battle, drink the water in which they have been dipped, uttering imprecations on the foe. The inhabitants of *Pulo Nias*, an island off the western coast of Sumatra, wear for armour a baju made of thick leather, and a cap to match, covered with the ijo, the vegetable substance resembling black horse hair obtained from the Arenga saccharifera.

The Lampong who inhabit the eastern and southern extremity of Sumatra, go into combat with a long lance borne by three warriors; the foremost of these lance-bearers, protects himself with a large shield.

The Malay pirate prahu or prow are stockaded and armed with heavy guns, generally the mariam and lelah, to which last the Malays are very partial; also, matchlocks, long spears, pointed nibong stakes burned at the end, and others cut short for throwing when at close quarters, and large stones. The signal for attack is the sound of a sort of gong, called Tawa tawa.

The Batta race delay the burial of every person who, during his life had a claim to the title of rajah (of which each village has one) until some rice, sown on the day of his death, has sprung up, grown and borne fruit. The corpse, till then kept above ground among the living, is now, with these ears of rice, committed to the earth, like the grain six months before, and thus the hope is emblematically expressed that, as a new life arises from the seed, so another life shall begin for man after his death. During this time the corpse is kept in the house, enclosed in a coffin made of the hollowed trunk of a Durinon, and the whole space between the coffin and the body is filled with pounded camphor, for the purchase of which the family of the deceased rajah frequently impoverish themselves.—*Bikmore's Travels, pp.* 99, 418 *Newbold's British Settlements, Vol. ii. pp.* 212,

Banka Island lies, in its northern point, in Lat. 1° 52' N. and Long. 125° 24' E. It is hilly and of middling height. It has a chain of hills, generally called St. Paul's mountains, contiguous to its south end, 930 feet high, but Parmasang and Manopen hills on the west side of the island are respectively 1350 and 1617 feet in height. The straits of Banca are bounded on the east by the island, and on the west side by the coast of Sumatra. The straits extend from Lucepara island about 129 miles, with an undulating course to the N. W. The tides are irregular, and greatly influenced by the winds. Banca is inhabited by four distinct races of people. The *Orang-Gunung* or hill-people, the aborigines of the country, who are established in the interior, where they lead a wild kind of life, but are submissive to the regulations established for the government. The sea-coasts are occupied by *Malays* who have emigrated from Sumatra: they are extremely indolent, all the labour, either in cultivating pepper or working the mines, being performed by the Chinese, consisting of between fifteen and twenty thousand souls. The *Orang-Laut* or sea people, who are similar in their habits to the Baju found upon the coasts of Borneo and Celebes, though belonging to Banka, but can scarcely be said to inhabit the island, for they live entirely in their little prahus, and wander about the coasts. They subsist principally by fishing, and it is said that they are always ready to give information to the piratical rovers. The discovery of tin attracted numerous foreigners, chiefly *Chinese*, who with the working of the mines introduced the first attempts at agriculture and commerce; various settlements were formed, and a commencement was made in clearing the ancient forests, which had till lately not been disturbed, for the purpose of forming permanent places of residence. The principles of civilization were thus offered to the rude inhabitants.—*Earl's Archipelago. Horsburgh.*

Java. According to the traditions of the Javanese, Sumatra, Java, Bali, Lambok and Sumbawa, islands, were all formerly united, and they give the dates of A. D. 1192, 1282 and 1350, but these are not to be received. The dividing line between Asiatic fauna and that of Australia, must be drawn down the Straits of Macassar, and continued southward through the strait of Lambok between Lambok and Bali. Java, locally Jawa, is the name of the original occupants of the eastern part of the island, but in latter years, they spread all over the island and have given it their name. The Chinese call it Chi-poo. Marco Polo who described, though he did not visit it, calls it Giaua. Up to the middle of the 15th century, the people of Java, from Cheribon in longitude 109° to the west, spoke the Sundanese tongue: But in 1811, nine tenths of all the population of Java, spoke Javanese, and the Sundanese was already confined to the mountainous parts of the south and west, and to a small colony near Bantam. Sir S. Raffles, says that Java was originally peopled by emigrants coming in vessels from the Red Sea; from whence it is inferred that the ancient Egyptians might have been the ancestors of one class of the people. The Javanese are small in stature, but muscular in form, supple and active in their movements and of a light copper colour. The people of the Tenger mountains, shortly described in Raffles' History, may be a relict of an aboriginal race. This race, like a few others in India, and the Archipelago, adopt the singular practice of building their villages in terraces. This practice seems to have once prevailed in the Philippines. The inhabitants of the Serwatti islands, select the summits of the hills or the brows of cliffs which rise abruptly from the sea, as sites for their habitations. The crest or extreme summit of the hill is occupied by a large waring tree, the Ficus indica of Rumphius, beneath which the idols of the village are placed on square platforms of loose stones. Here the elders meet when any important matter is to be discussed. Below the tree the sides of the hills are scarped into a succession of platforms or terraces, on which are erected their oblong barn like houses with wooden walls and palm leaf thatch. At Letti, a neighbouring island, where the hills are far inland, the brows of the cliffs which overhang the sea are selected, and a similar mode of scarping into terraces is adopted when necessary. The same system also prevails at Baba and Timor Laut and the system of terracing is practised amongst the Malle Arasar, or hill kings, of the Pulney hills in the extreme south of India. The population of Java, in 1810 was 3,000,000 or 50 to the square mile. In 1815, the population had increased to 4,615,270, and in 1857, including Madura, it amounted to 11,594,158 and 180 to the mile. But the other Dutch possessions in the Indian Archipelago, contain an aggregate population of something less than 6,000,000. Java and Madura are divided by a narrow strait and may be considered as one territory, with a mean length of 650 English miles and 100 in breadth. The population arranged into classes are, European Settlers..... 20,331

The women, in opposition to the rule in most tropical countries, exceed the men, by 700,000. Slavery continued to be sanctioned until 1859, when it was abolished, but had so fallen away as an institution that there existed, then, only 5,260 slaves to liberate. In Netherlands India, the Dutch Government has been, since 1824, a commercial firm assisted by the trading company established in 1824 under the patronage of king William, this has proved the salvation of Java, and their shares have been at a considerable premium.

The Kalang of Java, reside among the inhabitants of the Teng'ger mountains. The Kalang are said to have been at one time numerous in various parts of Java, leading a wandering life, practising religious rites different from those of the great body of the people, and avoiding intercourse with them; but most of them are now reduced to subjection, are become stationary in their residence, and have embraced the mahomedan faith. Whenever the Kalang move from one place to another, they are conveyed in carts, having two solid wheels with a revolving axle and drawn by two or more pairs of buffaloes, according to the circumstances of the party.—*Raffle's History of Java, Vol. I. p.* 329. *Bikmore's Travels, page* 28.

Madura Island, is of an even appearance and moderately elevated, its N. W. point is in lat. 6° 55¾' N. long. 112° 51¾° E. and its east point in lat. 6° 59' S. long. 114° 11¼ E. It is the most important of a line which runs along the northern and eastern coasts of Java. It is the principal of a group composed of more than seventy-five; and is separated from the great island by a strait, not more than a mile or a mile and a half wide, which serves to form the capacious harbour of Surabaya. It has the appearance of being a continuation of Java. Few animals are found, and none peculiar to Madura. The island is famous, however, for its breed of cattle, and supplies from its rich pastures provisions to many of the agricultural and seafaring communities of the neighbouring regions. The meat, when cured, resembles, but is far superior to, the jerked beef of South America. The people are similar to the hill-dwellers of Java, and from them the Dutch recruit the line of their native army with the best troops in their service.—*Raffle's History of Java. Earl, Eastern Seas. Horsburgh, Temminck, Coup d'Œil, Sur les Possessions Neerlandaises.* I. 335; 336-338, *John's Indian Archipelago, Vol. I. p.* 337.

Bawean.—The island of Bawean, or following its old name Lubek, forming a portion of the residency of Sourabaya, lies about sixteen Dutch (forty-eight English) miles to the north of Ujong Pangka, in 5° 90' South Latitude and 112° 38' W. longitude (Greenwich) and contains about 36 square (Dutch) geographical miles, or 44 English miles. The country in general is very mountainous, and it is only near the sea that some plains are found, on the largest of which, about 3½ miles in circumference, the principal village Sangkapura is situated. The Bawean race are probably descendants of the Madurese, whose language, with a few modifications, prevails, though they differ from them in dress; but in this respect agree closely with the Bugis. The inhabitants of the dessa Dipanga employ the Javanese language.—*Journ. Ind. Arch. Vol. V. No.* 7. See India, p. 355. Jati.

Bali island, continues to indicate its Indian origin, with a small portion of Java, the Batta in Sumatra, part of Lambok. In Bali hinduism has prevailed since A. D. 1478; the Philippine Islanders, the Dyak of Borneo and the rude tribes of the interior of the Malayan Peninsula exhibit hindu elements, and their religion may be styled a degraded hinduism. The Balinese entertain a great aversion to a maritime life, and are more rarely to be met with at the European ports than the natives of the other islands to the eastward. They are fairer in complexion, stouter in frame, and more energetic in their dispositions than the Javanese, and in appearance and dress bear a great resemblance to the natives of Siam, from whom it is probable that they are descended. The entire population of Bali, amounting to about one million, profess the hindu religion, and the burning of widows amongst them is carried to an extent unknown even in continental India. The slaves of a great man are also consumed upon his funeral pile, and when the immense annual loss of life produced by these frightful practices is considered, it is surprising that the island possesses so large a population. Bali women, like the Burmese, attend to the selling of goods and merchandise. —*Earl.*

Borneo, is the principal island of the Sunda group, and is the greatest island on the globe after New Holland. It is divided by the equator into two unequal and extended parts, of which the southern is the larger. If we comprise the numerous Archipelagos by which the great island is environed, this group may be said to occupy more than eleven degrees of longitude and about ten of latitude. The geographical position of the principal island is between 7° N. L. and 4° 20' S. L. and between 106° 40' and 116° 45' E. Lon. Its length from north to south will be about 300 leagues and its breadth varying from 250 to 150 leagues. Its superficies has been calculated by which Borneo is given a surface of 12,741 square leagues or 6,992 myriametres; which makes it 2,589 myriametres

greater than Sumatra, and 5,723 myriametres greater than Java. The Portuguese, Lorenzo de Gomez, was the first of the European navigators who approached the northern part of this island; he arrived in 1518 in the ship *St. Sebastien* on his route to China. We presume that he gave to the country the name of Burne, but he says that the natives term it Braunai or Brauni. The travellers Major Muller, Colonel Henrici, the members of the scientific commission, Diard, S. Muller and Korthals, who quite recently penetrated into different parts of the interior, as well as the rajah Brooke, assure us that the Dyak which form the aboriginal population of Borneo, do not use, and cannot even have any idea of a specific name appropriated to the whole extent of a country of which the sea board is even most often unknown to the savage and wandering tribes who are separated by great distances from each other, and who are dispersed in hordes of small numbers over the vast extent of one of the largest islands in the world. These different tribes are designated amongst themselves by the names which they give to the rivers on the borders of which they have established their abode; it is thus that all the Dyak of the great river Dusen (the Banjer of our maps) call themselves Orang Duson (men of Duson) and those of the river Sampit, Orang Sampit; the manuscript memoirs of Major Muller and of Colonel de Henrici make mention of a great number of tribes designated by the names of rivers which have their mouths on the western coast; in the north of Borneo Mr. Brooke makes mention of Dyak tribes under the names of Sarebus, Sakarran, Lundu, Sibnuw, &c. established on the rivers which bear those names.

The interior is still, however, almost unknown. The existence of lofty ranges of mountains in the centre is undoubted; and in the north-west, as far as the country was penetrated by Mr. Spencer St. John in 1858, the whole was found to be mountainous, each range becoming more lofty as he approached the interior, but presenting one uniform aspect of jungle covering hill and valley. From the summit of the great mountain Kina Balu, in the north-east of Borneo, 13,000 feet high, and when looking towards the interior in a southerly direction, Mr. St. John obtained a distant view of a mountain peak which he supposes to be very considerably higher than the one on which he stood, and to be situated very nearly in the centre of the island. The land on all sides gradually slopes towards the coast. Borneo may be said to bear the same relation to Eastern India that the continent of America has borne to Europe, being a region in which tribes inhabiting the remoter east have occasionally found a refuge from religious persecution and from the pressure of a superabundant population. Brazen images, ruins of temples, and other remains of hindoo civilization, are still to be seen on the southern coast. The shores are inhabited by nations totally unconnected with each other governed by their own laws, and adopting their own peculiar manners and customs. The west is occupied by Malays and Chinese, the north-west by the half caste descendants of the mahomedans of Western India, the north by the Cochin Chinese, the north-east by the Sulu, and the east and south coasts by the Bugis tribes of Celebes. There are, besides, numerous tribes who live in prahus among the islands near the coast, there are no fewer than three distinct tribes, living in prahus, and wandering about the shores of the island: the Lanun from Magindano: and the Orang Baju and Orang-Tidong, source unknown. The Dutch claim a territory exceeding 200,000 square miles; but all beyond a mere fringe of the coast was, until the recent exploration of a portion of the interior, absolutely unknown. Its inhabitants are generally recognized as the Malay and Kyan and the Millanowe Dyak. The Malays are settlers from Sumatra, Java and Malacca, along the coast of Borneo. The Dyak are a prior race and are divided into Land and Sea Dyaks, the latter being richer and more powerful, those of the interior being broken up into innumerable clans, some of them being tributary to the sultan of Brunai, some of them under the Dutch in the south and west of the island, and some under the Sarawak government. The Millanowe are on the N. E. of the Sarawak territory. They are of a fair complexion and are occupied with agriculture, trade and peaceful pursuits. The Kyan are a powerful tribe of about 100,000 souls, and occupy the country from the south of the kingdom of Brunai right away into the interior. They strongly resemble the Dyak. The Dyak are generally well made, with a muscular, well knit, frame and are rather under than over the middle height. Their features are regular. Their colour is a deep brown occasionally varying to a lighter shade. The Dyak dwell in very long houses, occasionally large enough to contain a community. That portion of their creed which obtains the greatest influence over their mode of life, arises from a supposition which they entertain that the owner of every human head which they can procure will serve them in the next world. The system of human sacrifice was, upon this account, carried to so great an extent, that it totally surpasses that which is practised by the Batta of Sumatra, or, by any people yet known. A man could not marry until he procured a human head, and he

who is in possession of several may be distinguished by his proud and lofty bearing: for the greater number of heads which a man has obtained, the greater will be his rank in the next world. The chiefs sometimes make excursions of considerable duration for the sole purpose of acquiring heads, in order that they may be assured of having a numerous body of attendants in the next world. If they be at peace with their neighbours, they proceed in their canoes to the more distant parts of the country to which the numerous ramifications of the rivers afford them easy access. Upon their arrival near a village, if the party be small, they take up their position in the bushes close to some pathway, and attack a passer-by unawares. If the party be large, they are bolder in their operations, and an attempt will perhaps be made to surprise a whole village. For this purpose they will remain concealed in the jungle on the banks of the river during the day, and at night will surround the village so completely as to prevent the escape of the intended victims; and an hour or two before daybreak, when the inhabitants are supposed to sleep the soundest, the attack will be commenced by setting fire to the houses, and their victims are destroyed as they endeavour to escape. Apparently the practice is only general among those tribes inhabiting the banks of the large rivers, on which distant voyages can be made with facility, the Dyaks in the northern parts of the island being content with an occasional human sacrifice on the death of a chief.—The sacrifice of a cock is sacred as with the Karen and Chinese, and they believe that the Divine being eats the spirit or essence of the offerings made to him: they have a tradition about a deluge, from which the Chinese, Malay and Dyak escaped. The minor spirits, called "Antu" are largely worshipped: their name for the Almighty Good Spirit, is Yaoah or Jowah, almost the same as the Hebrew form of Jehovah: he is also called Tuppa, and in his worship, women are the celebrants. They had a craving for skulls, but head hunting is now scarcely heard of. They are brave, hospitable, simple, truthful, loyal and grateful, and are willing to receive instruction. Chastity before marriage is not insisted on, and they marry when grown up. The men wear a narrow loin cloth passed between the thighs. The women have a still narrower strip of cloth allowed to fall from the hips half way down the thighs and affords little concealment. The clans have different languages and they have no written character. —*Journ of the Indian Archipel., Vol. II., No.* VI., *June* 1848, *page* 365, *quoting Melville de Carnbee and published in Le Moniteur des Indes.*

The interior of the island is occupied by tribes of the brown race, whose warlike habits and skill in the use of missiles, will account for the disappearance of a less civilized race from the southern and western parts of the island. On the north-west coast, where the Dyaks are to be met with near the sea, the prior tribes have all retired into the interior. The Dyak, who are the Orang-Benua, or aboriginal inhabitants of Borneo, constitute by far the most interesting portion of its population. They are scattered in small tribes over the face of the island, those inhabiting the banks of the large rivers being generally under the dominion of one more powerful than the rest; but the tribes which reside in the depths of the forests, where the communication between them is more difficult, are generally perfectly distinct from each other, and these people would scarcely know that other human beings existed beside themselves, were not individuals of their little communities sometimes cut off by the roving warriors of a distant and more powerful tribe. The various tribes are said to differ considerably from each other, but Mr. Earl saw individuals belonging to several distinct tribes, who with the exception of a difference of dialect, might be recognized as the same people, those who lived entirely on the water being much darker than the rest. It is said by the Dyak themselves, that some parts of the interior are inhabited by a woolly haired people; but as they likewise assert that men with tails like monkeys, and living in trees, are also discoverable, the accuracy of their accounts may be doubted. He met with no Dyak who had seen either, but as a woolly-haired people is to be found scattered over the interior of the Malay Peninsula, their existence in Borneo seems by no means improbable. The Dyak are of the middle size, and, with the exception of those who are continually cramped up in their little canoes, are invariably straight-limbed, and well formed. Their limbs are well rounded, and they appear to be muscular, but where physical strength is to be exerted in carrying a burthen, they are far inferior to the more spare bodied Chinese settlers. Their feet are short and broad, and their toes turn a little inwards, so that in walking they do not require a very wide path. The native paths are found very inconvenient by a European traveller. The paths used by the Dyaks and Chinese being generally worn down several inches below the surface of the soil, and, as they are very little wider than the foot, pedestrian exercise proves both painful and fatiguing. The Chinese guides mentioned that strangers soon become accustomed to these byeways, from which he judged that the settlers had adopted the native mode of walking with one foot before the other,

since their arrival in the country. Their foreheads are broad and flat, and their eyes, which are placed further apart than those of Europeans, appear longer than they really are, from an indolent habit of keeping the eye half closed. The outer corners are generally higher up the forehead than those nearer to the nose, so that were a straight line drawn perpendicularly down the face, the eyes would be found to diverge a little from right angles with it. Their cheek-bones are prominent, but their faces are generally plump, and their features altogether bear a greater resemblance to those of the Cochin-Chinese than of any other of the demi-civilized nations in Eastern India. The Laos tribes inhabiting the inland parts of Cochin-China and Cambodia are undoubtedly the same race as the Dyak, speaking a dialect of the same language; and, as the Cochin-Chinese are probably descendants of these people, civilized by communication with the Chinese, the resemblance may be easily accounted for. The Cochin-Chinese, however, are physically superior to the Dyak, the natural results of a different mode of life. The hair is straight and black, and is kept cut rather short by both sexes, but if permitted, would grow to great length. Some of the Dyak women who are married to Chinese adopt the fashion of wearing tails. He never saw a nearer approach to a beard among the men. than a few straggling hairs scattered over the chin and the upper lip. The Dyak countenance is highly prepossessing. The countenances of the Dyak women, if not exactly beautiful, are generally extremely interesting, which is, perhaps in a great measure owing to the soft expression given by their long eyelashes and by their habit of keeping the eyes half closed. In form they are unexceptionable, and the Dyak wife of a Chinese, whom he met with at Sinkawan, was, in point of personal attractions, superior to any eastern beauty who had come under his observation, with the single exception of one of the same race, from the north-west coast of Celebes. This one he met with at Sourabaya soon after her arrival from Celebes, she was, for a native, extremely fair, and her portrait would not have disgraced the "Book of Beauty." In complexion, the Dyak are much fairer than the Malay from whom they also differ greatly in disposition and general appearance, although not so much as to lead to the conclusion that they could not have sprung from the same source, giving rather the idea that the cause of the dissimilarity has proceeded from the long disconnection of the Malay from the original stock, in addition to their admixture and intercourse with foreign nations. The Dyak are a much superior people to the Malay, although the latter affect to consider them as beings little removed from the orang outang. Though the most numerous of the aboriginal tribes are found congregated in villages on the banks of the rivers and the large inland lakes they also possess several towns of considerable size. The capital of the most powerful tribe on the west coast is Sigao, a town about forty days journey up the Pontianak river, which has a population of several thousands. The Dyak inhabit thatched bamboo houses, erected upon piles, those belonging to each family or petty tribe being joined together by means of a stage or verandah running along the front. Many of the small villages are defended by stockades, and the ladders by which they ascend into their dwellings are always pulled up when they retire to rest at night. Under these dwellings the pigs are kept; for, although some of the tribes in the vicinity of the Malay have adopted the mahomedan religion, they are not sufficiently rigid in their observance of its tenets to abstain from the use of pork. The Dyak cultivate rice in large quantities, as it forms their principal vegetable food, their animal sustenance being pork, fish and the flesh of deer and other animals which are procured by the chase. Some of the tribes possess bows and arrows, but the sumpit or blow pipe, a wooden tube about five feet long, through which small bamboo arrows are shot with great precision, is in more general use. The arrows are steeped in a most subtle poison, which is said to destroy birds and smaller animals, when struck with them, almost instantaneously, a slight wound from an arrow on which the poison is strong, being said to occasion inevitable death, even to man. The effects of weapons of this description are always exaggerated by those who use them; the poison therefore, is not, in all probability, so destructive to the human species as it is represented; and although the Dyaks assert that no antidote is known, yet the preparation of the poison being similar to that practised by the aboriginal inhabitants of Celebes, for which a remedy has been discovered, the people of Borneo are probably acquainted with it. They show no hesitation in eating animals which have been killed by their arrows, taking the precaution, however, of removing the flesh immediately adjacent to the wounded part. The poison, which is called ippo throughout the island, consists of the juice of a tree, and its mode of preparation appears to be perfectly similar to that practised in Java, and other islands where it is employed. Borneo, as a mineral country, is perhaps the richest in the East; producing gold, coal, antimony, and iron, while caoutchouc and gutta percha, are amongst its vegetable products. The coal and iron fields of the Balawi or Rajang are more extensive than any yet dis-

covered on the island. From the river Baram, coal is traced to the upper parts of the Bintulu, and thence southward to the Rajang river, on the left bank of which, at Tujol Nang, there is a seam exposed upwards of thirteen feet in thickness. At different other parts of the river and also in several of its branches, coal is found in abundance. From Tujol Nang the strike of the coal is southward across Dragon's plain. It is again found in the river Lang-Tha (a distance from the former place of about fifty miles) where it is extensively exposed on the surface, and has been in a state of ignition for several years. Iron ore of a quality yielding from sixty to eighty per cent. of iron abounds in the Baluwi or Rajang district, from about forty miles from the coast to the source of the river, or over a district comprising nearly one-half of the extreme breadth of the island. The iron manufactured from the ore of the above district is much preferred to that of Europe by the Malays and other natives of Borneo as being superior, doubtless owing to the charcoal being the melting material used, as in Sweden. The varieties of animal life are great, some species of Actinia, of enormous size, occur in the China seas, and on the coast of Borneo and fish live within them. Of 29 species of birds in Borneo and 21 in Sumatra, 20 are common to both islands. Of 29 in Borneo and 27 in Java, 20 are common to both islands. Of 21 of Sumatra and 27 of Java, 11 are common to both islands. The Malay of Borneo, firmly believe in ghosts. If a man die or be killed, they are afraid to pass the place. A writer in the Journal of the Archipelago, describesa race called Idaan occupying the northern part of Borneo, who also suspend human skulls in their houses. St. John, in his Indian Archipelago, says that the dominant Malays and the colonists of China, are active and industrious but are a turbulent and intractable part of the population. The Dyaks, in their physical and social characteristics resemble the Tarajah of Celebes. The Dusun, are the villagers in the north, an agricultural people, the Murut are in the inland parts of Brune, the Kadyian of the same country, are an industrious peaceful nation, valuable for those qualities; and the Kyan, are more numerous, more powerful, and more warlike than any other in Borneo. They are an inland race inhabiting a district extending from about sixty miles up the interior from Tanjong Barram to within a similar distance on the eastern shore. Fierce, reckless of life, and hot blooded in their nature, they are nevertheless represented to be hospitable, kind, and faithful to their word, and honest in their dealings. Next to them are the Millowe, southward and westward, living on rivers near the sea—an industrious intelligent people, who occasionally take heads, but have not the ferocity of the Kyan. The Tatau, Balanian, and Kanowit have dialects of their own, and are wild and savage in their manner Another writer says, that beside the Malays of the coast, there are eleven other tribes located between them and the Kyan, namely the Kanowit, Bakatan, Lugat, Tan-yong, Tatau, Balanian, Punan, Sakapan, Kajaman, Bintulu and Tilian—the majority of whom are tributary to the Kyan. The six first mentioned are all more or less tatooed, both male and female, and certainly, have all sprung from the one called Kanowit, who, in habits, closely assimilate to the Dyak of all Saribus whose neighbours they are. The tribes Punan, Sakapan and Kajaman are the chief collectors of camphor and birds' nests.

Idaan, called also Meroot, are a Borneo race who inhabit the more hilly districts towards the north, in the vicinity of Kina Balou. They resemble the Kadyan; and some of their tribes who are near the capital are compelled to plant pepper and collect the produce. They appear anxious for an intercourse with Europeans: they are said to sacrifice human victims, like the Kyan. The *Idaan*, of different places, go under different denominations and have different languages, but in their manners and customs they seem to be nearly alike. The name "Idaan" is, in some measure, peculiar to those of the north part of Borneo; the inland people of Passir are called Darat; those of Benjar, Biajoo, the Subano of Magindanao appear to be the same people; perhaps, where the aborigines, in the several islands of the Oriental Polynesia are not negroes, they are little different from the Idaan of Borneo. The Idaan are reckoned fairer than the inhabitants of the coast, this has given rise to an opinion, seemingly wholly unfounded, that they are the descendants of the Chinese. The custom obtains of arranging human skulls about the houses of the Idaan, as a mark of affluence.

The Dyak houses are all raised on posts and are often 200 or 300 feet long, and 40 or 50 wide, floored of bamboo, and the unmarried men sleep apart in a separate buillding. The Dyak race is closely allied to the Malay and more remotely to the Siamese, Chinese and other Mongol races. All these are characterised by a reddish brown or yellowish brown skin of various shades, by a jet black straight hair, by a scanty or deficient beard, a rather small and broad nose and high cheek bones, but none of the Malays have oblique eyes which are more characteristic of the typical Mongol. The average stature of the Dyak, is rather more than that of the Malays, but considerably under that of Europeans. They are simple, truthful, honest, and are more lively, more talkative and less secretive than the Malay. Active sports

and games of strength and skill are quite a feature in their every day life, and they have many in-door games. Head hunting has been discontinued amongst the Sarawak Dyaks. They are temperate in food and drink, and the gross sensuality of the Chinese and Malays is unknown to them. The women do all the field work and bear only 3 or 4 children.—Mr. Dalton, penetrated some distance into the interior, where he remained among the Dyak race about fifteen months. During this period he resided chiefly at Tongarron, the capital of the most powerful Dyak chief, who adopted him as his Sabat or brother, by means of a ceremony in use among all the Dyak tribes, in which each party drinks a small portion of the blood of the other, mixed in a cup of water. Ties of this description are more sacred than those of consanguinity, a very fortunate circumstance for those Europeans who may visit the country, since the chiefs show the greatest readiness in forming these bonds of brotherhood, and will afterwards protect their Sabat at the risk of their own lives. Mr. Earl tells us that a black bird, strongly resembling a magpie in its habits and appearance, is much respected, or rather feared by the Dyaks, and suggests that those who visit the Dyak tribes should refrain from shooting them, the destruction of one of these birds, which are considered by the aborigines to be evil spirits, being deemed an offence that will entail calamity on the whole country. The Dyak race do not use, and cannot even have any idea of a specific name appropriated to the whole extent of a country of which the sea board is even most often unknown to the savage and wandering tribes who are separated by great distances from each other, and who are dispersed in hordes of small numbers over the vast extent of one of the largest islands in the world. These different tribes are designated amongst themselves by the names which they give to the rivers on the borders of which they have established their abode; it is thus that all the Dyaks of the great river Duson (the Banger of our maps) call themselves Orang Duson (men of Duson) and those of the river sampit, Orang Sampit; The manuscript memoirs of Major Muller and of Colonel de Henrici make mention of a great number of tribes designated by the names of rivers which have their mouths on the western coast; in the north of Borneo, Mr. Brooke makes mention of Dayak tribes under the names of Sarebu, Sakairan, Lundu, Sibnuw, &c. established on the rivers which bear those names.—*Wallace Malay Archipelogo, Vol.* I, *pages* 34 *to* 161. *Journal of the Indian Archipelago, No.* 2, *February* 1849, *Vol.* III. *p.* 141. *No.* 6, *p.* 365, *June* 1848. *No.* 4, *Sept.* 1849, *p.* 557. *St. John's Indian Archipelago, Vol.* II. *p.* 265. *Quarterly, Review, No.* 222, *p.* 497. *Marryat's Indian Archipelago, p.* 10. *Earl's Indian Archipelago, p* 227 *to* 270. *Reveu de deux Mondes. The Malay Archipelago, from the Nicobars by the Malay Peninsula to the east, is 4,000 miles long from East to West, and 1,300 broad from North to South. The volcanic belt of the archipelago is marked by a chain of active and extinct volcanoes through the whole length of Sumatra and Java and thence by the islands of Bali Lombok, Sumbawa, Flores, the Servatty islands, Banda, Amboyna, Batchian, Makian, Tidore, Ternate and Gilolo to Morty island. Here the belt is broken and shifted 200 miles to the west, to north Celebes, from which it passes on to Siau and Sanguir, to the Philippine islands, along the eastern side of which it continues in a curving line to their northern extremity. From the extreme eastern bend of this belt at Banda, for 1,000 miles, to the North East coast of New Guinea, is a non-volcanic district. But there, on the North East Coast of New Guinea, another volcanic belt can be traced through New Britain, New Ireland, and the Solomon islands to the farthest eastern limits of the Archipelago. The united length of these volcanic belts is 90 degrees, their width about 50 miles, but, for about two hundred miles on either side of them, evidences of subterranean action are to be seen in recently elevated coral rock or in the barrier coral reefs which indicate recent submergence. In some part or other of all the line earthquakes are felt every few weeks or months, varying from a slight tremor to great movements shaking down villages and destroying life and property, and some of them devastating the adjacent lands. In Java, in 1772, the volcano of Papan-dayang was blown up by repeated explosions and a large lake left in its place. In Sumbawa in 1815, 12,000 people were destroyed by the great eruption of Tomboro.

Makian, an island of the Moluccas, was rent open in 1646, by a violent eruption. On the 29th December 1862, it again suddenly burst forth blowing up and altering its face and destroying the greater part of the inhabitants and sending forth such quantities of ashes as to darken the air at Ternate forty miles off and destroying almost the entire crops of that and neighbouring islands. Java has nearly 45 volcanoes active or extinct, many of them with volcanic cones, and averaging 10,000 feet high.

Sumatra, in reference to its extent, has few volcanoes and a considerable portion has probably a non-volcanic origin. Sumatra, the uncultivated parts of Java and Celebes, Borneo the Philippines and New Guinea are all forest countries, but on Timor and on all the islands around it there is absolutely no forest, and this character extends to Flores, Sumbawa, Lombok and Bali.

Mr. George Windsor Earl, in a pamphlet on the Physical Geography of South Eastern Asia and Australia, (1855) pointed out that the islands of Sumatra, Java, and Borneo are connected with the Asiatic continent by a shallow sea, and that a similar shallow sea connects New Guinea and all the adjacent islands with Australia, these last being all characterized by the presence of marsupial animals: and, carrying out Mr. Earl's suggestion, Mr. Wallace maintains that some to the islands had long been connected with the Asiatic continent, and others equally long with that of Australia, and that a line of separation can be drawn between them, and he designates the Asiatic portion, Indo-Malayan and the Australian division Austro-Malayan. The seas between Sumatra, Java and Borneo are so shallow that ships find anchorage in any part of it, as it rarely exceeds forty fathoms. And the seas eastwards to the Philippines and Java rarely exceed one hundred fathoms.

The elephant and tapir of Sumatra and Borneo, the rhinoceros of Sumatra and the allied species of Java, the wild cattle of Borneo and the kind long supposed to be peculiar to Java, are now all known to inhabit some part or other of Southern Asia; and, of the birds and insects, every family and every genus of the groups found in any of the islands occurs also on the Asiatic Continent and in a great number of cases the species are also identical. The great islands of Java, Sumatra and Borneo, even yet resemble in their natural productions the adjacent parts of the Continent almost as much as such widely separated districts could be expected to do, even if they formed part of the Asiatic Continent. The Philippine islands agree in many respects with Asia and the western islands, but present some anomalies.

The Eastern portion, on the other hand, from Celebes and Lombok eastward, exhibit as close a resemblance to Australia and New Guinea as the western islands do to Asia. Australia has no apes, monkeys, cats, tigers, wolves, bears, hyenas, no deer, or antelopes, sheep or oxen, no elephant, horse, squirrel or rabbit. In lieu, it has kangaroos, opposums, wambats and the duck billed palypus. It has no woodpecker or pheasants but has, in lieu, the mound making brush turkeys, honey suckers, cockatoos, the brush tongued loris, which are found no where else in the globe and all these peculiarities are found in the islands which form the Austro-Malayan division of the Archipelago. The islands eastward from Java and Borneo, form a part of a previous Australian or Pacific Continent, although some of them may never have actually been joined to it.

The Aru islands, Mysol, Waigyou and Jobie agree with New Guinea in their species of mammalia and birds and they are all united to New Guinea by a narrow sea. The 100 fathom line around New Guinea marks the range of the paradise birds. This separation has no relation to their geological character.

The Indo Malayan and Austro-Malayan divisions, hold two distinct types of the human race, the Malay and the Papuan, who differ radically in their physical mental and moral characters, and under one or other of these two forms, as types, the whole of the people of the Eastern Archipelago and Polynesia can be classed, and the line separating these two types comes near but somewhat eastward of that part of the zoological regions. This easterly jutting of the Malay line, has been caused by the maritime enterprise and higher civilization of the Malay races who have overrun the nearer part of the Austro-Malayan region and have supplanted the original inhabitants and spread much of their language, their domestic inhabitants and their customs far over the Pacific. To the Malay type and to the Papuan type, respectively, all the people of the various islands can be grouped. The Asiatic races include the Indo-Malay and all have a continental origin, while the Pacific races including all to the east of the Malay (except perhaps some in the northern Pacific) are derived not from any existing continent but from lands that now exist or have recently existed in the Pacific Ocean.

The varieties of animal life are great, some species of Actinia, of enormous size, occur in the China seas, and on the coast of Borneo, and fish live within them. Of 29 species of birds in Borneo and 21 in Sumatra, 20 are common to both islands. Of 29 in Borneo and 27 in Java, 20 are common to both islands; of 21 of Sumatra and 27 of Java, 11 are common to both islands.

The Malay of Borneo, firmly believe in ghosts. If a man die or be killed, they are afraid to pass the place.—*Wallace* I, *Wallace, pp.* 13 to 20, 161. *Journal of the Indian Archipelago, No.*, 2 *February* 1849, *p.* 141, *Vol.* III. *St. John's Indian Archipelago, Vol.* II. *p.* 265. *Quarterly Review, No.* 222. *p.* 497. *Marryat's Indian Archipelago, p.* 10. *Earl's Indian Archipelago, p.* 270. Orang Laut; Malay Mindoro; Legetan Islands; Soloo Archipelago; Kyan; New Guinea; Ladrone Islands; Lawang; Marco Polo;

The Sulu Achipelago, is that chain of numerous islands which stretch across from the N. E. point of Borneo to the Island of Mindanao. Sooloo Island, from which the Archipelago is named, is high and of considerable extent, being 35 miles long and from 5 to 10 broad; it lies in long. 121° E. near the centre of the Archipelago. The Macassar men of Celebes determine many disputes by single combat, but never avenge themselves by personal assassination. On the contrary, the Sulu race have no idea of putting themselves on a footing with their antagonist, but always attack him in the dark, or off guard. It would scarcely be possible to scrape up a more infamous race than the Sulu. The only virtue they boast, is courage, which, unaccompanied with principle, is at best but negative, and in this instance doubtful. Honesty, industry, or hospitality, are unknown to the mass of them, at least in practice, but they are distinguished by civil dissensions, treacherous assassinations, vain-boasting, theft, laziness, dirt, envy, and dissimulation, or rather unconnected falsehood. The Sulu do not, like the mahomedans of Hindostan, confine their women; on the contrary, they mix in society as in Europe. —*Horsfield.*

Negrito. In the Philippines are a black, woolly haired race called Negrito. They are of small dwarfed stature, 4 feet 6 inches to 4 feet 8 inches high, which is 8 inches less than the Malays, and the Papuans are taller than the Malays. The hair agrees with that of the Papuan, and many negroes of Africa.

Mindoro island lies immediately adjacent to the south-west coast of Luzon, being separated only by a narrow strait: the Negrito race who are residing there are congregated in a mountainous district, called Bengan, where they live on friendly terms with the Manguianes, or wild tribes of the brown race, by whom they are surrounded, although very little intercourse subsists between them; so that here, at least, the system of sacrificing a neighbour, to avenge the death of one of their own tribe, seems to have been abandoned. The Mindoro Sea is bounded on the south-west side by the north-east coast of Borneo. It is much resorted to by British sperm whalers who obtain entire cargoes there. Mindoro Strait is 27 to 33 miles wide. The *Manguianes* are a mild and ill used people, but so little advanced in civilization, that European visitors, who have not had opportunities of personal communication with the Bangano, often leave the island with the impression, that they are only a more savage variety of the same race.—*Earl, pages* 133, 137, 326.

Magindanao Island. The people use the alphabet of the Tagala nation, of the great island of Lucon.

The Ladrones or pirates of the Eastern Archipelago consist wholly of the inhabitants of the free mahomedan states in Sumatra, Lingin, Borneo, Magindanao and Sulu.

Mindanao, is in lat. 5° 39 N., long. 125° 18 E. The interior of this large island is said to be inhabited by many small tribes of Papuans, but those only who reside near the north coast, where there are several Spanish settlements, are known to Europeans. The chief tribes of the north are called respectively Dumago, Tagabaloy, Malano, and Manabo, but very little is known concerning them, except that, in common with the other mountain Papuans of Mindanao, they are comparatively inoffensive.—*Earl's Archipelago.*

Lombok, the rajah of Lombok has the title of Anak Agong, which means "son of heaven." The indigenes are called "Sassak." The people of Lombok believe that some men can turn themselves into crocodiles, which transformation they adopt in order to devour their enemies. The Sassak are a Malay race, hardly differing from those of Malacca or Borneo and have been converted to mahomedanism. But the ruling race are brahminical and from Bali. The men are jealous and strict with their wives, infidelity is punished by the couple being tied back to back and thrown into the sea, where crocodiles devour the bodies. Even a married woman accepting a flower or betel from a stranger has been punished by death with the kris, and any one found without leave within the grounds of a house is krised and his body thrown out to the street. The people frequently do a-mok but it seems to be deliberately done. On one occasion, a person doing a-mok killed seventeen people before he could be killed. In war, a whole regiment will agree to a-mok, and then run on with such desperate resolution as to be very formidable to men less excited than themselves.—*Wallace, Vol.* I. *pp.* 73, 161, 174.

Celebes Island, in configuration, has been compared to a star fish, from which the radiating limbs on one side have been removed; and this very singular form also distinguishes Gilolo, an island not far distant from it to the eastward. Its salubrious climate restores to health constitutions impaired by residence on the marshy plains of the less elevated regions of India. Celebes occupies the centre of the tropical zone, and lies in the Molucca sea. Its length and breadth it is difficult to estimate, being composed of four peninsulas, with an area of 3578 miles. Its coast presents a great number of bays, gulfs, and capes of eccentric outline. The surface is lofty, with considerable hills, and towards the north are several active volca-

noes. Some of the mountains rise seven thousand feet above the level of the sea usually with round or flat tops. Though a mountainous island, Celebes presents along the borders of the sea wide plains covered with verdure and beautiful valleys, some of which enclose magnificent basins of limpid water, raised on a smooth plateau encircled by a rim of low hills. Thick forests cover the hills and large tracts of the level country with oaks, maples, sycamores, cedars, teak-trees, and the upas. Celebes is less populous in proportion to its extent, than many other island of the Archipelago. Klabat is a conical volcanic mountain, rising 6,500 feet above the sea in the northern peninsula of this island: the two southern prongs of this island form the gulph of Boni, which stretches three degrees northward into the centre of the island. Its entrance is about eighty miles wide, but narrows to thirty miles, till at its head it again expands to forty-five miles. Celebes, on its eastern coast, is fronted by islands, and many islands are scattered over the bays of Tolo and Tomini, or Goonong Tella. Celebes, on its north coast, is in general high, bold land. Its extreme point is called Cape Coffin, and the whole of the islands that stretch from it to Menado bay are sometimes called Banca islands. The tongue of land in the north of Celebes, known administratively under the name of the Dutch residency of Menado, comprehends all the northern extent of the island, from the bay of Palos in the west, to the cape of Taliabo in the east, and comprises the great bay or arm of the sea of Gunong-Tello, which stretches in a westerly direction between the two peninsulas. The Dutch residency of Menado includes under its jurisdiction the whole federative states of Minahassa; the small kingdom of the northern coast; the very extensive districts in the west part of the peninsula, where Government exercise sway, besides the islands of Sangir and Talaut to the north, as well as the lesser island of the west coast and the large gulf of Tomini. The population is composed of native christians, Malays, and Chinese. In 1840 there were reckoned in Minahassa:—

Natives	78,700	The districts of Gorontalo.	50,000
Christians	5,687	Sangir & Talaut islands	40,000
Malays	2,875		
Chinese	510		
Free Slaves	500	Total	178,272

Without taking into account the number of the Alfoura population of the interior, which cannot be very considerable, seeing that the elevated and woody parts of Kayeli, Toradja and To-meiku appear to be thinly peopled, the Minahassa confederation in the north of Celebes counts 286 villages; the principal districts are Tondano, Langoang, Kakes, Temehon, Sonder, Kawakkoang, Tompasse, Amurang, Belang and Kema. They are all under the direct authority of the Dutch government; the Resident and three other European civil employes, assisted by an indeterminate number of native functionaries, administer the government. The resident is under the orders of the governor of the Moluccas, the head quarters of which is Amboyna. Sangir, and the numerous islands of this group occupy a superficies of 13 square leagues; the Talaut and the Meangis islands united are 18 square leagues; these Archipelagos, formerly subject to the authority of the sultan of Ternate, now make part of the residency of Menado.

Several extinct volcanoes, and some still in full action, are found in the *Sangir group*; the devastations which they commit from time to time have often been fatal to the inhabitants. The eruption of Duwana, in 1808, completely annihilated the village of Tagalando, destroyed all the surrounding forests, and suddenly deprived the inhabitants of all means of livelihood, by the destruction of their fields. The Gunong-api causes numerous ravages in the island of Sjauw; its peak, 6,000 feet above the level of the sea, forms the culminating point of this group Gunong-api covers with its base all the northern part of Sangir-besar: this volcano has not been active since 1812, when the torrents of lava destroyed the extensive forests of cocoanut trees with which this part of the island was covered, and caused the death of many of the inhabitants. These islands furnish more than twenty-five kinds of wood suited for building and furniture. Two harbours, sheltered from all winds, exist in the larger Sangir, one in the Bay of Taruna, the other, called Midelu on the eastern side.— As will have been seen from the above, Celebes consists of a small irregular central area, with four long peninsulas. The two on the south are separated by the Gulf of Boni; in the S. W. peninsula, two languages are spoken, the "Mangkasa" or "Mangkasara," and (of which word the Netherland capital Macassar is only a corruption of the Dutch), and the "Wugi" or "Bugi" which originally was more particularly limited to the coast of the Gulf of Boni. North of Macassar, in the most western part of the island, is another people, the "Mandhar," who speak a third language. On the island of Buton, which may be regarded as a part of the peninsula, east of the gulf of Boni, a fourth tongue is spoken. In the northern peninsula are the people speaking the "Gorontalo" and the "Menado" languages. Minahassa is in the northern extremity of Ce-

lebes. In the interior are a people whom the coast tribes call Turaju, who are said to be cannibals, and head hunters. This was stated many years ago by Dr. Crawfurd, who says (Vol. i. p. 243) "some of the savages of Borneo destroy their prisoners and devour their flesh. One nation of Sumatra acquainted with the art of writing and possessed of books, are well known to be cannibals. Among other tribes, the skulls of enemies are held as trophies round their habitations. Among the people of Celebes, when an enemy falls wounded on some occasions, they actually devour his heart, and there is hardly a warrior of note who at some time or other has not partaken of the horrid repast. Dr. Crawfurd had seen several who had done so, and one person told him it did not differ in taste from the offal of a goat or buffalo." Macassar is the most notorious place in the Eastern Archipelago for the Bugi people to run a-mok. On the average one or two occur in the month. It is in fact amongst the natives of Celebes, the national mode of committing suicide, and is therefore the fashionable mode of escaping difficulties. Ten or twenty persons are sometimes killed and wounded at one of the a-mok. Stabbing and killing at all he meets, the a-mok runner is at last overpowered and dies in all the excitement of battle. It is a delirious intoxication, a temporary madness, absorbing every thought and action. Macassar men is a common name of the Bugi race. The Macassar people were taught mahomedanism in the early part of the 16th century, but the Portuguese arrived A. D. 1525, and they embraced christianity. The Bugi are now the great navigators and traders of the Eastern Archipelago. In the beginning of the western monsoon, they go in great numbers to the Arru islands, which is the principal rendezvous for the people of Ceram, Goram, the Ki islands, Tenimber, Baba, and of the adjacent coast of New Guinea, a distance from Macassar of upwards of 1,000 miles. They carry English calicos, cotton goods of their own manufacture, Chinese gongs, and arrack, and the return cargoes are tortoise-shell, mother of pearl shell, pearls, birds of paradise, and tripang, the Malay term for all kinds of Holothuriæ or Sea Cucumbers. Of tripang alone, about 14,000 piculs are yearly shipped from Macassar, of a value of 600,000 dollars, or £150,000. It is estimated that the annual value of goods carried by the Bugi to the Arru islands from Macassar alone is 80,000 dollars, or 200,000 guilders, and of those taken to the Arru group from other places 20,000 dollars, or 50,000 guilders.—The Bugi are the most enterprising race of the Eastern Archipelago. Although they bear some personal resemblance to the Malays, arising probably from a common origin, in every quality but courage, they are essentially different. Exposed to the same temptations, and most skilful and adventurous navigators, they have never adopted the occupation of piracy, but abhor and resist it, and defend themselves against the Malay prahus with the most heroic and desperate valour whenever they are attacked, proceeding, if overpowered, to blow up their vessels rather than submit. The poorest of these hardly islanders is as impatient of a blow as a European gentleman; and it is permitted to any one to avenge an affront by the death of the person who offers it. A more than Spartan training is bestowed on children. The boys at the age of five or six are removed from their parents, lest they should be made effeminate by indulgence, and they are not restored to their family until they are of an age to marry. They are the Phœnicians of the Indian Archipelago, and there is not a coast from the northern shores of the Australian continent to the Malay peninsula where their ships are not habitually seen. These adventurers leave their country in the beginning of the eastern monsoon on a trading voyage, and proceed westward until they reach Singapore. With vessels of peculiar build, of from forty to fifty tons burthen, they conduct almost the whole carrying trade of the Archipelago. They own at least 1,000 ships, the outward cargoes consisting of cotton cloths, gold dust, edible bird's nests, tortoise shell, tripang or sea slugs for Chinese epicures, scented woods, coffee, and rice; and in spite of the jealous and restrictive policy of the Dutch, they have greatly contributed to diffuse British manufactures throughout the islands of the Eastern Seas. *Kilwaru* is the metropolis of the Bugi traders to the east. It is a mere sand bank, lying between Ceram Laut and Kissa and offers good anchorage in both monsoons. From the earliest times they have been accustomed to buy horses at Gorontolo in Celebes, and kill them to eat. The natural wealth of Celebes is diversified and abundant. Besides timber and other trees noticed in its forests, are found palms of various species, ebony, odoriferous sandal, dyewoods, areca, banyan, and bamboos often forty feet high and three in diameter. *St. John's Indian Archipelago, Vol.* I. *p.* 352, 353. *Raffle's History of Java, Vol. I. p.* 57. *Raffle's Memoirs, pp.* 67,263,264; *Journal of the Indian Archipelago, No. IV, Sept.* 1849, *p.* 553; *S. Arch. for Dec.* 1850, *page* 764. *Bikmore's Travels in the Archipelago, pp.* 97, 99, 101, 379. *Quarterly Review, No.* 222, *p.* 502. *Wallace, Malay Archipelago*, I. 174, II. 63,64.

The population of Celebes was estimated by Mr. Crawfurd at 900,000; if it were as well peopled as Java, it would number 14,000,000 inhabitants.—(*Quarterly Review, No.* 222, *p,* 503.) But at present, according to St. John (i. p. 351), it does not exceed 1,104,000 people. Its cotton tape, silk tape and embroidered tape, were exhibited at the Exhibition of 1862. It produces teak. The people of *Minahassa,* in the north-east part of Celebes, differ much from all the other people in the Archipelago. They are of a light brown or yellow tint, often approaching the fairness of a European, of a rather short stature, stout and well made, of an open and pleasing countenance, but disfigured, as age advances, with projecting cheek bones, and with the usual long, straight, jet black hair of the Malays. The coast people, where there has been intermixture, are coarse; but in inland villages, where the race is pure, both men and women are remarkably handsome. They are quiet and gentle, submissive to authority, and are easily induced to learn and adopt the habits of civilized life; they seem capable of acquiring a considerable amount of intellectual education, and they are clever mechanics. Up to the early part of the 19th century, up to 1822, this people lived in tribes each under its own chief, always at war with each other, speaking different languages, unintelligible to each other. They built their houses on lofty posts, to protect themselves, they were head-hunters like the Dyak of Borneo, and were said to be cannibals. Human skulls were the great ornaments of a chief's house, and when a chief died, two skulls of an enemy, or failing that, of his slaves, were placed at his grave, and they worshipped deities in the mountain, the torrent, the lake, and certain trees and birds, and wore only a strip of bark. In 1822, the introduction of coffee planting and a settled Government altered all that, and the people, though still speaking different tongues, are now the best clothed, best housed, best fed and best educated in the Archipelago. Much of this has been due to the tractable nature of this people, for near Menado is a race called Bantek, strong, but intractable, who have hitherto resisted all efforts to improve them. There are some of the less civilized tribes which have semi-Papuan features and hair; while in some villages, the true Celebes or Bugi physiognomy prevails. The plateau of Tondano is chiefly inhabited by people nearly as white as the Chinese, and with very pleasing semi-European features. The people of Siau and Sanguir much resemble these, and Mr. Wallace believes them to be immigrants probably from some of the islands of North Polynesia. The Papuan type will represent the remnant of the aborigines. The languages contain a Celebes-Malay element, and a Papuan element, along with some radical peculiarities derived from the Siau and Sanguir islands further north, and therefore probably derived from the Philippine Islands.

Sumbawa, one of the three peoples speaking distinct languages current in the island of Sumbawa are the Bima. Their alphabet, once distinct, has been displaced by that of the Celebes.

The *Orang Laut*, or sea-people, who are similar in their habits to the Baju, found upon the coasts of Borneo and Celebes, though belonging to it, can scarcely be said to inhabit the island, for they live entirely in their little prahus, and wander about the coasts. They subsist principally by fishing and it is said that they are always ready to give information to the piratical rovers. *Quarterly Review, p.* 222, 503. *Professor Bikmore's Travels, pp.* 101 *to* 378. *Crawfurd's Dictionary of the Archipelago, Vol. i. p* 243. *St. John's Indian Archipelago, Vol. i. p.* 351. *Wallace's Malay Archipelago, Vol. i. p.* 175. *Horsburgh. Bouro Island, is one of the Moluccas, Fort Defence, being in Lat. 3° 22¾' S. Long. 127° 4' E. in Lat. 3° 6' S. Long. 125° 57' E. and is about two hundred miles in circumference. The island is high and has a semi-circular mountain on its N. W. part. *Bouro* has two races, the larger number are Malays of the Celebes type, often exactly similar to the Tomore people of East Celebes, who are settled in Batchian, but the other race resemble the Alfura of Ceram. The bulk of the inhabitants are a comparatively fair people, very closely resembling the natives of Amboyna.

Ternate is merely a high volcano, with its base beneath the ocean. Its circumference around its shore is six miles and its height is 5,400 miles. Severe and destructive eruptions took place in 1608, 1635, 1653, 1673 and next on the 26th February 1838, then on the 25th March 1839 and on 2nd February 1840. In that of 1673, a considerable quantity of ashes was carried to Amboyna. In that of 2nd February 1840, for fifteen hours, the solid ground rolled like the sea, but the heaviest ground wave was at 10 A. M. of the 15th February, and the people then took to their boats. In this interval were great eruptions of ashes and hot

stones which fell like hail. Lava poured from the crater into the sea. For ten days, clouds of black smoke poured out. About midnight of the 14th, the shocks were more violent, and before half past three A. M. every house was levelled. Fissures formed in the earth out of which hot water rose for a moment and then the earth closed again to re-open at another place. Its population in 1865 was 9,000.—The lower part of the mountain behind the town is covered with fruit trees and hundreds of men women and children go daily to the mountain to bring in fruit, the Durian and Mango, Lansat, Mangusteen. When Drake visited Ternate in A. D. 1579 the Portuguese had been driven out of the island by the sultan. Ternate with Batchian constitutes the ancient Moluccas. In the last great earthquake of 1840 nearly every house was destroyed. The people are of three well marked races, the Ternate Malay, the Orang Sirani and the Dutch. The first are the descendants of the intruding Malay who drove out the indigenes (who were no doubt the same as those of the adjacent mainland of Gillolo) and established a monarchy, their language is quite unintelligible. The Sirani are the Christian descendants of Portuguese. Ternate town is at the foot of the mountains. Ternate, Tidore, Motir and Makian are only cones standing on the same great fissure of the earth. *Bikmore*, 306-312.—*Wallace*, I. 300,311.

Makian is an island 50 miles from Ternate consisting of a single grand volcano. In 1646 there was a violent eruption, which blew up the whole top of the mountain, leaving a truncated jagged summit, and vast gloomy crater valley. It was said to have been as lofty as Tidore before this calamity. On the 29th December 1862, another eruption of the vast mountain took place in which all the villages and crops were destroyed and many of the inhabitants killed. The sand and ashes fell so far that crops 50 miles off at Ternate were destroyed and it was so dark at Ternate that lamps had to be lighted at noon.—*Wallace.*

Savu and Rotti, small islands to the west of Timor, are very remarkable as possessing a handsome race, with good features, resembling in many characteristics, the race produced by a mixture of the hindoo or Arab with the Malay. They are certainly distinct from the Timorese or Papuan race and must be classed in the Western rather than the Eastern division of the Archipelago.—*Wallace, Vol.* ii. *p.* 277.

Gilolo ; *Ceram.*—The northern peninsula of Gilolo, and the great island of Ceram are inhabited by the Alfura of Sahoe and Galela. These people are quite distinct from the Malays and almost equally so from the Papuans. They are tall and well made, with Papuan features and curly hair. They are bearded and hairy limbed, but they are quite as light in colour as the Malays. They are an industrious and enterprising race, cultivating rice and vegetables and indefatigable in their search after game, fish, tripang, pearls, and tortoise shell.

Bouru island has a shorter, round faced people, with a Malay physiognomy, who may have come from Celebes, by way of the Sulu islands, and a taller bearded race resembling that of Ceram.

The Alfuro seem to have affinities with the Tagala race of the Philippines, through the Sanguir islanders.

A Papuan or Timorese is darker and has more frizly hair than the Polynesian New Zealander or Otaheitan, but their features are almost identical.

Mr. Wallace (ii. 250) believes that the numerous intermediate forms which occur among the countless islands of the Pacific are not merely the result of an intermixture of these races but are to some extent truly intermediate or transitional and that the brown and the black, the Papuan, the natives of Gilolo and Ceram, the Fijiyan, the native inhabitants of the Sandwich islands and those of New Zealand are all varying forms of one great Oceanic or Polynesian race. Professor Huxley, however, is of opinion that the Papuans are more nearly allied to the Negroes of Africa than to any other race.

The whole of the great island of New Guinea the Ke and Aru islands, with Mysol, Salwatty, and Waigyou are inhabited almost exclusively by the typical Papuan, and the same Papuan race extends over the islands East of New Guinea as far as the Fiji Islands. The people on the coast of New Guinea are in some places mixed with the browner races of Moluccas.—*Wallace, Vol.* ii. *pp.* 250, 277.

In the typical Papuan, the colour of the body somewhat varies : generally it is a deep sooty brown or black, somewhat approaching but never quite equalling the jet black of some negro races, but it is occasionally a dusky brown. The hair is harsh, dry and frizly, growing in little tufts or curls, which in youth are very short and compact, but afterwards grow out to a considerable length forming the compact frizzled mop, which is the Papuans' pride and glory. The face has a beard of the same frizly hair and the arms, legs and breast are also more or less clothed with hair of a similar kind. In stature, the Papuan is superior to the Malay, and the equal or superior of the average European. The legs are long and thin and the hands and feet larger than those of the Malay. The face is somewhat elongated, the forehead flattish, the brows very prominent, the nose is large, rather arched and high, the base thick, the nostrils broad with the aperture hidden, owing to the tip of the nose being

elongated. The mouth is large, the lips thick and protuberant, he is impulsive and demonstrative in speech and action, his emotions and passions express themselves in shouts and laughter, in yells and frantic leapings. Women and children take their share in every discussion. The Papuan has much vital energy? In the Moluccas, Papuan slaves are often promoted to places of considerable trust. He decorates his canoe, his house, his domestic utensils with elaborate carving. They are often violent and cruel towards their children. The Papuan is black skinned, frizly haired, bearded and hairy bodied, long faced, has a large and prominent nose, and projecting eyebrows, bold, impetuous, exciteable and noisy, joyous laughter loving and displays his emotions. If the tide of European civilization turn towards N. Guinea, the Papuan like the true Polynesian of the farthest isles of the Pacific will no doubt become extinct. A warlike and energetic people who will not submit to national dependence or to domestic servitude must disappear before the white man.—A race identical in all its chief features with the Papuan, is found in all the islands as far east as the Fiji.

Mysol and Waigyou are Papuan mixed partly from Gilolo, partly from New Guinea Paradisea rubra, the rare red paradise bird, and Ptilonopus pulchellus a lovely little dove occur here.

Alfura, is written Alfora, Alafora, Arafura and Halafora, and according to Mr. Crawfurd it is from the Arabic al and fora. Mr. Bikmore says that those of Ceram had crisp but not woolly hair like the Papuans, and he regards them as a division of the Malay. He states that at Ceram the custom of head hunting prevails amongst the Alfura.—*Bikmore*, 204. *Wallace, Vol. ii. p.* 284.

Philippines. The Aheta or Negrito, are a Papuan race, the second name, meaning little Negro, being given to them by the Spaniards; but that of Ita or Aheta, so pronounced, but written Ajeta, is their usual appellation among the planters and villagers of the plains. The woolly haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago, they were estimated, by M. Mallat, in 1842 to amount to 25,000. The islands Samar, Leyte, and Zebu, have not any of them; but they are found in Negros, Mindanao, Mindoro, and Luzon. In the early accounts of them by Spaniards, they are described as being smaller, more slightly built and less dark in colour than the Negros of Africa, and as having features less marked by the Negro characteristics, but as having woolly instead of lank hair; and their social condition could not then have been much better than now, since they are described as living on roots and the produce of the chase; and as sleeping in the branches of the trees, or among the ashes of the fires at which they had cooked their food. They are all well formed and sprightly, but very low in stature, as they rarely exceed four feet and a half in height. The character of the Negrito is untameable, and it is impossible to surmount their tendency to idleness. Prompted by an irresistible instinct to return to the place of their birth, they prefer a savage life to all the charms of civilization. They are ebony-black like Negroes of Africa. Their hair is woolly, and as they take no pains in clearing it, and do not know how to arrange it, it forms a sort of crown round the head, which gives them an exceedingly fantastic aspect, and makes the head appear, when seen from a distance, as if surrounded with a sort of aureole—*Earl's Papuans, pages* 121 *to* 131.

The Papuans of Dory, worship, or rather consult, an idol called "Karwar," a figure rudely carved in wood and holding a shield, every house is provided, with the idol, which is usually about eighteen inches high, is exceedingly disproportioned, the head being unusually large, the nose long and sharp at the point, and the mouth wide and well provided with teeth. The natives have also a number of "Fetishes," generally carved figures of reptiles, which are suspended from the roofs of the houses, and the posts are also ornamented with similar figures cut into the wood. Within the geographical limits of the Indian Archipelago, the Papuans only appear as inhabitants of the sea coast in New Guinea and the Islands immediately adjacent. In other parts of this region they are found only among the mountain fastnesses, maintaining an unequal struggle with the brown races by whom they are surrounded. In some of the Spice Islands, the group nearest to New Guinea, their extirpation is matter of history, as observed by Mr. Crawfurd ("*History Ind. Archipelago*," *Vol. i. p.* 18.) In Ceram and Gillolo a few scattered remnants of the race still exist; but they hold little or no intercourse with their more civilized neighbours, flying into the thickets which afford them shelter and concealment on the first appearance of a stranger, experience having taught them that death or captivity will be their fate if they fall into the hands of their natural enemies. The characteristics of the mountain Papuans must therefore be sought in those islands where their numerical strength permit them to lead a life more fitted for human beings than that of their hunted brethren. It is an error to suppose that these poor creatures disappear before civilization. Their chief destroyers are

the wild and warlike hunting tribes of the brown race; and, excepting the case of the Moluccas, wherever European civilization has been introduced, the Papuans are more numerous than elsewhere. In the Philippines, for example, their number in the year 1842 amounted to 25,000 souls. (*Mallat*, "*Les Philippines*," *&c., vol. i. p.* 97, *Paris*, 1846.) The large island of Mysol or Mæsual, which lies nearly midway between the north-western extreme of New Guinea and Ceram, is said to have been occupied exclusively by Papuans when this region was first visited by Europeans, and they still form the bulk of the inland population, but the villages of the coast are occupied by a mixed race, in which the Papuan element, however, prevails. The islands of Goram, Ceram-Laut, Bo, Poppo, Geby, Patani, Hoek, and the south-eastern extremity of Gillolo, are also occupied by people of the mixed race, who are remarkable for their maritime activity, and for their friendly disposition towards European strangers. The woolly-haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago, with the exception of New Guinea. M. Mallet, as already stated, gives the amount of the "Negrito" population in 1842 as 25,000. This can only be considered as approximative, still it is probably not far from the true amount. The race, therefore, can scarcely be less numerous now than on the first arrival of the Spaniards more than three centuries ago. Indeed, their distribution among the Islands of the group seems to have been much the same then as at the present day; for the island on which they were first seen was named by Magellan "Isla dos Negros," to distinguish it from the adjacent island of Zebu, where his ships remained for some months. Negros still contains a large population of Papuans, while Zebu is altogether free from them, and no record exists of their having ever been found there. Samar and Leyte are similarly situated with Zebu, but Mindanao and Mindoro contain several tribes of Negritos, and they form the chief population of the less accessible parts in the mountain ranges of Luzon, the largest island of the Philippine group. The accounts of the Negrito race given by the early Spanish navigators perfectly apply to their present condition. They are described as being smaller, more slightly built, and less dark in colour than the negroes of Africa, and as having features less marked with the negro characteristics, but as having woolly hair.

From a number of inquiries among Papuans who were marked with the raised cicatrices, it appears that those on the arm and breast, which are the largest and most prominent were made in order to qualify them for admission to the privileges of manhood, by showing their capability of bearing pain. The Malayan term for crisped or woolly hair is "rambut pua-pua." Hence the term "pua-pua," or "papua" (crisped), has come to be applied to the entire race; and expresses their most striking peculiarity. The features of the Papuans have a decided negro character: broad noses, thick and prominent lips, receding foreheads and chins, and that turbid colour of what should be the white of the eye, which is apt to give the countenance a sinister expression. Their natural complexion is almost universally a chocolate colour, sometimes closely approaching to black, but certainly some shades lighter than the deep black which is often met with among the negro tribes of Africa. The Papuan race, when placed in circumstances favourable for the development of their powers, are physically superior to the races of South-eastern Asia. Some of the New Guinea tribes would bear a comparison, in point of stature and proportions, with the races of Europe, were it not for a deficiency about the lower extremities. Even the more diminutive mountain tribes are remarkable for energy and agility—qualities which have led to their being in great demand as slaves among their more civilized neighbours. With regard to mental capacity, also, they are certainly not inferior to the brown races; but their impatience of control while in an independent state, utterly precludes that organization which would enable them to stand their ground against encroachment; and they invariably fall under the influence of the Malay people whenever the two races are brought into contact. The islands in which remnants of Papuan tribes may yet be found are Sumba or Sandal-wood Island, Buru, the Xulla Islands, and the small eastern peninsula of Celebes, which terminates at Cape Taliabo. Sumba is a mountainous island, three hundred miles in circumference, lying to the south of Flores, from the coast of which it is distinctly visible in clear weather. The inhabitants of Savu possess a settlement near the south-west extreme of the island, and the Bugi traders of Ende have two or three small stations on the north coast which are occasionally visited by small European vessels for the purpose of obtaining horses; but the natives of Sumba all dwell in the uplands, where they cultivate maize, yams and other produce similar to that grown on Timor, and are said to use the plough, which is unknown in any other island to the eastern of Sumbawa.—*Mr. Earl, pp.* 6 *to* 185.

Phillippines.—The entire population of this Archipelago, is estimated at 4,000,000, of whom 3½ millions are christians. The Indian races are in general superstitious, credulous, fond of gaming, and particularly addicted to cock-fighting. The Negrito are said to be the

original inhabitants of the islands who retired before the invading Indians. The extent of this Archipelago is 300 leagues from north to south, and 180 leagues from east to west. It is made up of countless islands, traversed by a mountain range, and partially fertilized by the overflow of spacious lakes. This Archipelago received its name after Philip the Second of Spain, in whose name they were finally conquered, pacified, and peopled. The *Negrito* of the Philippines, are polytheists, but without temple or ritual. They believe in omens, invoke Camburan (God), the moon and stars, and adore the rainbow after a storm. They have also a worship of ancestors, a god of the harvest, of the fisherman and hunter; and a remnant of fetichism in a grotesque native devil. *Iloco*, is one of the languages spoken in the island of Lucon. In the Philippines are many separate nations or tribes, speaking distinct languages unintelligible to each other. The principal tongues of Lucon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000 people, while the Bisaya has a wide currency, among the southern islands of the group, Leyte Zebu, Negros, and Panay, containing 1,200,000 people. Mr. Crawfurd says that it does not appear from a comparison of the phonetic character and grammatical structure of the Tagala, with those of Malay and Javanese that there is any ground for fancying them to be one and the same languages,or languages sprung from a common parent and only diversified by the effects of time and distance, and that an examination of the Bisaya Dictionary gives different results.

Negros or *Buglas Island*, extends from lat. 9° 4′ to lat. 9° 50′. Of the central group of the Philippines, consisting of Panag, Negros, Samar, Leyte, Masbate, Bohol, and Zebu, the two former are the only islands in which Negrito tribes exist to the present day, and even as regards Panag, the fact must be considered doubtful. Negros, however, contains a considerable Negrito population, the crest of the mountain range, which extends throughout the length of the island, a distance of one hundred and twenty miles, being almost exclusively occupied by scattered tribes.—*Mr. Earl, p.* 141.

Bo, is an island of the Eastern Archipelago inhabited by a mixed race of Papuans and the brown race.

Flores, called also Endie or Mangerye, is an extensive Island, of the Archipelago, 201 miles long from E. to W. and from 42 to 45 miles broad. It is so named from the Portuguese word 'flor,' a flower, but is called Ende and Mangerye, from its chief south and west ports. Its chief trade at Ende is with Sumba or Sandalwood Island ; the Mangerye port trades with the Bugi and Malay. The coast is occupied by the Malay or brown race, but in the interior is a people with frizzled hair, and a similar frizzled hair people live in the mountainous parts of Solor, Pintar, Lombatta and Ombay. On the south coast of Flores is a tribe called Rakka who are reported to be cannibals, accustomed to eat their enemies and their own relatives who die. Captain Keppel says that the natives captured from the island used to be much esteemed by the Celebes pirates, as slaves, and he gives the following translation from a Dutch journal :—"On the island of Flores, there lives a race called, on the south coast, Rakka, who not only devour their enemies, but with whom custom requires that the son shall cut the body of his deceased father in pieces, and sell the flesh to the inhabitants at the high price of its weight in gold. This flesh is greedily eaten by the people as a great delicacy. If the father was heavy and of great size, the son considers himself particularly fortunate. The population of Endore on the same island is also very greedy of human flesh. But these cannibals confine themselves to the heart, which, with incredible dexterity, they extract from the body, by giving a blow under the left shoulder blade. It is then cut into very small pieces, eaten completely raw by the bystanders, who belong to the same race." Captain Keppel adds I am not able to corroborate this. *Galeteng* is a locality in the island of Flores, occupied by a race so called. According to the statements of Bugi traders, who had settled in Flores, that island is inhabited by six different races speaking as many different languages, the Ende, the Mangarai, the Kio, the Roka, the Konga and the Galeteng, names derived from the principal places of their residence. —*Horsburgh. Bikmore*, iii. *Keppel's Indian Archipelago, Vol.* ii. *p.* 149. *Crawfurd Dict.* 1 *p xciv.*

Sumba or Sandalwood Island, with about 4,000 geographical square miles, is composed of a range of hills that rise immediately from the sea to a height of 2,000 feet, and almost of equal height ; Romba peak, however, is 7,000 feet. Vessels visit it in the S. W. monsoon from Surabaya and return in the N. E. monsoon with the active little ponies of the island. They are, after the ponies of the Balla of Sumatra, the best of all the horses of the Archipelago, Bikmore thinks its people are Malays, though this is questioned, and they are also said to have a different tongue. It yields sandalwood and copper.—*Bikmore*, 112.

Solor.—The coast tribes of Solor are remarkable for their skill in managing their prahus and canoes, and are the most expert fishermen in these seas, frequently capturing the black-fish, a small variety of the cachalot, or sperm-whale, which no other fishermen in these seas will venture to attack. The blubber or fat obtained from them is used as food, and also as an arti-

cle of barter with the inland inhabitants; and the oil and spermaceti is sometimes disposed of to the Bugi and Macassar traders, who prefer it to cocoa-nut oil for burning in their prahus. Several Solor fishermen are always to be found at Coupang, the Dutch settlement on Timor, chiefly in the service of government, from whom they obtain a fixed allowance of rice and maize. These men, who are relieved by others every year, are sent in compliance with an old treaty, by which the coast natives of Solor agréed to furnish an annual quota of men for the public service. As all the youths have to take their turn, the system makes them accustomed to intercourse with Europeans, and is attended with very beneficial results.—*Mr. Earl.*

Timor is an island of 249 miles in extent, from lat. 10° 23' S. to lat. 8° 21' S., and long 127° 15' E. to long. 123° 30' E. It is about 300 miles long and 60 broad and is formed of high undulating mountains in the interior, though near the sea, it is of moderate elevation. The Portuguese settlement of Dieli or Diely, is in lat. 8° 34' S. and long. 125° 40' E., and on the north side of the island. *Timor* is occupied by tribes much nearer to the true Papuan than those of the Moluccas. The Timorese are dusky brown or blackish, with bushy frizzled hair, and the long Papuan nose. They are of medium height and of rather slender figures. They are said to be great thieves. The tribes are constantly at war with each other, but they are not very courageous or blood thirsty. They reverence the custom of "tabu" which they call "pomali" and a palm across a door indicates that the ceremony has been performed. In their excitable disposition, loud voices and fearless demeanours the Timorese closely resemble the Papuan people of New Guinea. In the islands west of Timor, as far as Sumba or Flores and Sandalwood Island, a very similar race is found, which also extends eastward to Timor Laut, where the true Papuan race begins to appear. Timor seems to form the north east end of the great range of volcanic islands, which extends north east and south west from Timor to Sumatra. It has only one active volcano, Timor Peak, near the centre of the island, which was blown up during an eruption in 1638, and has since been quiescent. Coupang in the west end of the island is the chief Dutch town, and Delli, in the eastern part of the island is the capital of the Portuguese possession. There is nothing that could be called a forest and the whole country has a parched and dry appearance. There are Malays and Chinese but the native Timorese preponderate and have nothing in common with the Malays, but are much more closely allied to the true Papuans of the Aru Islands and New Guinea. They are of the Papuan type, tall, have pronounced features, large, somewhat acquiline, noses and frizzly hair. The women talk to each other and to the men with loud voices and with a self asserting, quite different from Malay women. The mountaineers of Timor are a people of Papuan type, have rather slender forms, bushy frizzled hair, and the skin of a dusky brown colour. They have a long, somewhat acquiline, nose, with the overhanging apex, which is so characteristic of the Papuan, and so absolutely unknown among races of Malayan origin on the coast. There has been an admixture of Malay, perhaps of hindoo, as well as of Portuguese, and the coast occupants have wavy, not frizzled hair, a lower stature with less prominent features and the houses are built from the ground. The houses of the Papuan mountaineers are raised on posts. The dead of the Papuan Timorese are laid on a stage six or eight feet above the ground, sometimes open, sometimes covered, and are retained there till money for a feast can be obtained, when they are burned. The "Pomali" exactly resembling the Taboo of the Pacific, is in full operation here, and a few palm leaves stuck outside of a garden will preserve it from any thief. The inhabitants of the south-western part of Timor, in the neighbourhood of Coupang, are an exceedingly dark, coarse-haired people, and travellers have great difficulty in coming to a conclusion as to whether they belong to Malayan or Papuan races, so equally balanced are their characteristics. The anonymous author of an excellent "account of Timor, Rotti, Savu, Solor, &c.," in Moor's "Notices of the Indian Archipelago," seems to have fallen into this state of perplexity; and as his observations are evidently the result of long experience at Coupang and its neighbourhood, the following are a few short extracts which bear upon the point. The natives are generally of a very dark colour, with frizzled, bushy hair, but less inclining to the Papuans than the natives of Ende (on the island of Flores). They are below the middle size, and rather slight in figure. In countenance they more nearly resemble the South Sea islanders than any of the Malay tribes.

The people of the neighbouring island of Semao, are like those of Timor, with frizzly or wavy hair and a coppery brown colour.

Amongst the birds of Timor few are ornamental. There are Platycercus vulneratus; a green species of Geoffroyas; Tropidorhynchus Timorensis. Ptilonopus cinctus, a white-headed pigeon; the pretty little lorikeet Trichoglossus euteles and T. iris; Sphæcothera viridis, a green oriole, and the red Cyornis hyacinthina. Of the butterflies Papilio œnomaus and P. liris the swallow tailed butterflies occur: also,

Cethosia Leschenaultii and several Picidæ. Small quantities of copper and gold are found.

The land mammals in Timor are only seven in number, Macacus cynomolgus common all over the Indo-Malayan Archipelogo ; Paradoxurus fasciatus, a civet cat ; Felis megalotis. a tiger cat ; Cervus Timoriensis ; Sorex teais, and Cuscus orientalis. The south-east coast of Timor near Mount Allas is according to Bikmore occupied by the Papuan race with frizzled hair in tufts on the head. Mr. Earl says that some of the people on the table land back of Dilli, have opaque yellow complexions with hair of a reddish or dark auburn colour, and that the hair of others is straight, fine and of a reddish line, and that every intermediate variety of hair and complexion between this and the black or deep chocolate colour and the short tufted hair of the mountain Papuan is found in Timur, and it is possible that the races are there mixing as its position is next to Papua.—*Wallace, i. p.* 184 *to p.* 211. *Mr. G. W. Earl, from p.* 180 *to* 181.

Semao island, the natives of this place have been named by Mr. Crawfurd the Negro Malayan race. The people are like those of Timor with frizzly or wavy hair and a coppery brown colour. Semao island has abundance of monkeys, one of them the Macacus cynomolgus, or hair lipped monkey, which is found all over the western islands of the Archipelago.

Timor Laut or Tenimber Islands, form a group which consists of the large island of Timor Laut, the islands of Larat and Virdati, and the numerous small low lands fronting its northern side. Timur-laut, means Timor of the sea, or to the eastward.

The Kei group of Islands, adjoining the Arru Islands, are inhabited by the Arafura race. Ke, Kei or Ki is prefixed to the names of all their villages. The great Kei is about the size of Tanakeka an island near Macassar. The men profess mahomedanism, but eat hogs flesh, and the islands produce Maratigo and Banyaro woods, well adapted for masts. At *Dori*, the Papuans are called Myfore. They are about 5 feet 3 inches high, few attain 5 feet 6 inches. They wear their crisped hair its full length, and generally uncared for, which gives them a wild, scared appearance. The men, not the women, wear a comb. The Papuan women of Ke, are not secluded, the children are merry, noisy and have the nigger grin, and amongst the men is a noisy confusion of tongues and excitement on every occasion. *The Ki*, group of ten islands form the northern of the south-easterly islands. The natives are industrious and great boat builders.

Carpophaga concinna occurs in the Kei and in Banda where it is called the nutmeg pigeon. The islands, covered with luxuriant forests, are occupied by two races, one of them the Papuan who make cocoanut oil, build boats and make wooden bowls, their boats are from small planked canoes to prahus of 20 to 30 tons burden. They build the skin first and fit on the knees and bends and ribs. Money is not used but every transaction is in kind. The Papuan wears a waist cloth of cotton or bark. The other race are mahomedans who were driven out of Banda and wear cotton clothing. They are probably a brown race, more allied to Malays, but their mixed descendants have great varieties of hair, colour and features, graduating between the Malay and Papuan tribes, Cyphogastra calepyga, a beautiful species of the Buprestidæ, occurs here also the butterfly Orchis, Phalænopsis grandiflora, two large beetles, Therates labiata, and Tricondyla aptera. T. labiata is ever on the watch and from time to time emits an odour like otto of roses. T. aptera of the Malay islands resembles a large ant more than an inch long and of a purple black colour. It is wingless.—*Wallace, p. ii.* 103. *Archipelago to* 124. *Bikmore*, 243.

Ceram is the largest island of the Moluccas and, next to Celebes, of all the Archipelago. It is 162 miles long, but its greatest breadth is only 42 miles. The island is one long mountain chain that sets off transverse spurs, and some of the peaks are 5,000 or 6,000 feet in height. The people of Ceram approach nearer to the Papuan type than those of Gillolo. They are darker in colour, and a number of them have the frizzly Papuan hair ; their features are harsh and prominent, and the women are far less engaging than those of the Malay race. The Papua or Alfuro, man of Ceram gathers his frizzly hair into a flat circular knot over the left temple, and place cylinders of wood, as thick as one's fingers and coloured red at the ends, in the lobes of the ears. They are very nearly in a state of nature, and go almost naked, but armlets and anklets of woven grass or of silver, with necklaces of beads or small fruits, complete their attire. The women have similar ornaments, but wear their hair loose. All are tall, with a dark brown skin, and well marked Papuan physiognomy. The Alfuro or Papuan race are the predominant type in the island of Ceram. Of twenty-eight words of the language of Ceram, nine of the words are Malay, two Javanese, and seventeen are common to these two languages. The cluster of islets lying at the south-east extremity of the large island of Seran as it is called by the natives, or Ceram, as it is laid down in the maps, are known as Ceram. They are situated in latitude 30° 55' south, and in L. 133° E. and form

one of the most remote trading stations to the eastward, from which the produce of the Archipelago is conveyed in native vessels to this port. The Island of Ceram is the second in size of the Moluccas, having an estimated area of about 10,000 square miles. The mountains are from six to eight thousand feet in height, sending down innumerable streams to the sea. The vegetation is every where luxuriant, and the trees gigantic. Admiral Keppel had in his possession a circular slab of wood from the Island, three and a half inch thick, eight and a half in diameter. The sago palm in particular is more abundant and productive, than on any of the adjoining islands. Cloves and nutmegs grow wild. The names of the several islets which compose the Ceram group are Seranreh, Gesir, Kaliwaroo, Gorong, Manakoo, and Malomgee. Of these, the two largest re Gorong and Manakoo, and are the only ones of the group which exhibit any appearance of fertility: they are represented to be hilly and covered with wood, except where cleared for the purposes of cultivation, which however seems confined to the little rice which is grown on them. They produce fruit trees in considerable abundance, and among them the durian and mangosteen, as also the wild nutmeg, the cocoanut and sago palm, the latter supplying to the natives the chief article of subsistence. Ceram has on its western side the three islands Bonoa, Kelang and Manipa. The commercial products from these islands consist of tortoiseshell, mother o'pearl shell, beche de mer, wild cinnamon, wild nutmegs, and birds of paradise. —*Bikmore*, 253. *Keppel's Ind. Arch., Vol. II. p.* 196.

Ceram Laut.—A cluster of islets lying off the south eastern extremity of the large island of Seram or Ceram in lat. 3° 55' S. and 133° E. They produce tortoiseshell, mother o'pearl shell, beche de mer, wild cinnamon, wild nutmegs, and birds of paradise. Ceram Laut is the most westerly and the largest of the range of small islands which extend 15 or 18 miles E. &. W. *Ceram Laut*, means Ceram lying to seaward.

Ceram Laut is the great place to which the Bugis carry the Papuan slaves whom they steal from New Guinea. Ceram Laut, and Goram are seldom visited by Europeans. The natives of the Ceram Laut islands repair chiefly to the northern coast of Papua, or the island of New Guinea, from which they are distant only about a day's sail, to procure the various articles of produce we have mentioned—that part of this vast island being called by the Bugis Papua—Nothing. Mother o'pearl shells are however procured by the Bugis themselves in greater quantities at the Aroo islands. The Papuans of New Guinea, it seems, have not yet been made acquainted with the use of firearms among themselves; they have the sumpit or blow-pipe, but their principal weapons are the bow and arrow, and a light spear or lance. Although the inhabitants of the Aroo island are represented by the Bugis as being of the same race as the Papuans, they enjoy a much more unrestricted intercourse with the inhabitants, who trade freely with them and permit them to settle. Mother o'pearl shell is obtained here in great quantities, and tortoise shells and trepang or beche de mer, are also procured. The Aroo people employ their Papuan slaves in diving for the mother o'pearl shell, and in fishing for beche de mer. The people of the Ceram isles appear to have themselves little or no communication with the Aroo islands.—*Journ. of the Ind. Arch. December* 1852, *p.* 690-691. *Horsburgh*; *Bikmore* 242.

Goram, a group of three islands in the East Archipelago. S. E. of Goram is a high group composed of raised coral reefs 300 or 400 feet, with a volcano on the island of Teor which broke forth in 1659. In the Goram group, at Manowolko, east of Ceram, a slight infusion of Papuan on a mixture of Malay and Bugi has produced a good looking people. The Goram people are wholly traders, every year they visit the Tenimber, Ke and Aru islands, the whole N. W. coast of N. Guinea, from Oetanata to Salwatty and the islands of Waigiou and Mysol. They also extend their voyages to Tidore, Ternate, Banda and Amboyna. Their prahus are all built by the Ke islanders, who annually turn out hundreds of neat boats. The Goram people trade in trepang, medicinal Mussoi bark, wild nutmegs and tortoise shell, which they sell to the Bugi traders at Ceram Laut and Aru.—*Bikmore*, 243. *Wall.* II. 53, 60.

The Keffing group consist of 17 islands. Their inhabitants resemble those of the S. Coast of Ceram, and are not of the Papuan or negro race, they are great traders and constantly visit New Guinea and purchase birds of paradise, luri, crows, pigeons, megapodiidæ and scented woods.

Moluccas include five islands off the W. Coast of Gilolo, with Buru, Amboyna, and the other islands off the S. Coast of Ceram. The three large islands, are Gilolo, Ceram and Bouru with a great number of smaller ones, amongst others Batchian, Morty, Obi, Ke, Timor-Laut, Amboyna, Ternate Tidore, Kavia and Banda. These occupy a space of ten degrees of latitude by eight of longitude, and by groups of small islands they are connected to N. Guinea on the east, the Philippines on the north, Celebes on the west and Timor on the south. The land mammals are few in number. Of

bats however 25 species are known. The only one of the quadiamana, is Cynopithecus nigrescens, at Batchian, the Viverra tangalunga, Rusa hippelaphus, *Var;* Babirusa, Sorex myosurus; the flying opossum, Belidens ariel, a beautiful little marsupial animal like a flying squirrel, and three species of Cuscus, opossum like animals, with long prehensile tails, small heads, large eyes with a covering of woolly fur, their flesh is every where eaten. There are, however, 265 species of birds known, Amongst them the large red crested cockatoo, two species of the Eclectus parrot, and five of the beatiful crimson lories, 21 species of pigeons, 16 species of kingfishers and the mound making megapodii, for M. Wallacei inhabits Gilolo, Ternate and Bouru.

The insects are very numerous and very beautiful, Pieridæ, Danaidæ, Ornithoptera priamus, helena and remus, Papilio Ulysses, deiphobus and gambrisius; Iphias leucippe, one of the Pieridæ, also Hestra idea of the Danaidæ; two large Nymphalidæ; Diadema pandarus and Charaxus euryalus, and amongst the beetles Enchirus longimanus, Xenocerus semiluctuosus and a species of Eupholus.

Amboyna is alike the name of the island and of the chief city. The west side of the island is called Hitu and the east side Lai-Timur. Amboyna and Banda are supposed to have been discovered by Antonio d' Abreu, a Portuguese captain who left Malacca in 1511 : but Ludovica Barthema (Vartoma) of Bologna claims to have been there in 1506. Amboyna town has 14,000 people. The city people seem to be mixtures of Papuan or Ceramese, Malay, Portuguese, with an occasional crop of Portuguese or Dutch, half civilized, half savage lazy people.— *Wallace, i.* 300; *ii.* 79 *to* 90. *Bikmore,* 130.

The Banda group consists of ten islands, the largest of which is Lontar or Great Banda, it is crescent shaped and Pulo Pisang, Banana island, and Pulo Kapal, ship island, lie in the hollow of the crescent and form the arc of a circle. Within this arc are three other islands, the highest of which is Gunong Api, next Banda Neira, N. E. of which is Pulo Krakka or Old Woman's island. D' Abreu, a Portuguese commander was the first European who visited them. This was named the nutmeg group and for nearly a hundred years the Portuguese monopolized the trade. In 1609, the Dutch attempted to take these islands, but the war lasted 18 years, and the natives who survived all fled to the neighbouring islands. The Dutch had to cultivate these islands with slaves, and when slavery was abolished, with convicts, of whom in 1865 there were about 3,000. Its three islands enclose a secure harbour and the water is so transparent, that living corals and minute objects are seen below. Almost all the island is covered with nutmeg trees, grown under the shade of the Canarium commune. About $\frac{3}{4}$ of the inhabitants are mixed races, Malay, Papuan, Arab, Portuguese and Dutch, but the aborigines, doubtless were Papuans, and a portion of them still exists in the Ke islands to which they emigrated, when they first took possession of Banda. Of the birds is a very handsome fruit pigeon Carpophaga concinna, which feeds on the mace and is found also in Ke and Matabellow, and a small Fruit dove, Ptilonopus diadematus.—*Wallace, i. p.* 289 *to* 291. *Bikmore,* 221.

Batchian. The interior of Batchian is uninhabited, there are only a few villages on the coasts. The people are the Batchian Malays, who differ very little from those of Ternate. Their language, however, has more of the Papuan element in it, with a mixture of pure Malay showing that they are formed from stragglers of various races, almost homogeneous. The Orang Sirani (qu. Nasrani or Suryani) are christians of Portuguese descent, like those of Ternate. Many of these have a Portuguese physiognomy, but their skin is generally darker than that of the Malays. They speak Malay, with a large number of Portuguese words and idioms. A third race is the Galela men from Gilolo, and the fourth race, is a colony from Timor in the eastern peninsula of Celebes who were brought here, a few years ago, at their own request to avoid extermination by another tribe. They have a very light complexion, open Tartar physiognomy, low stature and a language of the Bugis type. They are an industrious agricultural people and supply the town with vegetables. They make a good deal of bark cloth, similar to the "tapa" of the Polynesians. A cylinder of bark is taken off and soaked and beaten till it be as thin and as tough as parchment. It is used for wrapping up clothes also dyed with a bark dye and sewed into jackets. The Orang Sirani are very fond of dancing. In three hundred years, they have changed their language and lost all knowledge of their nationality but in manners and appearance they are almost pure Portuguese. Every where in the east where the Portuguese have mixed with the native races, the offspring are darker in colour than either of the parent stocks. This is the case with the Orang Sirani and with the Portuguese of Malacca and Goa. This is not the case in South America, where the Mameluco, the offspring of the Portuguese and Indian, is often fairer than either race, but always fairer than the Indian. Batchian and Tawali islands are separated by a narrow strait.

Makian, north of Batchian, is a volcano, of which in 1646 there was an eruption.

Motir, north of Makian is a trachytic cone.

Gold has been washed for in the island of Batchian ever since 1774.

Obi, Batchian and the three southern peninsulas of Gilolo, possess no true indigenous population. The Orang Sirani or Christian descendants of Portuguese are as civil, obliging, and industrious as the Malay, but they consider themselves of a superior order and are inclined to trade and commerce rather than to manual labour.—*Wallace, ii.* 19—41. *Bikmore*, 299.

Gilolo, is one of the Molucca Islands. Its north end is in about Lat. 2° 23'. N. It has a long mountainous coast. High bold land, with three remarkable peaks. The indigenes live in the north of the island. They are radically distinct from all the Malay race. Their stature, their features, as well as their dispositions and habits are almost the same as those of the Papuan. Their hair is semi-Papuan, neither straight, smooth and glossy like all true Malays, nor so frizzly and woolly as the perfect Papuan type, but always crisp, waved and rough, such as often occurs among the true Papuans but never among the Malays. Their colour alone is often exactly that of the Malay, or even lighter. Of course there has been intermixture and individuals are occasionally seen whom it is difficult to classify, but in most cases, the large somewhat aquiline nose with elongated apex, the tall stature, the waved hair, bearded face, and hairy body, as well as the less reserved manner and louder voice unmistakingly proclaim the Papuan type. Here is the exact boundary between the Malay and Papuan race. It is only in the northern peninsula that these Papuan indigenes exist, the whole of the rest of the island with Batchian and the other islands westward being exclusively inhabited by Malay tribes like those of Ternate and Tidore. This would seem to indicate that the Alfuro are a comparatively recent immigration, and that they have come from the north or east, perhaps from some of the islands of the Pacific, though it is difficult to understand why so many fertile islands should possess no indigenes. The Galela race are natives of a district in the extreme north of Gilolo, but they are great wanderers over the Archipelago. They are a very fine race, remarkably energetic and industrious, of light complexion, tall and with Papuan features, coming near to the drawings and descriptions of the true Polynesians of Tahiti and Owyhee. They build large and roomy prahus with outriggers, and settle on any coast or island they take a fancy for. They catch turtle and tripang, hunt deer and wild pigs and dry the meat, and cut down the forest and plant rice or maize. The people of Gilolo are called Alfura. Bikmore, however, erroneously states that they are strictly of the Malay type, and have not the dark skin and frizzly hair of the Alfura of Ceram and Buru, though representatives of that people may exist in Gilolo. The population of Gilolo are supposed to be 75,000, all but 5,000 of them are under the sultan of Ternate.

The Clove tree grows spontaneously on the Moluccas, viz, Ternate, Tidore, Motir, Makian, and Batchian.—*Horsburgh. Wallace, ii.* 13, 405. *Bikmore*, 313. See Pulo Gasses, Syang; Waygiou, Weeda Islands, Wutsau.

The Keffing Islands is a little group, in the Molucca sea, encircled by very extensive reefs projecting into deep water, and rendering it difficult of approach. The cachelot or spermaceti whale abounds in the ocean, and might support an extensive fishery. Some of the islets are low, sandy, girdled by reefs, and, as in Ghissa, with a lagoon in the centre, absolutely swarming with fish, while the shores are peopled by ducks and snipes. Pulo Manok, or Bird island lies midway between Ceram and the Serwatty group, a high solitary mountain resting on the bosom of the sea, with a truncated cone, desert, and the refuge only of myriads of birds, which deposit such vast quantities of eggs, that many of the natives of the neighbouring isles visit the place and subsist for whole days on this wholesome food. Sulphur is also found on the rocks. The little communities existing in these scattered groups present curious phases of social life. Dwelling in houses erected on posts, they in many instances surround their villages with rough walls of coral, occasionally carrying a similar fortification all along the shore. Many indications among them proves the existence of piracy. Slaves, nutmegs, trepang, tortoise-shell, edible birds' nests, are bartered for powder, shot, muskets and small cannon, besides calico and china-ware, betray the inclination of the people to the use of arms. Many of them, apparently peaceful traders are secretly addicted to piracy, though some bear a character for innocence and love of industry altogether inconsistent with this pursuit. Among these are the inhabitants of Motir, a gentle, tranquil, sober tribe, following the occupation of potters, and supplying the neighbouring islands with vessels and utensils of various kinds made of red clay elegantly moulded and of good quality. These compete in the markets of the Molucca sea, with the plates and pans brought by the traders of Keffing from the Ki Islands.—*Kolff's Voyage of the Dourga*, 220,345. *Darwin's Coral Reefs. Crawfurd's, Ind. Arch. III.* 447. *Temminck*, 111,307. *As. Journ. s.* 336, *quoted in St. John's Indian Archipelago, Vol. I. p.* 142.

Arroe or Arru Islands, extend from Lat. 7° 0' to Lat. 5° 52' S. and in Long. 133°. 56' E. run for upwards of 100 miles N. and S.

and lie between the Timor Laut group and the S. W. Coast of New Guinea. They are a closely packed group, distant about sixty miles from the south-west coast of New Guinea, and between forty and fifty miles in breadth. On the eastern side of the group are found banks of sand and mud, stretching far out to sea, which are only covered to the depth of a few feet at low tides. Inland are many fresh water swamps with thick impenetrable jungle in other places. Their produce is pearls, mother of pearl, tortoiseshell, birds of paradise and trepang. The timber of the islands is much praised. The Arru Islanders have much intercourse with strangers. They purchase from the Bugis the Papuan slaves brought from New Guinea, who are then employed in diving for pearls and in the beche de mer fishery. The Arru Islanders are impoverished by their excessive use of intoxicating liquors, imported from Java and Macassar. In personal appearance the people are between the Malayan and Polynesian Negro. They are not many degrees further advanced in civilization than the natives of the north coast of Australia to whom many of them bear considerable personal resemblance. Some of the Arru men profess christianity and some are mahomedans. In stature they surpass the civilized natives of Celebes. The dress of the men is a piece of matting or cloth girded round the loins and drawn tight between the thighs, and a salendan or shawl. No fillet is worn round the head. The hair is woolly and frizzled out like that of the Papuan. The men are of a jealous disposition and easily roused to anger by abuse of their women or ancestors, otherwise they are mild of disposition. The women wear a mat in front and one behind. When a person of consequence dies, these are stripped off and they rush into the sea where they disport for some time. Christianity was introduced into the Arru Islands many years ago by the Dutch of Amboyna and nearly all the principal people profess this creed. The Arru people ornament their houses with brazen trays, dulam or talam, and elephants' teeth, which are broken up when the owner dies. Tripang is abundant near the islands, in nearly all the varieties, but is indifferently cured. Neither the Kei or Arru islanders ever abscond to avoid paying their debts. The Arru islanders bear a strong personal resemblance to the aborigines of Port Essington; indeed, on several occasions in which natives from the neighbourhood of the late settlement visited the islands in European vessels, they were considered by the Arruans as belonging to some remote part of their own group. But the Arruans also possess so many characteristics in common with the *Outanata* of the opposite coast of New Guinea, that it would be necessary to include them in a general account of the Papuans. One of their most singular peculiarities, however, consists in the value which they attach to elephants' tusks, brass gongs, and huge porcelain dishes. An odd custom, and one that is probably unique in the world, consists in the destruction of a man's goods on his death, instead of a distribution of them among his surviving relations. All the chattels which he has collected during his life, including tusks, gongs, and precious China dishes, are broken in pieces and thrown away: and in the villages may be seen heaps of these fragments of property which custom or some singular superstition has deterred the living from appropriating. The natives of Aru are Papuans, with black or sooty brown skins, woolly or frizzly hair, thick ridged prominent noses, and rather slender limbs, most of them wear nothing but a waist cloth. Papuan boys sing cheerily as they walk along or talk aloud to themselves, which is quite a negro peculiarity. They have as food raw sago and vegetables, fish and molluscs, and tobacco, betel and arrack are their luxuries. Their houses are rude sheds. There are some mixed races amongst them. The Papuan talks, laughs, shouts without intermission. The women have only a mat of plaited strips of palm trees worn tight round the body and reaching from the hips to the knee. Their frizzly hair is tied in a bunch at the back of the head. They delight in combing it or forking it, using a large wooden fork with four diverging prongs, to separate and arrange the long tangled frizzly mass. They and the men wear earrings, necklaces of silver, brass, shell. The Arru Papuans told Mr. Wallace that some of their tribes kill the old men and women when they no longer can work, but he saw many old folk. Their hair is usually black and strongly curled. Like the African Somali, they wash it with wood-ashes or lime water, which impart to it a lightish colour and cause it to appear rough, both these peculiarities being considered very tasteful by the Alfoer as well as by the Papuans. The Arruans are taller and more muscular than the Malays and Bugi of Celebes, but are inferior in porportions, if not in stature, to the ordinary run of Europeans. The usual height of the men is from five feet four inches, to five feet eight inches, and there is a great inclination to slimness about the lower extremities among the taller men, some of whom attain the height of six feet. The Arafura of Vorkay (one of the southern Aru) possess no religion whatever. Of the immortality of the soul they have not the least conception. To all enquiries on this subject they answered, "No Arafura has ever returned to us after death, therefore we know nothing of a future state, and this is the first time we

have heard of it. Their idea was Mati Mati sudah. When you are dead there is an end of you. Neither have they any notion of the creation of the world. They only answer "None of us are aware of this, we have never heard anything about it, and therefore do not know who has done it all. The ports frequented by the foreign trading-vessels are all in the north-western part of the group, where the people are evidently of a mixed race, the natural result of strangers from the west having married and settled among them during an intercourse which appears to have extended over several centuries.

Baju, a maritime people in the Arru Islands, who venture far out to sea. Many of the Baju remain throughout the year near the Dutch settlement of Macassar, on the south end of Celebes, where they are found very useful in carrying despatches. They are chiefly employed by the Chinese in fishing for trepang, or sea-slug, and according to the policy invariably adopted by the latter in their dealings with the natives, are generally involved in debt, from which extrication is nearly hopeless. The demand against each boat or family usually averages about four hundred guilders (twenty-five pounds sterling), and, extraordinary as it may appear, no instance is on record of their ever having absconded to avoid the payment of their debts.—*Earl, p.* 335. *Quarterly Review, No.* 232, *p.* 512 *Wallace*, II. 141 to 180. *Lubbock Origin of Civil. p.* 122.

New Guinea.—Its S. W. part is known to native traders as Papua-kowiyee and Papua-Onen : it is inhabited by the most treacherous and blood-thirsty tribes, and up to the present time traders continue to be murdered there. The Papuan races of Mysol, Salwatty Waigiou, and some parts of the adjacent coast, have become peaceable. On the S. W. Coast however, and in the large island of Jobie, the Papuan race are in a very barbarous condition and take every opportunity to rob and murder. The race in the interior of Dorey are called Arfak, they are savages. The Papuans of Dorey hang the skulls of the Arfak under the eaves of their houses, which are built in the water, on posts and led up to by rude wooden bridges. There is a large Council Chamber, at Dorey, supported on larger posts on each of which is a rude carving of a naked man or woman with other revolting carvings near. The people of Dorey resemble those of the Ke and Aru islands, many of them are very handsome, tall, well-made, with well cut features and aquiline noses. Their colour is a deep brown, often approaching to black, and their frizzly hair is combed up into a mop-like form by means of a long six pronged fork. The language spoken at Dorey is not understood by the Papuans at Humboldt Bay. The Dorey people are great carvers and painters. Their food is roots and vegetables with fish and game as a luxury. The Arfak or hill-men of N. Guinea are generally black but some are brown like the Malay. Their hair, though more or less frizzly, is sometimes short and matted, instead of being long, loose and woolly. Mr. Earl describes the features of the New Guinea Papuans as of a decidedly negro character :—broad flat noses, thick lips, receding foreheads and chins, and that turbid colour of what should be the white of the eye which gives a peculiarly sinister expression. Their complexion is usually a deep chocolate-colour sometimes closely approaching to black but certainly a few shades lighter than the deep black that is often met with among the negro tribes of Africa. The many Papuan tribes in New Guinea, are generally in a state of warfare with each other and return from their warlike expeditions with heads. They are superstitious and worship a wooden deity called Karwar, 18 inches high, whom they consult on all occasions. A widow remains in the family of her deceased husband. The negroes of New Guinea are in various states of civilization. Some of the rudest dwell in miserable huts and seek a bare subsistence by the chase or the spontaneous productions of the forest. There are, however other Negro tribes living on the coasts who have made some advance in civilization. These dwell by whole tribes in huge barn-like houses raised on posts, like those of the wild inhabitants of Borneo, but ruder. Their beard is crisp. The forehead is high and narrow ; eyes large, dark brown, or black : nose flat and broad : mouth large, lips thick and teeth good: few have regular features, and most are apathetic. The ordinary men wear a waist cloth made of the bark of a tree, called "mar," which is wrapped round the waist and passed between the legs. Women wear a short sarong to the knee, generally of blue cloth. Men and women tattoo their bodies on occasions, by pricking the skin with a fish bone and rubbing in lamp black. The Dori people are a seafaring people and are expert swimmers and divers. Their prahus have outriggers and are excavated from the trunk of a single tree. Their food consists of millet, obi, maize, a little rice, fish and hogs' flesh and fruits. Sago is imported in small quantities. Theft is considered a grave offence : they are chaste and marry one wife. The dresses of the chiefs among the natives of Dori consist of the saluer, or short drawers of the Malays, and the kabya, or loose coat of calico, with a handkerchief tied round the head. The common men, and the chiefs themselves, when not in the presence of strangers, wear only a chawat, or waist-cloth of the bark of the fig, or of the paper-mulberry-tree, beaten out like

the bark-cloth of the Polynesian. The north coast of N. Guinea is generally high ; towards the sea, there is low land, but a little way inland, a chain of mountains extends parallel to the coast and elevated in some places 4,000 or 5,000 feet above the sea. It is the great seat of the Papuan race, and is 1,500 miles in extreme length, or nearly double that of Borneo; but its superficial area is probably less than that of the latter island (200,000 square geographical miles), as there is every reason to believe that the south coast of New Guinea, immediately opposite to the Gulf of Carpentaria in Australia, forms a deep indentation similar to the Great Bay on the north coast, there being a space of two degrees and a half of longitude in which the land has not yet been seen. Of this unexplored space, 118 miles, or four-fifths of the whole, were taken possession of by proclamation, in the name of the king of Holland, in the year 1828. As the commanders of Her Majesty's ships employed in the Surveying service are said to have general instructions not to interfere with coasts claimed by foreign powers, unless the interests of navigation absolutely require it, this in some degree accounts for the fact that so large a space of coast, within 600 miles of a European settlement that has been established more than three centuries, remains still unknown to civilized nations. The names by which the island is known to Europeans and Asiatics, New Guinea and Tanna Papua, both distinctly refer to the leading peculiarity of the race by which the coasts are inhabited. The most striking geographical feature of the great eastern peninsula consists in a backbone of lofty mountains, which apparently extends throughout its length. Their practice of standing up to paddle their canoes is repeatedly noticed by Lieutenants Kolff and Modera, and it seems to be general throughout the coasts of New Guinea. The brown coloured natives of the Archipelago all sit, or "squat," while paddling their canoes, excepting the Baju Laut, or Sea Gypsies, who stand like the Papuans, and give as a reason for assuming this posture, the superior facilities it affords them of seeing turtle, and of chasing them when discovered.—*G. W. Earl, p.* 40. *Crawfurd Malay Gram. and Dic. Vol.* 1. *p.* clxiii. *Mr. Earl, page* 71.

Ansus island in the Eastern Archipelago, is inhabited by Papuans. Their houses, built on posts, are placed entirely in the water. At very low water only is the beach partially uncovered. This beach consists of mud, in which mangroves grow luxuriantly and completely obstruct a landing. The gardens, from this cause, are situated on the surrounding islands, principally on an island with a high beach lying opposite to the kampong. The Ansus Papuans wear their hair in tufts. Their appearance is good natured, faces regular, eyes beautifully black, the mouth broad with beautiful regular teeth, and the forehead high but narrow. Many have thin lips and finely curved noses, which give them a more European physiognomy. The men are generally handsome and well formed, stout, without being too thick, strong and muscular ; the women very good looking ; and some children with very regular soft faces and long pendant curling hair.—*Journal of the Ind. Arch., June* 1852, p. 330-1-2 and 3.

Brumer. The women of Brumer Island, on the south coast of New Guinea, are tattooed on the face, arms, and front of the body, but generally not on the back. in vertical stripes less than an inch a part, and connected by zigzag markings. On the face these are more complicated, and on the forearm and wrist they are frequently so elaborate as to resemble lace-work. The men are more rarely tattooed, and then only with a few lines or stars, on the right breast. Sometimes, however, the markings consist of a double series of large stars and dots stretching from the shoulder to the pit of the stomach.—*Lubbock Orig. of Civil, p.* 44. *McGillivray's voyage of the Rattlesnake, vol.* 1. *p.* 262.

Aiou or Yowl, is a group of islands situated about 70 miles W. N. W. from the Cape of Good Hope, on the W. Coast of New Guinea, and 30 miles N. E. from the island of Waygiou in the Gillolo Passage. The group consists of circular low isles, 16 in number. The largest lies in about lat. 0° 25' N. long. 131° 0' E. The group is surrounded by an extensive coral reef, nearly a degree in circumference, the south-western portion of which is separated from the main reef by a narrow, but deep channel. Aiou Baba, the largest of the group, lies on this detached portion of the reef and is about 7 miles round and 500 feet in elevation. The north-eastern or larger reef, which contains the islands of Abdon and Konibar, with several coral islets, is said to have an opening on the N. W. side which admits large vessels within the reef, but if this be the case, the harbour is not frequented, there being no temptation in the way of refreshments to induce large vessels to put in there. The inhabitants, who are Papuans, are few in number and occupy themselves almost exclusively in fishing and in catching turtle, with which the lagoons within the reef abound. The chief exports are tortoiseshell of good quality, which is obtained here in large quantities, and trepang. These are purchased by Chinese and sometimes European traders from Ternate, in Moluccas, the king of which place assumes supreme autho-

rity over all those parts of the Coast of New Guinea which his subjects have been in the habit of visiting for purposes of trade. The traders to Aiou all employ small vessels, which alone are adapted for going within the reef of Aiou-Baba, their chief resort. They bring red and white calicoes, thick brass wire, old clothes, glass beads, and all sorts of ornamental finery which the negroes of New Guinea delight in as much as those of Africa. The natives are tolerably friendly to strangers, but must not be trusted too much, as they are inclined to be treacherous and revengeful, which is the case, indeed, with all the Papuan tribes. A vessel visiting these islands for purposes of trade should always be provided with a native of Ternate or Tidore to act as pilot and interpreter.—*Journal Ind. Arch.—Horsb.*

The *Languages* in the islands of the Eastern Archipelago :—

	Languages.	Spoken at	Written character used.	Religion and Priests.
	1 Malay ...	Singapore	Arabic	
	2 Javanese ...	Java	Javanese	
	3 Sapak ...	Lombok	...	Indigenes of Lombok, a pure Malay race professing mahomedanism.
Celebes.	4 Macassar ..	S. Celebes near Macassar	Native	Mahomedan.
Celebes.	5 Bugis ...	Large part of Celebes	Native distinct form Macassar	,,
Celebes.	6 Bouton ..	Boutony	...	A large island S. of Celebes.
Celebes.	7 Salayer .	Salayer	...	A smaller do.
Celebes.	8 Tomore ...	E. Peninsula of Celebes in Batchian	...	Pagans.
			The people speaking these five languages of Celebes are of pure Malayan type, and all but the Tomore race, are equal in civilization to the true Malays.	
Celebes.	9 Tomohon, 10 Langowen	Plateau of Minahassa	These nine languages with many others are spoken in the N. W. Peninsula of Celebes, by the people called Alfuro. These languages are falling into disuse and Malay is becoming the general medium of communication. Most of the people are being converted to christianity.	
Celebes.	11 Ratahan, 12 Belang	S. E Coast of do.		
Celebes.	13 Tanawanko	West ,, ,,		
Celebes.	14 Kema ...	East ,, ,,		
Celebes.	15 Bantek ...	a suburb of Menado		
Celebes.	16 Menado ...	Chief town		
Celebes.	17 Bolanghitam	On N. W. Coast between Menado and Licoupang		
	18 Sanguir islands and Siau ...			Two groups of islands between Celebes and the Philippines. The inhabitants resemble the people of Menado.
	19 Salibabo Islands also called Talaut			
	20 Sulu Islands			E. of Celebes, Malays of the Moluccas type : Mahomedans.
Bouru	21 Cajeli ...	3 villages on the eastern side of Bouru		These people are allied to the natives of Ceram : Cajeli people are mahomedans.
Bouru	22 Wayapo ..			
Bouru	23 Massaratty ...			
	24 Amblau... ...	An island, S. E. of Bouro		Mahomedans.
	25 Ternate... ...	The most northern island of the Moluccas		Inhabitants somewhat mixed with the indigenes of Gilolo.
	26 Tidore	Next island of the Moluccas		Inhabitants undistinguisable from those of Ternate.
	27 Kaioa Islands	North of Batchian		
	28 Batchian ...	...		Mahomedans : inhabitants, like the preceding.
	29 Gani ...	A village on the S. peninsula of Gilolo		Moluccan Malays. Mahomedans.
	30 Sahoe ...	Villages in N. Gilolo		Inhabitants called Alfuro. They are indigenes of Polynesian type, but brown skins and Papuan hair and features : Pagans.
	31 Galela ...			
	32 Liang	Villages on the N. Coast of Amboyna		Of mixed Malay and Polynesian type. they are mahomedans or christians.
	33 Morella and Mamilla ..	Do. in N. W. do.		
	34 Batumerah ...	A suburb of Amboyna		Inhabitants of the Molacca Malay type —Mahomedans.
	35 Lariki, Asilulu, Wakasiho ...	in W. Amboyna		Mahomedans from Ternate.
	36 Saparua	An island east of Amboyna		Inhabitants of the brown Polynesian type and speaking the same language as those of Ceram, opposite.
	37 Awaiya ...	Villages on the S. of Ceram		Indigenes of Polynesian type, now christians.
	38 Camarian ...			
	39 Teluti and Hoya ...	Villages on the S. coast of Ceram		Mixed brown Papuan or Polynesian and Malay type ; Mahomedans.
	40 Ahtiago and Tobo ...			
	41 Ahtiago... ...	Indigenes inland from Ahtiago		Alfuro of brown Papuan or Polynesian type —Pagans.

42 Gah	E. Ceram	Alfuro of Ceram.
43 Wahai	N. Coast of Ceram	Inhabitants of the N. Coast of Ceram, of mixed race, speak several dialects of this language: Mahomedans
44 Goram	Small islands E. of Ceram	Of mixed race: Mahomedans.
45 Matabello ...	Do. S.E. do	Brown Papuan or Polynesian race. Pagans.
46 Teor	Do. S.E. of Matabello	Do. do.
47 Ke Islands ...	...	On the W. of the Aru Islands, true black Papuans; Pagans.
48 Aru do. ..	...	W. of N. Guinea True Papuans.
49 Mysol Coast ...	...	N. of Ceram, semi-civilized Papuans, with mixture of Moluccan Malays.
50 Mysol interior.	...	True Papuans; Pagans.
51 Dorey	N. Coast of N. Guinea	Do. do.
52 Teto ..		Intermediate between the true and the brown Papuans —Pagans.
53 Vaiqueno in E. Timor		
54 Brissi in W. Timor ...		
55 Savu ...		Islands W. of Timor, of mixed race, with apparently much of the hindu typ.
56 Rotti ..		
57 Allor ..		Islands between Flores and Timor, inhabitants of dark Papuan type.
58 Solor ...		
59 Bajau or Sea Gypsies ...		A roaming tribe of fishermen of Malayan type all over the Archipelago.

Wallace, Vol. II. p. 292 to 295.

Mr. Crawfurd, (*Malay Gram. and Dic. Vol. I. p. vii.*) considers that a certain connexion of more or less extent exists between most of the languages which prevail from Madagascar to Easter Island in the Pacific, and from Formosa, on the coast of China to New Zealand. Thus over 200 degrees of longitude and seventy of latitude, or over a fifth part of earth's surface. In this are the innumerable islands of the Indian Archipelago, from Sumatra to New Guinea, the great group of the Philippines, the Islands of the North and South Pacific, and Madagascar. It is inhabited by many different and distinct races of men, as the Malayan, the brown Polynesian, the insular negro of several varieties, and the African of Madagascar. Of these, the state of civilization is so various that some are abject savages, while others have made a respectable progress in the useful arts, and

have even attained some knowledge of letters. He is of opinion that the leading race in the Archipelago is one and the same, but the languages are many, with more or less intermixture of some principal ones throughout. In Borneo, he says, there are at least 40 languages. In Celebes and its islands at least 10; in Flores 6; in Sumbawa 3; in Sumatra and its islands not fewer than 10; and even in civilized Java with its islands, 3. It is the same in the Philippine islands, and in Lucon alone, there are three. He says, that in the Eastern Archipelago, no languages exist derived from a common stock, or standing to each other in the relation of sisterhood, as Italian, Spanish, and French, do to each other; or as Gaelic does to Irish, or Armorican to Welsh, or Scotch to English. The only dialects that exist are of the Malay and Javanese languages, but they consist of little more than differences in pronunciation, or the more or less frequent use of a few words. In the Polynesian Islands alone, real dialects of a common tongue do exist, but there the number of words common to such dialects, and to the languages of the Archipelago, is so trifling that it refutes at once the notion of a common origin. In Malay, the most familiar words for the head the shoulder, the face, a limb, a hair or pile, brother, house, elephant, the sun, the day, to speak and to talk, are all Sanskrit. In Javanese, Sanskrit furnishes words for the head, the shoulders, the throat, the hand, the face, father, brother, son, daughter, woman, house, buffalo, elephant, with synonymes for the hog and dog, the sun, the moon, the sea, and a mountain. In the language of Bali, the name for the sun in most familiar use is Sanskrit, and a word of the same language is the only one in use for the numeral ten. It is on the same principle that Mr. Crawfurd accounts for the existence of a similar class of Malayan words in the Tagala of the Philippine although the whole number of Malayan words does not exceed one-fiftieth part of the language. Head, brain, hand, finger, elbow, hair, feather, child, sea, moon, rain, to speak, to die, to give, to love, are examples.

Some personal pronouns are found in the Polynesian dialects, where, in a vocabulary of five thousand words a hundred Malayan terms do not exist. A sentence of Malay can be constructed without the assistance of Javanese words, or of Javanese without the help of Malay words. These two languages can be written or spoken without the least difficulty, without a word of Sanskrit or Arabic. The Malay and Javanese, although a large proportion of their words be in common, are distinct languages, and their Sanskrit and Arabic elements are extrinsic and unessential. When this test is applied to the Polynesian languages we find an opposite result. A sentence in the

Maori and Tahitan can be written in words common to both, and without the help of one word of the Malayan which they contain, just as a sentence of Welsh or Irish can be constructed without the help of Latin, although of this language they contain, at least, as large a proportion of words as the Maori or Tahitan do of Malayan. Mr. Crawfurd is of opinion that the Malay and Javanese languages furnish the stock of the wide spread words which are common to so many tongues in the Archipelago and which have been chiefly derived from the languages of the two most civilized and adventurous nations of the Archipelago—the Malays and Javanese; and he uses the word Malayan for whatever is common to these two people. In physical form, the people speaking the wide spread Malay tongue, may thus be sketched. The average stature of the men is about five feet three inches, and of the women three inches less. They are, in fact as compared to the Chinese, the Hindus, the inhabitants of Western Asia, and Europeans, a short race. The face is lozenge-shaped, the forehead flat, the cheek bones high, the mouth large, the lips thin, the hair of the head black, coarse, lank, abundant,—that of all other parts of the body, beard included, very scanty; the skin is soft, tawny, darker than that of the Chinese, but fairer than that of any genuine hindu, and never black; the lower limbs are heavy and the whole person squab and wanting in agility. With shades of difference, not to be fixed in words, this, he says, with the exception of a few negroes, is a description which applies to all the inhabitants of Sumatra, the Peninsula, Java, Borneo, Celebes, the Moluccas, Timur, and the whole Philippine group. By any standard of beauty which can be taken, from the Ganges to the Pillars of Hercules, the Malayan must be pronounced as a homely race. The cradle of the Malay race was the plains of Menang-kabau in the interior of Sumatra from whence they emigrated and pushed their conquests, or formed settlements, to their present extensive limits. They formed colonies in the Malay peninsula and in Borneo, the former probably and the latter certainly occupied before their arrival by rude tribes of the same race of men who could offer no effectual resistance. In the remoter islands or in those occupied by powerful and civilized nations, the Malays appear only as settlers, and not colonists, as in Java and the principal islands of the Philippine Archipelago.

The Malay peninsula, called Tannah Malaya or land of the Malaya, with the exception of a few diminutive negro mountaineers, is occupied by Malays or by men of the same race, for the several wild tribes in the interior, although not calling themselves Malays, speak the Malay language, and have the same physical form as the Malays, although not calling themselves by this name, and their language contains many words that are not Malay.

Nearly the whole of the coast of Borneo is occupied by Malays who are supposed to have first emigrated to that island about the date of the reign of the Saxon king Athelstan.

The Malay tongue is now, and was, when Europeans first visited the Archipelago, the common language of intercourse between the native nations among themselves, and between these and foreigners. It is in the Archipelago what French is in western Europe, Italian in eastern, Arabic in western Asia, and Urdu in India. All nations who hold intercourse of business with strangers must understand it, and all strangers must acquire it. This is the case in Sumatra, where other languages are also vernacular, in Java, in Celebes, in the Moluccas, in Timur, and in the Philippine group. Mr. Crawfurd attributes the spread of this language to the enterprising or roving character of the people whose native tongue it is, as also its own softness of sound and simplicity of structure and consequent facility of acquirement. He adds that although Malayan civilization in all probability, sprang up in the interior parts of Sumatra, as Malay tradition alleges, still that is not above fifty miles from the coasts, with which many rivers communicate and the Malays must be considered as essentially a maritime people.

In Sumatra and the groups of islands on its western coast, in addition to the Malay, there are at least nine other languages, five of which, the Ache or Achin on the north-western end of this island, the Batak or Batta, the Korinchi east of the Batak, the Rajang or Rejang and the Lampung, are cultivated and written tongues. There are also several rude languages among the scattered tribes on the mainland. The Batak or Batta nation lie to the east of the Malays, and furnish perhaps the only recorded example of a people acquainted with letters, who practice a modified cannabalism.

The Lampung people occupy the eastern end of Java, on the straits of Sunda and fronting the western extremity of Java.

In the groups of islands on the western coast of Sumatra, are several unwritten tongues, amongst which may be named that of the Pogy or Pagi islands, the language of the Nias, and that of Maros.

Many of the Malay race have become converts to mahomedanism. The earliest conversion recorded was that of the Achinese, the nearest people of the Archipelago to the continent of Asia. This was in 1206 of our era. The Malays of Malacca were not converted until 1276; the inhabitants of the Moluccas not until 1478, and the people of Celebes not until

1495, only the year before Vasco de Gama passed the Cape of Good Hope. Thus the earliest conversion of these islanders took place 574 years after the death of Mahomed and long after the first zeal of his followers had evaporated. To this day there are a few mountaineers in Java still professing a kind of hinduism, and the Javanese retain numerous of their old pagan superstitions and have added those of their subsequent religion. They people the air, the woods and rivers, with various classes of spirits. They have the praying—or fleeting ghosts ; the baikas-a-han, kabukamale and wewe, evil spirits; and the damit and dadungawu or tutelary spirits. They now consider the hindu gods of their former belief not as imaginary beings but as real demons, and have added the jan of the Arabs.

The games of the Indian Islanders are chiefly sedentary.

Java, an island of 40,000 square miles in extent, and by far the most fertile of the Archipelago contained in 1850, 1,000,000 of inhabitants. In the eastern and central parts there may be said to be three Javanese languages,—the popular, the polite (which is a kind of facetitious dialect of it), and an ancient tongue, found only in old books and ancient inscriptions. The modern and popular language, as well as the polite dialect, is written in a peculiar character, of which the substantive letters amount to twenty. In Java, in addition to the Javanese, is the Sunda language, which is spoken over about one-third of the island extending from Cheribon across the island down to its western extremity. This tract is more mountainous than that inhabited by the Javanese, and the people somewhat less advanced in civilization, but possessing the same amiable and docile character as that nation.

The industrious, peaceful and numerous people who speak the Madurese language with its dialect the Sumanap, occupy the island of Madura, divided from Java by a strait and form in some districts the bulk of the population on the opposite shores of Java, to which, depopulated by long wars for the past two hundred years, they have been emigrating.

In the adjacent island of Bali, which is small but fertile, well cultivated and populous, is the Balinese, with its ceremonial dialect and sacred language, and it is one of the most improved languages of the Archipelago.

The fourth language, which Mr. Crawfurd considers to have a strong affinity with the Javanese, is that of Lombok, a fertile and populous island, divided from Bali by a narrow strait. This is the termination in an easterly direction, of the group of tongues which begins with Sumatra. According to Mr. Logan, Javan has a much broader, more forcible asperate and primitive phonology than Malay, and the Javan group embraces Sundan, Maduran, (with its dialect Bawian) and Bali.

Borneo, is an island of about three times the extent of Britain. In 1824, out of the forty wild tribes in its interior, eight had adopted mahomedanism and the Malay language. Amongst these were the Dyak race of Sugalam who long since abandoned the cruel practice of head hunting. The many languages of this island belong to the same class of languages as the Malay, and Javanese and the aboriginal inhabitants of Borneo are all of the same race with the Malays and Javanese. The inhabitants are divided into numerous distinct tribes, each, it is stated, speaking a separate language, and Mr Crawfurd has seen the names of at least sixty of these small nations who have no common name by which to distinguish themselves from the people of other regions. The greater part of the coast of Borneo is rather dotted than peopled by Malay settlements, according to the Malays themselves, the result of migrations from Sumatra dating as far back as thirty generations. A small portion of the eastern coast is occupied by settlements of the Bugi of Celebes of more recent date. The aboriginal inhabitants are thus, in a great measure, locked up in the interior, and precluded from access to that commerce with strangers which might civilize them. The Malays and natives of Celebes, by their superior civilization and power, domineer over the rude aborigines, without, however, being able to penetrate into the interior, or to dispossess them of their land. Nine vocabularies have been collected, the most extensive by Mr. Robert Burns who resided there, and it is that of the most numerous, advanced, and powerful tribe in the island, *the Kayan* or Kyan, whose possessions extend from the northern to the southern coast. No native tribe of Borneo has ever invented letters. The Kyan tribes in the interior, on the Kapuas, are said to be cannibals eating the flesh of their enemies. They prize heads like the Dyak race. They carry spits in the scabbards of their swords. The Dyaks of Jang-kang also are said to be cannibals. They live between Sangow and Sadong, on the Sakiam, a branch of the Sadong river. The Jang-kang people eat Malays or Dyaks or any one else whom they kill in war, and they kill their own sick if near death and eat them. Whilst a party of this people were staying at Sang-kang, one of them fell out of a mango tree and broke his arm, besides being otherwise much hurt, and his companions cut his throat and ate him up—(*Voyage of the Mæander in J. I. Arch., April and May* 1853.) The Jang-kang Dyaks are said to eat only the tongue, brain, and muscles of the leg. The men of this tribe file down their front teeth to a point, like the teeth of a saw. They

cut off their beards. There are numerous Dyak tribes settled on the Kapuas river, the principal stream on the west coast of Borneo and which is supposed to take its rise in the Batang Lupar range. Almost every tribe has its distinct language. All the houses in a Kampong are erected on posts ten or twelve feet high and are all under one roof, with only a slight partition separating the families. Dyak, in Malay Dya, is a term applied to the aborigines of Borneo, the Malay settlements being on the coasts. The Sultan resides at Brunei on the N. W. coast. The Dyaks live far inland and are divided into numerous tribes under separate chiefs, and until lately were constantly at war with each other and with the Malay settlers. In complexion, shape and features, they resemble Chinese. They are more muscular than the Malays of Borneo. They subsist on the natural products of the forests, wild roots, fruits, &c. and obtain rice in their forays. The Malays build their houses 18 or 20 feet high to avoid the Dyak spears. The Dyaks in their forays descend the rivers in the ebb tide and surround a village at night and rush on it plundering and slaying, set it on fire and return with the flood with their plunder and the heads they have acquired. These are smoked and hung up in their houses from the rafters, where sometimes 100 heads are to be seen suspended. A man could not obtain a wife until he had slain a few people and could show a head or two. They use the spear, bow, shield, club, and sumpetan with poisoned arrows, but those near the coast have fire arms. A few tribes have settled in the Malay villages, and have become civilized and evince gentleness and kindness in their manners.—*Jour. Ind. Arch.*

In Celebes, the Trans-Javan or Timorian band, and the Moluccas, is a large and important class of Indonesians, who graduate between the Anam type, the Burman and the Negrito. The most prevalent head or that of the predominant race is ovoid, but it is somewhat Burman in nose, eye and colour. The great island of Celebes may be considered the centre of a group of languages, which, although agreeing with those heretofore described, in simplicity of grammatical structure, differs very widely from them in phonetic character although spoken by the same race of men. Celebes is intersected by the equator, leaving a small portion of it in the northern and the mass in the southern hemisphere. Its greatest length is about 500 miles, but its greatest breadth does not exceed 100; and in some places it is hardly one-third of this width. Celebes may be considered to be the focus of an original and independent civilization which probably sprung up amongst the most advanced of the nations which occupy it, called by themselves Wugi, and by the Malays, and after them by Europeans, Bugi or in the plural Bugis. In material civilization the Bugi are equal to the Malay.

Of the languages of Celebes, the next in importance to the Bugi is the Macassar. The people who speak this tongue inhabit the same peninsula. They call themselves and their language Mankasara, and hence the Makasar or Mankasar, of the Malays, whence our name. Besides Bugi and Macassar, the two principal languages, there are three other languages of Celebes written in the same character, or, at least, occasionally written in it; the Mandar, the Manado, and the Gorongtalu. The Mandar is spoken by a people on that side of the south-western peninsula, which fronts Borneo.

The island of *Sumbawa*, the third in a direct line east of Java, about three times the extent of Bali or Lombok, and divided by a deep bay into two peninsulas, has three languages, the Sumbawa, the Bima, and the Tambora. The natives of Sumbawa are little inferior in cultivation to the most improved nations of Celebes. The Sumbawa and Bima languages are written in the Bugi character, but there exists in this island a singular and curious obsolete alphabet. It is ascribed to the Bima nation, but the characters do not generally correspond with the simple sounds of the Bima language as exhibited in the specimen given of it.

The large island of Flores, the fifth in a line east from Java, due south of Celebes, and of volcanic formation, affords the first example of a race of men seemingly intermediate between the Malay and Papuan, or Negro, but partaking far more of the physical form of the former than of the latter. The complexion is a good deal darker than that of the Malay, the nose flatter, the mouth wider, and the lips thicker. The hair is not lank as in the Malay; but buckles, without frizzling as in the Papuan. The stature is the same as that of the Malay, that is short and squab. According to the statements made to Mr. Crawfurd by Bugi traders, themselves settlers in the island, Flores is inhabited by six different nations, speaking as many different languages; the Ende, the Mangarai, the Kio, the Roka, the Konga, and the Galeteng, names derived from the principal places of their residence.—*Crawfurd's Malay Grammar and Dictionary, Vol. I. p. xciv.*

Timur is a word which means the east, and was probably imposed on this island by the Malays, to whose language it belongs, because this was the extreme limit of their ordinary commercial voyages to the south-east. Timur is about three times the extent of Jamaica. Its principal inhabitants are of the Malayan race, but it contains also Papuans or Negroes, and tribes of the intermediate race. The two languages of Timur are the Manatoto and the Ti-

muri, the first spoken at the north-east end of the island, and the last used by many of the tribes as a common medium of intercourse. No alphabet has ever been invented in Timur; but judging by the specimens of its languages, the vowels are the same as those of the Malay and Javanese.

From Timur to New Guinea, there runs a long chain of islets, forming, as it were, a wall or barrier to the south-eastern portion of the Archipelago. In these islets the inhabitants are of the same race with the Malays, and speak many languages. By far the most ample and authentic account of them has been given by Mr. Winsor Earl, who, after a long experience of the countries in which they are spoken makes the following observations. "In the south-eastern parts of the Indian Archipelago, where opportunities of social intercourse between the various petty tribes are of rare occurrence, every island, every detached group of villages, has its own peculiar dialect which is often unintelligible, even to the tribes in its immediate neighbourhood. In some of the larger islands, Timur, for example, these tribes are so numerous, and the country occupied by many of them so extensive, that it becomes impossible to form even an approximate estimate of their number." Of one language, the prevailing one, among several languages of the island of Kisa, one of the Sarawati group in the chain of islets already mentioned, Mr. Earl furnished a vocabulary of 330 words. The Kisa is an unwritten tongue, but its vowels are the same as those of the Malay and Javanese.

The Spice Islands in the Molucca and Banda seas, consist of many islands and numerous languages. Next to Java of which they form a sub-government, the Moluccas are the most important of the Dutch possessions in India. The islands to which this term is applied are Amboyna, Banda, Ternate, Tidore and smaller islands in their neighbourhood. The islands are small, volcanic, unproductive in grain, but fertile in fine spices. But the ruinous policy of the Dutch nation in their greed to secure a monopoly of this class of products, led them for years, to root up and destroy, at a great cost, often by force of arms, every nutmeg or clove tree not required for the production of that quantity of spices which they calculated they could dispose of. Rosingain, near Banda, was almost abandoned after the extirpation of its spice trees, its people emigrating to the neighbouring islands in search of a livelihood. The people are of the Malayan race, short, squab and darker in complexion than the Malays or Javanese. The Amboynese are of a middling height and well formed They are gentle, very sober, brave, easily managed, and make good mounted and foot soldiers and a considerable number of them have embraced christianity. Banda is very unhealthy, and is subject to frightful earthquakes. When first discovered by Europeans, the inhabitants had made considerable advance in civilization, but one still much inferior to that of the Malays and Javanese. Sir Stamford Raffles has furnished specimens of three of the languages of this furthest east portion, viz., those of Ceram, correctly Serang, of Ternate, correctly Tarnati, and of Saparuwa, one of the Banda isles. Of the language of Ceram, nine of the words are Malay, two Javanese, 17 are common to these two languages. Ceram Laut is the great place to which the Bugi carry the Papuan slaves whom they steal from New Guinea.

The great group of the Philippines, although contiguous to the proper Indian Archipelago, differs materially in climate and the manners of its inhabitants. It extends over fifteen degrees from near latitude 5° to 20° N., and consists of many islands of which only Lucon and Mindanao are of great size. The bulk of the people are of the same tawny complexioned, lank haired, short and squab race, as the principal inhabitants of the western portion of the Indian Archipelago. The focus of the aboriginal civilization of the Philippines, as might be expected, has been the main island of the group, Lucon. This is a corruption of the Malay and Javanese word lasung, meaning a rice-mortar. The Spaniards are said to have asked the name of the island, and the natives, who certainly had none, thinking they meant a rice-mortar, which was before the speakers at the time, answered accordingly. In the Philippines are many separate nations or tribes speaking distinct languages, unintelligible to each other. The principal languages of Lucon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000; while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people. Mr. Crawfurd tells us that it does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala, with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language, or languages sprung from a common parent, and only diversified by the effects of time and distance, and that an examination of the Bisaya Dictionary gives similar results.

The great islands of Mindanao, Palawang, and the Sulu group of islets, forming the southern limits of the Philippine Archipelago, contain many nations and tribes speaking many languages of which little has been published. Mr. Crawfurd, on the information

given by Mr. Dalrymple, informs us that even in the little group of the Sulu islands, a great many different languages are spoken, and he gives a short specimen of 88 words of one of those most current,

Sulu has for many years been the market where the Lanun and other pirates disposed of much of their plunder, and in former times itself was decidedly piratical. The mahomedan religion has made much progress in Mindanao and the Sulu islands, as has the Malay language, the usual channel through which it has at all times been propagated over the islands of the Indian Archipelago. Mr. Crawfurd remarks that whether the principal languages of the Philippines be separate and distinct tongues or mere dialects of a common language, is a question not easy to determine. Certainly, the phonetic character of the Tagala, the Bisaya, the Pampangan, and Ilocо are, sound for sound or letter for letter, the same. Words of the Malayan languages are to be found in the language of the aboriginal inhabitants of Formosa, or Taiwan; and as this large island, about half as big as Ireland, stretches as far north as the 25° of latitude this is the extreme limit in a northerly direction to which they have reached. The aborigines of Formosa are short in stature, of tawny complexions and lank hair. Although inhabiting a great and fertile island, affording to all appearance a fair opportunity of development, they never made any progress in civilization, and at present seem to live in a state of barbarism. They are thought by Mr. Crawfurd to belong to, or much to resemble, the brown complexioned race of the Archipelago of whom the Malays are the type.

The islands of the Pacific extend from the east of New Guinea and the Philippines, to within two thousand five hundred miles of the western coast of America, and from about the 22° of north to the 47° of south latitude. The languages spoken over this vast area are, probably, nearly as numerous as the islands themselves. The language, with variations, is spoken by the same race of men from the Fiji group west to Easter Island eastward, and from the Sandwich islands north to the New Zealand islands south. It has been called the Polynesian. The whole number of Malayan words in the Maori dialect of the Polynesian, as they are exhibited in William's Dictionary, only amount to 85.—*Crawfurd Malay Gram. and Dic. Vol. i. pp.* 1, *to cxli. Mr. Logan in Journals Indian Archipelago from* 1848 *to* 1858.

Notwithstanding the numerous languages in the Archipelago, the written characters are only eight or at most nine in number. The Javanese alphabet like all others in the Archipelago is written from left to right, each letter is distinct and unconnected, and the writing is perpendicular and not slanting. It is the character used for the Javanese proper, the Sunda, the Bali, and it is believed the Lombok and including Palembang in Sumatra, it is current among twelve millions of population. But in prior times, other characters to the extent of twelve in number, have prevailed in Java.

In Sumatra, beginning from the west, the first evidence of a native written character is among the Batak, and it is singular that a nation of cannibals should possess the knowledge of letters. There was assuredly nothing of the kind in Europe or continental Asia until long after men had ceased to eat each other. The form of the Batak letters is horizontal.

The Korinchi alphabet, among the people of this name in Sumatra, who border on Menangkabau, has 29 characters and consists of horizontal or slightly raised scratchings.

The Rejang, is the alphabet of Lemba and Pasummah on the western side of Sumatra. It consists of 23 substantive characters, formed of upright scratches or strokes, and on the whole it is more complete than either the Batak or Korinchi.

The Lampung nation, which occupies that portion of the south-western side of Sumatra which lies opposite to Java, divided from it only by the straits of Sunda, has its own peculiar alphabet, which consists of 19 substantive letters with double or treble consonants making them up to 44. It has a great deal of that angular, linear, and meagre form which characterizes the other Sumatran alphabets.

The Achin and Malay of Sumatra are written in the Arabic character.

The Bima alphabet formerly in use amongst the Bima people in the island of Sumbawa, east of Sumatra and Java, has now given way to the alphabets of the Celebes.

In Celebes, are two distinct alphabets, one of them the Bugi, at present in use over the whole island, and which extends to Bouton and Sumbawa and wherever the Bugi nation have settled or colonized. The modern Bugi has 23 substantive characters consisting mostly of small segments of circles; running horizontally. The Bugi letters have no resemblance to those of Sumatra, or Java, or even to the obsolete alphabet of Sumbawa. The other alphabet of Celebes, is now obsolete.

The ninth and last alphabet of the Archipelago is the Philippine, that of the Tagala nation of the great island of Lucon or Luconia, and consists of 13 characters. It is the only one existing in the whole of this group, and seems at one time to have been used among the civilized tribes of the neighbouring islands having spread even to Magindanao and Sulu. The forms of the letters are rather bold and

more complex than that of the Sumatran alphabets.

In the Archipelago, thus, are nine distinct alphabets, every one of which appears to be a separate and a native invention. But they are not only distinct from each other. they differ equally from all foreign alphabets. They are the produce of five large islands only, out of the innumerable ones which compose the Archipelago. The most fertile and civilized island, Java, has produced the most perfect alphabet, and that which has acquired the widest diffusion. The entire great group of the Philippines has produced, and that in its greatest and most fertile island only, a single alphabet; even this one is less perfect than the alphabets of the western nations, in proportion as the Phillippine islanders, when first seen by Europeans, were in a lower state of civilization than the nations of the west of the Archipelago.

The Malayan peninsula and Borneo, extensive as they are, have never given rise to an indigenous civilization, sufficient to raise their inhabitants beyond the condition of small and miserable communities, and hence no indigenous alphabet can be traced to them. Their more civilized inhabitants are invariably stranger emigrants. This must be owing to the absence of a certain kind of fertility in the land, available to the rude and feeble efforts of a native industry, such as elsewhere give rise to a concentrated population, to leisure and to letters.

No kind of native writing can be traced to the Spice Islands which, notwithstanding their rich native productions, are incapable of yielding corn, iron, or cattle, the rough staples of early civilization, and without the presence of which, letters have never been invented or existed. In the great island of New Guinea, with its savage negro population, and with the same deficiencies, the presence of any kind of writing is not reasonably to be looked for.

No trace of a written character has been found in the wide extent of the islands of the Pacific. Most of them are probably too small to have furnished a population, at once sufficiently numerous and concentrated, to generate the amount of civilization requisite for the purpose. In the great islands of New Zealand, with their comparatively energetic race of inhabitants, the discovery of letters would, most probably, have been made, as among some rude nations of Sumatra, had the civilization necessary not been precluded by the absence, as in the smaller islands, of the larger animals for labour, and of all the cereal grasses for food.—*J. I. Arch. Dec.* 1848, *p.* 774.

The *Ladrones* were the first islands seen by Magellan. From these he sailed to the Philippines where, in the island of Mactan near Zebu, he was killed, as also was Barbosa. Magellan's companions then visited Timor in 1522 and returned to Lisbon, making the first circumnavigation of the globe. Of these islands the grand Ladrone, called by the Chinese Tyman-Shan, is in latitude 20° 56′ N. longitude 113° 44′ E. 12 miles east of Macao and 29 miles east of Canton factories. It is steep and bold and 2 miles in circumference. On its west side is the Little Ladrone. The Ladrones or pirates who infest the Archipelago consist wholly of the inhabitants of the free mahommedan states in Sumatra, Lingin, Borneo, Magindano, and Sulu; those natives who have remained uncontaminated by the doctrines of the Arabs never being known to engage in the like pursuits. The Europeans who were unfortunate enough to fall into their hands were generally murdered, while the natives who compose the crews of the captured vessels are sold for slaves. The term is of Portuguese origin and is applied by the Portuguese to the Chinese pirates, who commenced to gain power by the close of the 18th century.—*Mr. Earl*, *p.* 42.

Adi or Ai Island, near New Guinea, is the Pulo Adi of the Malays, Wessels Eylandt of the Dutch, and is in Lat. 4. 19′ S. Long. 143° 47′ E. (East Point). Modera, is about 25 miles in length lying to the N. N. E. of the great Ke, distant about 60 miles, and is the south-westernmost of a group of high islands which, until lately, were considered as forming a part of New Guinea. The inhabitants are Papuans, and as they do not bear a high character among their neighbours, they are rarely visited except by traders from Goram and Ceram Laut, who have found means to conciliate them. The sea is unfathomable at a short distance from the island, but there are several indifferent anchorages on the north side. No vessel should attempt to visit the island for purposes of trade without previously obtaining a pilot at Goram, who will also act as interpreter, the natives not being acquainted with the Malayan language. Wild nutmegs, trepang and tortoise-shell are to be obtained here, but not in sufficient quantities to tempt a European vessel to visit the island for purposes of trade, particularly as these articles can be obtained more readily at some of the adjacent ports of New Guinea. Red calico, parang or chopping knives, coarse cotton shawls and handkerchiefs, with iron, Java tobacco, muskets and gun-powder, are the principal articles in demand. The chief traffic is in slaves which are distributed among the neighbouring islands of the Archipelago, and are sometimes carried as far as Bali and Celebes. This probably accounts for the deficiency of other articles of export. Pulo Adi is separated from the large island of which Cape Katemoun forms the S.

W. extremity, by a strait 8 miles wide, which seems to be full of dangers, and should only be ventured upon with the greatest caution.—*Jour. Ind. Arch.*

Gelbe, is an island between N. Guinea and Gilolo, in the Eastern Archipelago, and not far from Gilolo. It is occupied by the Negro-race, with nose flat: the lips thick and projecting, the complexion a dark olive, the eyes deep seated, and, on an average the facial angle 77°, but as high as 81°. In Gebbe and Waigiou and in some parts of the coast of N, Guinea the complexion is lighter and the peculiar texture of the negro hair is absent. M. Du Perry and M. Preycinct have thus described the negroes of Gebbe. In Gebbe, Waigiou and in some parts also of the coast of New Guinea, the Malayan race may have become intermixed with the negro, as the complexion is lighter and the peculiar texture of the negro hair altered or obliterated. The language spoken at Waigiou is entirely Papuan being that which is used on all the coasts of Mysol, Salvatty the N. W of Guinea and the islands in the Great Geelvink Bay Waigiou, Guebe, Poppa, Obi, Batchian between New Guinea and the Moluccas as well as the South and East peninsulas of Gilolo possess no original tribes but are inhabited by people who are evidently mongrels and wanderers.—*Wallace*, II. 216 and 217.

Japan. Sir J. F. Davis thinks, that the Japanese resemble their Chinese neighbours:—"They go as far as they dare, until a check occurs. The Japanese language is much mixed with Chinese. It is not monosyllabic but agglutinate, supplying subfixes to modify the idea. The priests of the buddhist religion employ the Chinese, but their poetry is in the pure Japanese. There exists among them both the Mongolian and Malayan types, and it is not improbable that a wave of Mongols has passed over the primitive Malayan race of the country and left the two races now inhabiting it. The Japanese at present therefore seem to be of two or three races. The United States' expedition; from analogies in the language, formed an opinion that they are of the Tartar family. Mr. C. F. Fahs regards the people of Luchu as identical with the Japanese, and asserts that they have many characteristics which distinguish them alike from the Malay and Chinese—such as the absence of the long angular form of the internal canthus and the presence of a thick black beard. Dr. Prichard considers the Japanese to belong to the same type as the Chinese, but Dr. Pickering maintains that they are Malayas—while Dr. Latham follows Siebold in regarding them as of two distinct types of physical formation. The prevalent belief is that there are three types of people, in Japan, —the field labourers have broad faces, brown hair, with an occasional tinge of red; flat noses, large mouths and a comparatively light complexion. The fishers of the sea coast have prominent features, with their noses inclining to the aqualine: hair black and crisp, wavy with a tendency to curl. The nobles are majestic in deportment and more resemble Europeans. One of the races is described as having an oval head and oval face, rounded frontal bones and a high forehead, with a mild and amiable expressions of countenance. The complexion is light olive with eyes slightly oblique, large and animated, long eyelashes, and clustering eyebrows, heavy and arched, the cheek bones are moderately prominent, chest broad and largely developed. In Siam one of these races of the Japanese are the most esteemed for their courage, and the kings of Siam have always employed them as their principal force in preference to the Malays. It would seem that the Japanese of all classes, look upon their wives as upon a faithful servant; a Japanese is never known to beat his wife. It is a custom amongst some Japanese to take a woman a few weeks on trial before deciding upon whether to marry her or not. The Japanese marriage ceremony is very simple. The bride and bridegroom drink wine with each other three times, exchanging cups with each other every time, in the presence of a few select friends; after which the young lady gets her teeth blackened, and she is married for better and for worse. *Macfarlane. Geo. and His. of Japan, p.* 110. See *Bowring's Siam, Vol. I. p.* 97.

Galapagos Islands, almost every indigenous living thing is peculiar to them. Admiral Fitzroy mentions that while one side of them is covered with verdure, the other aspects are barren and parched.—*Wallace, p.* 10.

Beyond the Fiji the brown Polynesian race or some intermediate type extends over the Pacific. The descriptions of these latter, agree exactly with the characters of the brown indegenes of Gilolo and Ceram.—*Wallace*, II. 277.

The population of the Sandwich Island about 75,000 or 80,000 is now in a very different condition from what it was thirty years ago, the inhabitants, from having been wild and uncivilized, are now all nominally christians. The male population are a good height, athletic, and well proportioned; but neither men nor women are prepossessing in appearance although they have the reputation of being good tempered and not easily aroused into anger. The ruins of an old temple are still to be seen about six miles from Honolulu, near Diamond Hill. It is said to have been built by Ka-me-ha-meha the first, after the conquest of the island. It is called Heiau. Here, in the days of heathenism, were offered human sacri-

fices. The victim was chosen either by the priest or king. The messenger of death entered his abode while he slept, and he met his end by strangling. He was then dragged off as an offering to the sanguinary god. *William's The Cruise of the Pearl, pp.* 34-41.

The Loochoo or Lieucheu Islands, lie to the N. E. of the Patchu group and consist of one large island surrounded by smaller ones, the large island being of considerable size and well peopled. It extends from lat 26° 3′ and 26° 53′ N. and long. 127° 34′ and 128° 25′ E being 58 miles long and about 10 or 12 miles broad. In language and physical form, the Luchu islanders resemble the Japanese, their buddhism being more imperfect and their manners more simple. The people in the small islands between the Luchu group and Formosa, are Japanese rather than Malay.—*Dr. Latham's Ethnology.*

Formosa Dr. Collingwood (*Trans. Ethn. Soc. N. S. Vol. vi. p.* 139 speaking of the Kebalan of Formosa, to whom he showed a copy of the 'Illustrated London News,' tells us that he found it impossible to interest them by pointing out the most striking illustrations, with they did not appear to comprehend. *The Formosa,* people are called by the Chinese Tai-lokok, their hair is short and fringed on the forehead; behind it hangs loose. The language of Formosa or Tai-wan according to M de Rosner appears to be a branch of the Oceanic.—*Adams, p* 240.

Corea, Korea; Kao-li, is the Chinese name of Corea. The people use rice, barley meal flour of millet. The Koreans were driven out of East Tartary into the peninsula which they now occupy. They have since been conquered by the Japanese. Their country was subsequently invaded by the Mongols, on which occasion the Siogour Yoritomo defeated Kablai Khan. *The Koreans,* have flat faces, oblique eyes, broad cheek-bones, strong black hair, and scanty beard, they are strongly made, their skin varies from tawny or yellow to brown, wheat or straw color, and reddish yellow. They have a mixture of the Chinese and Japanese physical features. Their religion is buddhist; their alphabet and language differ from the Chinese. The Mantchu call the Koreans Solgo. There exists probably two populations intermixed.—*Latham. Adams.*

Tungus, a general name applied to a population common to a vast area in Siberia and China. Their physiognomy connects it with the tribes of Northern Asia in general, and their language forms a transition between the monosyllabic and agglutinate forms of speech. The Tungus, under the name Mantshu, constitute the dominant population of China itself. The tribes under Chinese rule, in Mantshuria, on the watershed of the Amu or Sagalin, are termed Mantshu. The Mantshu proper have a literature with an alphabet modified from the Mongol. They are agricultural and industrial.

Daurian, a Tungus race dwelling on the Upper Amur, all well made, especially the women. The secretaries of the mandarins who are sent to this part, are privileged by a letter from the khan to select any women or young girls whom they may fancy, whenever love prompts them. Mr. Ravenstein says that he frequently was present when the best looking were taken away in a cart. Some men whose wives had been selected in this manner consider it a special favor to have such fine gentlemen as brothers in-law. Others, though discontented are compelled to conceal their chagrin for fear of punishment and disgrace.—*Latham Ravenstein's Russians, p.* 365.

Seghalin, Seghalien or *Tarakai,* long believed to be a peninsula, is an island lying between 54° 24′ and 45° 54′ 2″ N. L, and E. L. 141° 40′ and 144° 46. It is about 600 miles in length and from 20 to 100 broad. It is well wooded and fertile, and coal is found in many places, especially about Jonquiere Bay. Two-thirds of the northern part belong to Russia, and is peopled by Ghilak.

Aino.—The aboriginal races of Yezo, whose severe treatment by the Japanese, has led them to other countries. They occupy the southern part of the island of Seghalin, which is in possession of the Japanese. The Aino are of short stature with broad faces of the Mongol type. They are a timid race, their limbs are hairy, they have bushy beards and long tangled hair, large heads and clumsy figures, the expression of their faces is that of good nature combined with stupidity. According to M. Rosney their language is dissimilar to Japanese, and that spoken in the Kuriles and in the island of Yesso, are also different from Japanese.
